WITHDRAWN

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, THURSDAY, JULY 18, 1839. NO. 1.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Religious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

POETRY.

THE MERCY SEAT.

From every stormy wind that blows,
From every swelling tide of woes,
There is a calm, a sure retreat,
'Tis found beneath the Mercy Seat.

There is a place where Jesus sheds
The oil of gladness on our heads;
A place on earth of all most sweet,
It is the blood-bought Mercy Seat.

There is a place where spirits blend,
Where friend holds fellowship with friend,
Though sundered far, by faith they meet,
Around one common Mercy Seat.

Oh! whither should we flee for aid,
When tempted, desolate, dismayed?
Or how the hosts of Hell defeat,
Had suffering saints no Mercy Seat.

There, there, on eagle's wings we soar,
And sin and sense seem all no more,
And Heaven comes down, our souls to greet,
And glory crowns the Mercy Seat.

O, let my hand forget her skill,
My tongue be silent, cold and still,
This bounding heart forget to beat,
If I forget the Mercy Seat.

ORIGINAL PAPERS.

For the Western Recorder.

SKETCHES.

HALF A DAY'S JOURNEY UPON THE OHIO.

Mr. Editor:—In my peregrinations, I am in the habit of taking sketches of what I meet with that is striking. I have thought of sending you a sketch occasionally, for insertion in the "Recorder." It is with no small degree of diffidence, however, lest what is taken down in common place style for my own amusement, may not suit the public eye. Hence I must crave the indulgence of your readers, and beg of you, sir, to exercise the utmost editorial freedom with my productions.

The incidents I have now to relate, occurred on Tuesday, the 4th day of the present month. Business required my attention at Louisville. I embarked on board the steamer *Ben Franklin*, mail-boat, at the port of this city, and we were off at half past eleven A. M. She is indeed a fast runner, being propelled by two engines. I looked upon our city as we were departing, and had to count briskly to designate the intersecting streets, as we passed. Main, Walnut, Vine, Race, Elm, Plum, &c., received the hasty *go by*, and the gallop of no steed could have kept up with us. In an hour and five minutes we were at North Bend, 16 miles below, and in seven hours we were at Madison, Ia., 100 miles below Cincinnati, making our speed average rising of 14 miles per hour, without allowing for stoppages. Much might be said in favor of this vessel, in point of comfort and splendor, as well as speed. The table is furnished with abundance to tempt the palate of the Epicurean, all manner of savory dishes, and "baked meats for Pharaoh."

Yet with these comforts and conveniences, I found little to favor social enjoyment to the thoughtful or the serious mind.—We had, as nearly as I could ascertain, from 75 to 80 cabin passengers; and of all this throng I could recognise but 4 or 5 gentlemen to be even moral. The far greater part evidently neither "feared God nor regarded man." The *races* were about commencing at Louisville. Many on board were destined for those sports. I learn that they present scenes of the most reckless and revolting impiety that could disgrace human nature; yet they are resorted to by thousands for several successive days. But I need not look there for vice and depravity in their most diabolical forms. My fellow passengers, *i. e.* a great proportion of them, lost no time in their *gambling* avocations. These were not simply diversions to pass away time, for upon every table was a heap of money both in bank notes and specie, and this was shoved from one to another, as any one became winner. We had, upon the cabin floor, no less than five circles of these gentry thus employed, at the same time.—Each man had his glass of spirits beside him, with a spoon to mix the sweetened draught, the loser, I supposed, having to *treat* the others and himself to the poisonous potation. The bar-keeper was kept busy, and we witnessed the most disgusting effects from his out-pouring of spirit. Even grey heads, as well as young, were reeling in intoxication, and we were continually liable to be stumbled against, or fallen upon by these filthy annoyances. We were not destitute of a *Bible* in our cabin. A neat one is furnished to both the Ladies' and Gentlemen's cabin of each steamboat on these waters, by the Young Men's Bible Society of Cincinnati. But in this case I did not see a third person open the sacred volume, in the whole trip.

A little after sunset, we were alarmed with the word, "*a man overboard!*" Some persons who witnessed the accident told me that the individual was somewhat intoxicated,—that he fell over near the bow of the boat,—that one caught him by the feet, but being a heavy man, he was quickly drawn under by the force of the water, (as the boat was under rapid headway,) and passed under the water wheel. The boat was immediately stopped by the engineers, and word despatched to the captain, who was busily engaged *playing cards* in the cabin with a company of other gamblers! I thought that the news of *a man overboard!* would start a sympathy in the breast of every one on board. I looked that the captain should order out the yawl, and have the boat lay to, until efforts were made to save the man, or at least to pick up his body. I looked that even the gambler's heart, and the drunkard's heart, should be touched. I apprehended that there would be a general rush *astern*, to see a fellow being struggling for life, if not already dead. But my heart sickens while I tell the cold indifference which I witnessed. And though knowing the account to be true, I know it will appear incredible to those to whom it is told. I went astern just after the alarm was given, surprised that all did not seem disposed, at least to look after the poor man who was lost. But not a half a dozen persons of all the company, did I see take pains to go and look. Not a gambler left his seat—not a toper dropped his cigar, or set down his glass, though I am confident that all understood the word! Our captain remained at his play—a glass of spirits at one elbow, and a heap of money at the other! At his right, engaged in the same game, sat one of our Cincinnati physicians, and at his left a celebrated jockey and horse racer! I looked on with astonishment. *I saw that—it—was—so.* Whilst a fellow man was perhaps struggling for life upon the wave, in the midst of the Ohio, at the near approach of night, I looked, and saw five gaming tables surrounded, first by those who were seated and at play, then by others, mostly standing and looking on! I could hardly believe my senses whilst I counted eleven in one circle, seven in another, fifteen in another, &c., all seeming utterly indifferent to the tragic circumstance just then occurring! [Excuse my exclamation points, Mr. Editor,—and you, dear reader.] Here, thought I, are the tender mercies of infidelity. I heard, too, some of the passing observations. One gentlemen comfortably enjoying his seat, coldly remarked with a smile, "*wonder whether the fellow paid his passage, or not?*" And he added, that "it would be a pity for a man to come on board and be lost off before he had paid his passage!" The yawl was never sent out for the man, or his body. Within from three to five minutes the engines were put in motion,—we passed on, leaving the lost man to his destruction! The watery surge passed over his body, and the billows of eternity, we presume, engulfed his soul!

As the man fell from the fore part of the boat, and passed under the wheel, it is likely that he was by it bruised to death. Yet this, though probable, is not indeed certain. A man in first plunging into the river may sink so deep as to escape the play of the wheel, by its passing quickly over before he rises. Indeed, a gentleman, a fellow passenger, well known in this city, told me of precisely such a case, which he witnessed upon the Mississippi river. A man fell overboard from the bow of a steamboat when under way, and presently rose to the surface a little below the water-wheel, *unhurt*. My friend cried out to him to *hold up, and not be scared*. The yawl was sent off, and the man saved from a deluvian grave, though the current had carried him onward more than a quarter of a mile before he was overtaken. Hence it is never right to let a man go for lost, in such cases, because he has passed under the water-wheel. But alas! when will man care for his fellow? When will the doctrine of Cain be relinquished, who said, "*am I my brother's keeper?*" O for "Dick's Philosophy of Religion," that it may be known and read of all men. How clearly does that writer show that men are turned into beasts if not demons, and the world into a hell, *almost*, by the want of love—the absence of religion.

I have not told half the awful iniquity which I had the pain of witnessing during this short trip. Scenes of *lewdness* which occurred on board, it is not proper to describe. The blasphemous *profanity* which saluted us from every quarter, and ceased not, was enough to make a man shudder, or an angel weep. Alas! men are hardened and will not consider,—so God saith:—"Be astonished, *O Heavens*, at this."—The drunkenness and profanity, and gambling and pollution, are but a part of the picture. To all this was appropriately added the instance of *murder* which I have related—I must so term the leaving a lost man, *unhelped*, to perish, almost before our eyes. I must say that to me, our vessel, with these associations, seemed any thing you please but a *heavenly* place.—My very soul shuddered amid these horrors of moral depravity, and I marveled at the forbearance of Him who holds in his hand, as well the energy of steam, as the winds and the waves, that he did not with a summary desolation, reveal his judicial displeasure against such presumptuous ungodliness. But how often, indeed, do such instances take place. Almost daily do we receive news of some steam boat disaster! Five, or twenty-five, or one hundred or more, have been thrust into eternity in a twinkling! Yet others, though continually exposed to danger, pass heedlessly on, till, perhaps, their measure of iniquity is filled, and they too are hurried off from the stage of life.

At about 11 o'clock, P. M. we reached Louisville, having accomplished our trip, 150 miles, in less than 12 hours. I judged it too late to go into town and lodge with my friends, though anxious enough to escape from my unpleasant situation, and concluded to occupy my berth until morning. I had from choice secured an under berth. The one above me was engaged by some gentleman, as yet I knew not whom. I retired to rest, after there was a degree of composure obtained, which was not until from 1 to 2 o'clock, when a large portion of our company went off into town. But a considerable number kept up their gambling the whole enduring night, and were still at it when I left in the morning. For a time I had a prospect of being left alone, as none yet laid claim to the berth above me. An orderly gentleman, however, was seeking a resting place, and supposing my neighbor not forthcoming, took the liberty to turn in, and soon composed himself to sleep. This, in Wisconsin, would be called *jumping a claim*. I obtained little rest through the night. The morning light, however, found me in a sound repose.—From this I was awakened at 4 o'clock by the voice of a finely dressed young fellow, calling lustily to the man above me,—"*This is my berth—get up—I must go to bed.*" The man did not demur, but yielded possession as soon as possible, the other hurrying him very much. This last gentleman had been gambling all night, but was now obliged to retire, sick as could be, from the effects, doubtless, of his drinking, want of rest, and undue exercise of mind. No sooner had the first man cleared the berth, than our new comer entered it;—and no sooner had he laid down, than with the most distressing guttural outcries, he began to evacuate his morbid stomach without reserve upon his bed, directly above me! I was, indeed, as it were, *electrified* out of my quarters.—I left my wretched neighbor full possession. I left him to reflect, "*who hath woe? who hath sorrows?*" And as it was now day-break, after washing, I took a morning's walk up into the city, and shortly breakfasted with a kind family of friends.

I scarcely need add, that for the present, I have done with the steamboat *Ben Franklin*. If her captain cares no more for the life of one of his passengers,—if he can be so engrossed with his gambling, and his toddy, as not to attend to helping a man out of the river who falls overboard, and lets him sink and perish without offering relief,—I think it is time for such as have regard for their souls or their bodies, their safety or their welfare, to *take passage on some other boat*, and time too that the U. S. Mail should be entrusted with more careful hands. I am not capable of publishing any thing for the purpose of injuring the proprietors of the Ben Franklin. Far from it. But I think that by the publication of such facts as these, they should be constrained to obtain a reform in the management of their vessel, or a change of officers.

In view of all these unpleasant, disgraceful transactions, and the sad extent of wickedness and depravity witnessed continually upon our waters, in our cities, and throughout our land, I feel deeply humbled before God to think of the slackness of Christians in their efforts for the conversion of the world, and especially my own remissness and want of energy, when so much needs to be done.—"Lord, I have heard thy speech and was afraid,—O Lord, revive thy work."

A. H. B.

Cincinnati, June 25, A. D. 1839.

The Rainmaker in Boston.—The Boston papers tell us that Mr. Espy had a very attentive audience to hear his first lecture, and all who listened to him appeared to be much interested in his learned and scientific discourse. Five hundred attended the first lecture, and the second was equally well attended.

O. St. Jour.

INFIDELITY.

ATHEISM—THE FAMILY STATE.

From Beecher's Scepticism.

There never was but one government professedly atheistic. The National Assembly of France, in the commencement of the revolution, appointed a committee to inquire and report whether there were and ought to be a God; and the committee reported, that there could be no liberty on earth while there was believed to be a God in Heaven; and there is no God; and that death is an eternal sleep. The assembly adopted the report, abolished the Sabbath, burnt the Bible, instituted the decade, and ordained the worship of the Goddess of Liberty, in the person of a vile woman. But the consequences were too terrible to be endured; it converted the most polished nation of Europe into a nation of fiends and furies, and the theatre of voluptuous refinement into a stall of blood. The mighty mind, who governs the universe—whose being they had denied, whose word they had burnt, whose worship they had abolished, whose protection they had denied, whose wrath they defied—withdrew his protection, and gave them up; and with the verocity of famished tigers, they fastened on each other's throats, and commenced the work of death, till quickly few were left alive to tell the tale of wo. And yet this dreadful experiment these men would repeat upon us. The entire corroborating action of the government of God, with all its satellite instructions, they would abolish, to let out upon society, in wrath without mixture and without measure, the impotent depravity of man.

The family—the foundation of the political edifice, the methodizer of the world's business, and the mainspring of its industry—they would demolish. The family—the sanctuary of the pure and warm affections, where the helpless find protection,—the wretched sympathy,—and the warm undying affection, while parental hearts live to love, and pray, and forgive,—they would disband and desecrate. The family—that school of indelible early impression, and of unextinguished affection—that verdant spot in life's dreary waste, about which memory lingers—that centre of attraction, which holds back the heady and high-minded, and whose cords bring out of the vortex the shipwrecked mariner, after the last strand of every other cable has parted—these political Vandals would dismantle. The fire on its alters they would put out; the cold hand of death they would place on the warm beatings of its heart—to substitute the vagrancy of desire, the rage of lust, and the solicitude, and disease, and desolation, which follow the footsteps of unregulated nature exhausted by excess.

The possessions of the soil in fee simple, which to industry is like the action of the sun to the movements of the heavenly bodies, they would exchange for their common field—where men perform their tasks, and receive their rations, and eat, and drink, and sleep, and die—while infancy is committed to the tender mercies of state nurseries, in which, during the experiment, in France, about nine out of ten died—a system, which, by infanticide and disease, had in half a century reduced one half the population of the Sandwich Islands, and were it to be universal and permanent, would in a century depopulate the earth.

Thus would a political atheism suspend the kind attractions of heaven upon, and let out the storm of guilty passion, and by one disastrious wave, from stem to stern, make a clear breach over us—sweeping us clear of what patriots, and Christians, and heaven have done to render us happy.

It would unspiritualize our souls, cut off eternity from our being, to hang its leaden weights upon the wheels of our machine, till it run down and stopt forever. It would teach us to regard accountability as a fiction, and right and wrong as obsolete terms, without use or meaning—while with singular inconsistency it anathematized the ministry of Christ, it eulogized the most abominable crimes, and covered the most exalted virtues with contempt and obloquy.

Selected from among the tract-sheets of the "London Religious Tract Society." May they prove to be a word in season.—*Orion.*

THE CREDULITY OF INFIDELS.

Infidels scoff at the credulity of the Christian. But let us fairly state the case, and see whether of all beings in existence, the infidel is not the most weakly credulous. What is the infidel's creed.—He believes that the whole world united in a conspiracy to impose upon themselves about the era of the introduction of Christianity;—that they invented a universal persuasion of the coming of some great personage, and that by mere accident their conjecture was verified in the birth of Jesus Christ:—that verses or poems, the production of men who lived several hundred years before, accidentally happened to apply to that extraordinary person, and things the most contradictory did accidentally concur in him; that he was a deceiver and an enthusiast, and a false claimant to a divine commission, and yet that he was, without exception, the purest and most amiable of beings;—and that he succeeded in his object without any of the means usually employed by similar characters; for that, without money, without troops, without power, he convinced multitudes of his divine authority.

He believes that after Christ was openly crucified as a malefactor, twelve illiterate fishermen took up the extraordinary tale that he had risen from the dead, although these fishermen must have known to the contrary, if he was a deceiver; and without any assignable motive, in the face of danger and death, they formed the bold design of converting the whole world to a belief of this strange story;—that although aware of the calamities which they must thus occasion to mankind, (and therefore men of unfeeling and cruel dispositions) their writings and actions exhibit the purest morality and the most benevolent spirit;—that without education or literature, they composed several works, in which the leading character or subject of their memoirs, if a fictitious personage, is unquestionably one of the most wonderful creatures of imagination that the rang of literature can furnish, a character altogether unlike that of any other being who ever dwelt on earth, sustained throughout with the most exact consistency, and the most minute and apparently unnecessary particularity of dates, and times, and places—that they travelled over the greater part of the world, every where successful though every where persecuted, and that they were eventually the means of subverting the religious establishments of the most powerful nations upon earth.

Yet the infidel believes that all this was CHANCE, these were all impostors, the whole story was a fable and a forgery!! If it be so, then the case is without a parallel in history: and the man who receives the creed of the infidel, betrays a credulity so capacious, a faculty so prodigious of overlooking difficulties, that we cannot but suspect there is something wrong in the ordinary powers of his understanding. But the case is otherwise. Infidelity is not a derangement of the head, but of the heart. Believing, as we do, that the words of Christ are words of eternal truth, and that he has made for us "peace through the blood of the cross," we maintain, that it is impossible for any man to disbelieve the Bible who searches it with a right spirit: "If any man do his will, he shall know of the doctrine whether it be of God," but "Every one that doeth evil hateth the light."

There is one circumstance attending all conditions of life, which may and ought to be turned to the use of self-culture. Every condition, be it what it may, has hardships, hazards, pains. We try to escape them; we pine for a sheltered lot, for a smooth path, for cheering friends, and unbroken success. But providence ordains storms, disasters, hostilities, sufferings; and the great question, whether we shall live to any purpose or not, whether we shall grow strong in mind and heart, or be weak and pitiable, depends on nothing so much as on our use of these adverse circumstances. Outward evils are designed to school our passions, and to rouse our faculties and virtues into intenser action. Sometimes they seem to create new powers. Difficulty is the element, and resistance the true work of man.

Self-culture never goes on so fast, as when embarrassed circumstances, the opposition of men or the elements, unexpected changes of the times, or other forms of suffering, instead of disheartening, throw us on our inward resources, turn us for strength to God, clear up to us the great purpose of life, and inspire calm resolution. No greatness or goodness is worth much, unless tried in these fires. Hardships are not on this account to be sought for. They come fast enough of themselves, and we are in more danger of sinking under, than of needing them. But when God sends them, these are noble means of self-culture, and as such, let us meet and bear them cheerfully. Thus all parts of our condition may be pressed into the service of self-improvement.

RELIGION.

Bright as the morning star in the radiance of the sun-beams, cometh the seraph of immortality.

Religion, the child of heaven, wears an angelic smile and is distinguished by all the graces of its divine original. Elevated and aspiring, yet winning and attractive, benevolent, gracious, courteous and condescending; her features formed to complacency; her voice attuned to harmony; her eyes shining with benignity, and all her motions though composed and steady, are yet graceful and unassuming. Religion erects her votaries a temple sacred to immortality. The good man dreads not death nor desolation. Invited to heaven, and called to glory, he soars above this dim spot man calls earth, and is lost in the incomprehensible progression of eternity, that opens to his prospect. Religion is divine vigor in the soul, triumphing over the darkness of nature, and teaching us to acquiesce in the allotments of Providence. It is the image of God stamped upon human nature, refining its baseness, enriching its poverty, healing its maladies, and converting its very wants and miseries into abundance, happiness and glory.—Without this divine treasure, man is poor indeed! Amidst opulence, how needy! amidst titles and honors, how ignoble and vain? in a palace how miserable! how contemptible on a throne!

True religion is the source of happiness, the support of society, and the dying man's consolation. It is the guide of youth, and the stay of old age. It is the fairest flower that opens on earth, the sweetest incense that ascends to the skies.

The Summit Level.—Within 9 miles (at the neartest distance) from Lake Erie, is a Lake whose waters are elevated 720 feet above those of Lake Erie, and on the elevated body of water a steamboat of 100 tons burthen plies.—This is Chatauque Lake, in Chatauque county, New York.

The route from Detroit to Galena, via St. Josephs and Chicago, can now be travelled in six days, from place to place. There is a connecting line of rail-roads, stages, and steamboats through the whole distance.

From the Frederic Visiter.

A PREACHER TO PLEASE THE PEOPLE.

A preacher to please the people must be, in the first place, *very learned*. He must talk much about philosophy, science, literature, and quote a great deal from the ancient Latin and Greek authors, and give the original of verses of scripture. If he does not do this, many will not like him. There is, especially Mr. Classical Scholar, who cannot bear to sit under any other kind of preaching. He is himself a good theologian, and does not expect to hear anything *new* from any one: but as he is a great lover of the classics, he is always refreshed and edified when he can hear them quoted. It is therefore all-important that "high words" and classic figures be used for his sake.

Secondly: he must have a *fine delivery*. What does it profit a man if he knows every thing, and cannot tell it in a pretty way. His *voice* must not be too masculine nor too feminine, too harsh nor too soft, too loud nor too low, but it ought to be a just medium between *all* extremes. If his words do not flow out as smooth as oil and as sweet as honey, Mr. Delicate-ear is sure to be offended. He ought, therefore, to pay great attention to the proper modulation of his voice, and, if possible, blend the dignity of the human voice with the sweet and thrilling notes of the nightingale.

His *gestures*, too, must be polite and graceful. They should not be too violent nor too tame, too frequent nor too seldom, but ought to partake somewhat of the theatrical, which pleases the people so well. In short, he should imitate Demosthenes and Cicero, those great models of eloquence: for the nearer he can approach to these *perfect* patterns of heathen oratory the better.

Thirdly: he must have *personal beauty*. Bless me, there are the ladies, and especially the Miss Handsomes, who would faint to see a homely man in the pulpit! His face ought to be rather round and full—his skin white and fair—his hair auburn, and well trimmed and brushed up—his eyes black or blue—his nose and mouth a little less than common, and rather delicate—he should have but little beard, and that should be well shaved—his arms should be slender, and his hands and fingers fair and delicate—he should always wear new black clothes, made by the best tailors, and neatly fitted—and above all, he should have a white handkerchief in the pulpit.

Fourthly: he must be *polite* and *attractive* in his manners, and ought to spend at least half of his time in promenading the streets, and "nod and scrape" to every person that comes within a hundred yards of him. When he walks the streets, however, he should be careful to have his boots well blackened, and to appear neat and trim as though just out of a bandbox. If Miss Love-to-be-seen happens to be looking out of the 2d or 3d story window, and he passes without seeing and speaking to her, she is sure to be highly offended, and will not go to hear him for a year. How can his people become acquainted with him, or love him, if he neglects these necessary and highly important matters?

Fifthly: he must preach such things as the dear people love to hear;—he must "prophesy smooth things." How can a congregation bear to be always reminded of their sins, as though they were the worst kind of people? They know well enough, that God commanded Isaiah to "cry aloud, and spare not; to lift up his voice like a trumpet, *and show the people their sins*, and the house of Jacob their transgressions;" but this referred to the old and wicked Jews! Now if a preacher always tells the people about the evils of Sabbath-breaking, drunkenness, gambling, swearing, the ball room and other things, he is sure to get their ill will.—He ought never to talk about "the wrath of God," the sinner's awful death, or "the worm that never dies, and the flames that are never quenched," in the eternal world. He ought never to imitate Paul, by reasoning of "righteousness, temperance, and judgement to come." These are harsh things, and do not please the people. His sermons ought to be full of flowers, and stars, and rainbows and such pretty things.

Sixthly: he must be very benevolent; give to every one that ask him, and to every good institution; but must not receive a cent for his labors. There is Mr. Miser and Mr. Lovegold, who despise any man who will take pay for his labors, although they are careful to receive all they can, and keep all they have got. They live on sordid dust, and worship mammon, and they think, surely a preacher, who worships God, can live on the air. Their souls are rusted over with gilded dirt, and when they die, they would rather their spirits should be caged up in a money chest, than received into heaven, where there is no gold. What would they do in heaven? Ah! if the blue concave above us were a vast moneyed chest, and all the stars guineas, they would like to be there; and then they would be jealous, lest some one else should share part of it. If you, Messrs. Editors, can furnish such preachers, you will be sure to please the people.

42873

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,--------JULY 18, 1839.

In presenting our paper to the public patronage, it is not for the purpose of accumulating property, or of procuring the means of subsistance. If these were our objects we should pursue some other calling. The prime of our life has been devoted to the interests of religion and morality, and we wish still to be of some little service to our generation; this we trust is our leading motive. However, we do not feel sufficiently disinterested to sustain this press from our private resources. If the paper continues, its profits must clear its way. We would be willing, should it be called for, to render our personal services gratuitous for a time, but nothing more.

We solicit the aid of the citizens of this place and vicinity. We have been raised in this county from boyhood. It has been our home since 1806. We have contributed, in various ways, to the welfare of the county, but have, heretofore, asked no political favors from the people. If they will aid us in this enterprize, they will confer a greater favor than, if, by their suffrages, they had promoted us to political station.

There are three creditable political papers in our town, from which the public can be supplied with political reading to suit their respective tastes. We asked no discontinuance of these in our favor. But, as we propose to occupy somewhat of a different field all might be patronized to advantage.

To the reading community, ours will be decidedly the cheapest paper in this section of the country. After substracting what may relate to the interest of the Church, and what may be appropriated to advertisements, there will be at least three pages of *general* reading matter. And as we have procured a mammoth press and apparatus, we can at any time, should it be called for, and should our profits justify, enlarge to a mammoth sheet.

We have made no effort, yet, to get subscribers in this vicinity. Our object has been, to first get up the paper, and when we had a sample number, to call on the public for their patronage. From the disposition already manifested, we are encouraged to expect liberal aid from our neighbors, for a number whom we least expected, before asked, have volunteered their names.

We propose having two editorial heads, that which relates to the interests of the Church on the third page, and that which is of general interest on the second.

THE CROPS IN OUR VICINITY.

Wheat.—Wheat crops are better this year than they have been for several seasons past. In the neighborhood of our office wheat harvest commenced about the 8th, and will probably close about the 20th of this instant. Some fields of wheat are touched with the rust.

Oats.—Oats are better this year than common. They are well filled and mostly standing up.—Some fields, sewed on sod ground, were destroyed by the cut worm.

Corn.—The Corn crops are very promising.

Hay.—The meadows are lighter this, than they have been for some five or six years. The drought which commenced about one year since, continued with severity through the winter, and so late in the spring, that the rains which have made the other crops, did not materially benefit the grass.

Fruit.—Fruit will be rather scarce this year. Some orchards are well loaded, but mostly they have but light crops, and a considerable portion is notty and defective from the effect of the frost.

Potatoes.—The early Potatoes are the largest and best flavored we ever recollect seeing at this time of the year.

The rains, though sufficient for the crops generally, have not as yet effected the under regions of the earth. The springs and wells still remain low. This has been one of those rare seasons that grain of any kind flourishes in low swampy land, the rains having been so regularly tempered to the soil.

PLENTY OF RAIN SHORTLY EXPECTED.

We remember some mouths ago to have seen glowing discriptions of the excessive quantity of rain which had fallen in the neighborhood of Philadelphia and Baltimore. A neighbor of ours just returned from Green county, Pa., tells us that that country has been drenched with floods of rain for a number of weeks. More had fallen there this summer than had for several seasons. It was with difficulty they could tend their corn crop.—It seems from this the rain is on its way hither, and having past the mountains, the most difficult part of the route, we may soon expect it here. Farmers! in with your grain and be ready!

It is due to ourself and our mechanic to say to the reader, that those letters, in our paper, which look like they were 'squabbled' out of their place, and left so through carelessness, particularly the *b's*, are not so in reality. We are not sufficiently acquainted with the subject to know exactly what is the matter. It is, however, probable that letters of a different No. was mixed with the font of Primer that was sent us, other than No. 4, for which our Bill calls. But one thing we do know, that it is, to a person who has a laudable ambition to do things right, extremely vexatious to be bored in this kind of style by the sheer negligence of those whom you pay for doing your business correctly.

We shall not commence the regular issue of this paper for some eight or ten weeks. Until then it will be issued every other week. This will give time for the completion of our subscription list, and for other arrangements. But the Subscribers shall have 52 numbers for their year.

When you want a man to manage the public interest, seek such as manages his own business well; for one who neglects his own affairs will be sure to neglect the public's. Industrious and business habits, when once acquired, will attend to public as well as to private interest.

Hail Storm.—A correspondent informs us that the hail storm we had some Sabbaths ago, was so severe in the neighborhood of Martinsburg Knox Co., that it had entirely destroyed the crops of some individuals in that vicinity. That one hail stone measured 11½ inches in circumference.

Sunday School.—There is at the Springfield Meeting house, (Meth. Prot.) in the neighborhood of this office, at present, one of the most flourishing Sabbath schools, perhaps, in the county. It was organized several years ago by Mr. Lewis, one of the American Sunday School agents, and was continued for several seasons with but moderate success. An attempt was made sometime since to re-organize it for the summer: but this was opposed warmly by several, who urged there was no probability it would be sustained. But it has succeeded to admiration. There has some times been near eighty scholars in attendance; over 1000 verses have been recited on each Sabbath for several weeks past. On last Sabbath there were 1135 verses recited by the larger scholars and 2760 words by the smaller. Between two and three hundred verses have been recited several successive weeks by individual scholars.

These children have all to work constantly in their domestic avocations. But the way this thing is done is by constant persevering application. We have seen little girls going about the house with their books swung around their necks, and little boys in the harvest field with theirs in their pockets, and the moment an opportunity permitted they were in their hands. The interest thus originating among the children was soon transferred to the Superintendents—the teachers—the parents—the neighborhood. I believe the managers of this school receive more real pleasure in one Sabbath spent in the midst of these interesting youths than they would in some three or four days spent in any other amusement you could propose to them. Circulating tickets, with the promise of small rewards to industry, seems to have been the principal agent in producing this excitement among the children.

When our compositors went to work, we had no preparation for the paper, our business not affording us time, we also had to get it up without the benefits of "Exchanges." We offer this as an apology for our barrenness in general news, and for other defects.

The Court of Common Pleas commenced its Session, in this place, on yesterdy.

Advertisements will be inserted on accommodating terms.

ELOQUENCE OF THE WEST.

We give the following extract, on the "eloquence of the west," from the pen of J. N. Maffit, V. D. M. without any abatement from its merit. Who that is acquainted with the eloquence and geography of both the East and the West, does not see the force of his contrast, and the elegance of his discription. The valley of the Mississippi, which is generally distinguished by the appallation of the West, at the present, presents one of the most interesting and prosperous countries, perhaps, in the world. Every thing, almost, that relates to it is on the splendid order. Its rivers are great, its mountains are great, its plains are vast, its forests are vast, its mineral and agricultural resources without limits. What is more rational than to suppose, that *nature's* orator, who always gathers illustration from the scenes around him, would be inspired to mightier thought, amids the splendors of God's work-manship, than he who is surrounded by the comparatively neglected portions of creation. This difference in the eloquence of the two sections of our country is not without a cause. There are, however, other considerations, which tend to make this difference, we cannot mention here, but, to which we may allude at some future time.

"The eloquence of the West, as contrasted with that of the East, presents many striking peculiarities.—The eloquence of the East, is sober, passionless, condensed, metaphysical; that of the West is free, lofty, agitating, grand, impassioned. The East is pure, chastened down to a defiance of critcal censure, sharpened to a fineness too razor-like to cleave the mountains or curve the rocks; the West defies and transcends criticism --unbosoms mighty thougts, applies motives to human mind as strong as the rush of a whirlwind, in language varied yet strong, and if ever defective, yet grand. The thoughts of the West are large. In the East, a river means the brawling Merrimac, the mountain-fed Kenebec, or the poetic Connecticut; in the West, the same word means the proud flow of waves, too wide to roar, and cincturing half the globe in their course. In the East, a plain means a patch of earth hedged in by circumambient mountains, defended on either hand by rock and water; in the West, a plain means an expanse of territory over which the sun rises and sets through a thousand successive horizons, and above whose carpet of verdure heaven spreads out half her stars. In the East, a wind means a blast which wrestles with the mountain beach or maple, or plays fitfully with the fallen snow; in the West, the same word means the roaring impulse which accumulates about the head waters of the far wandering Missouri, passes a distance in which Europe and Asia might be laid out in length and breadth, and pours its vast volume in the Gulf of Mexico.

If the sublimity of Eastern eloquence rise to a mountain height, it is a mountain over whose industrated bosom the lightning might glance inocuous. The sublimer heights of Western eloquence are, indeed, mountains too, yet they are luxuriant and woody quite up to their flowering any gorgeous summits.—The dash of the water is heard in the path of the avalanche, and although rude and shaggy its gulfs and cliffs may sometimes appear, it is yet the warm and living picture of nature's self.

In the pulpit oratory of the West, there is a nearer coincidence to the style of the sacred volume than is heard in the Eastern desk. The grand poetic touches of inspiration are blended with the strong colors of nature in such proportions, that the entire painting presents the appearance of an ancient picture, over which the lapse of centuries had no power save to brighten and purify."

AGRICULTURAL.

AGRICULTURAL.

We propose dedicating a portion of our columns to the interests of agriculture. What we may write or publish on this subject shall be directed to two points;—1st, to recommend to our youthful readers to select the business of farming as their occupation in life:—2d, to contribute our mite to render the labor of agriculture productive.

Our first proposition has more to do with religion and morality, than from a slight view of it, we might be led to suppose. No occupation in life is more conducive to the exercise of those graces than that of the farmer. Poets, who are the strictest observers, have sung of rural virtue from the time they first tuned their harps down to the present day. In the professional and commercial circles the moral principle is perpetually tested;—not so in the agricultural. The farmer has no fees to settle—no bills to make. He has very little left at discretion,—the prices of the products of his labor are generally established and known. Beside, in the retirement of his farm, he is not brought in hourly contact with the great mass of human corruption, which has a tendency to pollute and deprave his mind.

In recommending to youth, the pursuits of agriculture, we mean nothing invidious to other occupations. Professional and mercantile men, in the present state of society, are somewhat essential to its welfare. But certainly, there are more engaged in every profession,—in every branch of business than the public weal calls for. Look at our cities and principal towns. You will there see scores in their groceries and groceries, who, so far from being useful, are a real nuisance. Among the more honorable class of traders what a large number too many are engaged. Small investments, and borrowed capital, on the part of many, render it impossible that they can do more than make a bare subsistence. They can do nothing for their children but raise them in idleness; who will ultimately, in all probability, be let loose as pests on the public. These, if trained to industry, in the operations of husbandry, might become useful and respectable citizens.

The idea that farming is a low, plodding business, is fast passing away. Farmers are raising every year still more and more into credit. They are considered by many as the bone and sinew of the country. Agriculture is getting to be very lucrative,—particularly in this section.—They who till the ground are, perhaps, in temporalities, at this time, the most independent part of the community.

It is true they have to labor. They must "earn their bread by the sweat of their brow." When the earth was made to bring forth "briars and thorns," which man had to subdue before he could gain his subsistence, this was no mark of severity on the part of the Deity, but of wisdom and goodness. It was simply an adaptation of the physical world to the condition of the moral. Fallen man would be happier with labor than without. It preserves his mind from ennui,—strengthens his physical and intellectual powers,—saves him from dyspepsies and disease,—prepares him to enjoy the good creatures of God, and to take sweet repose upon his pillow.

Beside, the mercantile and other departments are not free from difficulties. How frequently, for instance, have we seen the imprudent and aspiring youth, who forsook the occupations of husbandry, for the more flattering prospects of commerce, draw around a whole circle of friends and connexions, such a net of entanglement, from his bankruptcies and his failures, as produced more misery in one hour, than would be produced from the toils of agriculture in a whole life time.

Our second proposition is, to endeavor to contribute our mite to render the labors of agriculture productive. We are well aware that there is much prejudice in the minds of many practical farmers against what they call book-farming. And no wonder, for there are so many speculations by theoret writers, which betray such an ignoranee of fac that the most unlettered *practical* operator can detect them. This weakens his confidence in the whole that is written about farming. But it is not our intention to theorize on agriculture. We are a practical farmer, and have been trained to the business from boyhood,—have had extensive intercourse with the farming community, and from them have received many practical lessons and useful hints. These, as they occur to our recollection, shall occasionally be given for the benefit of others. We shall also select from the periodicals of the day, such articles as we may deem useful,—and should be glad to receive written communications from any of our friends on this subject.

Cutting wheat.—It has been frequently stated on high authority, that wheat should be cut in the greenish order if you would wish to have good flour, and your wheat to weigh well. We cut a field last year so green that we were afraid the grains would shrivel; but they remained plump and full. It weighed 63 to the bushel, and made the very best kind of flour. To let wheat get dead ripe before cut, the bran thickens and the weight depreciates. Nothing would justify letting wheat stand to get too ripe but the prospect of wet weather.

Setting stakes.—By staking and ridering your fence, you can have a firm and good fence with less timber than on any other principle on which a worm fence can be constructed. The common mode of setting stakes, is to throw the dirt back upon the lower end of the stake after it is put into the ground. We are of opinion that the better practice is to dig deep holes for your stake, put the end thereof into the hole and let it remain without being covered with dirt. It then has an opportunity of seasoning and keeping dry, and will last much longer before it needs resetting, and will be equally firm.

What kind of timber is best for posts.—Where cedar or locust cannot be had, swamp oak first, the common white oak next. In all cases the top end of the wood should be put down; for if the butt be put into the ground, the vessels, which nature has prepared for elevating the sap, retaining their natural position, will continue still to raise the moisture into the wood, which, of course, will accelerate decay. But when reversed—placed with their mouths upward, the post remains comparatively dry, which every one knows to be the condition that will keep it sound. That the vessels of the body of trees have the power of imbibing moisture from the ground, when separated from the root, is proven by taking the branch of an apple tree, for instance, in the spring, and sticking it in the ground. It will bud and flourish until the dry weather kills it. Indeed, there are many kinds of shrub and tree which can be propagated from the slip, as the currant, the willow, &c. However, we do not rely upon these speculations for the truth of the position that a post, with the top end downward, will last the longest;—this fact is ascertained by experiment, the great instructer of man. The above only appeared to us reasonable as the cause.

We do not remember ever to have heard any thing said about the durability of wild-cherry for posts. We recently noticed a lot in which nearly every vestige of the white oak, and every other species of tree, which it bore, was decayed and gone, while the cherry stood firm and sound. Since then we have been making observations upon the subject, and are at present inclined to the opinion that wild-cherry has the power of resisting the decomposing influence of the earth and atmosphere, far beyond that of the oak, and probably equal to any other kind of timber.

Salt being good to preserve timber, some bore a hole in the post, from the surface of the ground slanting downward, fill it with salt and plug it with soft wood. Lime, thrown around the post, has also the tendency to preserve it. Posts will last much longer if seasoned before they are set in the ground. It is said the top of the tree is better than the butt. A gentleman of Coshocton county, Ohio, being in haste to procure a post for his well sweep, took for that purpose, the limb of a white oak which lay convenient, one side of which was dead and seasoned. It has now stood its station for upwards of 25 years, and was still standing firm last August.

The time to cut timber for rails.—The common opinion says that the time to cut timber for rails is in January or February. We have found, on observation, this opinion, like too many other common opinions, is founded in error. To rails made in the winter the bark adheres;—between it and the sap the moisture is retained, which causes the rotting process to commence, and your fence soon sinks into decay. Cut your timber after the sap starts,—say in April;—the freezing of the first and second winters will separate the bark from the rails, and even the sap part of them will become dry and hard, and remain sound when your winter made rails have rotted and gone. The bark, however, should be permitted to remain on them until they become seasoned, otherwise they will crack in seasoning so as to retain water, which will cause early decay, as has been exemplified in rails made of timber from which tan-bark had been stripped.

It would be time profitably spent to re-set your fences after the bark is disengaged from the rails, so as to separate from them every thing which would retain moisture and cause decay.—It evinces great want of economy to permit fences to be shaded with weeds, briars, or sprouts. Under such circumstances they will soon rot down.

From the Ohio Republican of July, 13th.

CATTLE SHOW, AND AGRICULTURAL EXHIBITION.

The Directors of the Muskingum county Agricultural Society, desirous of exciting a spirit of emulation in the improvement of agriculture, among the farmers of this county,—and being anxious to ascertain, as far as possible, the present state of agriculture and its kindred arts among us,—and believing at the same time, that much good, would in various ways, result from calling together the farmers and mechanics, with specimens of their productions and articles of workmanship,—have resolved on holding a *Cattle show, exhibition of implements of husbandry, and agricultural and horticultural productions generally, at Zanesville on Saturday the 26th day of October next.*

As the society has been organized but a few months, it is not in possession of sufficient funds to justify offering any premiums the present year, the Directors having already appropriated the amount in the treasury for other objects—(procuring animals, &c.) They must therefore, content themselves with offering instead of money, what they trust will be considered a sufficient stimulous: viz., *certificates of excellence*, to be awarded by judicious committees, who will attentively examine all subjects which may come under their respective departments and report the results of their examinations.

The *committee on crops* will examine and notice specimens of any new or extraordinary grain or vegetable, which may be offered; and will award certificates for the best crops of all kinds of grain usually grown here, and also for the best crops of vegetables—as potatoes—sugar-beets—mangel-wurtzel—turnips of all kinds—carrots—parsnips, &c. [By the term *best* is here to be understood the greatest and most valuable crop per acre, in proportion to the expense of producing it.]

The *committee on stock* will examine all animals which may be offered, and will award certificates when in their opinion there is such excellence as to justify it, on all kinds of stock—as neat cattle—horses—sheep—and swine.

The *committee on implements* &c. will examine all articles which may be offered under this head, and award certificates, according to merit, for ploughs, cultivators, seed-sowers, fanning mills, straw cutters and all implements and machines used by the farmers that are thought to possess excellence.

The *committee on fruit and fruit trees* will examine specimens of all fruits which may be offered, and will award certificates for any uncommon excellence.

In addition to the above, certificates will be awarded for the best samples of silk worm cocoons, and sewing silk, produced and manufactured within the county,—and also a certificate for the best silk reel.

The sum of Five Dollars will be paid by individual subscription, to the person who shall present to the Directors the best plan of a farm house, barn, and other farm buildings—having regard to convenience, economy, and neatness of style.—The plan which receives the premium, is to be afterwards engraved and published without expense to the person offering it. The Directors invite a general competition for this premium.

Arrangements will be made to exempt competitors from all charges of toll at the bridges at Zanesville,

The Directors would express the hope that the farmers and mechanics of the county will not be backward in sending any thing either in the animal, vegetable, or manufacturing line which is valuable, or that will add to the interest of the exhibition. The distinction which the successful competitor secures for himself, and the increased reputaion, and consequent demand for his stock, his grains, his fruit, vegetables, or his articles of manufacture, which is sure to follow, cannot, if properly viewed, fail to be regarded as a sufficient inducement for engaging in so laudable a contest.

Due notice respecting the place of depositing articles, &c. and particularly as regards the course of proceeding on the day of exhibition, will be published by the committee of arrangements.

JOHN SLAUGHTER, *Pres't.*
A. Van Horne *Rec. Sec.*

FARMING IN OHIO.

Of all the states over which the star spangled banner waves, there is not one, which for fertility of soil, and natural advantages, exceeds Ohio. The rapidity with which the territory has been peopled, the industrious and enterprising character of the population; and the broad foundation they have laid for common school education, as well as the higher branches of intellectual improvement, speak volumes for the healthy moral tone prevailing there, and may be considered decisive of their future progress. Bordered north by the beautiful Erie, with its steamboat covered waters; and south by the smooth flowing Ohio, opening a channel of communication with the north, the east and the south; with rivers flowing over its level surface, boatable in all directions; and artificial channels sweeping across its fertile vallies, givig access by water to almost every county in the state; it cannot be wondered at that wealth should increase, and agriculture flourish. Ohio does not contain so much prairie as the states farther west, but this disadvantage is more than compensated by the greater abundance of wood, a want of which is the serious evil of open countries; and while there is not any thing like a mountain on the whole surface of the state, there is sufficient elevation, and undulation, to give free course to the waters, without a foot of unnecessary waste land in precipices or swamps, in this respect much resembling the western district of N. Y. No papers that we have seen have given such clear ideas of the mineral as well as agricultural resources of Ohio, as the valuable essay of Dr. Hildreth of Marietta, and the Notes of a Naturalist, both published in Prof. Silliman's Journal of Science.

The opening of the Hudson and Erie canal of this state may be said to have given the first decided impulse to agriculture in the west; and the extension of the same system of internal improvement in those states, evinced, and perpetuated the beneficial influence. With the new facilities for transportation, it was found that grain could be profitably grown for exportation, and Ohio, from merely raising wheat enough to supply her own citizens, is rapidly becoming one of the first, if not actually the first, wheat growing state in the union. That Ohio is capable of raising immense quantities of grain cannot be doubted by any one acquainted with the climate, the soil, and the natural, as well as acquired facilities for this purpose.—The Ohio wheat has been considered rather inferior to the Genessee wheat; but farther cultivation, and the introduction of the best flourishing wheat will soon obviate this objection. Much too is depending on the mode of manufacture, and in this respect the millers of Western New York are as yet unequalled.

Ohio too, in common with the other western States, is an excellent grazing country, and a large part of the capital and attention of her farmers has been directed to this point. There is not probably a state in the Union, unless indeed Kentucky to be excepted, that possesses at the present moment so many cattle of good blood, and high breeding, as Ohio. And her citizens are finding an ample reward for the pains they have taken to improve their stock, by the importation of the best cattle from Europe. Ohio has many valuable horses of the best blood, and a laudable ambition exists to excel in such matters. These improvements may in a great measure be attributed to the agricultural societies which have existed in that state, particularly near Cincinnati, and the southern and central counties.—Of these societies, the Hamilton county has taken the lead, and from the first has been a most spirited and active association. Its publication have tended to awaken inquiry, reward research, and prompt to successful exertion. The example set by these older associations is extending its influence, and we perceive the other societies are organizing on the same general principles, and we doubt not intended to advance the same great end, the promotion of agriculture. Among the last of these that have fallen under our notice, is one at Zanesville, a rich and fertile section of the state, peopled by intelligent farmers, who evince a disposition to avail themselves of the advantages of improvement nature has so liberally placed within their reach. The address of the committee appointed to report a constitution and organize such an association is now before us. It is a sprited and able production, well calculated to enlist the feeling of the farmers, in such an undertaking, and promising in the end the most auspicious results.

We can only say, let Ohio go on as she has begun, laying broad and deep the foundations of moral and intellectual improvement; taking care that the advancement and development of her physical resources, shall keep pace with her progress in population and wealth; bearing in mind the great truth that in agriculture is her sure source of wealth and prosperity, and the time is not distant, when that state, with her millions of inhabitants, and her vast natural resources, will occupy a proud and commanding position, in the great confederacy of American States.—*Presbyterian.*

Alabama.—The Tuscaloosa Flag of the Union, of the 5th inst., says that the heart of the farmer was never gladdened with more flattering prospects of an abundant crop of all the productions of the soil, than at the present season. Cotton, corn, and all the smaller grains, such as wheat, rye, and oats, promise most abundant returns for the labors of the husbandman. The same journal remarks, that the most gratifying feature of the agricultural condition of the State is found in the large quantity of bread stuffs with which the fields are now teeming, which will effect a saving of many a thousand dollars usually paid to Kentucky and Tennessee for such supplies. We are truly glad to find the Southwest awakening to the necessity of feeding itself—the example is worthy of imitation nearer home.

ITEMS OF NEWS.

Accident.—Another sad accident occurred in this place on Sunday the 7th inst. by leaving a loaded pistol within the reach of children. A boy about eleven years of age had the pistol playing with it in a room, where the unfortunate sufferer, Mrs. Slack, was, unconscious of its being loaded, and having pointed it towards her, discharged the contents in her left jaw; the ball striking the jaw bone, and shattering it dreadfully, and knocking out several double teeth. Hopes are entertained of her recovery.

Ohio Republican.

CANADA.

The Toronto Examiner repeats the assertion it has often made, that emigration is taking place to a very great extent from the Upper Province. Some of the best citizens are selling off their property and investing the proceeds in lands in the Western States and Territories.—The Examiner has the following paragraph, not very complimentary to the order loving loyalists of Toronto:

"*Outrage on the Printing Office.*—There will soon not be a whole pane of glass in our printing office. On four different occasions have the infuriated partisans of ——— and Mr. ——— attacked our premises at night, and smashed the windows with large stones. This, it will be recollected, is the capital of Upper Canada, under the surveillance of the Governor and the Mayor and the city authorities. We have hitherto treated these assaults with contempt. They are getting too frequent. We shall allow the windows to remain in their present condition as a *standing advertisement* of the tory system of discussing political principles."

The Montreal Herald of the 22d states that warrants will shortly issue, for the confiscation and sale of property belonging to individuals who have been found guilty of high treason. The confiscation will not extend, it is said, to the property of refugees—at which the herald is afflicted.

The same journal affirms that a project has been entertained, in this country, of intercepting and capturing the convict ship, about to sail from New South Wales, and liberating the prisoners going out in her in fulfilment of their sentence! What nonsence the readers of the Herald have to swallow.—*Balt. Chron.*

Wm. Lyon Mackenzie has been tried and convicted for violating one of the Neutrality laws of the United States.—The news is brought to us in an extra from the Ontario Messenger, which says that the evidence adduced was a recapitulation of the facts connected with various expeditions that have been raised in this country for the invasion of the British territory. Mackenzie conducted his cause in person, unaided by counsel, and without introducing testimony—that which he offered being rejected as legally inadmissable. He addressed the court and jury in a speech about eight hours long, in which was detailed the whole history of his connection with the Canadian insurrections. The jury, after retiring for three hours, returned a verdict of guilty. The sentence of the Court, which was that he should be imprisoned in the county jail of Monroe county for eighteen months, and pay a fine of ten dollars, was pronounced immediately after the verdict was rendered. Mackenzie was sure of an acquittal, instead of which he is to be imprisoned for a year and a half. The jury when they first went out stood 8 for and 4 against acquittal.

George W. Case was tried this afternoon, for a violation of the Neutrality laws, and convicted, and sentenced to be imprisoned in the county jail of Ontario county one year, and to pay a fine of twenty dollars.

Several indictments have been found at the present term of the Circuit Court for violations of the Neutrality laws, one of which is against *General* Birge.

New York Daily Express.

A large piece of Chalk.—On the South Eastern and Dover railway, in England, an enormous mass of chalk, of several thousand tons, suddenly fell from the facing of the rock forming the entrance of the tunnel through Shakspears'e Cliff. No less than seventy-eight men would have been crushed by the fall, had they not been warned of their danger in time to make their escape, by the previous falling of some particles. The accident afforded a rare treat to the geologists, as it has laid bare the vertebræ of an immense animal, and it is hoped that on the removal of the fallen rubbish, the remainder of the skeleton will be found.

Buffalo Patriot.

THE RECORDER.

ZANESVILLE:

THURSDAY,--------JULY 18, 1839.

ORIGIN OF OUR PAPER.

The last Conference of the Pittsburg District being sensible of the want of a medium, to sustain the interest of the Church, in this region of country, appointed a committee to inquire into the practicability of getting up a periodical for that purpose. The committee, in their report, say: "we are of opinion a western periodical is greatly needed, and that the western part of our work has suffered much, and will continue to suffer much without one:—2. We are further of opinion that a weekly paper of good size, and well conducted, keeping its columns open to a free and fair discussion of all moral questions of importance, and giving an abstract of general intelligence, religious and political, would meet with general circulation, and an ample support."

The committee gave it as their opinion that the paper should be got up on individual responsibility, and that the Conference should have no control over it. They suggested the following as the principles, on which if conducted, the Conference ought to pledge themselves to sustain the paper:—1. "That it be strictly a free, but not a party press; 2. That the paper be issued in folio form, and not less than super-royal size; 3. That a portion of its columns be devoted to general intelligence, foreign and domestic, Congressional news, agriculture, prices current and advertisements." To all which the Conference agreed, then passed the following resolution:

"*Resolved*, That the other Western Conferences be requested to unite in this enterprise, by using all proper endeavors to sustain the paper."

We were then solicited by the committee to undertake the publication of the contemplated periodical. Having some experience in this matter, and seeing the whole length and breadth of the difficulties which it involved, we felt extremely reluctant to yield to the proposition.—But feeling a conviction that we yet owed some service to the Church, and believing that we could serve her, probably, more efficiently that way, than any other, we ultimately consented to embark in the enterprize, provided the Conference would agree to hold its members individually responsible for the pledge it had made to support the paper, we agreeing at the same time to hold ourself responsible to that body for conducting the paper on the principles they proposed. To this the conference assented. In this faith we have now gone to work.

CAUSE OF OUR DELAY.

When we agreed to undertake the publication of a paper, an indispensible condition was that we could procure an office and press of our own. The office was to erect and the press to procure. We stated to the Conference that the earliest possible period in which we could be out, would be late in the spring. In a communication to the Protestant we stated, in substance, (for we have not the communication by us) that we wanted to issue our first No. by the last of May, or the first of June. The first of June, by a liberal interpretation, would mean any time in the fore part of June. Well, our office was completed about the 12th of that month, and ready for business. We had forwarded our order to Cincinnati for a press and type, accompanied by $100 cash, with references to a number of men, both in this place and in the city, with regard to our responsibility in such a transaction, as we thought, in sufficient time to let us get out against the 20th or 25th of June. But it seems we had not credit enough in Cincinnati to raise a press. After our communition had been gone sufficient time for the materials to have been forwarded to us, lo! we received in their place a letter from each of type foundries, stating that for '*cash*,' or 'notes endorsed by responsible men,' &c. &c. &c. we could be accommodated. We saw, at once, that, in this negociation, there was no reliance on any thing but the "cash;" we recollected the old vulgar addage, "money makes the mare go," and immediately forwarded to one of the establishments the whole amount of our order, and, mind I tell you, it brought up the press quicker.

This transaction caused a delay of something near twenty days. We were advised, previous to sending our order to Cincinnati, to forward it to New York, and promised a better article on better terms: but we chose rather to patronize the mechanics of our own State. This is what we have paid for our patriotism.

OUR PROSPECTS.

It was also our understanding with the Conference, if, after a Prospectus was issued, there was not a sufficient number of subscribers returned to justify our undertaking, that we should not proceed. We asked the counsel of some influential members of the Church on this subject; they advised us not to venture without first knowing that we should be sustained. All this was very correct and very prudent. But we foresaw that if a paper was not commenced until a sufficient number of subscribers was first procured to sustain it, in all probability one would never be started; that in this matter something would have to be risked. We, theferore, after maturing the subject in our own mind, adopted for our motto, "go ahead." After this determination we have paid but little attention to procuring subscribers. All our energies have been directed to a preparation, from a conviction that it would be best to get up a sample number of the paper, and then make the effort for patronage. It is true, in compliance with the public call, we issued a prospectus, and sent a few abroad, leaving them to their fate without much solicitude about them. We have now 600 subscribers;—one thousand *good paying* subscribers is the least that would clear our way. This number it will be easy to raise if those interested in our success will only exert themselves. And we hope they will do it forthwith, as there is now no uncertainty about the paper.

After we determinined to "go ahead" our path seemed the most cheerless we ever trod. Our enterprize involved such pecuniary responsibility; such incessant toil; exposed to so many personal difficulties, and conflicts with the public mind we shuddered at the task. Besides, we are reaching that period in years, that men incline to retreat from public life. However, recently, our way seems more cheering. One of the principle difficulties, that of getting up an office, is now over; individuals that we thought would be apathistical towards our project seem warm hearted in the cause. Our delay has called forth letters of inquiry from the east and the west, within a few days past, which convince us the interest manifested on the part of our Church, with regard to our success, is intense.

The Ohio Annual Conference, at its last session, also, took measures to get up a paper, and appointed a Committee to whom that subject was referred. Some time late last fall we wrote to that Committee to know if they could consistently with their obligations do any thing for us, and received for answer that they had determined, as far as they were clothed with authority, in our favor, and a majority of its members have been soliciting patronage for us. We have received communications from a number of the *working men* of that Conference, in whom we have the utmost confidence, encouraging us to go on. So the whole west seems to open to our enterprize.

OUR OFFICE.

We have erected a building about thirty-five rods from our residence 28 feet by 16½, two stories high,—the lower stone, the upper brick,—the whole is decently finished. The upper story is occupied for the office,—the lower has two comfortable rooms, and is designed for a small family.—This house was finished to the plastering in about nine weeks from the time it was commenced.—Our office, press, type, and every particle of furniture, is new, and of the very best materials we could procure.

PITTSBURG DISTRICT OF THE M. P. CHURCH.

We speak of this district because we are better acquainted with it than any other portion of our fellowship. Last year we visited nearly every circuit and station within its bounds; and this year we have had communications from nearly every part of it. It is in a healthful and prosperous condition at the present. Our two last Conferences were the two best Methodist Conferences we ever attended in either of the Methodist Churches. There has been a most rapid improvement in the ministry of this body.

We had, it is true, among us some "troublers of our Israel." Some upstarts who had more sail than ballast, and some unprincipled demagogues who cared more about the promotion of their own interests than the welfare of the Church. But thanks to the Supreme Being, that these, in the language of an interesting correspondent, have "gone to their place." We are no longer to be troubled with them.

We have never felt our Church relationship, since we have borne the Christian name, more agreeable than at the present. We have, at this time, the firmest confidence in our brethren of this district. We realize in our relation to them, with great pleasure, the interesting declaration of the Psalmist, "how good and how pleasant a thing it is for brethren to dwell together in unity."

As our cause proceeds our confidence increases in the stability of our ecclesiastical institutions. There is no sovereign power seated in our Church behind which dandy preachers and crawling sycophants can shield themselves from public opinion. Our government places every man upon his own basis. Hypocrisy may deceive for a while, but it will ultimately be detected and forsaken.

This year, some of the most important appointments in this District, are filled by young men, who have been reared in the ministry among us. They are filling them with great usefulness. O that God may keep us humble and give us abundant religious prosperity.

CHARLESTON CHURCH.

Better than one year since the dreadful conflagration, in the city of Charleston S. C., laid in ashes the Meth. Protestant Church of that place, then recently built. We learn from a communication, not long since published in the Protestant, from their pastor, Bro. Davies, that they have erected an other elegant church on the same spot, which was dedicated to the worship of Almighty God on the 24th of March last; and that as the fruits of "our latest efforts 23 have joined the church."

The brethren of Charleston have been calling on their friends throughout the United States for aid. They had recently been driven, by the exercises of "clerical supremacy," from the church of their spiritual nativity, to seek a home where the order of Providence might direct. They erected a church of taste and elegance, in which to worship the God of their fathers. While a considerable debt was still hanging over the society, on account of this house, it was entirely consumed. To meet this old demand, and raise the means to build again was the difficulty. For this purpose they have been calling for aid.—Brethren is it not the duty of christians to "bear each others burdens?" Should we withhold our aid on such occasions, and not properly respect the dispensations of Providence, how could we expect exemption in furture from such severe calamities?

LITERARY INTELLIGENCE.

Methodist Protestant Letter-Press.—This is the title of a little sheet, the two first Nos. of which we have received, proposed to be issued monthly, at Philadelphia, by the Rev. Thos. H. Stockton. This little messenger, though very small, was nevertheless, quite refreshing to our spirits,—for we are not among those who judge of things by their magnitude. We agree to the principles in the following stanzas which Dr. Watts sent to a lady who had made sport of his dimunitive size:—

"Were I so tall to reach the pole,
And grasp the ocean with a span,
I must be measured by my *soul*,—
The *mind's* the standard of the man."

The object and plan of this work may be seen from the following extract from its pages:

"Objects.—The *general* object of the Letter-Press is, to do something in promotion of Christianity.

Its *special* object is, to aid the establishment of the Methodist Protesant Church—particularly in Philadelphia.

Plan.—The preparation of articles appropriate to the cause.

The publication of a sheet, in the style of the one now presented, on the first Tuesday of every month.

The circulation gratuitously, or otherwise, of at least 1000 copies of each number.

Support.—The payment, by those who may desire to receive it regularly, of 50 cents, per annum, for a single copy.

Donations, from such as may be willing to extend its gratuitous circulation—such donations to be duly acknowledged."

New York Luminary.—This work is published weekly, on an imperial sheet, in the city of New York, by a committee of the Methodist Protestant Church, at $2 per annum. We have received the second No. It is to be the organ of the New York Conference of the M. P. Church. Its columns will be open for discussion on the subject of human rights and church polity. It proposes to be a medium of general information.

Rev. Nicholas Snethen has completed a work called the 'Identifier,' which we believe is intended to be published.

Rev. Asa Shinn has written an elaborate work on "The Benevolence and perfect Rectitude of the Supreme Being." Proposals are issued for its publication. It will probably make a volume of 400 pages duodecimo, and will be delivered to subscribers, bound in a neat form, at $1.25.

EXTRACTS FROM CORRESPONDENTS.

Most of the following extracts are from letters to us returning subscribers, and were not, perhaps, intended for publication; but though of old date we have thougat they would be interesting to the members of our fellowship.

"Pittsburg, 10th May, 1839.

"We are getting along in this station about as well as could be expected, all things considered. Forty-five have joined the Church this year, and more are expected. Our class and prayer meetings are much better attended than in the commencement of the year.

J. DALBY, Jr."

"Allegheny Town, Pa., May 9, 1839.

"We are doing tolerably well here and in Pittsburg. Tidings from the neighboring circuits is very good. Very respectfully &c.,

JOHN BEATTY."

"Steubenville, O., May 17th, 1839.

"About 40 have been added on Ohio circuit this year. We could do better, I think, if the members were more energectic in relation to class meetings and prayer meetings. Upon the whole, they are a good people, and I am happy among them. Excuse haste, &c.

Yours truly, GEO. BROWN."

"Cambridge, O., April 18th, 1839.

"We have some refreshing times on this circuit. Some 25 or 30 have joined this year. And although we cannot say we have any special revival, yet prospects are good. Our congregations are large and attentive, and the openings, or calls to new places, are many. The health of myself and family is good since I came to this (Cambridge) circuit. Yours &c.,

JOHN HERBERT."

"Mt. Pleasant, O., March 26, 1839.

"We are doing well on Mt. Pleasant circuit this year. We have taken a considerable number of persons into the Church, and propose building two brick meeting houses the ensuing summer. Yours respectfully, &c.,

GEO. HUGHES."

"Prunty Town, Harrison Co., April 22d, 1839.

"WE are getting along in peace and union in this (Middletown) circuit. We have taken sixty-three members since Conference, and the work is still going on. Yours in the Gospel of Christ,

WM. G. WILLIAMS."

"Mt. Tabor, Indiana, April 9, 1839.

"*Dear Brother*:—"Go ahead." The brethren, so far as I have consulted them, are in favor of your enterprize. The cause of God is on the advance in this region. The Lord has been pleased, in much mercy, to remember our infant Society in many places.

Your brother and fellow-laborer in the Kingdom of Jesus Christ,

D. H. STEPHENS."

Bournsville, O. May, 6, 1839.

Our third Quarterly Meeting closed last night at the Falls of Paint. Seven were added to the Church, which makes forty-one this year we have received. I hope you may be successful in your undertaking. Yours, &c. JOHN GUEST.

Madison Ct., Ia., May 30th, 1839,

Bro. Springer:—As you have heard nothing from this circuit for a long time, you would no doubt be pleased to know how we have been doing. We have had a variety of difficulties to encounter, among which are the disorganizing influences of Campbellism. Though one of our ministers was weak enough to be led off with this influence, yet I believe our members all stand firm.

I attended a two-days meeting last Saturday and Sabbath in Ripley county, at brother Rea's. We were favored with the divine presence;—mourners fell prostrate before the Lord and cried for mercy, and there remained until after midnight, "wrestling" with the Most High. Believers were greatly refreshed. I thank God for these displays of His goodness. I hope the flame will extend until it influences the whole circuit.

Yours in the bonds of Christian love,

THOMAS BLAND,
Unstationed Pr.

Bro. B. will please act as our agent, and forward the cash for his subscribers.—Ed.

Waynesburgh, Pa., July 2, 1839.

Bro. Springer:—If I were sure you were ready to publish, I would send you a brief account of the situation of this circuit for publication. We have succeeded in raising subscriptions to buy a parsonage at Waynesburgh, say $500. The Society at Waynesburgh have finished their meeting house. We have about $300 subscribed towards building a house in another part of the circuit. The circuit is generally in good life.—We have formed several new societies, and taken in upwards of 100 members during the year. In a word, our cause here is onward.

Your brother in Christ,

JAMES HOPWOOD,
Sup. Monongahela Ct.

Broadridge Ct., Grant Co., Ky., May, 1839.

Bro. Springer:—After my best respects, permit me to inform you that on parts of this circuit we are doing well. We have had a considerable revival on Grassy Creek, most of the year. I have had the happiness to see the last of my brothers and sisters "after the flesh," converted to the Lord. There are eleven of us, all members of the M. P. Church, with the exception of one who removed to Tennessee, who has not an opportunity of uniting with our fellowship. Both my parents are also rejoicing with us in the same religious community.

At a Three-days' meeting, which commenced last Saturday, in Richland, Harrison co., in the neighborhood of Patterson Smith, we had a cheering time. The work of the Lord commenced on the day the meeting opened, and continued until the close. Several professed to obtain God's pardoning mercy, and twelve left the meeting deeply distressed on the account of sin. May the Most High have mercy upon them! The Society at that place has not been established quite three months. It now numbers 26 members. One was a member residing in the neighborhood; five removed thither from other societies; two joined from the Presbyterians; four from the Episcopal Methodists, and the rest from the world. We have received 36 this year on this circuit.

The Church at Ruddles' Mills have had a hard struggle with Campbellism. They made a noise for a while, "like the sound of many waters;" but they have taken none of our members there yet. Pray the Lord to revive his work, and we have nothing to fear.

Our President, Bro. M'Guire, is hereby informed that the friends on this circuit wish to see him again before Conference.

Yours in the bonds of a peaceful Gospel,

JOS. SIMPSON, *Sup.*

Hamilton Co., O., April 9th, 1839.

Bro. Springer:—I am happy to address you once more. We are in too much of a luke-warm state, but we have had some omens for better days at some appointments; at others we have had our difficulties. The doctrines of Restorationism, Campbellism, with every other *ism* opposed to Christianity, seems to centre in this quarter. But the God of Jacob has promised HIS protection. I rejoice that we shall have a channel of communication, through your columns, by which we can be informed of the condition of our Church, and detect false reports put into circulation to our injury. We have some accessions to our classes, so that on the whole, I believe we about hold our own.

Your friend and fellow-laborer in the Gospel of Christ,

ISAAC HUNT,
Sup. Cin. Ct.

COMMUNICATIONS.

For the Western Recorder.

Tiffin, May 27th, 1839.

Bro. Springer—I have thought it would be proper for me to furnish for the first number of the Recorder, a brief statement in relation to the cause of God in the Methodist Protestant Church, within the bounds of the Pittsburg Annual Conference. I regret that it is not in my power to furnish recent intelligence from all the appointments.

Soon after the rise of Conference I visited that part of the District lying in the State of Virginia:—Wheeling Station, Middletown, Harrison, and Weston Circuits. We had interesting meetings at all of these places. The number added at the different appointments just named I cannot state, but is said to be considerable.

From the Monongahela country we crossed over to the Union Circuit; held a meeting in Connelsville—had quite a refreshing season of grace—several were taken into the Church.—We learn, from recent intelligence, that near fifty have been added since conference to that circuit. I proceeded thence to the Clearfield circuit; found the members somewhat discouraged, in consequence of Bro. Hamilton vioalating his obligation to the Conference, and to the circuit, in declining the appointment assigned him by the stationing committee. Bro. J. Addis is travelling the circuit, and we hope, doing well. Brownsville circuit was the next appointment: about fifty have united with the Church there since Conference, principally in Bridgeport.—Thence to Allegheny-town, Pittsburg Station and circuit. There has been an addition of forty in Pittsburg this year, and I learned the circuit was prospering. The number received in Allegheny-town we have not heard, but were informed it has been considerable. New Lisbon was the next appointment in order. Two weeks were spent here, I fear to but little purpose. There appeared to be some insuperable obstacle in the way of Gospel Truth. Bro. Kelly has returned to the Conference whence he came.—There are valuable members in New Lisbon station: may they prove faithful to God, and to their principles, under every discouragement.—From New Lisbon we came down to Wellsville, had a meeting there, and then crossed to the Ohio circuit. I learn from Bro. J. Browning that there has been a very interesting revival in Wellsville,—between forty and fifty have united with the Church in that place. The Quarterly Conference of Ohio circuit and Washington station have, for the time being, united the station to the circuit, and Bro. Ross is travelling with Bro. Brown. I am informed that fifty have united with the Church on their circuit, and that it is in a prospering condition. A detailed account of the organization at Holliday's Cove, and also the gracious revival in Steubenville, has been published in the Methodist Protestant. We presume that at least one hundred and thirty have been converted, and added to the Church in Steubenville since Conference. Mt. Pleasant circuit, at Wesley Chapel, was my next meeting. It was a meeting of interest. Twelve united with the Church there, more than sixty in all since Conference. The next week I visited Georgetown circuit, in Belmont; twelve were added at that meeting: also, about forty this year. From there to Woodsfield. The number taken into the Church on that circuit, may be estimated at fifty. From there to Pleasant Hill, Deersville, Coshocton, Adamsville, Cambridge, and Pennsville. The number added on these circuits, are as follows:—Pleasant Hill, twenty; Deersville, forty; Coshocton, sixty; Adamsville, twenty-five; and Cambridge, forty: the number not known on Pennsville circiut. Jackson circuit not visited. My next appointment, in course, was Lancaster station. The society in that place have suffered on account of the very reprehensible conduct of Enos Woodward. None of the members have left, nor do any of them intend leaving the Church.

After having spent two weeks pleasantly, and I trust, profitably, in Lancaster, we came to Zanesville station: from there to Zanesville circuit. In the station fifty have united with the Church, since Conference—on the circuit, one hundred. Since we left there we have visited Newark, Mt. Vernon and Bucyrus circuits, and are now attending a meeting in Tiffin, on the Sandusky circuit. On the Newark circuit forty have been added; on that of Mt. Vernon prospects are said to be good; on that of Bucyrus, nineteen of an addition. Sandusky is on the rise. We are informed that thirty-six have been added on the Loraine circuit, and seventy-five on the Monongahela. Thus you perceive there has been an addition of more than one thousand this year, on the circuits and in the stations named: add to this the additions on the circuits from which we have not yet heard, and we may safely calculate, by the blessing of Providence, and the faithful labor of the preachers, on a large increase at the next Annual Conference. There is one fact which has afforded me much gratification: I have found the preachers to manifest great care in examining into the moral qualifications of those who have applied for membership in the Church.

In conclusion, permit me to say, that I sincerely wish you prosperity in your periodical enterprise. The Conference having recommended it, and you having been at great expense in making preparations for it, the preachers and delegates will no doubt remember their pledge to patronize the "Recorder," by extending its circulation, and contribiting to its columns.

Yours, &c. Z. RAGAN.

Warrensville, O. June 24, 1839.

A letter from Bro. M. N. Warren to his father in this place, states that they have had an interesting meeting in Bakerstown on the Pittsburg circuit, at which twelve were added to the Church. In Warrensville the Church has prospered this year; sixty, it is believed, were converted as the result of one meeting, and between forty and fifty added to the society. I have recently learned that some thirty or forty have professed a change in the Youngstown station, and received into the Church.

In great haste, yours affectionately,

Z. RAGAN.

For the Western Recorder.

Mr. Editor:—Since the 2d Tuesday in September, the time fixed for the sitting of our next Annual Conference, in New Lisbon, will soon be here, it may be well to remind the stewards of the several circuits and stations throughout the Pittsburg district, of an important official duty, which the economy of our Church has confided to them, and which hitherto, from some cause or other, has not received sufficient attention:—*we mean the duty of making Conference collections*. Our book of Discipline makes it the duty of stewards "to see that a Conference collection be taken up, some time in the last quarter, previously to the sitting of the Annual Conference, both in the classes, and in the congregations. The whole when made shall be forwarded to the Conference steward." This collection is intended to meet the claims of the deficient itinerant laborers, the superannuated, the widows of our preachers, and their orphan children. Surely this is an object of too much importance to all concerned, to be wholly lost sight of by our stewards, to whom alone the laws of our Church have entrusted this matter. Our ecclesiastical institutions have said to the ministry of the M. P. Church, *yours is wholly a spiritual work*. "It is not reason that you should leave the work of God, and serve tables,"—you are to give yourselves "continually to prayer, and to the ministry of the word."—Acts vi, 3—4. This matter then, and all other temporal matters among us, belong, on disciplinary and scriptural principles, to the membership of the Church; and if the stewards, who are their appointed officers, refuse or neglect to act in this case, injury will be sustained by our cause, and the stewards must, of course, bear the blame.

Our older circutis and stations are said to be doing well in relation to ministerial support; but there are many places called circuits, that are, in fact, merely missionary fields of labor, where attempts are now being made to get up circuits, and which would in all probability, hardly be called circuits at all, were it not for the legal advantages secured by the name. These circuits, just struggling into existence, are not able to sustain those who labor among them; and it is not fair—it is not just to put our preachers to this *new, frontier pioneering work*, and then deny them the benefit of Conference collections, which collections have been ordained by the law, to a great extent, for their support. The strong must sustain the weak. They, the strong, were once weak—they received help, and have become strong, and now should be called on by the stewards, to help others who are still weak. They in turn may become strong, and assist others, and so this good work may be carried on from year to year, and from generation to generation.

But should the stewards refuse, or neglect to attend to this matter, in obedience to the laws of the Church, what then?—Why, this is on their part a neglect or refusal of official duty, for which, according to the Constitution, the Quarterly Conference may "admonish or reprove them." Or it is mal-administration, which means going beyond, or falling short of the requirements of law, for which, according to the Constitution, they may be "removed from office," and be legally incapacitated to fill the same office again, "without the consent of the Q. Conference."

Upon the whole it may be taken for granted, 1. That our stewards only need to be reminded of their official duty, and it will be performed. They, as well as all others concerned, desire that our preachers should be *sustained*. 2. That our members, and out-of-door friends only need to be called on, in some suitable way, and they will help in this good work.—3. That collections from all the circuits and stations, *of a respectable amount*, will make, in the hands of the Conference steward, a *fund* for distribution among the deficient preachers, which will make them measurably forget the pecuniary embarrassments of the past year; prevent them from retiring from the work of the ministry, and encourage them to toil on in the vineyard of the Lord.

Mr. Editor, it is now hoped by many of us that the ministry of the Methodist P. Church in the Pittsburg district will be more confidential—better worthy of support in time to come. Surely the hypocritical double-dealers are all, like Judas, gone to their own place, by this time.—They ate our bread, but they did us no good. No man can, in the nature of things, build up a cause which he means to betray or forsake. And they hung on eating our people's bread, even after their arrangements were made to go elsewhere.—O what an imposition! Our Church, like an ocean visited by the winds of heaven, is heaving on its waves, all its dead to the shores. We look for fair weather—a clear sky, a pleasant voyage, and a safe arrival in the heavenly port in due season. Let the officers be trust-worthy, and the crew and passengers pleasant and harmonious, and there is no danger. He who sits above the storms will still enable the trusty and out-looking watchmen to give forth the cry—"*All's well.*"

Yours truly, GEO. BROWN.

Holliday's Cove, July 4th, 1839.

DEATHS.

It becomes our painful duty to register the death of our beleved sister, JANE FRANCIS, wife of the Rev. Isaac Francis, of Connelsville, Pa., who departed this life, March 29th, 1839, after a severe illness of three weeks, in the 28th year of her age. She was about four years of that time a professor of religion, and a member of the Methodist Protestant Church. She gave a rational and scriptural evidence of an interest in the atoning merits of the Saviour, who is the pillar and ground of the truth, and expressed a strong desire to depart and be with Christ. Sometime before her illness, she, with her companion, resolved to live very near to God, and in order to accomplish this, their pious purpose, were more punctual on the means of grace, and the performance of christian duties. On Thursday evening, the commencement of a protracted meeting held in this place, she was out to hear the word of God, which proved to be the last discourse she ever heard from the pulpit, for on Friday she was taken sick, and on Friday three weeks she closed her eyes on all things beneath the sun. The morning before her death she said to her companion, "I am going to die; it is not the will of God that I should live to see my dear children raised, but I can with perfect resignation give them into the hands and protection of my merciful and heavenly Father." She requested her husband at the same time to raise them up in the "nurture and admonition of the Lord." She lingered a few moments, breathing out her hearts desire to the Lord, then exclaimed, "O my blessed Lord, how long shall I suffer?" when her soul was vented in the following lines of the poet:—

"Soon will the toilsome strife be o'er,
Of sublimary care,
And life's dull vanities no more
This anxious breast ensnare."

These were the last words she spoke so as to be understood, for she was taken in a spasm in which she remained until she fell asleep in the arms of her Saviour, no more to wake 'till the shrill clarion of God shall rouse into action the "dead who die in the Lord." Then our dear sister will arise in the lovely likeness of Jesus, whose name was her delight the last four years of her life, and also her delight in death. JAS. M. PIPER, Supt.

ITEMS OF NEWS.

Horrible.—Yesterday morning, a whole crowd of people were collected in front of a house in Front-street, below Market, their countenances indicating the most painful and intense anxiety. We looked up, and on the roof of the house beheld a small boy creeping from the dormant window down towards the spout, in order to catch a little pet bird that, released from it fetters, had taken refuge in that apparently inaccessible spot. He had gotten about half way, when fear overcame him. He advanced a little more. We held our breath and closed our teeth with excessive sympathy. Another step and a conclusive shudder ran through the crowd. The bird moved a little further. The boy made one unsuccessful grasp—the crowd shrieked with apprehension—and the boy, horrible to relate! *fell*—into the hands of his father, who pulled him in the window by the breeches, and severely whipped him for his temerity.

Philadelphia Times.

A huge steam ship, of 1300 tons, was launched at Quebec on the 13th. She is to be schooner rigged, and sent to Liverpool for sale—to take in her engines there.

The Philadelphia Gazette says that the young Dyotts have absconded from that city, to escape the merited doom which awaits the elder Dyott.

The Buffalo convict ship, it is understood, has been engaged in England, to convey the rebels and brigands from this country to one of the penal colonies, and may be daily expected at Quebec. The Mercury states that a mercantile house in that city has received instructions to make the necessary preparations for equipping the convicts for their voyage. It is also stated that the convict vessel will have an escort of the 51st Regiment on board, and that her destination is New South Wales.—*Montreal Gaz.*

The Cincinnati City Council have under consideration an ordinance authorizing the arrest of "all vagrants, loafers, gamblers, common street drunkards, and all odd-looking *gentlemen* having no ostensible daily employment, nor means of livelihood." The Cincinnati Whig ventures the assertion that the city marshal and watch will have their hands full, should the ordinance pass.

Business Department.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

We request our agents and friends, so soon as this number shall have reached them, to immediately forward to us what moneys they can obtain. Our office and printing materials have cost us something like $1100. We borrowed $400 at a very heavy interest, which is to be paid in two months from now. After Conference will be too late to meet that engagement. We have labored hard, and made much exertion to get thus far on, more for the public accommodation than our own. May we not expect, in turn, that our friends will make some effort for our relief?

Bro. Clarke of Ia. says, "I will take five copies of your paper, to atone, in some degree, for the few subscribers I am now ready to send. I will pay for them in advance, but reserve the privilege of getting subscribers for them."

Such acts, at this time, would be to us peculiarly well timed. How much easier would it be for each friend of our enterprize, to advance $10 or $50 than for us to advance $1100. This would be "bearing each other's burdens." And, brethren, the probability is, that so far as profits are concerned, you will each be as much benefited as we will. Bro. C. above pledges himself for twenty subscribers.

Credits will be given in our paper for all moneys we receive.

PRESIDENTIAL APPOINTMENTS.

Bro. Ragan will be at the Boardman circuit on the 14th, and at Monongahela on the 27th of this instant.

CAMPMEETING NOTICES.

A Camp-Meeting will be held for Union circuit, commencing 22d of August, on the Mount Braddock farm, owned by widow Mason and heirs, and is about one mile from the old Camp ground, on the farm of Col. Paul. We request the attendance of the President, and all our ministers, stationed and unstationed, as well as the ministers and members of other Churches who can make it convenient to be with us.

J. M. PIPER, *Sup.*

A Camp-Meeting for the benefit of the Zanesville circuit and station, of the M. P. Church, will be held on the land of Bernard Workman, near the residence of C. Springer, commencing on the 30th of August, 1839.

We request all our ministers, stationed and unstationed, and the ministers and members of other Churches, who can make it convenient to attend with us.

JAMES ROBISON, *Sup.*

Cattle for Sale.

TWENTY-FIVE thriving young CATTLE for sale. Inquire at this office, 5½ miles west of Zanesville.

Sketches of Character.

VOLTAIRE.

Frederic II., so conspicuous in the history of the eighteenth century as a politician and a warrior, has a still greater claim upon the attention of prosterity, on account of the influence which he exercised on the moral and intellectual movements of his time. The part which he took with respect to the new philosophy, contributed in no small degree to its success. He was in every way a remarkable man. He was trained in the school of adversity. A severe education, and a dislike for those about him, gave him an early disgust for what others regarded with affection and respect. In the retirement to which he was condemned by the harshness of his father, his only solace was in literary pursuits. At home he found nothing to gratify his inclination. The language of Germany was uncultivated; its learned men were divines, entirely engaged in controversial theology, or pendants of other professions; it did not possess a national literature. It was therefore to France only that he could look for gratification. He perused with eagerness the early works of Voltaire, and conceived the greatest regard for his person and character. He solicited, as we have already seen, his acquaintance and correspondence. When called to the throne, upon the death of his father, in 1740, though almost immediately involved in wars and complicated business, he still retained his love for literature. Amid the labors of the camp and the cabinet he found leisure for composition and study. A circle of Frenchmen of letters, most of them connected with the new school, formed his favorite society. With regard to religion, he did not affect to dissemble his skepticism or indifference. Voltaire was the object of his veneration; he regarded him with the feeling which the grateful pupil entertains towards his master.

But though Voltaire was received by Frederic with a lively welcome, and was treated with respect and liberality, it soon appeared that their friendship was not compatible with familiarity. The poet was expected to examine and correct the compositions of his royal pupil. This was a dangerous office. He took part in the squabbles of the court, became involved in dishonorable transactions, and lampooned Maupertius, who stood high in the king's favor. An open rupture was the consequence; and he was dismissed in disgrace.

Though this honorable intercourse was so speedily terminated, and Voltaire was not able to make it a source of gain, it served greatly to extend his fame, and had some influence on his future writings. The quarrel excited universal attention. His opponents were glad to avail themselves of an affair which could so easily be represented to his disadvantage; his admirers were not unwilling that the public attention should be directed to a transaction which was so plainly calculated to give them importance.—Men of letters might encourage the most ambitious hopes, if they were to be deemed fit antagonists for princes. Poets and scholars had often enjoyed the patronage of sovereigns. It was reserved for Voltaire to quarrel with the most celebrated monarch of the age in the sight of all Europe.

Voltaire was too sagacious an observer to visit Prussia in vain. In his intercourse with Frederic he picked up a new topic, which he henceforth set in the front of his battle against Christianity. During the remainder of his life, he never ceased to declaim on toleration. This was an amiable and popular principle under which he might easily conceal what was most startling and repulsive in his designs. It was calculated to gain those with whom coarse jeers and vulgar caricature would be less acceptable. Frederic, who felt too much contempt for every form of religion to deem it worth while to persecute, had made universal and complete toleration a maxim of his government. With him it was the natural offspring of cold indifference, and was suitable with his heartless, phlegmatic character. It was natural, and therefore not ungraceful. With Voltaire it became a mere instrument of sophistry. He disingenuously exhibited the intolerance of Romanism, as he had already exhibited its corruptions, as arguments against the pretensions of the Gospel. His enmity towards the believers in revealed religion was manifested in his warmest panegyrics upon liberty of conscience. It was always evident that all he meant was, that every opinion should be tolerated, except those entertained by the Jew and the Christian.

Voltaire was now anxious to revisit Paris; but the recent publication of the most licentious of his works had excited the just indignation of all the friends of decency, and placed an insuperable obstacle in the way of his return. For some years he resided chiefly at Colmar; after that at Lausanne and in the neighborhood of Geneva. But the simplicity which yet distinguished that republic was intolerable to so profligate a worldling; and in 1759 he passed into the French territory, and fixed his permanent abode at Ferney. The discontented Genevese crowded around him; his chateau was soon surrounded by a considerable village, and vanity was amused by the opportunity of mimicking the duties of the legislator and the sovereign.

During the twenty years which Voltaire spent at Ferney, his activity continued unabated, and it was chiefly exercised against religion. With unceasing assiduity he rang the changes on the common place objections to Christianity and inculcated universal skepticism. It is not easy to discover the actual extent of his own belief.—With the Gospel, however, he certainly rejected the most important points of what is called natural religion. He altogether denied the doctrine of a future life: he labored to confound the distinction between vice and virtue; and though he always professed to acknowledge a Creator, he was ever willing to raise a laugh by the most fearful blasphemies. But his attacks on Christianity, powerful as they were at the time for evil, were little calculated to add permanently to his reputation. They exposed his weakest points. His hostility to religion was not the result of thought or learning: it was the offspring of a corrupt heart. He prosecuted it in a way which plainly showed how ill he reasoned, and how little he knew. It may be remarked with regard to all the infidel writers of modern times, that it is no easy matter to get an accurate notion of their real views till they arrive at absolute atheism. But in Voltaire this indistinctness was so remarkable as to amount to an intellectual deficiency. He had nothing positive or substantial about him, it was "vox et prætera nihil;" or rather a charming tongue expressing only low thoughts and base passions. The fecundity of his mind bore no proportion to his marvellous facility in composition; but he was not ashamed to repeat himself; and the principles and objections which he had broached forty years before, and which had over and again been exposed and answered, were put forth from Ferney with as much complacency as if they had been irrefragable, and new.

In the meantime Voltaire received the most flattering homage. Frederic resumed his correspondence with him, and sent him a bust of himself, inscribed "Viro immortali;" Catherine of Russia courted his friendship; one of the German princes caused a medal to be struck in his honor, bearing as an inscription a verse of the Henriade, "Il ote aux nations le bandeau de l'erreur;" and his statue was erected in Paris. Ferney was a place of pilgrimage. *Enlightened* persons of all nations were proud to bow before the patriarch of modern wisdom. Yet he had to endure various circumstances of annoyance and mortification. Though he still affected to take the lead in the crusade against Christianity, and spoke of our LORD in language which breathed the virulence of personal enmity, he found his disciples most of them stepping before him in the march of impiety, and despising him for his lingering prejudices. The tranquility of Ferney, sweetened as it was by attentions and flattery, could not satisfy the cravings of his vanity. At the age of eighty-four he determined again to show himself in Paris. His reception was a triumph. His presence was acknowledged with more than royal honors. But the excitement was too great for his remaining strength. He felt that his days were numbered, and declared that he had come to Paris to find glory and a tomb. Amid the most flattering marks of the public admiration, he died a miserable death, on the 20th of May, 1778.

Such was Voltaire; such the origin of French infidelity. The "Economists" completed the work of the "Encyclediste," and ten years more brought about the Revolution. A bolder generation put in practice the theories of their speculative predecessors, and the throne and the altar were supplanted by the rights of man, and the worship of the goddess of reason.

Illa propago
Contemptrix seperum, sævæque avidissima cædis
Et violenta fuit: scires e sanguine natos.

The first result of the experiment was an explosion which shook the world—an eruption which caused a wide-spread desolation. Some regions still feel the consequences in an uniform barrenness; others have begun to wear a partial vegetation; others again exhibit a productiveness which they did not possess before. It effected permanent organic changes. The aspect of the social system testifies to the violence of the mighty agencies which put down mountains, elevated valleys, and gave admission to a flood of waters which affected the very structure of the moral world.—*British Magazine.*

LORD BOLINGBROKE.

"The scorn and wonder of his age," was Lord Bolingbroke. Few men have been more highly gifted by nature, or whose gifts were of less service to himself or others. To a noble person, elegant manners, and splendid genius, he united a depraved, malignant, wicked heart.—Therefore, instead of employing his talents for the good of mankind, he prostituted them to the base purpose of endeavoring to undermine the Christian religion, which is the best gift of God to man.—Though he possessed an elegant style, he was, as Burke justly observes, "a presumptuous and superficial writer"—and there is, in reality, little in his voluminous works worth reading—except for the style. The *best* of his writings are his Letters on the study and use of History; and the worst, in all respects, are his philosophical, or Deistical Essays. I have often tried to read them, but found them so empty of all good,—and indeed, so loose and flimsy, that I never could get through them. I was forcibly reminded of Burke's exclamation—"who now reads Bolingbroke?—who ever read him through?" I never heard of but one man that did—Lord Chesterfield: he tells his son that he went through his philosophical work; but advises his son not to read it: though he recommends him almost to commit to memory his historical and political writings, on account of the beauty and eloquence of the style.

It is melancholy to see such a man as Bolingbroke, instead of being the ornament and benefactor of the world,—laboring to poison the fountain of human happiness—and even attempting to invalidate the proofs of the moral character of God, and consequently all expectations of rewards and punishments—leaving the Supreme Being no other perfections than those which belong to a first cause. But his attempt, however labored, proved vain—as all such attempts ever will—equally vain as the attempt to blot the sun out of heaven. The infidel writings, which made so much noise in their day, have already gone, or will soon go, "to the family vaults of all the Capulets"—and Christianity is rising on their ruins: and will soon possess the world.

LORD CHESTERFIELD.

I can hardly name the man whose talents were so much overrated in his own day, as Lord Chesterfield's. This may be ascribed to the eloquence of his manners, his playful wit, the pleasant style of his conversation; and to the glitter of his coronet and character: for he was after all, a man of but superficial abilities. And though taste, I should think was his forte, he preferred the Henriade of Voltaire, to the the Paradise Lost of Milton. There is nothing in his history that shows him to have been a great man: and his Letters to his Son, prove him to have been the very reverse: "they teach (said Dr. Johnson,) the *manners* of a dancing master, and the *morals* of an apostate." Should any urge, as evidence of Chesterfield's talents, his speech upon the liberty of the press, they may be informed that this able speech, which did his Lordship so much honor, was written by Dr. Johnson; who did not even hear Chesterfield, but was merely told the side he took in debâte, and the general course of his argument; and Chesterfield deserves as little for it, as Hannibal does for the speeches which Livy puts into his mouth. Chesterfield's Letters have done much injury to young men: they have helped to make unprincipled coxcombs; but never to make a great or a good man.

RICHARD BRINDSLY SHERIDAN.

Among the splendid constellations of orators and statesmen, that appeared in England towards the close of the last and the beginning of the present century, one of the most brilliant was Richard Brindsly Sheridan. This constellation—such as never before appeared in that country—was led on by Chatham—after whom followed Burke, and Fox, and Pitt, and Sheridan, and Windham, and closed with Canning. I do not mention Castlereagh among them—whom I consider but a very ordinary man—nor even Brougham, who is just such a man as often appears—and whose superior it would not be difficult to find now, and in this country. But Sheridan was one of the most eloquent, and witty, and sparkling, of a magnificent *group*,—such as has never appeared in any country. It is generally admitted that on the trial of Warren Hastings, he delivered the most eloquent speech that was ever heard in the British Senate. Burke pronounced it the most astonishing effort of eloquence, argument and wit, united, of which there was ever any record or memorial. Fox said all that he had ever heard, all that he had ever read, when compared with it, dwindled into nothing, and vanished like vapor before the sun. And even Pitt (his political opponent) acknowledged, that it far surpassed all the eloquence of ancient or modern times; and possessed every thing that genius or art could furnish, to agitate and control the human mind. Yet notwithstanding his vast and various talents, Sheridan did not close his days with honor, nor was his end peace. He wanted prudence—he lacked regular, persevering industry—and he became intemperate. Debt, embarrassment, and disgrace, followed—and "*poor old Sherry!*" became almost a proverb; and left a name—once so great and splendid—"to point a moral, or adorn a tale."

THE ABBE MAURY.

The most able and intrepid antagonist in the National Assembly of France, was the Abbe Maury. Indeed, the *palm* of eloquence was by many—and I do not doubt justly—awarded to him. We cannot but admire his *boldness*, in standing up, at such a time, for the Altar and the Throne. And the respect and admiration which this commanded—even among his political enemies,—perhaps saved his life. For it is said that he was at no time personally odious, even to the Jacobin mob; who, though they sometimes abused, more frequently applauded him. They believed him to be honest, and admired the boldness and ability with which he defended a sinking cause. It was he who invented the name of Sans Culottes, for the creatures "in the abused shape of the vilest of women," who took so active a part in the horrid scenes of the French Revolution. They hissed him while he was speaking:—he paused and said, "Mr. President, I wish you would make those creatures, *without breeches*, behave themselves." From that time they went by the name of Sans Culottes, which become the general appellation for the whole "Rabble Route" of the Jacobin faction. They at one time seized him and were dragging him to the lamp post. "Do you think (said he coolly) that when you have hung me on it, you will see any better?" This witticism so diverted them, that they let him go. The example of Maury shows that the *boldest* policy is not only the *best*, but often, even the *safest*.—When he saw that all efforts to save his Royal master were vain, he emigrated to Italy, where the Pope conferred on him a Cardinal's hat. None of his speeches, delivered during the Revolution, have, I believe, been preserved, but we have a work of his, upon pulpit eloquence—written at an early period of his life—in a glowing and beautiful style; and with that lofty enthusiasm, which is the soul of eloquence, and a sure mark of genius.

LADIES' DEPARTMENT.

A MOTHER'S INFLUENCE.

Let those who sustain the interesting relation of mothers, learn from the following narration the fearful nature of their responsibilities, in regard to the influence which they exert upon the young immortals committed to their care.

A young man who was about to commence the practice of law, located himself in a flourishing village of Western New York. Well read in his profession, and attentive to the duties of his calling, he soon gained the confidence of the community around him; business accumulated upon his hands, and he seemed fast rising to distinction. All at once, however, a change was visible in the man, and a cloud seemed to be hanging over his prospects—and what was the matter? There was a store in the place where alcohol was sold, and as he was a single man, he used to spend much of his time in that store, where he found congenial company, and where he was allowed to help himself to the kind of beverage which best suited his taste. The secret is now told. He became a slave to his appetite for rum, and was advancing with rapid strides in the downward road to ruin. His business was neglected, and as a consequence, he forfeited the patronage which had hitherto sustained him. The property he had accumulated was soon squandered, and he went on from one step to another, until he gave up his business altogether, abandoned himself to his cups, and became a street vagabond, sometimes found in the groceries, and sometimes in the gutter, but every where disgusting in his personal appearance, and bearing about him the marks of the degraded inebriate. The muscles of his right hand refused to perform their duties, and it hung useless by his side.

But during the whole of his downward course, he had a friend, (a brother member of the bar,) who was insiduous in his endeavors to win him back to the path of sobriety and usefulness, from which he had strayed. On one occasion, after he had been reeling about the streets for a week, he came crawling into the office of his friend, in that state of lassitude and utter prostration of all the physical powers which is peculiar to the inebriate who is just coming out of a long protracted fit of drunkenness—the animal system having been run down, while there scarcely remained vital energy enough in it unspent to enable it to recover itself from the prostration. Just in this state—a state in which a man always groans under the burden of life—he bent his faltering footsteps to the office of his friend, gained the threshold, entered and sat languidly down. This was an opportunity which was eagerly embraced to remind him of the wretchedness of his condition, and exhort him to reform. He acknowledged that he was a degraded, miserable being—nay, the depth of his degradation was the argument he used against making any effort at reform. He said he was too far gone even to think of recovering himself from the state of degradation to which he was reduced. He talked freely of the miseries of his condition, and said, "Yesterday (which was the Sabbath) as I was alone, I began to think of my wretchedness, and as I despaired of ever being reformed, it appeared to me that death would be preferable to life, and I was just on the point of committing the fatal deed, which would have closed up my mortal career, when a recollection of the early religious instructions of my mother rushed upon my mind, and diverted me from my purpose."

Through the urgent solicitations of that faithful friend, he came to a solemn resolution, that he never would drink a drop of intoxicating liquor from that hour, and consented that his resolution should be communicated to his father at the east, with a request that he would furnish him the means of re-commencing the practice of the law. That resolution he kept, the means were furnished, he regained the confidence of the community, became highly respected and beloved, and soon found himself in possession of a competence. He is now an interesting man and useful citizen, still faithful to his purpose.

The above account we received from the lips of the individual alluded to as having been instrumental in bringing out the auspicious result. And what a lesson does it teach us in regard to the extent of a mother's influence! That mother who is faithful to her trust, embraces every opportunity to exert a religious influence upon the susceptible minds of her little ones, and it is an influence which clings to them, like their existence, shielding them in the hour of temptation; and if ever they stray from the paths of virtue, as a silken cord it gently draws them back. Lost indeed, beyond all hopes of recovery, must be the man who can break entirely away from it—who is never checked in his career of crime by a recollection of the soft persuasive accents of a mother's monitary voice. And if such be the extent of a mother's influence, how momentous must be her responsibilities.—*Buffalo Spectator.*

YOUTH'S DEPARTMENT.

FRANK LUCAS.

Mrs. Corbon kept a village school in the state of New York. She had a noble mind, and was a friend to all good children. One cold morning in the winter, a small boy came along, with a saw on his arm, and wanted this lady to hire him to saw wood.

She said one of her neighbors, a trusty man, would like to saw the wood, and she did not wish to hire any body else. "O dear," said the boy, "what shall I do?"—"Why, little fellow," said she, "what is the matter?"

He answered, "my father is blind, mother is sick, and I left my sister crying at home, for fear poor mother will die. I take care of them as well as I can; but they have nothing to eat. I want to work and get something for them."

He shivered very much with the cold, for he was but thinly dressed, and his ear locks were white with frost. The lady asked him to come in and warm himself. As he sat in a chair by the fire, she saw the tears run down his cheeks, and she tried to comfort him.

"It is not for myself," said Frank, "that I cry. I don't mind a little cold, but I can't help thinking of the family at home. We used to be very happy; but a sad change has happened in our house."

"Are you not hungry," said Mrs. Corbon. "Not much, ma'am: that is not what troubles me. I had some potato for dinner yesterday." "Did you not have supper last night?"—"No, ma'am." "Nor breakfast this morning?"—"Not yet; but no matter, I shall get some by-and-by. If I try to do well God will protect me; for so my precious mother says. I believe she is the best woman in the world. If I did not think she was, I would not say so."

"You are a brave lad," said the lady; "I will be your friend, if you have not another on earth;" and the tears sparkled in her eyes as she gave him a biscuit with a piece of meat, on a small plate.

"Thank you, ma'am," said Frank; "if you please, I will keep them to carry home. Don't you think, ma'am, that any body will hire me to saw wood?"

"Yes, my dear little fellow," she answered, "I will give you money to saw mine." He thanked her again, and ran to the wood pile to begin his work, while the lady put on her cloak and went out among her neighbors.

She told them Frank was one of the best boys she had ever seen, and hoped they would do something to help the little fellow provide for the family.

So they came to the house where he was, and one gave him a six cent piece, another a shilling, and a third twenty-five cents, till they made up nearly three dollars.

They presented him a loaf of bread, part of a cheese, some meat and a cake, a jug of milk, and some apples to roast for his sick mother; with a basket to put them all in; so that he had as much as he could carry.

He told them he was very much obliged to them indeed; but he did not wish to be a beggar. He chose to work and pay for what he had, if they would let him: but they said he must not stay now. He might see to that another time.

Frank hurried back tugging his load, and the whole family cried for joy.—"Bless your dear little heart," cried his poor blind father; come here, and let me get hold of you. I hope, my son, *you* will never be unable to *see* the friends you love; but we must not complain, nor forget the favors we receive, because we cannot have every thing as we wish.—My dear wife, a blessing has come upon us all, for the sake of our dutiful child." The good man raised his hands in prayer, and thanked his heavenly Father for giving him so hopeful a son.

It is thirty years since this affair happened, and the same Frank Lucas is now one of the first men in the country where he lives. His father is at rest. Twenty summers the bell flower has bloomed on his peaceful grave.

His mother has grown old and feeble, and can just walk about the house, leaning on her staff. She still lives with her son. He says it will be but a short time before this reverend parent must be called away to her eternal home, but, while her life is spared it shall be his delight to make her last days happy.

He often says, "I should have been a poor wretch, if it had not been for the early care of my kind mother."

The good old lady now seems only waiting for her Redeemer to call her to that bright world, where the souls of the righteous dwell, and where all is joy and peace.

Mr. Lucas is married to a charming lady, and has five children. They go to school; and their father tells them that if they intend ever to be useful, they must learn well while they are young; if they expect to be blest in this world, or in the next, they must love God, and honor their parents and teachers, and be kind to all; and that, in this free country, the way for a poor little boy to become a great and happy man, is to be honest, industrious, and pious.—*Youth's Friend.*

MISCELLANEOUS.

From the Monroe Republican.

A DECLARATION AGAINST THE USE OF TOBACCO.

When in the course of human events, it becomes necessary for one man to dissolve the bands that have bound him to the habitual use of any one article, a decent respect to the opinions of others, demands that he should declare the causes that impelled him to such separation.

I hold these truths to be self-evident, that all men are created with certain sensitive powers, that among these are taste, smell and hearing; that in order to preserve these powers, certain habits are formed; but when a habit formed becomes detrimental to either of these powers, it is the privilege, and not only the privilege, but the imperious duty of every individual to abandon such habit, and take such measures as will best promote his happiness and safety. Habits long contracted should not be changed for light and trivial causes, and all experience has shown that mankind are more willing to suffer than to right themselves by abandoning them.

But when such a long train of evils evinces the same design as those that have been caused by the habit of using the *Narcotic Weed*, pursuing invariably the same course, and having in direct object the complete subjugation of the mind; it is the right, it is the duty of every individual to throw off such a habit and provide new guards for his future security. The history of the habit of using the *Nicotiana Tabacum*, is a history of repeated injuries and usurpations; and to prove this let facts be submitted to a candid world.

It has refused its assent to the laws of health by dulling the sensibility of the system.

It has forbidden obedience to the pressing calls of nature, until its own assent should be obtained, and when so obtained it has utterly refused to attend to them. It has refused the fulfilment of the duties of life, unless under its stimulating effects.

It has collected the thoughts of the mind in places uncomfortable and distant from where they should be.

It has repeatedly disassociated the mind for resisting with manly firmness its invasions.

It has refused for a long time after such disassociations to suffer the mind to become collected, whereby the body, dispossessed of a proper governing principle, is subject to invasions without and convulsions within.

It has endeavored to prevent the growth and strength of the system; and for this purpose, obstructed the laws of animalization and nutrition, refusing to encourage the mastication, and deglutition of new appropriations of food.

It has obstructed the administration of justice, by refusing the gratification of all the senses equally alike.

It has made the nerves of taste (the judges for the stomach) dependent on its own will for the amount and quality of food it should receive.

It has created a preternatural appetite, to harass and eat out the substance of hard laboring men.

It has kept in the mind in times of peace and tranquility, large bodies of discordant thoughts without the consent of the united legislation of the several senses and faculties.

It has affected to render its own mandate independent and superior to the other habits of the body.

It has combined with other evils to subject the mind and body to a jurisdiction foreign from their own constitution, and unacknowledged by the laws of nature.

For creating an excess of saliva to annoy the cleanly housewife.

For impregnating the breath with such a foul stench as to render it odious to all who come within the sphere of its perfume.

For cutting off in some degree the sources of cleanliness and literary acquirements.

For making drafts on the purse without any special benefit.

For depriving us in many instances of the benefits of a connected and unmolested conversation.

For causing the body to be transported over mud and roads uncomfortable to replenish the store of the *beloved weed*.

For abolishing in part the power of free agency, and proportionally converting the individual who is the subject of its power into the creature of chance, subjecting him to its arbitrary government.

For aiding to destroy the mind, abolishing the most valuable laws of nature, and altering fundamentally the government of the system.

For measurably suspending the office of the organs of taste and smell, declaring itself invested with full power to legislate for the system.

It has plundered the human form of many of its beauties, changing the skin and teeth from a beautiful white to an ugly brown.

It has excited domestic broils, causing the house-cloth of the tidy female to fly o'er the floor with a rapidity scarcely paralleled in the history of other filthy habits.

In every stage of its oppressions it has been petitioned to suspend its operations, but the most humble petitions have only been answered with repeated injuries.

A habit thus marked by every act that may define a filthy, useless and heathenish practice, is totally unfit to be the ruler of a free, enlightened, and independent being. It should therefore be the duty of every individual to heartily acquiesce in the necessity of denouncing a separation from it, and hold the *weed* by which the habit is formed as an enemy in health, and in sickness a friend.

SIMON SNUG.

THE VALLEY OF THE OHIO.

We publish this morning some interesting remarks upon the country drained by the Ohio and its tributaries, from the Baltimore American.—The editor computes it at about 140,000 square miles, which exceeds, by several thousand square miles, the area of Great Britain and Ireland, and is but little less than that of France. The present population of Great Britain and Ireland is 24,000,000—that of France, say 32,000,000.—In the valley of the Ohio there is less unproductive land than in either of the others, and with the proper cultivation it is capable of supporting in comfort and plenty, more than twenty millions of a population.

Rival citizens are contending for the commerce of this great valley—a commerce already immensely valuable, although only in its infancy. There is, however, no need of jealousy in the matter; there will soon be abundance for all and there need be no hesitation about opening every practicable avenue between the Atlantic cities and the noble river that flows for a thousand miles through this great valley.

But the valley of Ohio forms but a comparatively small part of that great central basin which would not be half populated were the millions of Great Brittain and France added to its present inhabitants. All that is required of art is to reach Pittsburg—Nature has done the rest.—Come here and read our steamboat bills—'For Peoria'—'For Galena'—'For Red River'—'For New Orleans'—'For the Missouri River'—and remember when you are here that you are scarcely beyond the Atlantic slope; just on the verge of that ultramontane world that it makes a man dizzy to think about. Yet, here you are met by magnificent vessels ready to bear you—not across the ocean, nor along the coast, but to the deepest interior of a great continent, or almost across it if you choose. There need not, then, there ought not to be any hesitation or delay on the part of the States, in which the mountain barriers exist between the Atlantic coast and this central valley, in opening every possible avenue of intercommunication and commerce. They need only do the work; the vast resources of the west will soon pay for it.

Pittsburg Advocate.

To make a brilliant Stucco—White Wash for all buildings inside or out.—Add one-fourth pound whiting or burnt allum pulverized, one pound of loaf sugar, three quarts of rice flower made into a thin and well boiled paste, one pound of cleanest glue dissolved as cabinet makers do. This may be put on cold within doors, but hot outside. This will be as brilliant as Plaster of Paris, and retain its brilliancy for many years. The east end of the President's house in Washington is washed with it.—*Cincinnati Chronicle.*

Dr. Channing says—'I call that mind free which protects itself against the usurpations of society, which does not cower to human opinions, which feels itself accountable to a higher law than fashion, which respects itself too much to be a slave to the many or few.'

Prentice, speaking of Professor Espy's late remarkable annunciation on a clear day at Philadelphia, that a storm was raging at Chareslon, S. C., (found since to be true!) says: "Will the storms tamely submit to such a system of *Espyonage?*"

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, OHIO, THURSDAY, AUGUST 1, 1839. NO. 2.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

POETRY.

From the American Museum.

THE GRAVES OF THE SIGNERS.

BY MISS BUCHANAN.

Suggested by the question—"Do we not owe it to the memory of the Signers of the Declaration of Independence, to collect their remains, and place them in a national monument?"

Where lie our country's glorious dead?—
In graves that know nor rite, nor name,
Whence every passing wind should spread
The story to that country's shame!—
Where, all unchecked, the rank weed shoots
Its noxious fibres through their clay;
And where, in safety, loathsome brutes
Across it drag their mangled prey?—
Where human pride and hope and love
No'er meet the rugged clods above?

No! midst the dear homes of the land,
E'en as their own hearths, unforgot!
The North's stern yeoman lifts his hand,
Proud, from his plough, to point the spot;
And the wild school-boy he has nursed,
Beside them rests his tired knee,
And tells their names and deeds, the first
That he has known of history;
While the warm wish looks through his eye,
Like them to live, and thus to lie!

No! where the South's bright-plumaged birds
And bright-hued flowers, sing and wave!
There haughty men of burning words
In rev'rence seek each quiet grave;
And there, if lightly have been spent
Their own rich gifts of God and earth,
Up from the dust a voice is sent,
That startles them to aims of worth;
There high-souled women pause to prey,—
"May those we love prove such as they!"

They lie, where in their glory's time,
They saved their sires gray heads from harm,
In fruitful fields, throughout our clime,
Won from the dark woods by their arms;
Where first their children saw the light,
And where, when pressed by ill and wrong,
As unto altars dowered with might,
E'en yet their children's children throng
And feel what well may nerve their powers,—
"Why should we sink?—their blood is ours!"

And ye would break their holy sleep,
And bear them to some labored pile,
Where Mammon grudges time to weep,
Ambition cold to drop its guile;
Where the poor peasant ne'er could go,
To bless them for their god-like part,
And catch a spirit, still to grow,
And raise his soul, and swell his heart;
Where freedom's flighty slaves would turn
From them, unto their blazoned urn!

Go solemnly and seek their shrines,
And think, while o'er each honored breast,
Pure blows the breeze, the sun-beam shines
How sweet, how lovely is such rest;
See that their memory around,
Stamps freedom on each form and face;
Hear that, in danger's hour, each mound
Would be a legion's rallying-place;
If ye have hearts, their list their tones,
And dare to touch their hallowed bones!

Men are born with *two* eyes, but with *one* tongue, in order that they should see twice as much as they say; but, from their conduct one would suppose they were born with two tongues and one eye; for those talk the most who have observed the least, and obtrude their remarks upon every thing, who have seen *into* nothing.

Old Coins.—A lot of old Belgic coin, the size of a dollar, 300 years old, were last week turned up by a plough in a field on the farm of Mr. B. C. Timmins, Burlington county, New Jersey.

ECCLESIASTICAL.

CLAIMS OF THE PROTESTANT EPISCOPAL CLERGY.

The following is from the pen, as we presume from the signature, of the Hon. P. B. Hopper, one of the Judges of the Superior Court of the State of Maryland, who is a layman. In republishing this article we intend no disrespect towards the Protestant Episcopal Church. That is the Church which administered to us the ordinance of baptism, and from which our earliest religious instructions were received. And we still, from these considerations, retain for it a degree of attachment. But their boast of *legitimate* official geneology, and claims to exclusiveness, are rather too ridiculous to be preferred to this enlightened and liberal generation. And so long as the Clergy of that Church continue to urge these claims, either from the pulpit or from the press, so long such articles as the following will be called for, from other denominations, in self-defence.—It is our opinion if the Ministers of the Protestant Episcopal Church were to abandon their visionary notions of superiority, and consider themselves as equals with other denominations, it would not only be greatly to their credit, but would open to them a more extensive door of usefulness.—ED. REC.

From the Meth. Protestant and Fam. Vis.

Mr. Editor:—The high toned pretensions of the ministers of the Protestant Episcopal Church, and the industry used by them for the propagation of these pretensions in conversation, sermons and lectures; and by the circulation of printed sermons, pamphlets and treaties on the subject, as well as by their periodicals, render it necessary, that the proscribed churches should come out in their own defence; or strike at once to the high claims of the successionists, and send in their adhesion to "*the only true church.*" The Presbyterians and Episcopal Methodists have published some able works against these extravagant notions; but few of them in many places have been circulated and read. The Methodist Protestant Church should not patiently suffer her members to be misled (as some have been) by these high sounding assumptions.—Her periodical should speak out plainly, but respectfully in the matter. I think these discussions should be avoided as much as possible in the pulpit, when the congregations are generally mixed, and when it is expected that the gospel alone will be preached.

The writer of these remarks has felt himself on several occasions aggrieved in the Protestant Episcopal Church by the unkind allusions to other churches, and the bold declarations that her ministry were the only true ministry. About twelve months ago, he was startled to hear, in a large congregation composed of different denominations, a very respectable and popular minister of the low church party, declare that none of the churches except the Protestant Episcopal Church, the Roman Catholic Church and the Greek Church, had any better warrant for their church establishments than the followers of Jemima Wilkerson, Joanna Southcoate and Joseph Smith, (the mormon.) I do not pretend to give the precise words; but I am sure I give the substance. I have heard one of their Bishops, and other Clergymen, go nearly as far without the odious comparison.—Their writers say that other ministers are "interlopers," and unauthorized to administer the Lord's Supper, Baptism, Marriage, &c. An intelligent gentleman, recently, belonging to the Methodist Episcopal Church, and the son of an Itinerant minister of that church, is reported to have said, that he had been convinced by the works put in his hands by the Protestant Episcopalians, that his father, during his life time, was in great error, and that *now* he should consider it a sin, to let his children, if he had any, go to Methodist meeting. Other members of the same church, of our church, and other churches, have been seduced off by the same means. I have never read upon the subject so extensively as to be able to make an elaborate argument against many of their bold assertions; but I have read and seen enough, for my common sense to determine that there is no solid foundation for the claim of apostolic succession in the manner they claim it; and am satisfied that other ministers are called of God and anointed to preach his gospel and administer the ordinances. Before I can subscribe to these assumptions of superiority over the Presbyterian, Methodist and other ministers, more humble in their claims, I must see some plain declaration of scripture recognizing them; and must see more fruit of their labor in saving sinners and converting them from their sins and follies. They have never been remarkable, so far as I know their history, in doing this, nor do I believe their services and their sermons, the best calculated to effect the salvation of souls.

If members of the Protestant Episcopal Church in this country will look into their own history, they will find many causes of humility instead of boasting of their high origin. They will find that instead of owing their claims to an immediate call from God, they received their boasted ordination in virtue of a British statute, which gives them only limited authority; and with all their boasted superiority they cannot preach in any of the established churches in any place under the British Crown. A Protestant Episcopal Bishop of America, if he shall cross the line and go into Canada, becomes immediately a layman by force of the said statute, so far as to be precluded from the exercise of his official character.

Notwithstanding this degrading circumstance, they claim through the Church of England. If we look at the history of this Church of England, we shall find that it has at its head a layman or laywoman as the case may be. The King or Queen has the power to nominate the Bishops, and no Bishop can be appointed without the nomination of the existing Sovereign. Will these claimants be pleased to show us the scripture warrant, or the precedent in the Bible, or the early history of the church, which will justify this interference of secular power with the call to the ministry and the appointment of a Bishop. Queen Victoria is now the head of the Church of England. She is to fill the place of any Bishop who may die during her reign. A worthy friend of the writer, in conversing upon these unwarrantable assumptions of Protestant Episcopalians, remarked, "these people must certainly think that our Saviour is still dead and has not risen; for, (said he) when Jesus Christ was alive he choose his own ministers, and if he did so then why not now," and he might have added, that he did not stand in need of such a young girl as the British Queen to select his Bishops to rule his church; nor does he stand in need of wicked men, in this land of Bibles, to assist in selecting a Bishop, Observation teaches us and the candid of that church will not deny it, that *this* "*Holy Apostolical Church,*" admits to her conventions to choose a Bishop, some men who will curse and swear, gamble, horse race, &c.

Can any one believe that a Bishop so chosen is appointed by the Almighty to the exclusion of pious, faithful men, who preach his pure gospel, and whose ministry is made the means of the conversion of thousands? History also teaches us that at several stages of the church, the Bishop and Clergy, through whom they claim, were the most corrupt, profligate and voluptuous men of their age. The writer regrets the necessity which is imposed upon the members of the proscribed churches to deal so plainly with their brother Christians. I entertain a very high respect for many of the ministers and members of the Protestant Episcopal Church, and sincerely believe that she has in her communion many pious, devoted christians. I consider, however, that in view of the high prerogatives set up by this church, the members of the other churches are called upon to defend their ministry and church establishments from the unkind, not to say the rude attacks made upon them by our Protestant Episcopal brethern. I trust that some competent writer will come out in our periodical, with a succession of essays upon this subject.

The present remarks are made only with a view to introduce the subject to the notice of the readers of our periodical, in hope that an abler pen will be employed in the discussion. If we are to judge a tree by its fruits, I think it will be found that the Presbyterian, Methodist, and other ministers will have no cause to blush at a comparison with this "*Holy mother,*" as she is called, either in talent, piety, or usefulness. If other ministers be "interlopers" and "*wolves in sheep's clothing,*" why are they owned of God and made instruments in his hands in the conversion of thousands? Is it rational to suppose that if they were not sent of God that he would so abundantly bless their labors, and make them more successful than "these holy successors of the Holy Apostles?"

One distinguished trait in the gospel of Christ is that "*the poor have the gospel preached to them.*" Have not the Methodist ministers been eminently successful in this work, and without such ministers and free seats in the churches, how could the poor have had the gospel preached to them? They are not able to rent pews. We have cause to think our Episcopal brethren, are as intolerant in their sentiments as the Catholics, and in many respects exactly resemble that church.—Indeed we think that they have even less ground than the Catholics for their assumptions of superiority.

They profess, I believe, to have received their uninterrupted succession from excommunicated ministers of the Catholic Church. Now, it may be worthy of inquiry, if the Bishops thus excommunicated made vows to support the Catholic faith, and to be subject to the Pope, and this was the condition upon which they received ordination, whether they did not forfeit their office upon the violation of their vows, and whether an excommunication from that church did not legally nullify the office received from it? Do these learned successors of the Apostles, believe that if a sufficient number of their own Bishops were to become notoriously wicked, deny the tenets of that church, and were to consecrate ministers to preach Universalism or Unitarianism, that such ministers so ordained would be of the true Apostolical succession?

It cannot be denied without flying in the face of all history upon the subject, that the ministry, through whom they claim, were notoriously corrupt and immoral at periods of the church's history. Can it be believed that such profligate men could hand down authority to their immediate successors; or that a pure and holy God ever designed that his gospel should flow through such a foul and polluted channel? As well might it be contended that Judas Iscariot after his fall, might have consecrated and set apart a valid ministry. I wish it, in conclusion, to be distinctly understood that my object is not to wage a war against the Protestant Episcopal Church, except so far as to vindicate those churches, whose ministers she has denounced. So far as she is doing good in promoting the salvation of the world, I wish her abundant success. My objections to her are founded on her high claims to superiority, and to the assumption that no other ministers than her own are authorized to preach, &c.

Some portion of my remarks may seem to be severe; but when the reader shall consider the indignity offered to the ministers and members of other churches, he will excuse me for being so plain in my exposition of the rottenness of the foundation upon which these gentlemen build their arrogant pretensions. Nothing I have written is half so severe as the comparison made, as above stated, in regard to Jemima Wilkerson, &c. If the low church entertain such high notions, what must be the sentiments of the high church party? I shall, probably, occasionally trouble you with other remarks on this subject.

P. B. H.

MISSIONARY.

From the Evangelist.

INDIA.

The Rev. J. G. Pier, Secretary of the General Baptist Missionary Society, Derby, England, acknowledging a grant of $500, received from the American Tract Society, gives the following highly interesting statement of the effect of religious publications in villages in India, received by the overland despatch:—

Last November our brethren at Cuttack were pleasingly excited by a visit from two *Hindoos*, who went as a deputation from a number in some villages 30 or 40 miles from that city. Some Christian publications, it appeared, had reached them.—The effect was, that they left off the worship of idols, and sought instruction, by reading the Christian books, and the best part of their own shastres. They next gave up their own shastres, and confined themselves to reading the Christian books. By degrees, they *renounced Hindooism.*—Persecution now broke out against them. Some of the timid gave away, but others continued firm; and they sent two men as a deputation to seek out the missionaries, and ask their advice. After two days' search, they found the missionaries.

The men were soon sent back to their native village, accompanied by Rama Chundra, (a native preacher,) and other brethren, to investigate the state of things, and to return with a report to the missionaries. Rama soon returned delighted, and his feet blistered with haste, stating that they were not inquirers, but *confirmed Christians;* that they had offered to burn their own shastres in his presence, but he advised them to wait till one of the missionaries could visit them.

Rev. Mr. Lacey immediately went, and was to be followed by Rev. Mr. Sutton. Sebo, their leader, wished to be baptised; but, alive to the sacrifices he was making, trembled from head to foot while talking with our brother. A time was fixed for his baptism, and that of two others, in the first instance. As they were moving to the water, one of his brothers laid hold on him, and a crowd collected. His wife, almost frantic, now rushed forth, and laid hold of his outer garment. He let it go, and she sat down and wept over it, as over the last relic of a friend from whom she was about to be separated for ever.

They now brought his little girl, an interesting child about seven years old, and asked him if he would make his wife a widow, and his child fatherless? But he was unmoved. A younger brother now came up, prostrated himself on the ground, clasped Sebo's feet, and bathed them with his tears, and besought him not to go forward to disgrace them and ruin himself. Sebo seemed to feel deeply, but his resolution was unshaken. He said, 'Christ is more to me than all, and I have given up all for him.' The Zemendar came and talked with him, but was unsuccessful. An aged Brahmin came, but was soon put to silence.

The idolators now changed their mode of attack. They besought brother Lacey to delay the baptism of the converts till next day. He of course declined, unless the converts wished for delay. They applied then to Sebo, and he nobly answered, 'No; I have recorded my vow in heaven for to-day.' Still they held him forcibly. A police officer was sent for, and after various interruptions, they got to the water-side, and went down into it. The crowd rushed in also, and hardly left room for the administration of the sacred rite. The candidates tore off and threw away their poitas and their strings of beads. And the missionary said:—

'Do you acknowledge one God?' 'Yes.' 'Do you believe in Christ for pardon and eternal salvation?' 'Yes.' 'Do you see and feel that idols are vain and foolish?' 'Yes.' 'Will you till death love and serve God?' 'Yes.'

All this the multitude heard, and distinctly understood. The ordinance was administered. They came out of the water. The crowd mostly dispersed. The native converts, who were present, took hold of the hands of the new Christians, and walked, singing hymns together, towards the missionaries' tent, about 2½ miles distant. Our brother says, 'Our hearts were filled with joy, and our eyes with tears. Thus they walked, the wild jungle echoing with the songs of Zion.' Some of the heathen followed, and even their hearts seemed softened. A number more seemed under religious impressions. Adieu, esteemed brother!

Yours in the gospel.

Minister's Department.

From the Cincinnati Journal.

"PREACH SMALL."

"Mother," said a little girl seven years old, "I could not understand our minister to-day; he said so many hard words. I wish he would preach so that little girls could understand him. Won't he, mother?" Yes, I think so, if we ask him.—Soon after her father saw her going to the minister's. "Where are you going Emma?" said he. "I am going over to Mr. ———'s to ask him to *preach small.*"

This little incident has taught the pastor of Emma an important lesson on preaching the gospel with simplicity.—There is a happy medium between that *coarseness* which offends, and that *refinement* which is above comprehension.—This medium is the genuine Saxon-English, which is intelligible to all, and offensive to none.

Who is offended with the style of Milton in that noble sonnet on the massacre in Piedmont—with the style of the Liturgy, or that of our English Bible? No one of good taste; for therein we get plain sense in plain Saxon.

Not long since I heard a minister close the last of a series of sermons on the evidences of Christianity, thus:—"Now let the infidel go where the owls hoot, and the bats wing their starless flight; but we, when death shall sound our retreat from the shores of mortality, will shuffle off these clogs of clay, lie down quiescent in the grave, and rise to realms in endless day."

That minister preached to a city congregation, and had the reputation of being a very *eloquent* man: but really, if he had not gone to "the realms of endless day," I should feel desirous of sending Emma with the request that he would *preach small.* And so have I felt when I have heard a certain good brother in Ohio preach. Instead of *brotherly love*, he always says *fraternal affection.* Why did not Paul say, (Heb. xiii. 1) Let *fraternal affection* continue? And in order as I suppose, to avoid the appearance of egotism, when he rises to preach he introduces the sermon thus: "we propose in this discourse," &c. Why did not the appostle, for surely he was a modest man, say, "Whereunto we are appointed a preacher, and an apostle, and a teacher of the Gentiles?"

To other ears it may sound well, but to my own, *wegotism* is more intolerable than *egotism.*

Not long since I heard a minister telling about the *animal economy.* Animal economy! thought I; will not his hearers infer that he is speaking about quadrupeds instead of biped!

"And this is in accordance with the philosophy of the thing." My good brother, what do you suppose that plain man in your congregation will understand by the "philosophy of things?" "Preach small,"—*smaller* if you would be understood.

Every body understands the Rev. Mr. Hare in his village sermon. "There is hardly a poor person in these parts of England who does not get what our grand fathers considered luxuries. I will mention two of these—*tea and wheaten bread.* If any one a hundred years ago, had foretold that the time would come when every cottage in England would have its tea-pot and its wheaten loaf of bread, he would have been laughed at as a foolish dreamer. Yet the time is come."

Now what if Mr, Hare had called upon his people to be grateful for so fragrant a beverage (tea,) and so farinaceous a luxury (wheat bread,) who would have known what was piped or harped? They might have thought themselves called upon to be grateful that the Goths and Vandals were dead, or that such a thing as a steam engine had been invented!

Some where I have read an anecdote of an American officer who was peculiar for the quaintness and point with which he gave commands. On one occasion the battle was warm and the event was doubtful. The officer saw that his men were shooting over, and instantly darting by the ranks, cried, *shin them, boys, shin them!* when their levelled muskets mowed down the enemy, and gave the Americans victory.

The *point* of this anecdote may be worthy of remembrance; for all the world over, he does the swiftest execution, who deliberately *fires low;* and he preaches best, who in the sense above named *preaches small.*

J. S.

WHITEFIELD.

A writer in the Edinburg Review, thus speaks of the secret of the power of Whitefield's preaching.

"The enumeration of sources of Whitefield's power is still essentially defective. Neither energy, nor eloquence, nor histronic talents, nor any artifices of style, nor the most genuine sincerity and self-devotedness, nor all these united, would have enabled him to mould the religious character of millions in his own and future generations. The secret lies deeper, though not very deep. It consisted in the nature of the theology he taught—in its perfect simplicity and universal application. His thirty or forty thousand sermons were but so many variations on two key-notes. Man is guilty, and may obtain forgiveness; he is immortal, and must ripen here for endless weal or wo hereafter. Expanded into innumerable forms, and diversified by infinite varieties of illustration, these two cardinal principles were ever in his heart or on his tongue. Let who would invoke poetry to embellish the Christian system, or philosophy to explore its esotic depths, from his lips it was delivered as an awful and urgent summons to repent, to believe, and to obey. To set to music the orders issued to seamen in the storm, or to address them in the language of Aristotle or Descartes, would have seemed to him not a whit more preposterous than to divert his hearers from their danger and their duties and their hopes, to any topics more trivial or abstruse. In fine, he was thoroughly and continually in earnest, and therefore possessed that tension of the soul which admitted neither of lassitude nor relaxation, few and familiar as were the topics to which he was confined. His was therefore precisely that state of mind in which eloquence, properly so called, can be engendered, and a moral and intellectual one."

WHY I TAKE A RELIGIOUS NEWSPAPER.

"I had rather dispense with the luxuries of tea or coffee, and take my morning and evening beverage from the running stream, than do without a religious newsper. Let me say why.

1. Because I believe, with Solomon, that knowledge is better than choice gold. The cost of such a paper is nothing compared with the information I glean from it. I learn more about the geography, the manners and customs of different and distant nations, than I can get from any other source. And the information I thus get I know to be true, as I am personally acquainted with many of those who communicate it, and know them to be men of veracity. Besides, the knowledge I thus gain of my own country, of its laws, institutions, domestic and foreign intercourse, internal improvements, &c. is great. But more than all, I thus learn about the prosperity of Zion throughout the world.

2. Because I cannot repeat the Lord's prayer intelligently without information. How can I pray, 'thy kingdom come,' when I know very little or nothing about that kingdom!

3. Because I am unwilling to lose the enjoyment I thus obtain. Neither corn nor wine; neither the smiles of my wife, nor the prattle of my children, make me more glad, than the weekly visit of a neat, richly laden newspaper.

4. Because of its benefit to my family. My children read and converse about what they read. Thus they acquire a facility in reading, become intelligent, and at the same time receive a good moral and religious impression. In a pecuniary view, I had better pay $20 a year than not take such a paper; and in a moral view, it is richer than rubies.

5. Because of its influence on the heart. I take up my paper, and read a stiring sketch on practical godliness, on revivals in progress, or in prospect, on the conversion of the world, and my heart is softened. It beats quicker with sympathy for the perishing; and warmer with love to God and man.

6. Because of its influence on the community. Who can estimate the influence of a well conducted religious newspaper on 3000 subscribers, and on five times that number of readers. It is 'as the dew of Hermon, and as the dew that descended upon the mountain of Zion: for there the Lord commanded the blessing even life forevermore.'

7. Because while a religious paper contains tenfold more important matter to me than a paper exclusively secular, it is tenfold more difficult to sustain it.

Secular papers are principally sustained by their advertising patronage. Religious papers publish few advertisements, and consequently, derive little revenue from this source. With all the economy they can practice, not more than half a dozen religious newspapers in the land, do any thing more than just live.—While many have died from starvation, many more have the symptoms of premature death.

For these, and many other reasons, I take a religious newspaper, deeming it neither just or generous to myself, to my family, to the public, or the publisher that he should be left to bear the pecuniary burden alone."

We ask advice, but we mean approbation.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,------AUGUST 1, 1839.

The following note was forwarded to us in reply to the remarks in our last respecting the defective type. It is due to the establishment that they be permitted to explain; from this consideration we publish their communication to us on that subject.

CINCINNATI TYPE FOUNDRY,
July 20, 1839.

Dear Sir:—We this morning received the first number of your paper, which you had the kindness to send us, and were sorry to see that the *b's* of the Long Primer are, most of them, what are called *low-lined*. This was not occasioned by a mixture of numbers, as you suggested, but by dust, or a particle of metal getting between the matrix in which the letter is cast, and the body of the mould. This always has the effect, when it happens, of throwing the letter down on the body of the type, and is not easily discovered until an impression is taken. We have ordered the proper quantity of b's cast for your font, and will have them ready for any one who calls for them, whenever you have an opportunty of sending. We cannot well forward so small a bundle by boat.—We shall make no charge for them.

N. GUILFORD, *Treas.*
Cin. Type Foundry.

Mr. S. Rodman, one of the superintendants of the Sabbath School alluded to in our last, reports, that the number of verses recited by the scholars on Sabbath, 21st ult. was 1887. Something like the same amount was recited on last Sabbath.

DRESDEN CHRONICLE.—We have received the first No. of this paper, to be published at Dresden, in this county, by A. Deffenbaugh, on an Imperial sheet, at $2 per annum in advance.—The paper is of a miscellaneous character, and the number before us is respectable both for matter and mechanical execution. Mr. Deffenbaugh is a young man of steady habits, and of enterprise, and deserves to be patronized.

The Season.—In this vicinity we have had but little rain for some time past. The corn will soon suffer for want of it. There has been more plentiful showers both north and south of us. At Millford, some ten or twelve miles South, we are informed that the rains have been so abundant as to prevent the operations of harvest, and even to cause the wheat to grow in the shock.

Since writing the above we have been visited with a plentiful shower of rain. One more such, at a proper season, will make the corn.

ORIGIN OF NAMES.

Jonathan's Creek.—This is the name of a stream putting into the Muskingum two miles below this place, whose Indian name was Moxahala. It received its present name from the circumstances of Jonathan Evans, getting lost and lying all night upon its banks. He was one of a scouting party under Captain Brady, in about 1792, which was reconnoitering this country—they lay all night at Licking Falls—Jonathan turning out to hunt in the evening, got separated from his party and loosing himself, spent the night on this stream. Next day the company found him at the mouth of this creek, and in allusion to this event, called the stream after him.—Jonathan Evans was living in the year 1817, about five miles above Le Tart Fall, on the Ohio river, in this State. We had the happiness, that year of spending an evening at his house.

Duncan's Falls.—This is the name of the rapids in the Muskingum river nine miles below this place. It got this appellation from the following circumstance. After the party above found Jonathan they determined to descend the river to the fort at Marietta. For this purpose they prepared bark canoes, which was done by pealing hickory bark, and clamping and corking at the ends. These clamps were fixed in two ways, some horizontal and others perpendicular. An Irishman by the name of *Duncan* fixed his after the latter mode; and in passing over the rapids, the fragment of a rock, projecting rather near the surface, caught the end of his hinder clamp, tore it off, and, to the great amusement of the company, let him into the water. In allusion to this event those rapids were called *Duncan's Falls.*—Our authority for stating this, is, Henry Johnson, one of the heroes alluded to, in our Indian tale on the last page, and who was one of the party with *Duncan.* Johnson is now living, a respectable citizen, in Woodsfield, Monroe Co. O. and was through this place last fall, on his way to the Conference of the M. P. church, held at Lancaster in September, to which he was sent as a lay delegate.

Pee Pee, is the name of a stream emptying into the Scioto below Chillicothe, which it received from the following circumstance. A hunting party, from the Monongahela country, in time of Indian hostilities, encamped on this stream for the purpose of trapping and killing game. Peter Parker cut the initials of his name upon a tree in front of the camp; in allusion to this it was called for some time, by the hunters, the P. P. camp, and ultimately the stream on which the camp was situated was called the *Pee Pee*.—Our authority for the above is *several* of the descendants of the families who first settled on the Monongahela.

If our friends and correspondents would communicate to us all such *western* incidents as might be amusing, or instructive to the public, especially such as have never been published, we will cheerfully register them in the *Western Recorder.*

At the time of the Abolition Convention held in Putnam, a few weeks past, a stable and barn were burned, supposed to be by some who held antipathy to the Abolitionists. Citizens of Putnam, in guarding their property, found persons at night strolling the streets who could not give a proper account of themselves, had several of them arrested. In conveying one of them to jail, the constable and his aids were met on the bridge over the Muskingum, by a mob said to be about three hundred in number, who forcibly arrested the prisoner from the hands of the civil officer. The prisoner ultimately surrendered himself and gave bail for his appearance at court.—Both the prisoner and individuals of those who aided in his rescue, were presented to the grand jury on the 19th ult., who dismissed the whole without finding a bill.

With regard to the sufficiency of the testimony to convict the person arrested in the streets of Putnam, we give no opinion as we did not hear it. But there was no want of testimony to identify the persons who were presented for forcibly arresting the prisoner from the hands of the civil officer. This thing argues a very unhealthy state of public opinion, and is truly to be regreted by the friends of law and order.

Retribution to Abolition rioters.—At a court, recently held in Cincinnati, a verdict of $1500 was rendered in favor of Achilles Pugh, plaintiff, against three of the rioters who aided in destroying the press, &c. of the "Philanthrophist," in 1836.

The following are a few of the respectful notices taken of our paper by the editorial corps, for which we feel grateful to them. We shall endeavor, in turn, to treat them all courteously, without respect to party or politics.

From the Muskingum Valley, (McConnelsville, O.)—"THE WESTERN RECORDER," a new paper just commenced at Zanesville, *Rev. C. Springer*, Editor, John W. White, printer, devoted to the cause of Methodism, particularly, and to literature, news, &c. generally is on our own table. For the first No. it is very respectable indeed. The selections are all that can be comprised in that comprehensive word, GOOD. There are many good religious papers in the country under the patronage of that christian sect, but we like the plan upon which Mr. S. promises to conduct the Recorder better than that of any other Journal. Success to it.

The Lebanon Star.—"THE WESTERN RECORDER," is the name of a new religious paper just commenced at Zanesville, Ohio, under the patronage of the Methodist Protestant Church. It is of imperial size—handsomely printed—and from a hasty glance at its contents, we should think ably and judiciously conducted.—We cheerfully recommend it to the support of the denomination whose cause it more particularly advocates, as well as all others who wish to take a paper devoted to religion, morality, agriculture and general intelligence.

Ohio Whig Standard, (McConnelsville, O.)—"THE WESTERN RECORDER."—We have before us a new paper, printed at Zanesville, Ohio. It is devoted principally to the interests of the Methodist Protestant Church in the west, but will furnish an abstract of political, moral and agricultural intelligence. C. Springer, Editor and Publisher. Typography good—J. W. White, formerly of this place, is at the helm of this department. The enterprise deserves warm encouragement.

Steubenville Gazette.—A very neat and new religious paper called "THE WESTERN RECORDER," printed at Zanesville, O. has been received at this office. It is edited by the Rev. C. Springer, and published at $2 per annum.

Methodist Protestant, (Baltimore, Md.)—"THE WESTERN RECORDER."—This is the title of a *new* paper, devoted to the interests of the Methodist Protestant Church generally, but particularly in the Western States. It is edited by Rev. C. Springer, and will, no doubt, prove a valuable auxiliary in the spread of religious liberty and gospel truth. The present number speaks very well for the editorial *tact* of the gentleman under whose auspices it was gotten up. We shall probably find frequent occasion to select from its columns. From the present number we cut the following account of the "Pittsburg District" by the Editor.

ITEMS OF NEWS.

THE CROPS.

The harvest in the wheat growing States South of us, is nearly over, and in our own State and those West of us, it is just commencing, while to the Eastward the crops are still green or just turning. The season, however, is far enough advanced to justify an estimate of the compartive abundance of the crop.

We give the following account of the state of the grain crops in all parts of the country, as far as we have been able to obtain information:—

In our own State, the wheat crop in the Western Counties is said to be more promising than it has been at the same period for several years. Corn wanted only warm weather to yield a plentiful harvest. Oats and rye would yield alone an average crop. In the Northern Counties the prospect is equally good; and in the Southern a greater harvest is anticipated than has been gathered for many years.

In New England the season has been most propitious. The corn crop in Connecticut and Massachusetts is said to look better than usual. In Maine and New Hampshire the season has been too cold for corn, but other grain and grass have flourished luxuriantly. On the whole, above an average crop of small grain and grass may be safely calculated on, and with warm weather, a good crop of corn will be raised.

In Pennsylvania and New Jersey the harvest commenced about the first of the month. The crop of wheat, rye, and oats, is said to be abundant, though in some parts the wheat is injured by the rust. In the Western section of Pennsylvania, on the Ohio, more than an average crop of wheat and corn is expected. It is said that the crop of winter wheat in New Jersey is better than it has been for many years.

In Maryland, the wheat crop has nearly all been harvested and it appears that it is larger than has been realized for some years past. Accounts from all parts of the State concur in the report that the crop is abundant in quantity and excellent in quality.

The chinch bug and Hessian fly, in some parts of Virginia, have nearly destroyed the crop of wheat. The ravages of these insects however, have been confined to the Eastern and Middle counties, while in the region west of the Blue Ridge the crop was never more abundant. It seems to be impossible to say whether the whole crop will exceed a fair average. The corn crop is good, and affords a fine prospect, except that it is feared the chinch bug will attack it. In some counties the bug has commenced its ravages on it. The oats crop was abundant every where.

In North Carolina, the crop in the upper grain districts was very abundant.—In the Western counties, the ravages of the chinch bug had been very destructive and in some places half a crop would not be secured.

From Ohio, we have seen but few accounts of the crops—but those few represent them as unusually abundant.

In Arkansas and Mississippi, the wheat was all harvested in June, and in both States it was very abundant.

In the Western and South-western parts of Michigan, the wheat crop is most abundant, and every where, on the prairies in that State and Indiana, it never promised such a general abundance before. The Hessian fly has done extensive mischief in the eastern part of Michigan, though more than an average crop is expected. The harvest commences the last of this month.

On the whole, we do not think there has been in fifteen years, a prospect of such general abundance, as the accounts from all parts of the country now hold out. The tobacco crop, it is said will be very light, except in Virginia; but tobacco, we can do without, and if we have only an abundance of breadstuffs, there need be no complaint.—*N. Y. Express.*

On the night of the 4th ult. about 10 o'clock, some wickedly mischievous fellows entered stealthily the establishment of a vender of rockets, &c. opposite the Bowery Theatre, New York, and set fire to a train which soon communicated with the pyrotechnics, and caused an immense explosion that fulminated alarm throughout the neighborhood.

Slavery in Iowa Territory.— The first business session of the supreme court of the Territory, was held in Burlington the first week in July. The court decided that slavery was contrary to the laws of the Territory, and that a slave taken there to work in the mines and permitted to hire his own time, gained thereby a right to his freedom.

A Roman Catholic Missionary, the Rev. Mr. HARPER, was drowned in the river St. Maurice, Canada, by the upsetting of a canoe. He was on a mission to the Indians.

Indiana Iron.—The Logansport Telegraph says:—"The immense beds of iron ore in the new northern counties of Indiana, are beginning to be added to the available wealth of the country. The Iron works recently erected at Rochester, twenty-three miles north of Logansport, have succeeded in manufacturing a very superior quality of bar iron; a sample of which may be seen at the store of Mr. Cyrus Taber. The quality of the iron has been tested by Mr Hines, who pronounces it superior to the iron generally found in this market."

Illinois.—Fifteen new counties were established at the late session of the Legislature of this State, to which the following names were given: Marshal, Brown, Du Page, Menard, Logan, Dane, Williamson, Scott, Carroll, Lee, Dewit, Jersey, Lake, Stark, and Hardin.

Wool.--The Northampton Gazette says that the greater part of the wool in that section of the state has been taken by manufacturers, at prices generally from 50 to 55 cents per pound.

Green Corn and ripe Tomatoes, were served at the table of some of the Hotels at Columbus as early as the 12th ult.

FLOUR at latest dates—Boston, $5,12 a 5,87—Baltimore 5,62½—Richmond 5,50—Mobile $7 a 10—St. Louis $5.25.

MARKETS.

Zanesville O., July 27.—Flour $4,50; Wheat 62½ cts.; Wool 30 a 45 cts. Our Market continues supplied abundantly with the products of the country—Corn, Beans, Potatoes, Apples, Tomatoes, Cucumbers, and all other vegetables, plenty. The meat market continues at former prices, Beef and Veal, choice cuts 10 cents.

Cincinnati, July 22.—Flour $4,25; Wheat 75 cts.; Corn 60 a 62½ cts.

Baltimore July 23.—Flour $5,62 a 6,50; Beef $7½ a $9; Hogs $9 a 9,25.

New Orleans, July 12.—Flour $4,25 a 4,50; Sugar 5¾ a 6¼ cts; Molasses 31 a 32 cts.

New York, July 20.—Flour $5,75 a $6.—*Zanesville Republican.*

EDITORS' PAY.

Many suppose *editors* must be rich.—They subscribe and take their papers, often, without ever paying for them, and conclude that editors, of course, must be rich.

We have known many made poor by editing. And never did we know one who edited a religious paper "on his own hook," as the Yankee fought in the revolution, who was made rich, or who was increased in his worldly substance scarcely at all, by this kind of employment.

These statements have been suggested by an announcement in the last No. of the New York Evangelist, of which paper E. W. Chester, Esq. has been an assistant editor for a short time. Mr. Chester says, that in his efforts to sustain a religious paper, (The Cincinnati Journal) for three years, he has sunk *seven thousand five hundred dollars.* He now resumes the practice of the law, to regain what he has lost by editing. This is the way we editors get rich.—*Zion's Watchman.*

Counterfeit two dollar notes on the Farmers' and Mechanic's Bank of Steubenville, are in circulation in this place. The Herald says no such notes were ever issued by the Bank.—*Zanesville Rep.*

According to a statement recently made in Parliament, the whole number of persons engaged in the various wool, cotton, flax and silk factories throughout the united kingdom, is 355,333, viz. males 158,555—females 196,818.

It is stated, that steam vessels are vastly superior in squalls to sail ships, that, in a recent tornado, at the mouth of Cape Fear River, N. Carolina, a steamboat weathered it without injury, while the spars and rigging of a sail ship were snapped like pack-thread.

AGRICULTURAL.

IMPORTANCE OF AGRICULTURE.

Since our last we came across, in some old papers, the following extract from the Salem Gazette, with remarks thereon, by the New York Sun. The whole is much to the point, and exhibits in strong colors the folly of abandoning the peaceable and certain occupation of husbandry for alluring prospects of speculation.

"The neglect of agricultural pursuits springs, in a great measure, from the inordinate thirst of wealth which pervades every class of society, and induces men to abandon their legitimate business, to engage in some wild, hazardous speculation, with the hope of becoming suddenly rich.—It is too often the case, that the farmer becomes tired of the moderate and gradual accumulation of property by the products of his land, and leaves the cultivation of it, to engage in the business of commerce or manufactures. He finds out his egregious mistake when too late.—The property he had accumulated is often squandered and lost in consequence of his ignorance of his new business, and he again sighs for the cheerful and independent mode of life which he has abandoned, when it is out of his power to resume it.

"There is another great error prevalent upon this subject; and that is, the business of agriculture is regarded by farmers themselves as less respectable than that of commerce, manufactures, or the professions; and wealthy farmers, instead of teaching their sons their own business, most usually transform them into merchants, lawyers, doctors, or school-masters. This is all wrong.—Agriculture is the very back bone of all business, the main spring of wealth, and should be regarded as a profession of the highest respectability.—It gives to those engaged in it a feeling of independence, genuine nobleness without ostentation, honor, honesty, and firmness, well calculated to perpetuate the free institutions of our happy country. The truth of the eloquent panegyrics of the ancients upon this employment, may be more easily realized here than in any other country on earth.—*Salem Gazette.*

This fondness of the farmers for the desertion of business with which they are acquainted, for the attractive pursuit of speculation, it has been our fortune to witness fully exemplified, and with precisely the final result depicted in the Gazette. We have seen hosts of farmers in the vicinity of a then flourishing town, abandoning the plough and honest industry, and throwing their farms into the market. The town flourishes still—but the madness of speculation is over. Land is discovered not to be worth exactly as much money as would cover it. The farmers who disposed of their estates are now impoverished, either by the speculations in which they embarked the cash capital obtained by their sale, or they are rich in the notes of speculators, which amounts to nominal fortunes, while they are intrinsically worth less than the paper on which they are written.—Many have had the money once in their grasp, obtained by bank *accommodations.* They have had the notes taken up themselves, and have done it—the money being invested in unproductive property, or lost in trade, at the loss of every thing in the world. The farms themselves are still in existence, but would seem to be nobody's property, or at least are in nobody's improvement. They are in chancery, or they are buried under piles of deeds, mortgages, rights of redemption, and the deuce knows what—stuff filthier than legitimate compost, without its salulatary effect on the land thus covered.

Through all the breeze of speculation we knew one old chap who would hold to his acres, and keep them in their proper service, the production of corn and potatoes, and the fattening of cattle.—We used to laugh at him—aye, *we*, for, gentle reader, your deponent has "suffered some" in speculation—for a foolish old gentleman. We all condemned him for a narrow-minded old codger, with a soul not above beans. How stands the case now? The same trim market cart carries in his corn and beans, his cabbage and potatoes, to the neighboring market. Land has fallen in price from the place to which it towered in the pride and folly of speculation. Its products are raised in value and price. The speculators, who were the butterflies of a warm speculating summer, have fallen back—many of them to abject poverty. Our old farmer can portion off his sons and daughters with fortunes. Once, his gaudy neighbors would turn their broad-cloth backs upon his homespun. Now they would be glad to work with him at monthly wages, if speculation had not made gentlemen of them, and, of course, unmade them for every useful purpose.

If farmers wish to know their real standing, let them look at the newspapers. What is the leading topic now, all over the world? On what turns all business? Why, upon the crops. Speculation does not plant a blade of grass; and when a commodity has passed through five hundred hands, though it may have risen in nominal price, it has not increased in quantity or in value. It is rather depreciated. The agricultural interest is the great foundation of all trade and all traffic. There is no possibility that any other branch of business can subsist without it. Upon the farmer we depend for food—and until men become camelions and live upon air, the snug, contented, "before-handed" agriculturalist will be the only truly independent man.

The farmer now realizes a greater profit on his capital invested than any other man. If our farmers would go into business requiring more capital, they can go into more extensive farming operations. Not over more land—for American farmers generally have too much already. Agriculture is yet in its infancy in this country—and our farmers have yet to learn that if the earth yields increase for one dollar expended, it will quite or nearly double its yield for two.—But all this knowledge will come by and by. It has already dawned upon the agricultural tracts near cities.—*New York Sun.*

CULTURE OF MELLONS.

The first and most essential particular in the culture of this article is to get your seed from Philadelphia. Mellon seed, like those of the Weathersfield Onion, is depreciated when taken from the growth of this climate. If you have it, select sandy or alluvial soil, which is the best adapted to the Mellon. Plant twenty feet apart so that your vines may interlock but little, otherwise, being shaded, the young Mellons will drop off for the want of air and sun. Make a hole, for your hill, in which put a wheel-barrow load of well rotted manure, (if not very well rotted it should be mixed with earth) cover this over three inches deep with the common soil, in which plant your seed. Leave but two vines in a hill. Manure from the hog-pen is first rate to put in hills.

The outlines of this mode of culture we received from James H. Neal of Parkersburgh, Va., who had in his garden some of the finest Mellons we ever saw raised in the western country. We procured some seed from the east—probably New Jersey, and have been practising on this method for five or six years. We raise Mellons as large again from the eastern as from the common seed.

CUTTING WHEAT—AGAIN.

The Lebanon Star has the following remarks upon the article in our last on the subject of cutting wheat.

"CUTTING WHEAT.—The suggestion contained in the following article comes too late to be put in practice the present season; but if deemed judicious it can be acted upon hereafter. We have heard early cutting, as well approved as condemned by competent judges on both sides. The following is the experience of the editor of the Zanesville Recorder:

'It has been frequently stated on high authority, that wheat should be cut in the greenish order if you would wish to have good flour, and your wheat to weigh well. We cut a field last year so green that we were afraid the grains would shrivel; but they remained plump and full. It weighed 63 to the bushel, and made the very best kind of flower. To let wheat get dead ripe before cut, the bran thickens and the weight depreciates. Nothing would justify letting wheat stand to get too ripe but the prospect of wet weather.'

"Another advantage in early cutting would be the superior quality of the straw as an article of provender."

Since the publication of our article, a neighbor, a good practical farmer, remarked to us, if we had let the wheat lay in the swathe instead of immediately shocking, it would have shrivelled. The suggestion is reasonable, and probably accounts for the difference of opinion referred to by the editor of the Star. Nothing is more common than for farmers to let wheat, when cut greenish, lay in the swathe for the purpose of drying. It is likely the sun checks the sap too soon, and prevents it from perfecting the grain.

The above suggestion in relation to the straw is important, particularly in this section, where nine-tenths of the cattle are wintered on that article.

[*Communicated.*]

SELECT THE BEST SEED CORN.

It is highly important that your seed corn should be selected from the best samples which can be obtained, as the offspring, whether vegetable or animal, will in a great degree, partake of the good or bad qualities of the parent. The following directions on this subject are from a scientific and practical agriculturalist.

"When the first ears are ripe enough for seed, gather for early corn or for replanting, a sufficient quantity; and at the same time you would wish your corn to be ripe generally, gather a sufficient quantity for planting next year, having a particular care to take it from stalks which are large at the bottom, of a regular taper, not over tall, the ears set low, and containing the largest number of good sizeable ears of the best quality; let it dry speedily; and from the corn last described, plant your main crop, and if any hills should be missing, replant from that first gathered, which will cause the crop to ripen more regular than is common, which is a great benefit.

"The above mentioned plan I have practiced many years, and am satisfied that it has increased the quantity and improved the quality of my crops beyond what any person would imagine who has not tried the experiment.

"Dr. Dean observes, that some recommended gathering seed corn before the time of harvest, being the ears that first ripen. But I think it would be better to mark, and let them remain on the stalks until they become sapless. Whenever they are taken in they should be hung up by the husk, in a dry place, secure from early frost, and they will be so hardened as to be in no danger of injury from frost in the winter."

The manner in which Mr. Thomas N. Baden, of Maryland, improved his corn, commonly called the Baden corn, is given in the N. E. Farmer of March 1st, 1837, vol. XV. p. 265, by Mr. Baden himself. As this may not be in the possession of all your readers, I will give that part which illustrates the principle of improving plants, by selecting seeds from the best specimen.

"I have the pleasure to say that I have brought this corn to its high state of perfection, by carefully selecting the best seed in the field, for a long course of years, having especial reference to those stalks which produce the most ears. When the corn was husked, I then made a re-selection, taking only that which appeared sound and fully ripe, having regard to the deepest and best color, as well as to the size of the cob. In the spring before shelling the corn, I omitted taking the regular kernels at both the large and small end. I have carefully followed this mode of selecting seed corn for twenty-two or three years, and still continue to do so. When I first commenced it was with a common kind of corn, for there were no other in this part of the country. If any other person undertook the same experiment I did not hear of it; I do not believe others ever exercised the patience to bring the experiment to the present state of perfection. At first I was troubled to find stalks with even two good ears on them, perhaps one good ear and a smaller one, or one good ear and a 'nubbin.' It was several years before I could discover much benefit resulting from my efforts; however, at length the quality and quantity began to improve, and the improvement was very rapid. At present I do not pretend to lay up any seed, without it comes from stalks which bear four, five or six ears. I have seen stalks bearing eight. One of my neighbors told me that he had a single stalk with ten perfect ears on it, and that he intended to send the same to the museum at Baltimore. In addition to the number of ears, and of course the great increase in quantity unshelled, it may be mentioned, that it yields much more than common corn, when shelled. Some gentlemen in whom I have full confidence, informed me that they shelled a barrel (ten bushels of ears) of my corn, which measured a little more than six bushels. The common kind of corn will measure about five bushels only. I believe I raise double, or nearly so, to what I could with any other corn I have seen. I generally plant the corn about the first of May, and place the hills five feet apart each way, and have two or three stalks in a hill.

"Early last spring I let George Law, Esq. of Baltimore city, have some of this seed corn; he sent it to his friend in Illinois, with instruction how to manage it. A few weeks since he informed me that the increase was 120 bushs. per acre; that there was no corn in Illinois like it, and that it produced more fodder than any other kind. I have supplied many friends with seed corn, but some of them have planted it with other corn, and will, I fear, find it degenerate.

"I have lately been inquired of, if this corn is not later than any other kind? It is rather earlier but certainly not later. Corn planted in moist or wet soil, will not ripen so quick as that planted in a dry soil. In the former there will be found more dampness in the cob, although the kernel may appear ripe in both. In the two last years, (i. e. 1837 and 1838) the wet seasons have injured much corn that was early lofted or housed."

It appears from the experiment of Gorham Parsons, Esq. that the Baden corn, under that gentleman's skilful treatment, grew very large, but is late, and is doubtful whether it will ripen sufficiently to germinate another season. The same thing would probably take place in all southern corn. Probably the better way for those situated in a northern latitude would be to select northern corn;—the Lathrop, the Dutton, the Canadian, or some other early sort, and improve it by selecting the best sample, and adopting the same process, so successfully pursued by Mr. Baden, as above detailed. F.

With regard to the Baden corn alluded to in the communication of our friend, we have made a *garden experiment* with reference to it. Mr. Rogers, of Morgantown, Va., favored us with an ear of this kind of corn which we planted in our garden. It was planted in our absence from home last year, and was put in entirely too close, not exceeding two and a half feet apart, and three and four stocks in a hill. The season being extremely dry the chance for success was quite bad. We had on several stocks four perfect ears. And they were not as we expected, one big ear and the rest diminishing down to the nubbin; they were all nearly equal in size. We had about seven bushels, one half of which we saved for seed.—We have planted this year about 3½ acres, which looks very promising. We do not think there was one seed in a thousand but what vegitated. We never had sounder, better corn. This year it seems to be about ten days behind the common corn planted at the same time, in tasseling and silking. Whether it will overtake the other corn we cannot say. It has the thickest and tallest stalk we ever recollect seeing. The stalks seem a little more disposed to disease than the common corn. However, we are of opinion, it will answer this climate.

An effectual remedy for heaves in Horses.—Take one pound of good ginger per horse. Give two table-spoonfuls a day—one in the morning, the other in the evening, mixed with wheat bran. The efficacy of the above medicine has been proved in the cure of cases of obstinate heaves.—*Communicated.*

To stop Bleeding.—A new and valuable styptic which will stop bleeding even of the largest blood vessels. Take of brandy or common spirits two ounces; castile soap two drachms; pearlash one drachm; scrape the soap fine, and dissolve it in the brandy, then add the pearlash, mix it well together, and keep it close in a vial. When you apply it let it be warmed, and dip pledges of lint in it, and the blood will immediately congeal. It operates by congulating the blood a considerable way within the vessel. A few applications may be necessary where the wound is deep, or where a limb is cut off.—*Communicated.*

THE RECORDER.

ZANESVILLE.

THURSDAY,-----AUGUST 1, 1839.

MISREPRESENTATIONS CORRECTED.

The following article is from ZION'S WATCHMAN, of July 13th; a paper published in the city of New York by the abolitionists of the Methodist Episcopal Church, and edited by La Roy Sunderland:—

"THE METHODIST PROTESTANT LETTER-PRESS.—This is the name of a little quarto sheet which some members of the M. P. Church, in Philadelphia, propose to publish in that city, on the first Tuesday of every month, at fifty cents per annum.

"The only number that we have seen is the 2d. The prominent design in this seems to be, to set forth the superior claims of the government of the M. Protestant Church. For instance, the editor says:—

'Surely it is a blessing, to be permitted to announce, first, to sinners, that the doctrines we preach make provision for the salvation of all,—and to believers, that the *government we administer acknowledges and* SECURES THE RIGHTS OF ALL.'

"Well, this sounds well. Now let us quote from the constitution of this same church, and see if the above is the echo of that important document:

'Every minister and preacher, and every ☞*white*☜ lay member, &c. shall be entitled to vote in all cases.'—Art. 13. [12th instead of 13th Art.—ED. REC.]

"Does the above secure the rights of colored people?

"Again:—

'Every minister and preacher, and every ☞*white*☜ lay member, &c., shall be eligible as a representative in the General Conference.' —*Ib.*

"Hence it will be seen, that the constitution of this church, so far from 'securing the rights of *all*,' does positively deprive the colored members of all their rights, not allowing them either to vote, or to be sent to the General Conference.

"Such constitutional *restrictions* against the rights of colored people, we believe, are not to be found in any other church in the country. And it does seem to us, that those brethren in that sect who are unwilling to come out against this feature of their polity, will make but little progress in Philadelphia, towards convincing others that their government is the freest and best, on earth.

"Another fact. The 'Letter-Press' says:

'The M. Protestant Church delights in *publicity*.'—'It has nothing to conceal. It invites investigation.'

"Now if this be true, we ask brother Stockton to tell us, how it has come to pass, that the *official organ* of his church has repeatedly refused to publish the doings of Annual Conferences on the subject of slavery?

"If, as he says, he has 'nothing to conceal,' he will feel it a pleasure, we doubt not, to give us some light on these subjects."

Here it is asserted in the most positive terms, on the author ty of the above quotations, that the constitution of the Methodist Protestant Church "does *positively* deprive the colored members of all their right,s"&c Now, Bro. Sunderland, we ask in all seriousness, do you understand the meaning of the word "positive?" If so, is there any thing positive in these quotations but securing to white men in the Methodist P. Church the right of suffrage?—Have all ☞*white*☜ men in the M. E. Church this right secured to them? This is the first time that we have learned that providing for the rights of one class of men, "*positively*" took away the rights of another class.—On this discovery, we cannot but compliment the logical accumen of the editor of the "WATCHMAN," and commend him as worthy of a high station on "ZION'S" walls.

But now to the point; what our brother has asserted above, to make use of a Lilliputian expression, *is the thing that is not so*. So far from the constitution of the M. P. Church "positively depriving the colored members of all their rights," it makes a "positive" provision acknowledging their right of suffrage, and for carrying this right into operation. See Art. VII. Sec. 4. "Each Annual Conference shall have the exclusive power to make its own rules and regulations for the admission and government of colored members; and to make for them such terms of suffrage as the Conferences respectively may think proper."

Here the whole matter, in relation to colored members, is referred by the constitution, exactly where it ought to be, to the people. The Annual Conferences consist of an equal number of ministers and laymen, who come immediately from the body of the church. And we have no doubt but the Methodist Protestant Church, to say the least, is as much inclined, to treat with humanity, and to respect the rights of colored people, as brother Sunderland's own church.—However, in this region, the M. P. Church has nothing to do with the government of colored members. Before our organization, they were driven off by the proscribing operations of Episcopal Method stism, to themselves. They now have churches, and circuits, and districts of their own; aye, and we believe a *bishop* too; and, of course, are not dependant on their neighbors.

Now my brother, how looks your ungenerous charge upon us, that, "such constitutional *restrictions* against the rights of colored people, are not to be found in any church in the country"? Ah! let us say to you, sir, that the glorying of our brother Stockton, so far as a comparison between the government of the two Methodist Churches is concerned, still stands unimpeached, notwithstanding your self-confident attack upon him. You must see that the whole of your imaginary triumph, over the "Letter-Press," is founded either in your wilfulness, or your ignorance of our constitution. Take either horn of the dilema and your position is not very enviable.

With regard to the question, so complasiantly made, to our brother Stockton, respecting our "official organ" not publishing the "doings of Annual Conferences on the subject of slavery," we will make to Bro. Sunderland a proposition, viz: in the event the editor of the "Letter-Press" should not think worth while attending to the above question, if he will first answer an interrogatory or two of ours, we will reply to his query. Then;—how comes it to pass that "Zion's Watchman" manifests such a refined sensibility on the subject of the rights of "colored people," and pays little or no attention to the rights of ☞*white*☜ people? The Itinerant clergy of the Methodist E. Church have denied to, from ten to fifteen thousand local ministers, and more than 600,000 lay members, the right of representation or suffrage, and reduced them to a state of vassalage, exceeded by nothing but African slavery itself; they are said too, to be the best people in all the country. Now, why is it that the Watchman, so chivalrous on the subject of "human rights," the "rights of man," the "rights of colored people," &c. &c. is so wonderfully mum as it respects the ecclesiastical rights of these more than 600,000 good people? Surely here is a question that commends itself, highly, to the *philanthropic* feelings of our worthy editor.—"Give us some light on these subjects," and we promise then to attend to your query.

Bro. Sunderland, we have not been a regular reader of your paper for some time, but there are a number of our members scattered over this region of country who take it, and we learn from various directions, that, by the publication in your columns of such misrepresentations as the above, you have been doing us a considerable injury. We were informed by one brother, of respectable standing, that he had written to you a communication, correcting wrong statements, in your paper, but that up to the date of our information you had paid no attention to it. Are these things so? But, notwithstanding, we are loth to believe that you are intentional in these misrepresentations, and shall suspend our judgment for further testimony. If you will publish this correction in your columns, we will acquit you on the score of *design* to injure. Or if you think this too severe a request, and you will simply announce in your paper, in substance, that, in the article under review, you were mistaken, in reference to the constitution of the M. P. C., and that what you said was calculated to do that church an injury, we will still be satisfied that you *intended* us no wrong. Now, Bro. La Roy, come up to the work like a man and a christian, and we shall esteem you a worthy fellow-laborer. If you will publish this article, we will promise, in turn, to give any one you may desire, a place in our columns. We have ☞"nothing to conceal."

We doubt not the ability of Bro. Stockton to attend to this matter himself, but the reason why we notice it, is, because the "Letter-Press" does not circulate, through this region, so extensively as the Recorder. One prime object of the origin of this paper is to see to such matters. "Zion's Watchman," its neighbor the "Advocate," and a whole corps of *light horsemen*, reconnoitering the country, by their misrepresentations are discouraging our members, and doing all they can to prevent the progress of our cause. We now have the means of attending to these things. But we regret that one of the most philanthrophic papers in all the land should make it necessary, in the very commencement of our editorial labors, to gird on the armor of *self-defence*.

We do not claim perfection for either our principles or practice, (though we claim for the former a high degree of excellence,) and when asked in the spirit of candor, we are willing to admit what we think wrong in either. But when assailed through wantonness, self-preservation calls on us for defence.

Since writing the above, we see the editor of the "Philanthropist" has copied this article from the Watchman into his columns, and as he has made no objection to it, of course, has endorsed the *******. The editor of the "Philanthropist" is less excusable, if possible, than the original publisher of this article, because he is a member of the Methodist Protestant Church, and ought to be acquainted with the provisions of his own discipline. But, that he never referred to the constitution of his church, to see if these things were so, is plainly inferable, from the fact that he continues to credit the 13th Art. with the above quotations, after the "Watchman," instead of the 12th. If *high* party excitement would influence a man so intelligent and amiable as Dr. Bailey, that he would swallow, without *examination*, whatever came from one of the corps, what would be its effects on ordinary minds?

We ask it as a matter of *justice*, on the part of the editor of the "Philanthropist," as he has published the foregoing article in his paper, that he publish our reply. We wish him to give it intire, and not to mutilate it.

LIBERALITY OF SENTIMENT.

The following letter is from a minister of the Methodist Episcopal Church to the editor of the "Methodist Protestant," who had written before on the necessity of brotherly love among christians of different orders. We commend it to the notice of all. Men of this kind of liberality of spirit are an honor to any church. They should be loved and esteemed if found even among Turks.

GALLATIN, Tenn. May 7, 1839.

Mr. Editor:—The courteous manner in which you were pleased to notice my first communication, has emboldened me again to dip the "old quill" in the ink horn—and by way of introduction, I would beg leave to express my unfeigned regret, that the feelings of any Brother of the old side, have been wounded by any "word or syllable" contained in that letter—for I am sure sir, that I did not intend to cut the lock of any Sampson's hair, nor pluck a feather from any ministerial wing. But some brethren of our ancient "*common*-wealth" (forgive the misnomer, Mr. Editor,) are grieved, and your unworthy servant has already undergone the ceremony of a catechetical lecture, delivered by one of the Lieutenant Governors of the Spiritual Regency! I endeavored to commend to his special notice the spirit and manner evinced in the letter of the amiable Dodridge to the venerable founder of Methodism (appended to my letter,) in which the spirit and fire of love, are seen to glow in every line. I had to confess to my Brother, the superior—that I only regretted that the exceptionable words used by me, were too true in their application to historical data—some of which, I rehearsed to him. I referred to the unceremonious expulsion of ministers and members in Bedford county, for having it in contemplation to organize a union society some years ago. I also referred the brother to the rash proceeding, the cruel deed which eventuated in the excession of "eleven ministers and twenty-two laymen from the M. E. church in the city of Baltimore, in the fall of 1827"—whereupon "about fifty of the female friends of the suspended and expelled brethren, withdrew from the church, after addressing a letter to the preacher in charge," manifesting the courage of Roman matrons, and in words sweet as angels use, "they rebuked the madness of the prophets" saying "to find our dear companions, fathers, brothers, children and friends, treated as criminals and enemies, persecuted, suspended and expelled; denounced as back-sliders and disturbers of the peace: and ourselves treated coldly, and distantly by our former friends, and by our pastors—and all for a mere difference of opinion about church government, is more than we feel bound, in christian charity, longer to endure, and therefore, we feel it our duty, in the fear of God, to withdraw from the church." I furthermore told this *under shepherd*, and bishop of souls, of the claim set up by the General Conference in 1828, assuming the *divine right* to expound the word—and to *rule* those whom they had gathered together. What effect, if any, the reference as above, had on the feelings of my catechetical lord, the Rev'd. presiding Elder, I know not. He is a zealous minister, evincing in some instances a squamish adherenc, to the forms of service, laid down in our book of discipline—and as a preacher possesses at least "two talents of his Lord's money!" But Mr. Editor, I have long since learned, that to say, "I was wrong or mistaken," is one of the hardest sentences to pronounce distinctly, in any language, whether Latin, Greek or Hebrew! Surely "the times were sadly out of joint" when the deeds of undoing, were being done in the Baltimore Station. And I fear, sir, that the spirit of intolerance is still dominant in many places, among the leaders of our Israel. I have an extract of a letter recently received, written by a brother local preacher of the Protestant Methodist Church in Illinois, to a friend in this county, (I know the brother and vouch for his veracity) in which he saith—"We Protestants meet with much opposition in this country—not allowed to commune with them at the table of the Lord. I attended one Quarterly meeting where we were debarred in this way by the presiding Elder; he said there had been no split in the M. E. church, but there had been *a slabbing off*."

From the above extract it would seem that the officiating minister admitted that the saw of the executioner, had been in requisition, but it was only used to remove the bark and sap—the parts or parcels usually thrown away, or given to the flames! Ah, sir, but legitamize the authority of the priest-hood in any church, to arrest and expel any of its members "for a mere difference of opinion about church government," whether ecclesiastical or political, and that very day you will have introduced a monster, more hateful than the great golden image that Nebbuchadnezar caused to be set up on the plains of Dura! Yes, sir, it may prove the foundation stone of that pedestal on which the iron hearted Moloch was wont to stand, and receive to its burning bosom, the sacrificial victims offered to appease the hunger of the infernal greedy god! What—a bloated monster in North America! I thank God Almighty for the rights of freemen, "the liberty of speech and of the press," guaranted to us all by the Federal Constitution! But "the companions, fathers, brothers, children and friends" of the sisters in Baltimore, were suspended, yea, expelled, &c., and that too for the unpardoned and unpardonable sin—for "a difference of opinion about church government" and a manifest desire of propogating that opinion—and any thing short of the privilege of propogating a cherished opinion, call it what you may, is nothing more or less than arrant down right popery! So thought Dr. Fisk, and so he wrote from Italy, the seat of the beast. But the Protestant Methodists, according to the Illinois correspondent, "are debarred from the table of our Lord" by a Methodist Episcopal P. Elder!

I had thought, the State of Illinois was remarkable for a sort of magic influence, inherit in its civil constitution assimilating even the Crows and White Pigeons. But the Protestants have committed the unpardoned sin—and the sentence has gone forth—"Crucify him—Crucify him, till he is dead, dead, dead! And lest, peradventure, he should not be dead enough—one of the officers of the Italian band spears him afresh, in the side—not allowing the Protestant Methodist to commune at the table of the Lord." May the Lord forgive the dead!—I hope it is not so bad as the brother believed. What sir—suspended, excommunicated—banished to a returnless distance, "from the kingdom of grace"—for an honest difference of opinion about Church Government—inforcing that "damning Turkish gag law, that would make Eastern Eunuchs and trembling mutes" of an intelligent and pious ministry and membership! O! Sir—this is too bad! And if it should be the case among a few—who like the ambitious disciples, that prayed through their mother—that they might be seated, "One at his right hand and the other at his left," I know it is not so with all of our brethren and fathers. I know some that take great pleasure in co-operating with their Protestant brethren—and like true "yoke fellows" in the gospel car—they labor together in housing the harvest of souls. This is as it should be—Had the disciples that were minding their nets, commenced denouncing each other, on account of a mere "difference of opinion" about their nets—the presumption is, that the multitude of great fishes—which were inclosed by our Lords special superintendence, would all have broken through, and made their escape "in the watery waste."

Mr. Editor, I have a tradition given me by an aged man, an Elder in the Presbyterian Church—that, once upon a time (a set time I presume) the amiable Doddridge—the seraphic Dr. Watts and the laborous Wesley did actually commune together "at the same table of their common Lord!" O! what a bright example to Christians of different denominations—who cherish an honest difference of opinion about many things yet are so elevated by that love of God, (the lever by which a fallen world is to be moved) that they embrace as "brothers and companions in the kingdom, and patience of our Lord Jesus Christ." O! for their mantle to fall on us all. Adieu! till the next time. Your Brother.

H. M. CRYER,
L. Elder in M. E. Ch.

We have had an addition of eighty subscribers to our list since our last. We received a letter containing ten with the promise of more, from Bro. Hazlet, who labors in Braxton county, Virginia, away up in the mountains clear beyond where the "bears" live. He says "prospects, on this circuit, are getting better."

COMMUNICATIONS.

For the Western Recorder.

OWEN COUNTY, IA. July 8, 1839.

Bro. Springer:—I left home on the 13th of last month, to visit the six circuits in the interior of Indiana. I close my meeting to-day (Monday) on Spencer circuit. Hitherto we have had many refreshing seasons—a goodly number have joined the church, and our members seem to be encouraged. Very few in this section have taken the Baltimore paper, hence the reports spread and reiterated, by those who desire it to be so, that we are all coming to nothing, or are all going back to the old church; that Br. Shinn is negociating with the Bishops to get back, with the whole church, and so forth, has discouraged our brethren. But now, I hope, through your paper, correct information will prevent discouragements. I am confident that if our brethren would do their duty in a temporal and spiritual point of view, we would advance much faster. I am more and more convinced that unless there is some systematic plan to raise support for the Itinerant men, we must fail in this District to a great extent; but I feel a hope that our brethren will pursue the subscription plan, and that it will succeed. I believe our preachers have done their duty thro'out the District, with very little exception. I have not time to write much now; you may expect to hear from me after I get home.

Yours, in the best of bonds,
A. M'GUIRE.

For the Western Recorder.

HOLLIDAY'S COVE, BROOKE CO., VA. July 27, 1839.

Mr. Editor:—The "Western Recorder" has come duly to hand. We all wanted it sooner, but the reasons you assign for the delay of publication, it is presumed, will be deemed satisfactory to the subscribers generally. Others, who, so far have declined becoming subscribers, though members of the church, have no just right to complain, nor would they, if your paper had never appeared. The "Recorder" is hailed by our people in this region, as a messenger of glad tidings to the M. P. Church, and to all who look for Redemption from ecclesiastical thraldom through the extension of her principles, and influence. O how have we suffered, for a medium of communication, in the west, ever since the old "Correspondent," small as it was, was permitted to go hence, to be no more seen among us. The ministers, members, and friends, of the M. P. Church, in the outspread valley of the west, can now speak to one another through your columns. Needful information can be communicated, so as to enable the church, in proper season, to guard against internal and external enemies—those *vermin*, who, in the absence, or since the death of the "Correspondent," have been crawling over, and annoying our ecclesiastical body, *hunting life for themselves, while they were producing nothing but death to us*. Important suggestions can be made, by, who ever is able, and willing to make them, in relation to the best method of doing every thing, which, as a christian community, we have to do—ever remembering the old maxim, "that what ever is worth doing at all, is worth doing well." Encouragement to the heart, and soul, of the church, can be imparted, by communicating through the "Recorder," accounts of the work of God in the whole length and breadth of our fellowship—God has been doing wonders of mercy among us, yet we knew it not, for want of a medium of communication.

I rejoice Mr. Editor, that you, at length, are under way—that your sample number is before the public. It is respectable for its *size* and *form*, but more so, for its variety of well selected & original matter. Now I trust, every lover of our cause in the west, will subscribe at once for the "Recorder"—at once render its financial interest unembarrassed, by making your six hundred subscribers *twelve* o *fifteen hundred*. Our connexion, where your paper will circulate, can do this thing easily, if *they will*, and I think *they will*, if things are taken by the right handle, and managed judiciously by our preachers and active members.

A few words in relation to Ohio circuit, before I close this hasty communication. The year is near its close—nearly one year's experience enables me to say, that on this circuit their is much real moral worth—much unostentatious, modest, retiring piety. Here is a people friendly to peace and good order—no church litigation has harrassed or troubled the souls of either preachers or people, during the year. We found harmony, we expect to leave harmony among them—and should they become a little more alive to the value and importance of social meetings—*Class and prayer meetings*, I have no doubt, but more abundant success would attend the labors of the ministry on this circuit. Our additions so far, I suppose to be near fifty, but owing to removals, &c., I rather apprehend we shall not return to Conference many more than the last year's number, unless our camp-meeting should bring us a considerable increase.

On this circuit there are eight Sunday appointments in the four weeks, and but two week day appointments. At the Sunday appointments we have good meeting houses to preach in, and pretty good societies at all except one, and there we expect to organize a society before Conference. The societies at the week day appointments are small, but respectable in point of character. Our camp-meeting will be on the land of James W. Brown, in Holliday's Cove, and is to commence on the last Thursday in August. Our ministers and preachers, stationed and unstationed, in the neighboring circuits and stations, together with all who can be with us, as they pass on to Conference, are affectionately invited to attend.—Ministers and christians of other denominations shall be made welcome, should they see cause to attend and take part with us.

And now Mr. Editor in conclusion, permit me to join you and express my confidence along with you, in the final success of the M. P. cause.—Our principles are those of *reason* and *Revelation*, and will bear recommending and defending too. What though a few have left us, and by thus cutting themselves off from our fellowship, have done themselves and us a piece of justice, which the church at the time was not well able to perform—Does this prove that our enterprise is going to fail? Surely not. As well might the slipping of a few lizards, and the hopping of a few frogs out of a ship in full sail, be brought to prove that the said ship however well manned, managed and favored by Providence, would certainly be wrecked and cast away. *We want a holy enterprising ministry and membership; truly in love with our principles—all sacrificing, and bent on "overcoming, by the blood of the Lamb, and by the word of their testimony, and loving not their lives unto the death," and "the gates of hell" shall never be able "to prevail against" the M. P. Church.*

Yours, truly, GEO. BROWN.

For the Western Recorder.

STEUBENVILLE, O., July 22, 1839.

Bro. Springer:—The first No. of the "Recorder" was received this morning, and after a brief examination of its appearance, and the quality of its matter, I have no hesitancy in saying that it ought to meet a favorable reception and liberal support. Should all the preachers and brethren who are hearty in the cause, use that amount of dilligence that the importance of the object demands, there can be no doubt but their efforts will be crowned with success.

"The M. P. Church delights in *publicity*." It ought to glory in *publicity*. There is nothing in its constituent elements that need fear the light.—To us there appears a happy combination of the elements of "personal and social liberty," which are highly calculated in their natural and direct tendency to lead each of its members to see their high privileges, and to feel their proper responsibilities, and thus be stimulated to vigorous *action*. Yes, *action!* This is what we want, a straight forward, vigorous action. The press then doubtless may be a powerful auxilary.

Having visited a large portion of the Pittsburg District, during the last and present Conference years; having had the delightful privilege of attending many religious and popular meetings; wherever I have found our preachers attentive to their work, I have found our people in fine spirits, much religious prosperity, and the prospects of the church brightening. Her march was onward. But alas, in too many instances, it would seem, the cause has been left to languish, because of neglect or a wilful violation of engagements entered into on the part of some itinerants. Some perhaps, were naturally cowards at heart, and therefore not qualified to endure hardness as good soldiers of Jesus Christ. Others, we have reason to believe, were actuated by some ambitious motive; such cannot long endure the cheeks of our free institutions.

It is said of Lord Nelson that when he was preparing for the great battle of Trafalgar, he gave to the fleet under his command this rallying order; 'Old England expects every man to his duty;' a soul-stirring motto no doubt to all true-hearted Britons. Might we not adopt a similar motto? and say—'The M. P. Church expects every member to his duty;' yea, surely the reasons for her existance say so; the nature of her institutions say let her march be onward, and though she is young, and small, and feeble, yet we know, that great and wonderful results have been produced from small beginnings.

Hitherto we have realized the approbation of the great Head of the church, in many gracious and powerful revivals of religion, and never more so than during the present Conference year, now near its close.

In conclusion I which to say a few words for our Literary Institution, in order to stir up the minds of our brethren by way of remembrance.—The superintendents of circuits and stations were all appointed sub-agents at the last Annual Conference, and a number of them signed a pledge to do all they could in the way of obtaining funds, and, though the way of the agent was greatly obstructed for some six or eight months of the former part of this year, by circumstances not necessary now to name, it is now ascertained that the Trustees of the Ohio Conference have given assurances that the property shall not be sacrificed. We hope therefore that all who can do something, *will do what they can*. A number have subscribed who are in arrears according to the terms of their subscriptions. We hope those will make an effort to forward to the Conference funds to meet their engagements. It is my intention to forward for publication an entire list of subscriptions and donations, in order that all may see what has been paid and what remains unpaid.

Yours, &c. JER'H. BROWNING.

ITEMS OF NEWS.

FOURTH OF JULY IN NEW YORK.

We do not know that a single oration or public speech of any kind, was delivered in this city on the 4th ult., in commemoration of our national independence. There was however, folly and sin enough committed to sink the city. We might as well attempt to count the particles of dust raised in the streets, as to undertake a description of the dissipation which swelled the streams of iniquity by tens of thousands in this city on that "rum-soaked, powder-smoked day."

We doubt whether as much contempt was ever shown by so many thousands of people, for law since the world began as was shown in this city by tens of thousands on the 4th inst. We allude to the municipal laws which prohibit the firing of squibs, crackers, &c., in the streets.—One or more houses were set on fire we are told, by these practices. But not to speak of the immense amount of money which is thus so foolishly thrown away, we ask, what must be the effect of this practice on the thousands of youth who are thus educated to set the laws at open defiance! And is it not beyond the ludicrous to see the laws posted upon the fences and corners of the streets just at the very time when so many thousands on thousands set themselves to break those very laws, and this too, without the least attempt to carry these laws into effect? Indeed, we see not how more contempt can be cast upon the municipal authorities of this city than is done here by scores of thousands every fourth of July. An unusual number of accidents occurred in this city, a few of which will be found in our summary.—*Zion's Watchman.*

HYMENEAL.

MARRIED—On Thursday, the 27th of June, by D. Y. Ostrom, V. D. M., Mr. JOHN W. ROBERTS, of the M. E. Church, to Miss MARGARET YONTZ, of the M. P. Church, both of Thorn tp., Perry county, Ohio.

OBITUARY.

Departed this life, at her residence, near Dresden, on the last Sabbath of June, Mrs. SOPHIA CASS, consort of Mr. Geo. W. Cass, in the 50th year of her age.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper. Our subscribers in Cincinnati will please hand the amount of their subscription to Moses Lyon, who will retain what he may receive in his hands until he hears from us.

Letters received.—M. Scott—out of our power to attend your camp-meeting—would afford us much pleasure to comply with your requst, but the paper requires our daily attention. H. Heberling, A. M'Guire, J. Patfreeman—it is out of our power to attend with you; G. Brown, papers sent, all right: J. Browning, S. Hazlet.

Received pay for first volume Recorder—Of H. Elliott $2; Wm. Camp $2; H. Heberling $3, ($1 for advertisement;) C. Meriam $2.

CAMP-MEETING NOTICES.

A camp-meeting will be held on the land of Geo. Cassel, about 4½ miles from Mt. Vernon, on the road to Chesterfield, to commence on the 3d of August, under the superintendance of Bro. M. Scott.

A Camp-Meeting will be held for Union circuit, commencing 22d of August, on the Mount Braddock farm, owned by widow Mason and heirs, and is about one mile from the old Camp ground, on the farm of Col. Paul. We request the attendance of the President, and all our ministers, stationed and unstationed, as well as the ministers and members of other Churches who can make it convenient to be with us.

J. M. PIPER, *Sup.*

A Camp-Meeting for the benefit of the Zanesville circuit and station, of the M. P. Church, will be held on the land of Bernard Workman, near the residence of C. Springer, commencing on the 30th of August, 1839.

We request all our ministers, stationed and unstationed, also the ministers and members of other Churches, who can make it convenient to attend with us. JAS. ROBISON, *Sup.*

ADVERTISEMENTS.

ZANESVILLE, OHIO.
August 1, 1839. 2tf

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods, and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, short Creek, Harrison county, Ohio. HENRY HEBERLING.
August 1, 1839 p2

Cattle for Sale.

TWENTY-FIVE thriving young CATTLE for sale. Inquire at this office, 51 miles west of Zanesville.
July 18, 1839. 3f

LADIES' DEPARTMENT.

THE MOTHER.

How sadly is she deficient in natural feeling who thinks her infant troublesome, is willing to trust it to the care of hireling nurses, while she indulges in the gaities of the ball room; and who leaves the formation of its character, as it grows up, to the ignorant or vicious, rather than watch over it with assiduous care, and direct its opening mind into right thoughts and right impressions. A mother can mould the character of her child at will; but this cannot be done by supine indulgence of self. She must make it the business of her life—her pleasure and constant employment to rear up her children. Then will they gather round her in her maturer years, and bless the hand that guided them in the right way, and taught them such precepts as now guide them safely and calmly on the troubled sea of existence.

A SISTER.

He who has never known a sister's kind ministration, nor felt his heart warming beneath her endearing smile and love-beaming eye, has been unfortunate indeed. It is not to be wondered if the fountains of pure feeling flow in his bosom but sluggishly, or, if the gentler emotions of his nature be lost, in the sterner attributes of mankind.

"That man has grown up among kind and affectionate sisters," I once heard a lady, of much observation and experience, remark.

"And why do you think so?" said I.

"Because of the rich development of the tenderer and more refined feeling of the heart, which is so apparent in every action, in every word."

A sister's influence is felt even in manhood's later years, and the heart of him who has grown cold in its chilling contact with the world, will warm and thrill with a pure enjoyment, as some incident awakens within the soft tones and glad melodies of his sisters' voices. And he will turn from purposes which a warped and false philosophy has reasoned into expediency, and even weep for the gentle influences which moved him in his earlier years.—*Athenœum.*

THE ONLY DAUGHTER.

You are a pious mother, and God has given you an only daughter. You have read, "*He that asketh receiveth,*" and in virtue of this precious promise, have spent hours, yea, days and nights, in earnest, agonizing prayers over the cradle of that infant. Your almost every breadth contained an aspiration to the prayer-hearing God, in behalf, not of the perishing body, but for the never-dying soul of the object of your solicitude. You solemnly dedicate that infant child to the service of God.—When its lips could first articulate sounds, it was taught its Maker's praise. When its mind expanded, and became capable of understanding it, you informed the child of her dedication to the Lord. In childhood and in youth, no means were left unemployed that could lead to virtue and to God. Even her amusements were innocent, yea, instructive; and the whole course of her education such as should bring her to a knowledge of the truth, and the attainment of eternal blessedness.—Have you done all this, and has not the result been happy?—been such as you hoped for? If you have done your duty, and there be no such result—then, either I know not how to interpret the divine promises, or God is not faithful to fulfil them. At least, the parent ought seriously to inquire if there be not something wrong in the motive that has prompted to these efforts and prayers.

There is scarcely another spot where a parent is in more danger of self-deception. The mother may mistake mere maternal fondness for a desire of the glory of God, in the conversion of her child.—Maternal devotion may be the secret spring of all she feels, and asks, and does. "You ask and receive not, because you ask amiss."

I know of such a case: it is said of a pious widowed mother and *her only daughter.* She received her from the hand of her God in words like these: "Father of mercies! Thou who delightest in dispensing good to thy children; Thou who hearest the cry of penitence, and the solicitation of the humble, hear my prayer in behalf of the child thou hast given me. Make her a child after thy own heart.—Thou hast lent her to me. Continue the blessing so long as it can be for thy glory. I am unworthy of this trust, but, confiding in thy assistance, I will strive to use it for thee."

For years did she offer up such prayers, and oftentimes every energy of her soul seemed awakened and engaged to procure the long-delayed blessing. But it was still delayed; and not till she looked up from the deep waters of affliction, did God hear her. Then was she brought into the right position. She assumed the right attitude. The form of her petition was changed. She was humbled—she was truly humble. And in sole reference to the glory of God, she could say, "Lord, *take my all.*" Her heart was broken,—her spirit contrite. Her prayers now reached the ears of the Lord of Sabaoth. Her petitions for this particular thing, for twenty years, had not looked beyond a selfish end.

And what was now the condition of the daughter? She is flying to God for succor. A crucified Saviour seems to say, come. Yet there is a burden to be removed: it is a mountain. What can it mean? On it she seems to read, "Sinner, you may find mercy when, and only when you wholly and unreservedly devote yourself to your Saviour." And now, too, a kind interpreter may say, "God may need you in a heathen land."

Now comes the struggle. Here is life and death—heaven and hell: but the poor sinner must surrender all—be what the Lord would have her to be—go where the Lord would have her go, and do what he bids. She submits. Painful is the decision, but happy—happy in its results here, and happy will it be hereafter.

"Mother," says the daughter, now rejoicing in redeeming love, "thanks be to God, I feel peace and joy in my soul.—Jesus seems to smile graciously upon me. Let us praise him here, as an antepast of heaven. But there is a small still voice calling me from you for a little while.—It is a 'Macedonian cry,' from the far-distant East. I must say, *farewell.* It is not grevious to *me*—But why do you weep, dear mother?" "*Lord, take my all,*" is again her submissive reply.—*Mother's Magazine.*

POETRY.

DAY BREAK.

There's beauty in the dawning hour,
Of day among the brakes,*
When from its sleep the earliest flower
Of the young spring awakes;
When first the forest leaves are stirred
By the light fingered breeze,
And the first love-note of the bird
Is heard among the trees.

There's beauty in the changing fleece
Of every fainting star,
Marching in silentness and peace
On Heaven's front afar;
There's beauty in the distant hill,
And in the shadowy dell,
And in the dew-drop hanging still,
Upon the heather-bell.

The sounding of the pondrous wain,
Along the turnpike-road,
The burden of some *lively strain,*
Of some shepherd-boy abroad:
The martin of the meadow-lark,
As up in air she springs,
To catch the first life-giving spark,
Of sunlight on her wings.

The barking of the village cur,—
The distant city's hum
Of market-people just astir,—
And last the *reveille drum!*
In all of these—and every thing
Which answers to the call
Of morning, with her eagle wing,—
There's music in them all.

*Hedges.

DESULTORY.

TO PARENTS.

The right education of your children is dearer to you than any earthly object; for a good education is a young man's best capital. To educate your children well, is to give them equal chance for the privileges and honors of manhood.

But to keep them from school the most of the time—to furnish them with a miserable, useless teacher—to deny them the necessary and the most approved school books for general information and reading—to do these things, or either one of these, is to do your children an incalculable injury.

You wish your children to be companions of the virtuous and the intelligent—then make them virtuous and intelligent; unless you do this your children will be unfit for such society as you wish them to keep. You wish your offspring respected and influential—morality and intellect are always respected, and these qualities are always influential too. You do not wish others to trample upon the rights of your children—you do not wish others to lead them, to think for them, or make them mere tools for ambitious ends. Then give them an education; a mind, that they may know and keep their rights—that they may think for themselves, and have the privileges of freemen. Ignorance is always the vassal, the slave of intelligence. The educated man always has had, and always will have, the advantage of the ignorant; and if you let your children grow up uneducated, you let them grow up to be the tools and the slaves of others. You cannot do your children a greater injury than let them step into manhood, uneducated; and in no other way can you do these free institutions a greater evil.

You ought to put into your children's hands every thing that assists or encourages them in their studies. Do not hesitate at the expense. If you can strengthen one moral feeling, or one intellectual faculty in your child, you are well paid for almost any expense. Wealth will not make your offspring great or happy—happiness and greatness consist in virtue and knowledge. Let the education of your children, then, be your first care.—*Common School Almanac.*

LACONICS.

Great minds had rather deserve *cotemporaneous* applause, without obtaining it, than obtain, without deserving it; if it follow them, it is well, but they will not deviate to follow it. With inferior minds the reverse is observable; so that they can command the flattery of knaves while living, they care not for the execrations of honest men, when dead. Milton neither aspired to present fame, nor even expected it; but (to use his own words,) his high ambition was, "to leave something so written to after ages, that they should not willingly let it die." And Cato finely observed, he would much rather that posterity should inquire why *no* statues were erected to him *than why they were,*

—

An upright minister asks, *what* recommends a man; a corrupt minister, *who.*

—

Imitation is the sincerest of flattery.

If those alone who "*sowed to the wind, did reap the whirlwind,*" it would be well. But the mischief is, that the blindness of bigotry, the madness of ambition, and the miscalculation of diplomacy, seek their victims principally among the innocent and unoffending. The cottage is sure to suffer for every error of the court, the cabinet, or the camp. When error sits in the seat of power and of authority, and is generated in high places, it may be compared to that torrent which originates indeed in the mountain, but commits its devastation in the vale.

—

As in agriculture, he that can produce the greatest crop is not the best farmer, but he that can effect it with the least expense; so in society, he is not the best member, who can bring about the most good, but he that can accomplish it with the least admixture, of concomitant ill.—For let *no man* presume to think that he can devise any plan of extensive good, unalloyed and unadulturated with evil.—This is the prerogative of the Godhead alone.

—

If hypocrites go to *hell* by the road to *heaven,* we may carry on the metaphor, and add, that as all the virtues demand their respective tolls, the hypocrite has a by-way to avoid them, and to get into the main road again. And all would be well, if he could escape the *last* turnpike in the journey of life, where all must pay, where there is no by-path, and where the toll is death.

—

The enthusiast has been compared to a man walking in a fog; every thing immediately around him, or in contact with him, appears sufficiently clear and luminous; but beyond the little circle, of which he himself is the centre, all is mist, and error, and confusion. But he himself is nevertheless as much in the fog as his neighbors, all of whom have also cantoned out their little Goshens of perspicacity. Total freedom from error is what none of us will allow to our neighbors, however we may be inclined to flirt a little with such spotless perfection ourselves. Sir Richard Steele has observed, that there is this difference between the Church of Rome and the Church of England; the one professes to be infallible—the other to be never in the wrong. Such high pretensions are extremely awkward wherever the points of difference happen to be more numerous than those of agreement. A safer mode of proceeding would be to propose with diffidence, to conjecture with freedom, to examine with candor, and to dissent with civility; *in rebus necessariis sit unitas; in non necessariss liberalitas; in omnibus, charitas.* This ought to teach all the enthusiasts moderation, many of whom begin to make converts from motives of charity, but continue to do so from motives of pride; like some rivers which are sweet at their source, but bitter at their mouth. The fact is, that charity is contented with exhortation and example, but pride is not to be so easily satisfied. An enthusiast, therefore, ought above all things, guard against this error, arising from a morbid association of ideas, directed to view and examine all things through one medium alone. The best intentioned may be exposed to this infirmity, and there is one infallible symptom of the disorder, which is this: whenever we find ourselves more inclined to *persecute* than to *persuade,* we may be certain that our zeal has more of pride in it than charity, that we are seeking victory rather than truth, and are beginning to feel more for ourselves, than for our master. To lose our charity in defence of our religion, is to sacrifice the citidal to maintain the outworks; a very imprudent mode of defence.

—

We know the effects of many things, but the causes of few; experience, therefore is a surer guide than imagination, and inquiry than conjecture. But those physical difficulties which you cannot account for, be very slow to arraign, for he that would be wiser than nature, would be wiser than God.

TOBACCO.

Extract from Dr. C. A. Harris on Dental Surgery.

In the supposed protective virtues of tobacco to the teeth, many find a ready excuse for its use. But its preservative properties, if indeed it possesses any, have been greatly overrated. It is undoubtedly true, that, being a stimulant and narcotic, it will sometimes obtund the pain of an aching tooth; but even the relief thus obtained, is, at best, only temporary, and principally confined to those unaccustomed to its use; for those, who are in the daily habit of chewing or smoking, are as much subject to tooth-ache, as those unaccustomed to the use of tobacco.

As to the effects produced upon the teeth themselves, by the use of this article, I know not that it matters much in what manner it be used, whether by chewing or smoking. Directly, it may be said to effect these organs, neither beneficially nor prejudically. The increased flow of saliva which it occasions, may, perhaps, by diluting such vitiated humors, as happen to be in any of the interstices, or indentations of the teeth, and thus lessening their corrosive and acrid properties, render them less hurtful; yet this benefit is probably more than counterbalanced by its pernicious effects upon the gums. The constant state of excitement in which they are kept by its use, is apt, unless the greatest attention is paid to the cleanliness of the teeth, to produce, especially in persons of a cachetic habit, a sort of chronic inflammation, and in those of strumous temperamant, debility.

From the coloring matter contained in tobacco, the teeth of persons who chew large quantities of it, become, if great care is not taken to keep them clean, in a few years, so much stained, that they present a most filty and disgusting appearance. Moreover, their teeth usually suffer a more than ordinarily rapid loss of substance, especially when the front ones fall plump upon each other, from the constant abrasion to which they are thus necessarily subjected.

SNUFF.—Within the last few years, snuff has, in some parts of the country, become quite popular as a dentifrice, especially with females. The teeth suffer more from the use of tobacco in this form, than in any other. Being reduced to a powder, its fine particles find a more easy lodgment beneath the edges of the gums, around the necks of the teeth, in their interstices, and various indentations and fissures, than when taken into the mouth in any other manner. These particles not only thus serve as nuclea, around which the thickened and vitiated secretions of the mouth gather, but also, from their stimulative properties, and their long retention beneath the edges of the gums, and in the crevices of the teeth, are productive of much irritation, both to the gums and the periosteums of the roots.

I have observed, that the gums of persons, who have used snuff as a dentifrice, for any length of time, usually have a dark purple, and sometimes a yellowish appearance, are soft and spungy, more or less isolated from the teeth, and that the teeth themselves are not unfrequently very much loosened. In fact, I do not recollect ever to have known an instance, of an individual's using tobacco in this way, two or three times a day, for several years, without the teeth and gums being thus affected. In some cases, however, it is much longer in producing these deleterious consequences, than in others. Much depends upon the condition of the gums, at the time its use is commenced. If they be healthy, and firmly adhere to the necks of the teeth, it may be employed for some time, without being attended with any very obvious injury; but if they be at all diseased, a deleterious influence will soon be manifest. Viewing the subject in this light, and believing the opinion that we have here advanced, to be supported by the observations of every one, whose attention has been at all directed to the subject, we cannot but condemn the use of this article as a dentifrice; and recommend to every dentist, to particularly caution persons consulting him, and especially females, against thus employing an article that is productive of such pernicious consequences to the teeth.

Nor are its effects upon the general health less injurious. Persons who use snuff in this manner, are generally observed to have a pale, sallow countenance, especially if their constitutional habits be at all delicate.

SPEAK TO THAT YOUNG MAN.

You may save him from the jaws of a monster more to be feared than sword, pestilence or famine. He has just commenced taking the social glass. Those dissolute young men with whom you see him, have lately tempted him and decoyed him from the path of peace and virtue. They have led him to the haunts of dissipation and revelry. Already his virtuous principles have been shaken—his correct habits checked, and the fine feelings of his heart blunted. This young man is the pride of his parents, and the child of many prayers. They have often begged the blessing of God to rest upon their son: but they reside in a distant town; they cannot watch over him and warn him of his danger. Will you warn him? How their hearts will bleed when they hear of his downfall! but he may be recovered. His conscience is yet tender. If you would save a soul from death, speak to him. Let no time be lost.

Speak to that young man, whom you just saw leave the haunt of the unprincipled and vicious. He has just lost at the gaming table the last shilling of ten dollars, which he took in the morning from his master. He is in the broad road to death. His steps already take hold upon destruction. He is the only son of his mother, and she a widow. She has entreated him with all the eloquence of a mother's deep love, to forsake his ruinous course. She has wept over him till her heart is broken. But he remains incorrible.—Will you speak to him? God may give effect to your counsel; then the blessing of those ready to perish will rest upon you.

Speak to that young man. He has been laughing and jeering in the house of God. He will give you an insolent answer, but nevertheless, speak to him. His courage is of the fool-hardy stamp. He thinks more about religion, heaven and hell, than he would have you believe. At this very moment, while he makes a mock of serious things, and pours contempt on the followers of Christ, there is a worm gnawing at his heart. His levity is feigned. Speak to him, Christian. If he heed your counsel, you will save a soul from death. If he gets angry with you and abuses you, you will have an opportunity, by your meekness, gentleness, and forbearance, to exhibit the excellence of the religion you profess. Let not the blessed opportunity be lost. Say not that he knows not how to appreciate such treatment.—The first time he is alone, and all is still about him, he will reflect upon his abuse and ill will; he will remember too the meekness with which you bore his incivility; and the thought will break his heart. But if you do not warn him, the next judgment of an Almighty God may sink his soul to irretrievable wo! Speak to him, Christian, in the name of the Lord.

FATE OF A GAMBLER.

We extract from a foreign paper the following account of the melancholy consequences of indulging a propensity for gaming, as illustrated in the melancholy fate of a Bohemian nobleman:

"The dreadful passion for gambling has lately made another victim in Bohemia. The young Count J. B. Gravallasky had two years ago inherited fifteen millions of francs; he was then in his 25th year, and always in gaming houses. He lost at Milan 500,000 florins; at Vienna 800,000; at Prague 300,000 florins.—This severe lesson, instead of tempering his passion, made it still stronger. He sold his furniture, then his estates, and even the revenues to arise from the dominions composing his birth-right for one hundred years, which property could not be alienated. All his money he lost also. Reduced to misery, and always dreaming of the possibility of winning back the immense fortune he had lost, he committed the serious crime of forging bills of exchange. He was at Gratz, and there he found means to negotiate, to Messrs. Clarenheim & Co. in that town, bills on which he had affixed the false signatures of the bankers, Reynenberger & Brothers, at Vienna. One of the partners of the rich house arrived on the same day at Gratz, and informed the Messrs. Clarenheim that they were the dupes of a sharper. Next morning the count Gravallasky was arrested, but a short time after he found means to escape. He left Gratz and went to Beraun, where he assumed the name of Karner, and passed for a cabinet maker. He lived there quite in retirement; but, being discovered, he was put in confinement, and on the night of the 19th, or morning of the 20th December, he strangled himself with a silk handkerchief."

MORAL COURAGE.

There is a distinction, too little observed, between the manly indignation which moves a strong mind and an expanded heart to wield heavy rebukes against wrong doers, and that peevish fretfulness which wastes itself on trifles, and is ever in restless agitation about the mistakes and faults of mankind. Firm dignified displeasure honors any cause; but spleen and irritability degrades it. A generous mind, too, respects the virtues of an antagonist, while to the inflamed eye of a partisan all the excellencies of an opponent are in eclipse total, by the mere intervention of a differing opinion. The former would treat with respect and veneration the veteran wisdom of such a man as Beecher, and would feel himself honored by a courteous and gentlemanly discussion of points at issue, and would scorn unmanly aspersions to lessen him in the estimation of his admiring friends. The latter, perhaps with insulting forwardness, would strive to drag him into angry bickering, where a controversy would be degrading, and would loudly exult in the transient notoriety he might gain by showing with what fearfulness he could lay his hand on the lion's mane, whose respect for his native greatness would secure the saucy meddler from harm.

DEFERRED ARTICLES.

New Invention.—A surgeon of Guernsey, Mr. Le Mesurier, has recently invented a new pump for ships and mines, on a principle infinitely superior, for all practical purposes, to any yet discovered. In this pump the piston is dispensed with, and a vaccuum is produced by means of an India-rubber bag stretched on rings. Some of its peculiarities are, the total absence of friction, the impossibility of getting choked by sand, wheat, or even small stones, and a capability in a small sized one, worked by one man, of delivering a hogshead of water in a minute and a half. Mr. Le Mesurier has been offered twelve thousand pounds for the patent.

A Man of the olden time.—Captain Benjamin Webber, of Gloucester, Massachusetts, who was engaged in the battle of Bunker Hill, and is now 84 years old, the other day walked thirty miles, and rode thirty more. Few of our modern men, in the prime of life, can do that without grunting.—*New York Sun.*

The oldest town in the United States, by more than forty years, is St. Augustine, in Florida. It was founded 40 years before Virginia was colonized. Some of the houses are yet standing, which are said to have been built more than three centuries ago.—*Ibid.*

From Mississippi.—From the Vicksburg Sentinel, we learn that Judge Shattuck, of Madison county, Mississippi, recently made a narrow escape from a Lynching scrape at Benton. He, it seems, had given offence to the jury, and the mob were not disposed to submit to what they styled judicial arrogance.—*ib.*

The Life Insurance Companies.—The amount of losses paid during the last year by the New York Life and Trust, and the Farmers' Loan and Trust, and the two principal Life Insurance Companies in this city, was $24,000; rescuing from actual poverty in almost every instance, the families of the insured.—*Ibid.*

Melancholy.—A poor woman on board of the John Bull steamer, burnt on the St. Lawrence last week, lost *six* out of *nine* children she had with her. Another woman attached a rope to a Newfoundland dog, who nobly swam ashore with her, and thus saved her life.

WESTERN INCIDENTS.

ESCAPE OF JOHN AND HENRY JOHNSON.

Among the few interesting incidents which occurred in the upper country, during this year, (1793,) was the captivity and remarkable escape of two brothers, John and Henry Johnson;—the former thirteen, the latter eleven years of age.—They lived at a station on the west side of the Ohio river above Indian Short creek; and being at some distance from the house, engaged in the sportive amusements of youth, became fatigued and seated themselves on an old log for the purpose of resting. They presently observed two men coming towards them, whom they believed to be white men from the station. until they approached so close as to leave no prospect of escape by flight, when to their great grief they saw that two Indians were beside them. They were made prisoners, and taken about four miles, when, after partaking of some roasted meat and parched corn given them by their captors, they were arranged for the night, by being placed between the two Indians, and each encircled in the arms of the one next him.

Henry, the younger of the brothers, had grieved much at the idea of being carried off by the Indians, and during his short but sorrowful journey across the hills, had wept immoderately. John had in vain endeavored to comfort him with the hope that they should be enabled to elude the vigilance of the savages, and to return to the hearth of their parents and brethren. He refused to be comforted. The ugly red man, with his tomahawk and scalping knife, which had been often called in to quiet the cries of his infancy, was now actually before him; and every scene of torture and of torment which had been depicted, by narration, to his youthful eye, was now present to his terrified imagination, heightened by the thought that they were about to be re-enacted on himself.—In anticipation of this horrid doom, for some time he wept in bitterness and affliction; but

"The tear down childhood's cheek that flows,
Is like the dew-drop on the rose;—
When next the summer breeze comes by
And waves the bush, the flower is dry."—

When the fire was kindled at night, the supper prepared and offered to him, all idea of his future fate was merged in their present kindness; and Henry soon sunk to sleep, though enclosed in horrid hug, by savage arms.

It was different with John. He felt the reality of their situation,—he was alive to the anguish which he knew would agitate the bosom of his mother, and he thought over the means of allaying it so intensely, that sleep was banished from his eyes. Finding the others all locked in deep repose, he disengaged himself from the embrace of the savage at his side, and walked to the fire. To test the soundness of their sleep, he rekindled the dying blaze, and moved freely about it.—All remained still and motionless,—no suppressed breathing, betrayed a feigned repose. He gently twitched the sleeping Henry, and whispering softly in his ear, bade him get up. Henry obeyed, and they both stood by the fire. "I think," said John, "that we had better go home now." "Oh!" replied Henry, "they will follow and catch us again." "Never fear that," rejoined John, "we'll kill them before we go." The idea was some time opposed by Henry; but when he beheld the savages so soundly asleep, and listened to his brother's plan of executing his wish, he findly consented to act the part prescribed him.

The only gun which the Indians had, was resting against a tree, at the foot of which lay their tomahawks. John placed it on a log, with the muzzle near to the head of one of the savages; cocked it, and leaving Henry with his finger to the trigger, ready to pull upon the signal being given, he repaired to his own station. Holding in his hand one of their tomahawks, he stood astride of the other Indian, and as he raised his arm to deal death to the sleeping savage, Henry fired, and shooting off the lower part of the Indian's jaw, called to his brother, "*lay on, for I ve done for this one!*" seized up the gun and ran off. The first blow of the tomahawk took effect on the back of the neck, and was not fatal. The Indian attempted to spring up; but John repeated his strokes with such force and so quickly, that he soon brought him to the ground; and leaving him dead, proceeded on after his brother.

They presently came to a path which they recollected to have travelled, the preceding evening, and keeping along it, arrived at the station awhile before day. The individuals were, however, all up and in much uneasiness for the fate of the boys; and when they came near and heard a well known voice exclaim in accents of deep distress, "*Poor little follows, they are killed or taken prisoners,*" John replied aloud—"No mother, we are here again."

When the tale of their captivity, and the means by which their deliverance was effected, were told, they did not obtain full credence. Piqued at the doubts expressed by some, John observed, "you had better go and see" "But, can you find the spot," said one. "Yes," replied he, "I hung my hat up at the turning out place, and can soon shew you the spot." Accompanied by several of the men, John returned to the theatre of his daring exploits; and the truth of his statement received ample confirmation. The savage who had been tomahawked was lying dead by the fire—the other had crawled some distance; but was tracked by his blood until found, when it was agreed to leave him, "*as he must die at any rate.*"

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, OHIO, THURSDAY, AUGUST 15, 1839. NO. 3.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

POETRY.

[*Published by the request of a subscriber.*]

TIME AND ETERNITY;

OR, THE DIFFERENCE BETWEEN TO-DAY AND TO-MORROW.—A LOOKING GLASS.

CHRISTIAN.

To-day the saint with time things has to do,
Before to-morrow bids them all adieu;
To-day he darkly sees as through a glass,
To-morrow views his Jesus face to face;
To-day corrected by a chastening rod,
To-morrow solac'd with the smiles of God;
To-day he's watching, fighting, full of fears,
To-morrow palms of victory he bears;
To-day he's persecuted, jeer'd and scorn'd,
To-morrow with a glorious crown adorn'd;
To-day he feels his wants exceeding great,
To-morrow doth possess a large estate;
To-day a suppliant at the mercy-seat,
To-morrow casts his crown at Jesus' feet;
To-day he seeks, he mourns, he looks, he longs,
To-morrow all his sighs are turn'd to songs;
To-day rack'd with affliction and distress,
To-morrow swimming in exalted bliss;
To-day sowing in tears is his employ,
To-morrow bears the sheaves of heavenly joy;
To-day he lives by faith and leans on hope,
To-morrow in fruition swallow'd up;
To-day with saints on earth he dwells in love,
To-morrow joins the angel hosts above;
To-day in feeble strains he tunes a song,
To-morrow sings with an immortal tongue;
To day he has a taste of peace and love,
To-morrow drinks full drafts of bliss above;
To-day his sweetest forms do fade away,
To-morrow fill'd with joys that ne'er decay;
To-day in God's commands he loves to run,
To-morrow hears the plaudit of "well done;"
To-day he's on the road to happiness,
To-morrow shall the same eternally possess.

SINNER.

To-day the sinner's state is much admir'd,
Before to-morrow finds his soul requir'd;
To-day seeks what to eat, to drink, to wear,
To-morrow plunged in ruin and despair;
To-day puts off repentance for his sin,
To-morrow finds no time to do it in;
To-day thinks how the time to pass away,
To morrow needs that time to mourn and pray;
To-day he would be counted rich and great,
To-morrow sees his poor unhappy state;
To-day he has no fear of being lost,
To-morrow all his hopes give up the ghost;
To-day his conscience sleeps, and is secure,
To-morrow shocks him with its dreadful roar;
To-day his sins are lovely in his sight,
To-morrow they his wretched soul affright;
To day thinks slightly on the world to come,
To morrow finds his everlasting doom;
To-day his worldly treasure has his heart,
To-morrow must with that and heaven part;
To-day he fain would be accounted wise,
To-morrow is a fool to his surprise;
To-day the jovial crew is his delight,
To-morrow ghastly fiends do him affright;
To-day o'er flowing cups his health is sung,
To-morrow wants one drop to cool his tongue;
To day he slights God's law and gospel call,
To-morrow has to answer for it all;
To-day the great salvation he expects,
To-morrow perishes for his neglects;
To-day he vainly glories in his shame,
To-morrow is tormented for the same;
To-day takes pleasure in the way to hell,
To-morrow fix'd therein eternally to dwell.

He who would acquire a knowledge of the world, must arrange and analyze in private the experience he has collected in the crowd.

AFFLICTION.—When sorrow comes, I will welcome it; before it comes, I will prepare for it; when it goes, I will take out half a farewell of it, as still expecting its return.—*Robert Hall.*

From the Cleveland Herald and Gazette.

THE OLDEN TIME.

A friend has furnished us with the following interesting narrative of the first visit of Judge Stow to the Western Reserve.

I have been favored with the narration of the following facts connected with the early history and settlement of this country from the lips of Judge Stow of Connecticut. He was entrusted by the Connecticut Land Company with the charge of the expedition that visited the northern part of Ohio in 1796. He is now in our city in his 78th year, in the enjoyment of full and vigorous health. He is truly a relic of olden times. He is possessed of a very intelligent mind, and he has stored a retentive memory with long years of faithful observation and experience, which makes his conversation on this subject as well as others, deeply interesting and instructive.

Such facts as these are worth preserving.—Let them be collected and in some authentic shape given to the world, not only from the deeply interesting character of the transactions themselves, but that the memory of those men who have subjected themselves to all the hardships of the wilderness, may not be forgotten. While our State is jealous lest she should not pay due honors to heroic and daring services on the field, let her not be entirely unmindful of those who with no less a sacrifice of ease and enjoyment, have hazarded their lives in its service by pioneering the way for its settlement.

If this enterprise had been conducted with less vigor than it was, or if from any cause it had proved unsuccessful, the settlement of the Reserve would probably have been delayed for several years. Much therefore is due to the enterprising individuals who composed this company, for the energy and success with which they prosecuted their labors under such a multitude of embarrassing circumstances.

To Judge Stow it must be a source of the highest gratification, to witness the extraordinary and magical change which this country has undergone since 1796, when he first landed at Conneaut.—It is truly a great result for such small beginnings.

There are but few of the venerable men now living who composed this early expedition. They have gone with the generations before them.—The grey hairs and tottering steps of the survivors warn us that with them "the silver cord will soon be loosened," and "the golden bowl be broken."

In the early part of May, 1796, the Connecticut Land Company fitted out an expedition to visit the Western Reserve, and survey and divide the same into townships. The company consisted of five Surveyors, a Physician, with chainmen, axe-men, making in all about forty individuals. By previous agreement most of the individuals to compose the company met at Schenectady, New York. They were embarked in four flat bottomed boats of about three tons burden each, and ascended the Mohawk river. The boats had on board a quantity of freight, besides their camp utensils, provisions, &c. The Indians then inhabiting the Reserve had agreed to hold a council with the company at Buffalo, for the purpose of reconciling their several claims to the territory; and a part of the cargo consisted of merchandize that they were carrying thither for the Indians. The ascent of the Mohawk was slow and tedious. The boats, besides being heavily laden, had a rapid current and shoal water to contend against much of the way. On arriving at Fort Stanwix (now Rome) they were wearied with fatigue, and a discouraging prospect was thrown over their further progress. A melancholy accident occurred here; one of the hands fell overboard and was drowned. This sad accident seemed to increase the general despondency.

Their contemplated route was up Lake Oneida, and following the chain of the Lakes, to the Reserve. At Fort Stanwix the boats and goods were hauled about a mile and a half by teams into Wood creek, a small stream emptying into Lake Oneida.

At the time the party set out, Jay's treaty had not been ratified by the American Congress, and the greatest danger now was, in not being able to pass Fort Oswego, which was then garrisoned by the British. At Fort Stanwix they had the good fortune to be overtaken by Capt. Cozzens, who had been sent by the British Minister, Mr. Bond, with open despatches to all his Majesty's officers and subjects, declaring the ratification of Jay's treaty on the part of the two Governments, and the navigation of the Lakes to be free to American vessels, and commanding all of his Majesty's officers to be governed accordingly. Capt. Cozzens was accompanied by a Mr. Peters, brother-in-law to the Governor of Upper Canada.—These gentlemen accepted the invitation of the Agent to take passage on board his boat down the Lake. With the influence of the dignitaries in their favor, and the nature of Mr. Cozzens' despatches, the party had dismissed all their fears as to the danger of passing the Fort.

They proceeded down the Lake and the Oswego river, and when arrived within twelve miles of the Fort, the boats anchored near the shore, and the Agent with Capt. Cozzens and Mr. Peters proceeded by land to the Fort. The Agent was politely received by the officers commanding.—But contrary to his reasonable expectations a permit to pass with the boats was denied him.—The officer, being a subordinate, justified his strange refusal on the ground of its being a violation of his instructions. No permit could be granted except by the consent of the commanding officer on the frontier, who was then at Niagara. Entreaties were of no avail, and the Agent returned sadly disappointed.

The instructions of the company to their agent were not in any event to run by the Fort, but if permission was not granted, to lay by till further instructions could be received from them. The prospect of two or three weeks delay for this purpose in a sickly country, was no way promising. The men were extremely impatient under the prospect of delay. They had heard that nearly all the troops composing the garrison were on the sick list, and this intelligence increased their fears. They were in a multitude of doubt as to the course to be pursued.

If they attempted to run by the Fort it would be against the express orders of the company, and if the attempt should prove unsuccessful the entire enterprise would be defeated, and thus a fearful weight of responsibility thrown upon the Agent.

Nor was the other alternative free from difficulties and danger. The unhealthy climate might produce as general sickness among the men as it had among the soldiers of the garrison, and so disable their force as to oblige them to return.

After mature deliberation it was nearly a unanimous resolve to attempt the passage. In the execution of this plan, great skill and prudence was required. The boats were floated down to within four miles of the Fort where they were hauled into a small bay, and secreted among the bushes. One of the boats was then relieved of the greater part of its cargo, manned with double oars and with the Agent on board rowed down to the Fort. Supposing that the boat was destined to Fort Niagara for the purpose of getting a permit for the rest of the boats, he was suffered to pass. In the dead of night, the garrison being put off their guard by this stratagem, the others passed unobserved and safely by the Fort.

Their greeting with the waters of Lake Ontario was a hearty and a welcome one. The men set up shouts of rejoicing that might have been heard at the Fort, even over the noisy din of the elements. Never did men feel better after being relieved from a perilous situation than they felt.

The first boat had proceeded on to Sodus, where the little fleet intended to make a harbor. A sudden storm arose which overtook the boats before they reached Sodus, and before they had finished their rejoicings. The storm was very violent, and the darkness of the night made it imminently perilous. The crew which had landed at Sodus built beacon fires that the other boats might be directed to the harbor. But the storm had suddenly increased in violence, and it was impossible for either of the boats to make the harbor.

The situation of the Agent at this moment was intensely painful. His companions were in a perilous situation, and it was out of his power to afford them the least relief. They were off but a short distance from a dangerous shore, and the next billow might dash their little barks in a thousand pieces. Besides he had assumed the responsibility of running by the Fort, and though successful in that attempt, yet if the boats were now cast away or lost, the whole responsibility of that catastrophe would rest upon him.

In this state of suspense and alarm a man from one of the boats came running from the beach with the intelligence that all was lost. No anxiety could have been greater, or suffering more intense than was that of the men on shore.—They flew up and down the beech to see if some assistance could not be rendered, or tidings obtained from their shipwrecked companions. They found thrown upon the shore a gun and oar, which they knew belonged to Captain Beard who had charge of one of the boats. This circumstance increased their alarm and gave new point to grief. But they were not allowed to remain long in this painful suspense. The next moment they met Capt. B. himself, and inquired if all was lost? He replied that nothing was lost but a gun and oar!! The other boats reached the shore but they sustained much injury. Fortunately no lives were lost. One of the boats was so much injured that it could not be repaired and was thrown by—the damage to their cargoes was inconsiderable.

While the boats were repairing at Sodus, the Agent proceeded by land to Canandaigua. He there met Gen. Cleveland with instructions to him from the company, if he thought it advisable, to run by the Fort. This in a measure relieved his anxiety on the subject.

After a detention of nearly two weeks, they again embarked on board the three remaining boats, and prosecuted their toilsome journey up the Lake. Nothing unusual occurred during this part of their journey. After numberless embarkments and re-embarkments, they landed their stores at Fort Erie, (opposite Buffalo) and crossed over to Buffalo to hold a council with the Indians.

They found the Indians assembled to the number of about one thousand to meet them. These were the remnant—a weak and feeble remnant of the mighty Six Nations. "The glory thereof had departed." This tribe whose name had spread terror wherever it was known, had now assembled to give mere forms to a treaty which was to surrender up their vast dominions into the hands of their deadliest foe, the white man.

This was one of the last public acts of that nation. They knew that their existence was short; that the progress of civilization would soon waste away the little remnant, and "leave not a wreck behind." They seemed to wish their sun to set with as much dazzling splendor as possible.—They had, therefore, left their hunting grounds and assembled round their council fires to exhibit for perhaps the last time, the fancied splendor of their own greatness.

Red Jacket and Farmer's Brother conducted the treaty on the part of the Indians, and they managed quite adroitly. But they relinquished every claim and gave the company peaceable possession of the country. So many presents were made to the Indians, that they were ever after the friends of the company.

After the completion of the treaty, they pursued their route up Lake Erie. Profiting by their sad and nearly fatal experience on Lake Ontario, they kept near the south shore of the Lake to avoid the danger of sudden storms.

On the 4th of July, 1796, the party to their great joy first set their feet on the virgin soil of Ohio. On this day they landed at Conneaut, and there celebrated the Twentieth Anniversary of American Independence.

Their joy was complete at the successful termination of their voyage. They had been greatly threatened with dangers, but had escaped them all. Though several times their enterprise came *near* being defeated, they sustained no material loss or injury, and it is a singular and striking feature of this expedition, that notwithstanding they visited this new country in the most unhealthy season of the year, not a life was lost by sickness. Providence seemed to smile upon them with peculiar favor.

The survey was immediately commenced.—The surveyors proceeded to the south line of the Reserve and run a line west five miles from the eastern line of Ohio, thence run a meridian line to the Lake. In this way the survey of the townships east of the Cuyahoga was completed. The Indian title to the land west of the Cuyahoga river was not then extinguished, and the party this season confined their labors to the land east of the river.

Only two townships were surveyed into lots, viz: Cleveland and Euclid. In the latter part of July they reached Cleveland, built a log house, and with all due solemnity gave this place its name.

During their stay they were subject to all the rigorous hardships of the wilderness. Frequently deprived of food and sleep, they were strangers to all the enjoyments of civilized society.

On the 8th of October the object of the enterprize being completed, the company separated and most of them returned to their homes.

FIDELITY OF THE DOG.

One of the most remarkable instances of the fidelity of the dog that we remember, is recorded in the Shrewsbury (Eng.) Chronicle. A gentleman by the name of Roberts, of Montgomeryshire, returning from an excursion on horseback, attempted to ford a river which was swollen, and in doing so was drowned. His dog followed the body as it sank, and seizing the collar of the coat in his teeth, with great labor, brought the body to the side of the stream, and raising its head above the water, held it there firmly during the whole of an inclemant night in March; and when discovered in the morning, the faithful animal was still immersed in the water, and shivering with cold, yet still holding the head of his old master above the stream, unconscious that life had departed from him to whom the poor animal was so much attached.

My Dog, the trustiest of his kind,
With gratitude inflames my mind;
I mark his true, his faithful way,
And in my service copy Tray.

MISCELLANEOUS.

THE PERVERSENESS OF WOMAN.

There is an old story of a man who had married a young lady, and who had a friend somewhat sceptical as to the obedient tendency of the wife's disposition, much to the dissatisfaction of Benedick, who strongly asserted and warmly asseverated that his will was law, and that she never by any chance disobeyed any wish or injunction of his.

"Have you ever tried her temper in that respect?" said the friend—"have you ever desired her positively not to do any particular thing? for that is my point, since you tell me she never refuses to do whatever you desire her to do."

"No!" said the affectionate husband, "I never have found occasion to desire her not to do any thing, but—"

"That's it, as the old woman says," cried the friend: "female obedience is proved by negatives; tell her not to do any particular thing, give her no particular reason why, and see if she does not do it."

"Ridiculous!" says the husband.

"Try," says the friend.

"Well," replied the husband, "agreed! We are both going away for the day; what proof shall I put her to? What shall I tell her not to do? May she not play her harp? Must she not sing, or draw—or, in fact, tell me what you want me to prohibit her doing, and I stake my life she does it not."

"Oh, no!" said the friend, "drawing and singing, and playing the harp, are things which she might abstain from without a murmur, or, what is more essential to the affair, a wonder; because she has sung, and played, and drawn a thousand times. It is an injunction not to do something *she has never done before*—for instance, tell her when we go, not to climb some particular hill, for particular reasons, which you do not choose to give her; or, by way of carrying the principle out to its fullest extent, warn her not to attempt to ride on a dog's back."

"Neptune's back!" said the husband.

"Yes," replied the friend, "on the back of this most valuable Newfoundland dog, the bravest and faithfulest of his breed."

"Ride upon a dog's back!" exclaimed Benedick; "how can you be so absurd—as if—"

"Ah, there it is," said the friend, "as if—now take my word for it, if you issue the injunction, without giving her any reason, Harriet will break it."

The most credulous of men rejoiced at the idea, which he felicitously ridiculed, and resolved upon trying the experiment in order to establish his Harriet's superiority of mind and his friend's exceeding silliness.

He parted with his Harriet, and with tender fondness she clung round his shoulder; as he said in quitting her,

"Harriet, dearest, we have seldom been separated since our marriage—I shall be back soon—take care of yourself, love—but, just attend to one thing I am going to say, dear; don't try to ride upon Neptune's back while we are away."

"What!" said the laughing Harriet, "ride upon Neptune—ha, ha, ha! what an odd idea—is that all you warn me against?—what a ridiculous notion! why should you tell me that?—what nonsense!"

"That, my dear," said the husband, "is a secret; all I beg of you is, not to ride upon Neptune!"

"Ride upon Neptune!" repeated the lady, and she laughed again and they parted.

When Benedick and his friend returned to dinner, the laughing Harriet did not as usual present herself to receive them; there was a sort of gloom pervading the house—the footman who opened the door looked dull—the butler who came into the hall looked as white as his waistcoat; the lady's own maid rushed down stairs, evidently to prevent a scene.

"Where is your mistress?" said Benedick.

"Up stairs, sir," said the maid; "there is nothing the matter, sir—nothing in the world—only my mistress has had a fall—quite a little fall on the walk in the flower garden—and has cut her face the least bit in the world, sir; all will be well to-morrow."

"A fall!" said Benedick.

"Humph!" said the friend.

And up stairs ran the anxious husband.

"What has happened?" he exclaimed, catching her to his heart, and seeing her beautiful countenance a little marred—"how did this happen?"

Harriet cried and hid her face.

The explanation never came altogether clearly before the friend of the family, but the accident was generally thought to have arisen from Harriet's having endeavored to take a ride on Neptune's back.

THE END OF THE DRUNKARD.

A New York correspondent of the United States Gazette, describing an evening on the Battery, concludes his letter with this affecting incident.

"A crowd had gathered near the gate at the southern extremity of the Battery and several voices rose at the same moment upon the air, crying for vengeance upon a tattered form that reeled into the enclosure, in a beastly state of intoxication. He was apparently about fifty years of age, and was followed by a young, beautiful and interesting girl, not out of her teens. A moment before I saw him, he had raised his arm, and struck this lovely being to the earth. For this the crowd was pursuing him, and would doubtless have committed some summary act upon the inebriated wretch, had not the same delicate form interposed to prevent the consummation of the deed. She approached timidly, and fondly begged the monster to go home. He swore by the living God he would never return.—Little did he think, as he uttered the oath, that the vengeance of that God his sacrilegious lips profaned, was at that moment hanging over him, and that the angel of Death was waiting upon the waters to bear him, with all his sins upon his head, into the presence of the Creator he had mocked.

"He shook the fair girl from him with a curse, and staggered to the railing.—A cluster of boats was at some distance from the shore, and a few voices were singing one of Russel's songs. The drunkard tried to clamber on the uppermost rail, and having seated himself, called to the singers to perform something lively, or "d—n his eyes, he would come out there, and sing for himself!" These were the last words he uttered. In endeavoring to change his position, his foot slipped, and he fell into the waters to rise no more. Great exertions were made by the boats to render him assistance, and more than one daring fellow plunged into the sea—but all in vain; his body has not yet been recovered. The tide was running strong at the time, and we may hear of his body being washed upon the opposite shore in a few days.

"The poor girl was almost frantic—she rushed to the water's edge, crying "father! dear, dear father!—For Heaven's sake, save my father!" It was indeed her father. He once enjoyed a handsome property, but liquor ruined him. He sold his house for it, and at last his garments. His wife had died from want, and this daughter had supported him and three brothers by the labor of her hands. He swore he would never again enter her house, because she would not give him liquor—He cursed her, and died while a curse against himself yet hung upon his lips. The daughter did not leave the spot before midnight, and her cries appalled the stoutest hearts around her.—Twenty dollars were raised among the spectators, but when handed to her, she exclaimed, "No! no! give me my father!"

"Poor girl, she called in vain. That father was in other presence. She was borne from the place by some friends, and when I left the spot, the lightness of heart which had drawn me to the scene had departed, and I felt it almost a sin to be happy amid the wretchedness man makes for himself."

SINGULAR RENCONTRE.

"You are about to become one of our neighbors, I see sir?" "Yes sir."

"I am very happy to hear it. I like to meet gentlemen so amiable as you seem to be."

"Sir, you are too kind. I am a stranger to you, and ——"

"No matter, I am a physiogomist, and am seldom mistaken."

"I thank you for the good opinion you have been pleased to form of me; but excuse me, my furniture is coming in, and I must see to arranging it."

"Do not incommode yourself! if you will allow me, I will assist you, as I have nothing whatever to do."

The person who spoke thus was a little man of fifty, with a lively and open countenance; the person he addressed, Mr. N———, who was about taking possession of apartments he had hired in the Rue St. Honere. The officious neighbor accompanied his new acquaintance to his rooms, where they found the furniture heaped up in the most admired disorder. Near the window was a stand, on which a number of little articles had been placed; among them a pile of old cards of address, on which Mr. N.'s name was written in a very large hand. The neighbor took one of them up mechanically, and seemed all at once very much troubled.

"What is the matter?" said Mr. N——; "that is my name on those cards."

"Ah, me—very well," rejoined the other, flinging the card away, as though it burnt his fingers.

"Why, do you know me?" asked Mr. N——.

"Not at all," said his neighbor. "Oh heavens, I shall faint."

And, in fact, he grew very pale, and his knees bent under him. Mr. N—— hastened to his aid, placed him in a chair, and went for a glass of water. When he returned, what was his surprise when his guest threw himself on his knees, and said in a contrite tone—"Sir, I am a villain, and must make you immediate retribution."

"How so," said the other, "this is the first time I have ever seen you; at any rate, choose a more seemly posture, and let us talk the matter over calmly."

"You treat me with too much kindness; but pray preserve that feeling for me till you have heard all, for I shall need it.—Did you not go to Marseilles in 1823?"

"I did."

"Did any thing happen to you on your journey?"

"I lost in a hotel at Lyons fourteen thousand francs in bank bills. All the inquiries I made were fruitless, but I have always thought that the people of the house took it."

"Your are mistaken, I stole it." 'What!'

"Yes, I; but let me tell you how it happened. I was in business at that time, but bankrupt, and in desperate circumstances. At Lyons, I lodged in a room alongside the one you occupied and which you had just left. Just as I was leaving, I found that I had forgotten some papers, and went up stairs for them. Our rooms joined each other, were of the same size, and furnished alike, so that I mistook yours for my own. I did not see my papers, but found your portfolio, which you had left in a closet. What shall I say? Instead of returning you the property, which I could easily have done, for your address was written on it, I made use of it to relieve myself from my troubles.—My ill-gotten gains prospered so well in my hands that I have paid my debts and made some money. I have been a thousand times on the point of restoring you your money, but false shame prevented me. But now that chance has brought us together, I have only to say, that your money is at your service with legal interest, and I can but humble myself before you, and beg of you to pardon my villainy." While saying this, he made another effort to throw himself at Mr. N.'s feet, but the latter hastened to give him his hand in sign of forgiveness. He would not take any interest, but merely the original sum stolen.

AN APPARATION.

The Montreal Transcript relates the following instance of a supernatural visitation, which comes from so respectable a source that it is inclined to credit it notwithstanding the skepticism with which it formerly regarded such tales. The following is the second visitation which the lady received from the spirit of her deceased husband:

On Tuesday night, feeling stronger and in better spirits than she had enjoyed for several months past, Mrs.——— dispensed with the presence of her attendent, retiring alone to her chamber, and went to bed a little before 10 o'clock.—Exactly as the clock struck 12 she waked from her sleep, and distinctly beheld the apparation she had before seen advancing from the table, (on which stood her night lamp) till it stood opposite to and drew aside the curtains of her bed. A scene of suffocating oppression deprived her of all power to scream aloud.—She describes her very blood retreating with icy chillness to her heart from every vein. The countenance of her beloved in life wore not its benevolent aspect, the eyes, once beaming with affection, were now fixed in stern regard on the trembling half dissolved being who with the courage of desperation thus abjured him—"Charles! dear Charles why are you come again?" "Jessey," slowly and solemnly aspirated the shadowy form, waving in its hand a small roll of written paper, "Jessey, pay my newspaper account and let me rest in peace!"

A FRAGMENT.

'Twas night—and such a night as earth ne'er saw before. Murky clouds veiled the fair face of heaven, and gave to pitchy darkness a still deeper dye. The moon had fled—the stars had closed their eyes, for deeds were doing they dare not look upon! The gods of the elements were abroad. Æolus exultingly led forth his legions, howling from their dark caverns. Neptune, foaming with rage, roared madly, as he contended with his rock bound prison. The incensed thunder drawn by his winged steeds, in his ærial chariot, flashing lightning from his eyes, bellowed forth his madness—and ever and anon the demoniac shout of Ate, and the fiendish laughter of Hecate and her crew were heard above the tempest. For a time the pure streams turned stagnant and ceased to flow—the mountain trembled—and the forest dropped its leaves—the flowers lost their fragrance and withered, and all nature became desolate. In glee serpents hissed, harpies screamed—and satyrs revelled beneath the deadly Upas. Domestic beasts crept near the abode of men. The lion relinquished his half eaten prey; the tiger, forgetful of his fierceness, ran howling to his lair—and even the hyena deserted his repast of dead men's bones.—Man alone of all earth's creatures slept. But still he slept as if the boding of some half unknown calamity brooded o'er his mind. The aspiring youth muttered of blasted hopes, long cherished—young, fair and gifted maidens would start, and trembling, weep their injured innocence—and mothers, too, would half awake, and while they pressed their little nurslings to their breasts, would breath still another prayer for their protection. On such a night—Hell yawned and gave to earth—*a slanderer!—Gem.*

Royal favorites are often obliged to carry their complaisance further than they meant. They live for their master's pleasure, and they die for his convenience.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,-----AUGUST 15, 1839.

Our paper will be issued every other week for some eight weeks yet, to give time for the completion of our subscription list and for other arrangements: it will then be issued weekly.

The Lancaster (O.) Gazette of Aug. 8th, says it is reported that Gen. M'Cracken, of that place, one of the Fund Commissioners of this State, had gone to Europe, for the purpose of effecting a loan for the benefit of the State.

Some of our subscribers complain about the *rottenness* of our paper. [See M. Lyon's communication in this No.] When we were ready to issue the first number we got, from our paper establishment, the only two bundles they had on hand of the kind we wanted, that were any way passable. We felt afflicted that we could get nothing better, particularly to begin with. However, we had to use it. But the owners of the concern promised to have a better article for us against the issue of our 3d No. But lo! it comes to pass for this No. we are bored with an article considerable inferior even to the other.—Will Moses Lyon of Cincinnati, and John Burns of Steubenville, be so good as to inquire of their respective establishments, on what terms such paper as we use, of good quality, can be had, and give us information? If we cannot depend upon our folks at home we will try it abroad; for we feel anxious to have the credit of our paper sustained in every way.

The towns of Hamilton and Rossville, (says the Hamilton Intelligencer of 8th inst.) situated 22 miles north of Cincinnati, and lying on the Miami river, in a healthy situation, and one of the most productive sections of the country,are in a prosperous condition. In the two towns, lying on opposite sides of the river, $500,000 were vested last winter in the single article of pork.—They contain 6 or 7 churches and others going up—a beautiful female Academy, and good common schools. The Miami Canal lies near—four turnpike roads lead there—one finished and the others on the way. It is said to afford a desirable site for the investment of capital.

The Hamilton Intelligencer says a boy in that vicinity, by the name of John Addleman, had his foot torn off in the gears of a thrashing machine. He reports that his father and mother are both dead, and that he recently came from Preble county. Any communication addressed from his friends to A. B. Line, Hamilton, Butler county, Ohio, will be promptly attended to.

FOREIGN NEWS.

Late advices from England say that the money market is in a state of pressure and disquietude, such as has not existed since the panic of 1836.

Mr. Webster, now in London, attracts great attention from all classes, from the Queen and nobility, to the humblest citizen.

The prospect of crops, in England, at the date of July 5th, were said to be good.

War is said to have commenced between the Sultan and Pacha of Egypt.

We do not pretend to understand the operations and workings of the Financial and Commercial systems of Europe. But the following, from the Charleston (S. C.) Mercury, of the 29th ult., seems to us an intelligent article on these subjects. We will not vouch for the correctness of the opinions here given, but they look to us to be plausible.

"THE BANK OF ENGLAND—THE MONEY KING IN DANGER OF DETHRONEMENT.

"The commercial condition of England as exhibited in the extracts we make to-day is worthy of serious study—nay, involving as it does our own interest to so fearful an extent, it demands the closest scrutiny. A London paper reviewing the commercial relations of England and the last quarterly returns of the Bank, concludes with the following observation:

'From this return, therefore, it would still appear that the Bank of England has not been able to control the foreign exchanges, which is a very important feature in the return, but in other respects there is but little to notice beyond the circumstances that their great burden, "the deposits," have again decreased.'

"Within the year preceding the 25th of June, the bullion in the Bank had been diminished the enormous sum of £5,378,000, and the process was still going on. At the date of the sailing of the Great Western, the specie in the Bank was said to be less than four millions sterling, (some accounts say less than three) and the exchanges on the 4th of July actually becoming more unfavorable to England. Has commerce lost her balance? Has the autocrat of the money market dropt the sceptre? Has the Bank slumbered while all Europe was fingering her exchequer?

"The system by which the Bank of England pretends to govern the exchanges is very simple and known to most persons who pay attention to such subjects. It is, in case of exchange against London, to curtail her circulation; if need be, to raise the rate of interest, and thus produce a pressure and panic among English buyers, check importation, produce a necessity for selling and by depressing domestic prices, encourage exportation. This process has been so often successful, that it had come to be considered an infallible specific and was so spoken of by the President of the bank in his examination before the House of Commons in 1832. We are now told that after a struggle of months, after inflicting the most terrible oppression upon commerce, threatening general bankruptcy to this side the Atlantic and starvation or civil war to the other, after passing through all the stages of its great remedial process, and dosing trade with the bitter, more bitter, most bitter, of its wonderful, panacea, we are now told that "the Bank of England has not been able to control the foreign exchanges!" The failure was not for want of a vigorous application of the medicine, as we ourselves can testify. Has it then lost its healing virtues? In plain words has the Bank of England fallen from her supremacy over the money market?

"This is a momentuous question, and one which we ask in all soberness. If it be so, then is the commerce of the world on the eve of a mighty revolution.

"It will be observed in looking back at the bank's method of correcting the exchanges, that every stage in the process may be completely successful and yet if the last fails the whole is good for nothing—will have been so much distress and panic thrown away. Importation may be checked, gloom and fright installed upon 'Change, merchants bankrupt, machinery at a stand, operatives starving, and manufactured goods reduced to a price below the raw material, yet if the last link in the chain fail to connect, if exportation does not ensue, the precious metals return not, and the exchanges do not "stand corrected."—Such seems to be the exact state of the case at this time. The great deficit in the wheat crop of last year created great and just alarm; the price of the article rose, and it forthwith poured in from the continent. What then! does not England manufacture for the world? She will be at no loss for the medium in which they pay for it. Such *was* the case assuredly, but now the continent seemed to have lost its taste for British goods and would have nothing but specie.—The Bank resorted to its medicine chest—sold securities and withdrew its circulation, still they would have specie; it raised the rate of interest to five per cent. still the specie flowed away; to five and half per cent, still nothing but specie. It seemed as if a panic had got among the guineas and they would not stop till the very last coin had escaped to the continent. The commercial world was waiting in some degree of terror for the ministration of the last pill in the shape of another rise in the rate of interest, and timid (perhaps prudent) men were even anticipating that the empty box might soon be shaken over their heads, and a suspension of specie payments be proclaimed as the end of this "eventful history."

"Let it be remembered that scarce two years have passed since this sovereign regulator humbled commerce in the dust by a similar process and for a like effect. So soon again? It looks like the fitful struggles of an expiring dynasty, more than the sure direction of an unquestionable authority. But in the former case at least the Bank succeeded. Although commerce smarted and bled for it, yet the specie did come back and the vaults of the Banks were filled to overflowing. But now, though the pain has been much the same and the cry for success quite as loud, no help comes. The golden sovereigns turn a deaf ear to the charmer and will not stir—they are engaged. There being a reason for all things, of course there is a reason for the startling announcement that "the Bank of England has not been able to control the foreign exchanges."—Yet we do not see any serious attempt to account for a fact that so deeply affects English commerce, and which must of necessity induce the most earnest inquiry on the part of every intelligent statesman, merchant, banker and manufacturer. In the former revulsion, the drain of specie had come at least to a great extent from this country; the Bank of England struck professedly at American trade in its action on exchanges, and yet no sooner was it felt than the gold and silver of the Continent flowed into her vaults and filled them to overflowing. Very little specie went back from the United States.—Now the drain is from the continent, and still a long succession of the severest measures have failed to recover from overstocked Europe the gold which she has withdrawn. In vain imports are checked and manufactured goods reduced to the lowest price—the continent is still not temptep to take them—the specie does not return.—There would seem to be some mystery in this which the English Bankers are afraid to unveil. It was not long since suggested that the Bank of England might be induced to recruit her stock by borrowing a few millions from the Bank of France, which is at present in a plethora. If she is so disposed, it would be well to send a Commission to the United States to "collect facts" as to the best scheme of borrowing, as France did to investigate our various penitentiary systems. Among the rest, we could probably shew her a scheme of loans on the self-recruiting principle, that would go on to the end of time without the necessity of payment. In truth the present position of the Bank of England is not a little like that of the peasant in the caricature, who is on the point of cutting off his own head in the oblivious eagerness with which he goes to punch a snake with the extremity of his scythe handle,

But to return. In a passing comment which we made some time since on the Cotton Circular of Vincent Nolte, we threw out the suggestion that a part of the commercial embarrassments of England grew out of an important radical change in her relations with several of the States of Europe; that she was no longer so exclusively as she had been the manufacturer for the world. That such change had taken place was no secret; that it has at length been *felt* in the diminished demand for English goods and a consequent diminished power of the Bank of England over exchanges is not without its probabilities. That the Bank has so far failed to produce a reaction, and failed notwithstanding the long continued and almost desperate exertion of her whole strength, is not attempted to be concealed. It is equally certain that the progress of the manufacturing system in Europe will ultimately strip the Bank of all extraordinary power over the exchanges. The progress is already not small. France, Switzerland, Belgium, and Prussian and German States, even Austria and Russia are industriously raising a system of domestic manufuctures. The seed planted by the great Napoleon, though long trodden down and thought to be dead, has at length sprung up from his grave and is widely shooting its branches over the nations of Europe. In the U. States, such has been the astonishing progress in manufactures, that if it were not for our enormous foreign and domestic debt, we might be perfectly independent of the Bank of England. Well may the securities for our loans be called "bonds;" it would be still more pertinent to call them *chains*, for they rivet us helplessly to the car of that great dictator; we must budge when it goes, stop when it stops, and howl whenever it pleases to pinch the money market!

"We have said all and more than we intended to say on this subject, for our object was rather to start inquiry than to put forth opinions. At this distance from the scene of action, it would be great folly to attempt now to define the various influences that have produced the present aspect of English trade. The utmost therefore that we wish to be understood as advancing, is that there is strong ground to suspect that a cause not accidental, but permanent and progressive, is now sapping the power of the Bank of England."

M. Winan's proposition in our next.

The following is from the Zanesville Aurora of the 9th instant;—

"The '*Western Recorder*' is the title of a new paper commenced in this county within a few weeks, by the Rev. C. Springer. It is of imperial size, and looks remarkably neat, being printed with new materials. A portion of the 'Recorder' is intended to be devoted to the cause of the Protestant Methodist Church, and the residue to the dissemination of useful literary, miscellaneous, agricultural and mechanical news.—The editor promises that the paper shall have no connection with politics, and being started with a view, principally, to the furtherance of the interests of the Protestant Methodist Church, we have no hesitation in believing that it will refrain, strictly, from any interference with the political agitations of the day. The paper is well gotten up, and the numbers before us evidence a degree of ability deserving of a liberal support, which we hope it will receive."

This notice of our paper is to us quite satisfactory, a more liberal one than we sometimes receive, and perhaps more flattering than we deserve. We do not know that we have yet directly promised to 'have no connection with politics,' but we now say it is our intention to have nothing to do with *party* politics. The suggestion indicated in the article above that it is our duty to "refrain, strictly, from the political agitations of the day," is perfectly correct. The incidents and accidents of our life has connected us with the cause of ecclesiastical liberty; the order of Providence has evidently made it our duty to promote the interests of religious freedom; and for us to pursue any course that would provoke against us the influence of political excitement, or any other species of excitement, would be to desert the post which Providence has assigned us; to betray the trust committed to our care. We hold that when circumstances beyond a man's control, have connected him with any enterprize, no difference whether of major or minor importance, that it becomes the leading duty of his life to serve the interests of that particular enterprize; and to pursue any course to disqualify him for that particular duty, would be the height of imprudence. Prudence should therefore direct his course, which will guard him equally against deceit and cunning on the one hand, and rashness on the other.

But when we say it is not our intention to meddle with party politics, we do not suppose that we shall be able to conduct a paper and do our duty, and get no censure from politicians. The religious press should be the guardian of the public morals. How can it attend to these without occasionally giving offence to political men?

With respect to party politics, it has been our study for a number of years to have none; and at this period of our life we have but little interest on the subject. Our observation has satisfied us that honest men have little to do in the government of the world. Sterling integrity cannot resort to that cunning, finesse, and deceit which seem necessary to manage the public mind.—And we are sorry to say that these remarks are too applicable to the ecclesiastical as well as to the political department. Our old friend Norris of Boston in the following extract from his paper (Olive Branch) of the 3d instant, has expressed, though in pretty severe language, our sentiments on this subject:—

"We have received from Portland, Me., a new paper called the 'Eastern Argus Revived.' It proposes to go back to the republicanism of the Jefferson times and Jefferson school. It repudiates the present administration as anti-republican, and refuses fellowship with the whigs; it appears to adopt the politics of Tallmadge and Rives. Go ahead, politicians, and watch one another, as well you may; for none of you deserve to be trusted. We should despair of the republic, if one set of rogues did not keep another honest."

A destructive fire occurred in Cincinnati on the morning of the 3d inst. About $50,000 worth of property is said to have been destroyed, only about $20,000 of which was insured. A youth aged 17 was burnt in an oil mill, which was among the property consumed.

A great revolution in public sentiment, in favor of the temperance cause, is said to have been effected in Louisville, Kentucky, within eighteen months past. This has recently expressed itself in a series of spirited resolutions on the subject.

It is thought from the present aspect of affairs that a general war throughout Europe, is highly probable.

The business of Cincinnati is said to be greatly depressed, "owing chiefly to the unparalleled scarcity of money."

We acknowledge the reception of the 17th No. Vol 1, of the "Middletown Mail," devoted to literature and general news, by "Gallagher & Co." It is a spirited and well conducted sheet.

AGRICULTURAL.

TO PREVENT RATS FROM INJURING STACKS.

Lay three logs some fifteen inches over under your bottom of rails. This will raise the stack so far from the ground that cats and dogs can pass under. It is probable the rat is afraid to commence cutting his hole into the stack for fear of being attacked in the rear. We have been informed, by those who have tried it, that stacks, fixed in this way, have stood for two years without being in the least disturbed by these troublesome vermin.

TIME TO TRIM APPLE TREES.

The common time of trimming is in March, probably because the farmer then has the most leisure. But, to trees trimmed at that period it will be seen that the wound made, dries, turns black, and ultimately, in all probability, rots.—Trim, say the first of June, when the sap is in full flow, and the wound made by the pruning knife, being supplied with plenty of fluid, keeps in a healthy state, free from rotting, until it heals over. We have tried the experiment, and found the above to be the result. We think this indicates the proper time for trimming trees to be when the sap first starts in the spring, if you wish to trim when the least injury is done to them.—Do not take much off at a time, and never take large limbs.

ART OF MAKING GOOD BUTTER.

We are informed by those who have the reputation of making good butter, that one essential particular in the process is, immediately after churning to work all the milk out, and until it becomes firm and solid. If the butter milk be permitted to remain in it, even for a short time, it will turn streaked, and become rancid and unfit for use. The cream should not be permitted to get too old, and after churning some say the butter should not be washed in water as is often practiced,

"CHURNING.—It is stated in a late number of the Genesee Farmer that the difficulty, that is often experienced of converting cream into butter, and, as often the case, the difficulty of obtaining a good article, may be obviated by sprinkling in a little *saleratus*, (a spoonful to two gallons of cream.) After the cream has been churned a while, if no signs of butter appear, sprinkle in the powdered salaratus, half at a time, as it may be but half will be required. The editor attributes the effect produced upon the cream to the neutralization of the superabundant acid, by the alkali of the salaratus."

There is difference of opinion among farmers as it respects the management of manure. However, we think the principle adopted in the following address is prevailing. The Washington and Green co., Pa. farmers are generally practicing on this plan, and perhaps there are no better farmers in America. Many of them haul their straw out and spread it over their fields immediately after thrashing.

"MANAGEMENT OF MANURE."

The manure heap is the farmer's gold mine, and on this he must place his chief reliance.

A difference of opinion, as well as a diversity of practice, prevails relative to the state or condition of the manure previous to its application to the soil, that is, whether it is most useful to apply it in its raw state, without subjecting it to the process of fermentation, or whether it will produce a greater effect by previous decomposition by being thoroughly rotted. In some parts of our state, the manure made in winter is considered as unfit for the soil, till the subsequent autumn, and among us it is a common practice to deposite the manure in large heaps, on the field where it is to be used, with the intention that it shall go through a partial fermentation. I have frequently adopted this practice, in imitation of those whom I considered among our most judicious farmers. But experience, observation, reflection, and attention to the observations of others, have convinced me, that every degree of fermentation in manure designed for ploughed land is absolute waste. True, the decomposition must take place before it can be taken up as food for the plants, but then this process may be carried on in the soil, while the seeds are vegetating and putting forth their roots and blades, with equal advantages and by their gradual decay, fresh food will be furnished to the plants, as they advance in their growth, and when this takes place beneath the ground there is a great saving of the strength, and nutricious power of the manure. Whoever has stood to the leeward of a dung heap, when in a state of fermentation, and witnessed the evaporation, and perceived the strong effluvia escaping from the heap, must have been impressed from the fact that no small portion of its strength and virtue is passing off into the air. That which thus escapes, is the most subtle and nutrive part, the most enriching to the soil, it is that which imparts the most life, activity and vigor to vegetation. Now this ammonia may be wholly retained within the soil. By ploughing in the manure before the fermentation takes place, there will be comparatively but a trifling evaporation.

The fermentation and putrefaction will ensue, but the small and subtile particles which would escape from the dung heap, are now retained in the soil and become incorporated with it.

Economy requires that the plough should be put in motion as soon as is practicable, after the manure is carried into the field. Even the moisture in the manure when carried out is in itself some of the richest part of the load, and the longer it is suffered to lie in the sun before it is ploughed in, the greater the diminution of its strength and value.

Lathrops Address.

EPITOME OF THE TIMES.

There has been some confusion among the Cherokee Indians. The celebrated chief John Ridge and his father have been murdered. John Ross is implicated in the mischief.

Antiquities.—The Lords of the Admiralty have sent a ship of war to the south-eastern part of Asia Minor, for the purpose of transporting from thence to this country a large collection of most valuable ancient sculptures and bas reliefs, which has been discovered by Mr. Fellows, in Asia Minor, where many towns and cities, and a remarkable and nearly perfect theatre, hitherto quite unknown, have likewise been found. Mr. Hawkins, one of the Curators of the British Museum, has been principally instrumental in securing to that establishment these invaluable remains of Grecian art, many of which are said to be in a state of comparative perfection.—*Lon. Paper.*

State Loan.—The last Columbus Statesman says—"We fear we were in error in saying that the Canal Commissioners had succeeded in obtaining a loan of a million of dollars. Such was the fair construction of a letter from one of them—but there is only $220,000 reported to the Auditor of State, at 4 per cent. premium, as actually secured.—*Leb. Star.*

The Cincinnati Law School, will commence on the fourth Monday in October, and continue four months, exclusive of a short recess at Christmas. The terms will be $50 for the session. This school is attached to the Cincinnati College, and under the Professorship of Timothy Walker, Esq., a gentleman of fine talents and extensive legal acquirements.—*ib.*

The fatal power of a jaw bone.—The Philadelphia Spirit of the Times, has the following hit at the evil *loquacity* of the softer sex. "A fellow who married a termigant who drove him to desperation, and finally to death; just before dying requested a friend, to have the following brief yet pungent inscription upon his tomb:

SLAIN BY A JAW BONE."—*ib.*

Miami Canal.—The water is to be let off from the Miami Canal, on Saturday, the 10th inst. for the purpose of making the usual annual repairs.—*ib.*

Not far from two centuries ago, the Scottish Legislature enacted that "a good and sufficient school shall be erected and maintained in every parish." To these five little words "a good and sufficient school," introduced into an act of Parliament, not longer than a man's thumb, is Scotland indebted at this day for the superiority in morals and intelligence which her people possess over all others in Europe.—*ib.*

Indiana Loan.—The Indiana Fund Commissioners have lately effected a loan of $600,000 for carrying on the public works of that state. They have now obtained $1,000,000 since the commencement of the summer.—*ib.*

The Great West.—It is remarked by the Cleveland Herald, "that the Mississippi valley that is to say, the country drained by the Mississippi and its tributaries, has been estimated at 1,400,000 square miles in extent. Massachusetts has a population averaging 82 to the square mile. Were the great valley as thickly populated, it would contain 114-800,000 souls; about seven times the present population of the whole United States, and one seventh of the probable population of the globe. Or at 200 to the square mile, which is the rate of population in Great Britain, the Mississippi valley would sustain 280,000, nearly three eighths of the entire population of the globe. The region drained by the Mississippi and its branches is ten times as great as the Island of Great Britain, and in fertility of soil and resources of all kinds, is unsurpassed by any under the sun. Why may it not, in a century or less, be inhabited by an hundred millions of people?"

The Northeastern Boundary.—The newspapers in Canada and the lower provinces have discovered, to their consternation, that the geologist of the United States has been appointed by the British Government, to settle the boundary question. The fact seems to be, that Mr. Featherstonhaugh, who has recently made a geological survey for our government in the Western States, and returned to England last winter, has received the appointment of geologist to the commission about to be organized for a new survey of the boundary. The New Brunswick papers seem to look upon this as conclusive evidence that the American claim is to be allowed without any trouble.—*N. Y. Express.*

LORENZO DOW, was an oddity of the oddest kind. The best anecdote of him is that being one evening at a hotel kept by one Bush, in Delhi, New York, the residence of the celebrated General Root, he was importuned by the latter gentleman, in the presence of the landlord, to describe Heaven. 'You say a great deal about that place,' said the General, 'tell us how it looks.' Lorenzo turned his grave face, and long waving beard, towards Messrs. Root & Bush, and then replied with imperturbable gravity, 'Heaven friends, is a vast extent of smooth and rich territory—there is not a *root nor bush* in it, and there never will be.'

Even among the granite precipices of New Hampshire, such crops, particularly rye, it is said, were never before known.

A trunk has been fished up from the wreck of the John Bull steamer on the St. Lawrence, containg £2900 in bank bills entirely UNINJURED.

The personal expense of Lord Durham, during his mission to Canada, amounted to £34,000, or more than £1000 per week.

Miss Gertrude Rapp, of the Economy Society, in Beaver county, Pa., has drawn from the Treasury of the State $367 premium for silk, under the provisions of the law which enacts that a premium should be paid by the State 20 cents for every pound of cocoons raised, and 50 cents for every pound of silk reeled.

By the arrival of a whaler at Nantucket, it is reported that a new Island has appeared in the Pacific, about a hundred miles to the eastward of Juan Fernandez, and that a French vessel of war has gone to examine it.

One of the Elms that have for centuries adorned the beautiful city of New Haven, fell the other day, from rottenness, which has long preyed at its root. Fortunately, though numerous vehicles and pedestrians were in the streets, no one was in its track at the time.

A strange looking bug, 2½ inches long, with fore legs near three inches, was found in Brooklyn last week. The naturalists pronounce it to be the Harlequin Beetle, of Brazil, and other tropical regions. It was probably imported in dye wood or other southern produce.

The N. Y. Tattler of Monday says, that there has been two cases of *cholera* in New York—one of which is convalescent—the other is still doubtful.

Texas has paid the indemnity of $12,-000, due for the seizure of two American merchant vessels. The young republic is rapidly winning its way to the favor of that portion of the citizens of the United States, who have hitherto regarded it with rather an evil eye.

Bowles, a fearless and powerful Cherokee Chief, threatens to invade Texas in the neighborhood of St. Augustine and Nacodoges. That section of country was in a state of great excitement, and about one thousand of the militia had collected, at the order of General Rusk, to repel the approaches of the Indians.

APPOINTMENTS OF THE PITTSBURGH ANNUAL CONFERENCE OF THE METHODIST E. CHURCH.

Clarksburg District—J. G. Sansom, Presiding Elder.
Clarksburg Station—Benjamin F. Sawhill.
Morgantown Station—J. Spencer.
Brandonville—D. Hess.
Fish creek mission—Caleb Foster.
Harrison—Francis H. Reed, Wm. Cox.
Kenawha mission—A. Coleman.
Kingwood—S. Cheney, J. W. Regar.
Lewis—D. Cross, B. Haynes.
Middlebourne—Geo. Monroe—one to be supplied.
Monongahela—B. F. Sedwick, H. Gipson.

Barnsville District—E. Smith, Presiding Elder.
Barnsville—R. Boyd, J. H. White.
Deersville—G. D. Kinnear, L. Jenney.
Freeport—S. D. Jones, W. Devinney, A. Rich.
Grandview mission—M. Bishop.
McConnelsville—W. Athey, D. Neal.
Moorefield—C. Thorn, J. K. Miller.
Newport—I. Archbold, Wm. Smith.
Sharon—P. Greene, C. Morrison.
Summerfield—E. H. Taylor, W. Leeper.
Woodsfield—L. Pettit, S. Lewis.

Beaver District—S. Elliott, Presiding Elder.
Alleghenytown station—R. Hopkins.
Beaver station—Abner Jackson (one to be supplied.)
South Common station—E. Burkett.
Wellsville station—J. J. Swayze.
Butler circuit—P. M. McGowan.
Canton—D. R. Hawkins, W. Cotts.
Dover—H. Whorton, J. Moffit.
Evansburgh—C. E. Weirich.
Hanover—M. L. Weekly, Joseph Montgomery.
Harmony—J. White, J. Wright.
Leesburgh—P. McCue, T. Thompson.
New Lisbon—J. Monroe G. McCaskey.

Pittsburgh District—W. C. Henderson, Presiding Elder.
Birmingham station—Jeremiah Knox.
East Liberty station—E. L. Dempsey.
Pittsburgh—Liberty street station, C. Cook; *Smithfield street station*, C. D. Battelle; *Wesley chapel station*, A. Young.
Blairsville—J. Coyle, J. Ray.
Braddocksfield—J. L. Williams.
Connelsville—Wm. Tipton, H. Crea.
German mission—N. Calender.
Johnstown—J. Murray.
Kittaning—T. McGrath, H. McCall.
Ligonier—T. Jemison, J. Phillips.

Uniontown District—S. Wakefield, Presiding Elder.
Brownsville and Bridgeport station—C. Hodgson.
Monongahela city station—W. D. Lemon.
Uniontown station—Wesley Smith.
Washington station—G. S. Holmes.
Bealsville—T. Stinchomb, J. McCaskey.
Greensborough—T. Baker.
Redstone—D. Sharp, (one to be supplied.)
Summerfield—J. L. Irwin, S. B. Dunlap.
Uniontown circuit—W. Long, E. Hays.
Washington circuit—S. Lauck, G. D. Martin.
Waynesburgh—I. N. McAbee, R. Armstrong.

Wheeling District—S. R. Brockuiner, presiding Elder.
Steubenville station—S. R. Babcock.
St. Clairsville station—James Drummond.
Wheeling station—W. L. Kenney, G. L. Sisson.
Wellsburgh station—M. Tichenell, J. Boyle.
Cadiz—P. Cook, J. Hamnet.
Elizabeth circuit—H. Gilmore, R. W. Lauck.
Florence—J. P. Kent, I. Dallas.
Ohio—J. C. Taylor, A. Scott.
Richmond—H. Bradshaw, J. M. Bray, W. Knox.
Smithfield—J. W. Minor, S. G. J. Worthington.
St. Clairsville circuit—W. Summers, J. Hare.

John Summerville, James Mills, Thomas M. Hudson, Thornton Fleming, Thomas R. Ruckle, Samuel Kyle, John H. Ebbert, James Merriman, } *Superanuated—worn out.*

Hiram Minor, Walter Chalfalt, } *Dropped at their request.*

Wesley Browning, transferred to Missouri Conference as a missionary.

William Hunter, editor of the Conference Journal.

Charles Cook, Thos. M Hudson, Robert Hopkins, Jas. G. Sansom, Geo. S. Holmes, } *Delegates to General Conference.*

☞The next Annual Conference will be held in Clarksburgh, Va.

The murder of the Cherokee chieftian (father of John Ridge) and also Elias Boudinot, an accomplished, educated, native Cherokee, whose loss to literature is deeply to be regretted—is fully confirmed. Ten or twelve others of the Ridge party were also killed in this melee, instituted by the rival chief, Ross.

The editor of the Harrisburg Chronicle has kept account of the number hurt on the recent anniversary of Independence as far as his exchange papers enabled him to do it, and finds that the list already gives no less than forty-one killed, and nineteen wounded and mutilated on that day by the bungling use of gunpowder and artillery. The Chronicle believes this to be not more than one fourth of all the accidents which happened on the occasion.

Mrs. Hemans, on one occasion, to satisfy the incredulity of one of her brothers, learned by heart, having never read it before, the whole of Heber's poem of Europe in one hour and twenty minutes, and repeated it without a single mistake, or a moment's hesitation. The length of the poem is 424 lines.

Repelling Power of Color to Lightning.—The Providence Courier, in support of the recent discovery that Lamp-black resists the course of the fluid, says that in the schooner Ida, struck a few days ago at that port, the portions of the masts and spars painted green entirely escaped, while the bare parts were shivered.

A Popular Lawyer.—The practice of the bar, of Mr. Prentiss, of Mississippi, who resigned his seat in Congress last year, is stated, incredible as it appears, to be worth $100,000 per annum.

Short-lived Honors.—A man in Indiana, attempting to drive past a stage, got up to hurrah over his victory, when he fell and was caught in the wheels of his own wagon and crushed to death.

A general war is anticipated, at Fort Snelling, between the Sioux and Chippeway Indians. Several skirmishes had taken place between small parties of them, above the Falls of St. Anthony, in which numbers were killed on both sides.

THE RECORDER.

ZANESVILLE:

THURSDAY,----AUGUST 15, 1839.

The Pittsburg Conference of the M. P. Church will meet in New Lisbon, Ohio, on the second Tuesday of September next.

We do not know the time or the place of meeting of either of the lower Conferences, or we would take pleasure in advertising them.

Ever since our paper was commenced we have been in the midst of the bustle of harvest, which has not left us more than one-fourth of our time to attend to its interests. Harvest is now closed, and we shall have more time to attend to our editorial duties. So soon as we can we shall make such an arrangement of our agricultural matters as to give them in charge of others, so that our whole time may be devoted to the paper.

As the labor of both editing and publishing a paper of this description is too great for any one man, we have made a proposition to A. H. Bassett of the Ohio Conference to join us in this enterprize, who holds the proposition for consideration until the meeting of their Conference, when he proposes to give us a decisive answer.

S. J. Harris, in a letter to the editor of the Olive Branch, dated Enfield, N. C. July 20, 1839, states, "in Alabama our cause is doing well. An efficient ministry would take the State." "Alabama is probably doing better than any District south of the Maryland Conference."

The 1st No. of vol. 6, of the Methodist Protestant failed to reach us, but we see from one we have borrowed, that this No. came enlarged. This is a well conducted and useful paper, and deserves the patronage of the church.

We see in the last Methodist Protestant a formal contradiction of the 101st report, got up by our Episcopal Methodist brethren, through mistake or otherwise, that Asa Shinn had rejoined their church. Why all this solicitude upon this subject? It certainly must be because our old friends find themselves, at present, destitute of men of talent, and are extremely anxious to have among them some who are capable of thinking. Why, dear brethren, if this really be your situation, we can spare you some half a dozen, fully equal to Bro. Shinn, without essentially endangering our cause. It is true we would be reluctant to part with our brethren; but then if your case imperiously require it, it would be no more than a reasonable exercise of christian charity to divide with you.

The prospectus of the "Letter-Press" in our next.

JER'H BROWNING, *Agent.*

COMMUNICATIONS.

JACKSONBURG, O., Aug. 1, 1839.

Bro. Springer:—Having to address you on business, I would now take the liberty to inform you and the friends scattered abroad, that the brethren on Twin Creek circuit, Ohio District, notwithstanding they have been left without a circuit preacher for about one year, are yet alive in the good cause, and are not coming to nothing, or all going back to the old church, as has been reported through different parts of the connexion.—No bless the Lord, we are still adding some to Christ and the church from out of the world, and some from other quarters. We organized a society a few weeks since, and a brother who left us some time since for the sake of society and religious privileges, came six miles and applied for membership again, in the new organized society, and was received. We have some reviving times and refreshing seasons from the presence of our God. We, like others, have our troubles, it is true, but out of them all the Lord delivers us, and will deliver us so long as we put our trust in him. There is nothing but a want of holiness of heart, and a willingness to support an efficient Itinerancy that can hinder our progress.—May God open our hearts and influence our minds, as he did disciples of old, to impart to every one as they may need. O that all the brotherhood would feel the weight of these things resting upon them, prompting them to do their duty first, and then to bestow charity when and where it is needed. We have some willing members, and we intend applying at this coming Conference for a preacher to take charge of our circuit. We are in the midst of a fine country, and surrounded with intelligence, and I think good may be done, by using proper means.—May God give wisdom and ability, and prosperity to the cause.

I remain yours in a peaceful gospel,

JOHN H. THOMAS, *Unst. Min.*

ZANESVILLE, July 23, 1839.

Mr. Editor:—It has occurred to me that a summary account of the gracious dealings of the great Head of the church with the people of the Zanesville circuit, might not be uninteresting nor unprofitable to the readers of the "Recorder;" especially, that portion of them who are fond of revival intelligence; and though poorly qualified to prepare an article for publication, I have nevertheless come to the conclusion to make the attempt.

At the time of the session of our Annual Conference in New Lancaster, last fall, Bro. J. Dalbey, Bro. and Sister Reeves, and myself, held a protracted meeting in the town of New Salem on this circuit, which was indeed the beginning of good times among us; seasons the remembrance of which will be long and fondly cherished. The congregation was large, respectable and decorous. The word was preached in a pointed, practical and impressive manner. Never shall I forget the energetic and heart-searching discourse delivered by Bro. Reeves on Sabbath afternoon previous to the administration of the Lord's Supper. Yet all seemed to have but little effect.

After the services were concluded an invitation was given to those who wished to become members of the church, to come forward; one lady presented herself, and was quickly followed by eight or nine young men, who threw themselves down at the altar of prayer, crying for mercy as though the last hour of their probation had arrived. These continued wrestling in prayer, Jacob-like, until God blessed them. The meeting continued increasing in interest until Thursday evening when it closed. About twenty joined the church at that time; since that we have had several accessions at that appointment.

This gracious outpouring of the spirit was not confined to this place exclusively. Other appointments soon began to participate in its soul-cheering and saving influence. At Baker's school house in the same neighborhood, we have had an increase of twenty-seven, principally the fruit of a protracted meeting held in January last. Here we had some valuable accessions from the M. E. Church, and those too who did not come because they had difficulties with their brethren and sisters in the old connexion, (for they were in good fellowship with all,) but because they believed in the principles of our church government, and could not conscientiously support those of an opposite character any longer. During the revival at this place seven were converted in one family, five of the same family had embraced religion previously, making in all twelve.—A happy family indeed.

We have held several protracted meetings in other places, at all of which more or less of the Divine power and presence was felt, in reviving the hearts of believers and converting the souls of sinners. We have organized two new and promising societies, both of which include many valuable members. In all we have taken into the church about one hundred and fifteen this year. All of these, with a few exceptions, have professed religion and given evidence of their having been with Christ, and of being taught of him.

The people have in contemplation the building of two meeting houses, one at Baker's school house, the other at Brownsville. Here all have distinguished themselves for liberality in their contributions. We find annexed to the names of those who are not members of any church, $75, $50, $25, &c.: several members in moderate circumstances have given $100 each. In all there are upwards of $1400 on the subscription list.

While we have just cause to rejoice on account of what God *has* done and *is* doing on this circuit, we also rejoice at the cheering intelligence brought us in Bro. Z. Ragan's communication, and others, of the abundant success which has attended the efforts of our fellow-labors on other circuits and in the stations. Yet Mr. Editor, it appears that amidst the abundant success that has attended our young but rapidly growing church, there are some of our croaking neighbors who labor assiduously to make the public believe that we are 'sinking,' 'decreasing,' 'falling,' &c. I do hope for the sake of their credit, that croaking time will soon be over.—They must either be grossly ignorant of the general state of our church, or they wilfully misrepresent us. Facts are against all they say, and when such is the case it is time for them to hold their peace.

JAMES ROBISON, *Supt.*

NEW LISBON, O., Aug. 2, 1839.

Bro. Springer:—In compliance with the President's request of April 21, which came to hand May 12, I left the Georgetown circuit, a place and a people who are deeply engraven on the leaves of memory, and who will I trust ever be held in remembrance.

On my way to this place I called at Wellsville, where I learned from I. Thrap, very much to the reverse of my expectations, that Bro. K——, who had been reported to have left his charge in New Lisbon, was still in the place, and expected to remain there and preach twice every Sabbath until the Annual Conference.—With a heart pregnant with sorrow and overwhelmed with grief, I left W. on the morning of the 16th for New Lisbon.—The day was wet and all nature wore a gloomy aspect. However it was not long before the refulgent rays of the unwearied traveller who traverses the heavens, broke through the condensed atmosphere, and dispelled the mist which mantled the earth, and thereby caused not only all nature to assume a joyful countenance, but imparted to the mind a degree of cheerfulness and tranquility, which conveys undoubtable evidence to me, that there is a very striking analogy between the moral and the physical world. By this time I found myself in the suburbs of New Lisbon, and soon arrived at the residence of H. Springer, and was kindly received under his hospitable roof, where the facts as related by I. Tharp were abundantly confirmed, and additional information respecting the then existing circumstances received. So you see I have not only my own weakness and inability to contend with, but ——— I thank God, however, the cloud has in some degree dispersed, and we are experiencing in a measure the genial rays of the regent of day.—Our congregations are moderately increasing, both on the Sabbath and on Wednesday evenings. Our meetings are quite interesting; the brethren are very much united; and in our supplications we take David for an example and cry, "O Lord send now prosperity." Notwithstanding the discouraging circumstances, and the violent opposition with which we have had to contend, we have taken three into society, one of which is a very acceptable preacher. Every preparation will be made for sustaining the Conference, in this place, in as respectable a manner as possible

Yours, affectionately,

J. B. ROBERTS.

WARREN COUNTY, O., Aug. 5, 1839.

Bro. Springer:—I have just returned home from near a seven weeks tour thro' that part of the District which lies in the interior of Indiana. I found my family all in good health. My own health has not been better for a number of years than during the last year, for which favor I feel thankful to God. I was also much pleased to find the first No. of the "Western Recorder" had been received by my family. Our cause has suffered much for a defender, and general informer relative to the prosperity of our church, and our brethren have so sensibly felt the loss of the "Correspondent," that they appear willing to support you in your laudable undertaking. I sent you thirty-three names, obtained mostly through Indiana, and have got three more since, and shall get as many more as I can, and also collect for you.

I must say that I feel much gratified, that I can address you once more, as the editor of a medium of communication to our Zion, and also a defender of Mutual Rights, &c.

I will now give a brief account of our prospects in this District; having visited every circuit and station, and a number of them twice. Notwithstanding preachers could not be had to supply all the circuits, I was much encouraged when I visited them, to find that our unstationed ministers were not all idle: the appointments were generally kept up, and all stand fast, and they were rejoiced at the good news which I verbally communicated to them, frequently in public. I also found it necessary to contradict the reiterated reports of our enemies, to-wit: that we were all going down hill, all coming to nothing, all going back to the old ship, &c; and by request I delivered short addresses on Church Government in many places, in a way that gave no offence to any except the ignorant bigot. Even a travelling preacher invited me home with him, in Muncytown, after I had addressed them on this subject, and treated me like a brother.

I think there will be several hundred increase in this District; upwards of fifty united with us, at the meetings I attended, beside those taken in by the superintendents. We have got clear of some upstart Itinerants, who, it appears, were seeking for honor and gain, rather than the good of souls, and the prosperity of the good cause. The Itinerants of this Conference, now, with two or three exceptions, are old experienced men, and I hope will continue to travel. They have been generally faithful and useful.

Our future prospects are brightening; all depends on a reasonable support of the ministry, and I think our brethren are generally convinced that the individual subscription plan will be the only way to succeed; i. e. for each member, male and female, voluntarily to subscribe at least twenty-five cents a quarter, and the rich to make up the balance.

I will close after stating that I have had some blessed meetings, a goodly number have been converted, and many convictions which I hope will not wear off. In some places I was not permitted to preach in the Episcopal churches. In Mill-Roy they refused and I preached in a tavern. In Wilmington I had to preach in a private house. In Green Castle our old brethren have a large church, and a college. I sent on an appointment; they granted the church, but did not ring the bell. However, the news spread over the town, and I had a large congregation on Wednesday evening. The president, professors, two circuit preachers, and the stationed preacher, with a number of local preachers were in attendance; among them all, none invited me into the pulpit; they all set at a distance, except an old local preacher. If ever I had liberty in preaching I had it that day. I took for my text two words, "Pure Religion." The congregation were much affected several times. After dismission a Presbyterian brother, with whom we put up, gave Bro. Bassett and myself an introduction to all the preachers; many invited us home with them; we went with a class leader. Two local brethren came and conversed with us till 10 o'clock.—They informed us that about thirty or forty of them were about leaving the old ship; they wanted to see our Book of Discipline. I advised them to come off altogether and organize, and send for Bro. J. Medaris, who travels the Spencer circuit, in that vicinity. We believe there will be a break here, on account of priestly dominition. I must now close with subscribing myself yours in the best of bonds, A. MCGUIRE, Pres't O. Con.

Bro. Springer:—The "Recorder" is well received as far as I have been able to learn. Since the arrival of the first No. I have obtained some additional subscribers. I think we shall yet do more. The communications already received from our ministers and preachers have been very encouraging to our people in general. We hope they will continue to write. With regard to this station, matters are rather encouraging than otherwise. I believe there is a manifest improvement in a considerable portion of our members. Rising sixty have been added to the church by certificate and otherwise; as yet we do not know what our nett increase will be. Our congregations are large, generally, and a more orderly and well behaved people is rarely to be found. Our worthy Bro. Shinn has preached to us during the year with great ability. It is the opinion of many of his most intelligent hearers, that he preaches better than usual. His discourses have been practical and well calculated to improve the morals of society. O that the Lord may continue to bless him with health of body and mind, that he may not only preach the truth to perishing sinners in the congregation, but also defend it with his pen, that it may be said in truth of him, after his toils are over, "*though dead he yet speaketh.*" I hope our brethren will do all they can in getting subscribers for his new work.

A word to my young brethren in the ministry. We are laborers with our elder brethren in building up a new branch of the church of Christ. I hope we have engaged in this enterprise from a sense of duty, and consciencious belief that the principles are true which we have espoused, trusting in the God of all grace for success. We should bear in mind, that every great enterprise has been attended with difficulty, and has called for heavy sacrifices on the part of those engaged in it. Look at the toil and sacrifice of our Fathers, to gain a Nation's political freedom; and shall we their sons, engaged in preaching liberty to captive sinners, prove to the world, that the patriotic blood of our fathers never coursed through our veins? While we preach the principles, which we profess, we proclaim liberty also to all who are fettered down with the chains of ecclesiastical despotism, and prove that, 'If the son shall make them free they shall be free indeed.' In the prosecution of this enterprise we may sometimes want pecuniary support, but what of all this? The farmer might sit down at the close of his first days labor, and complain,—"No fruit of this day's toil." But he waits, and has long patience, and ultimately gathers a plentiful harvest. So will we if faithful.—"He that goeth forth, weeping, bearing precious seed, shall doubtless return again, bringing his sheaves with him." Our infant Church has already done nobly.—New Meeting houses were to build; her Ministers sustained by noble spirits, were driven into the hedges and highways to gather a people for the Lord.—Now we number our thousands, have many respectable houses of worship, and a good people, and zealous ministry to occupy them. The worst of the battle is over; the struggle for life has ceased; we are brought into being as a church; now the labor should be to improve on the benefits of life, that we may make our existence as a church a blessing to the world. Let us strive to gladden the hearts of our brethren in the weakest portions of our Zion, by raising Conference collections to make up their deficiencies, and we shall thereby cheer the spirits of many a sufferer. This thing ought to be urged in public and in private.—Let us prove by our works, that we believe our cause to be good, and trusting our all to God, adopt the moto of the Warrior, "*Victory or death,—Victory or death!*" Keeping our eye fixed upon the Star Spangled Banner of Gospel liberty, obedient to the commands of the Captain of our salvation press the conflict, pouring the artillery of truth against the combined force of Hell, and the enemy shall be routed, a final victory gained, and the victorious warrior strengthened by his toil, shall be met on his return from the field of conflict by angelic hosts, with the rose of heaven blooming on his cheek, and the fire of liberty sparkling in his eye. Then shall all the bloodwashed, join in the song, "Hallelujah to God and to the lamb, who hath redeemed us, and washed us from our sins in his own most precious blood, and hath made us kings and Priests unto God and to his Father, to him be glory and dominion forever, and ever." "*Amen.*"

JOEL DALBEY, Jr.

Pittsburgh, 9th, Aug. 1839.

CINCINNATI, Aug. 5th, 1839.

Dear Cornelius:—I had at first thought that sure enough I was not going to get the "Recorder," and after inquiring several times at the office for it I gave it up; but last Friday on going home I found the penny-post had left me the 1st and 2d Nos. Well, I have carefully conned them over, and am free to say that I am disappointed—they are better than I expected, and taking the two first Nos. as samples, I think it the best religious paper that I know of at present. I am more than pleased with the summary justice you have rendered to him of the 'Watchman.' Alas! for such watchmen, what do they with their *veracity*, or *candor*, or *intelligence*—one or all? In fact taking the paper by and large, as they say, I find very much to *commend* and nothing to *censure*. I received your letter to me some time ago and ought to have written, but you see I did not. I thought too that I would try to do something, and did try to do something, but did not succeed in doing much, because I have so many other engagements that my head becomes so *abfusticated* that I scarcely know which end is uppermost. However, I was so pleased with the paper that I thought I would make an effort, and I yesterday, after sacrament, told the people there was a very good paper now publishing at Zanesville, in which matters and things in the west were more particularly attended to, and if any wanted it they might signify it to me, and it would be forthcoming. I now send you as the result of that little effort fourteen names.

I would, however, remark, that the quality of the paper on which you print is bad. It is (although pretty white) coarse and easily broken in the folds, as though rotten. Yours, respectfully,

M. LYON.

EXTRACTS FROM CORRESPONDENTS.

Fayette Co. O., July 29, 1839.

I have received the first number of the "Recorder," and feel glad that we have a medium of information in the west. We have sustained some loss in this Conference from a few of our ministers being led off with the injurious *isms* of the day, but I think the greatest loss of all was the suspension of the old "Correspondent." As the "Protestant" is not taken in this quarter we were entirely in the dark on the subject of our church matters. Notwithstanding our difficulties we have some Calebs' and Joshuas' who feel determined to go up and possess the land of religious liberty. Yours, &c. ELI WEST.

Cambridge, O., Aug. 8th, 1839.

We held a two day meeting recently at David Sarchet's, the entire benefits of which cannot now be stated, eternity will be required to unfold them. But one thing I can state it was truly refreshing and reviving to the church.—Thirteen united with us, seven or eight from the old Fellowship. Our circuit is in a healthy and prosperous condition, but a laborious one to travel. Yours, with all due esteem, &c.

JOHN HERBERT.

It is said that in the neighborhood of Mobile alone, a sufficient number of mulberry trees have been planted to stock the United States. We advise our friends not to dip too deeply into this business.

Conviction of Arson.—Charles Williams, a lad of some 15 or 18 years, has been sentenced to ten years in the State Prison for setting fire to the stable of Sheriff Archer, in Albany, from which originated the late great fire in that city.

A Bordeaux paper states that M. Conte, Director of the Post Office Department, has presented to the French government a project for the establishment of a line of steam ships between Bordeaux and New York. According to this scheme, twelve packets of 450 horse power each, will be employed, requiring an outlay of 22,000,000 francs. The project has been received by government with great favor—and will be presented to the Chambers at the opening of the next session.

MAINE WESLEYAN JOURNAL.—The REV. G. F. Cox has retired, or been expelled from the editorial charge of this paper: we know not which. Mr. Cox. is a man of great talents and an able editor, but a blind devotee of the old hierarchy. His discriminating mind saw mutiny in the camp, which could not be quelled; and he probably thought it the better part of valor, quietly to retreat. The REV. MOSES SPRINGER, of Gardiner, is his successor. Mr. Springer is a man of education and talents; and we cheerfully welcome him to the editorial corps. He never to our knowledge was a travelling preacher, but has mingled largely in the business world, and has become acquainted with man as he is. We trust he will not prove a mere cleric; and that he will be free from the indiscretions of such as have nothing but a clerical education. The only draw-back is recent indications of a blind submission to the cruel tyranny of the old Methodist government. It was perhaps for this he obtained his office.—*Olive Branch.*

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper. Our subscribers in Cincinnati will please hand the amount of their subscription to Moses Lyon, who will retain what he may receive in his hands until he hears from us.

Letters Received.—Z. Ragan, J. Burns, Wm. Dunn, C. Woodruff, J. H. Thomas, A. M'Guire, E. West, J. Browning, J. Herbert, J. M. Adams for R. Richardson, we had received none of the names you sent us by private hand but Jacob Ross and Geo. M'Pherson, the name of the former we have at New Philadelphia, Tuscarawas, and not at Tuscarawas town and county, as you direct: we will let it remain until we hear from you: W. Cable, M. Lyon, as you are acquainted with the circumstances, we would be glad you would adopt any plan you think best to insure the paper to the subscribers and we will be at the expense; we sent the back Nos. to your 14 new subscribers: M. Winan, J. Dalby, jr. and D. Warren.

Received pay for first volume Recorder—Of M. Brotherlin $4, for himself and J. Yontz; J. Robison $4, for C. Copeland and J. Baird; J. Burns, Steubenville, $24, for T. Hanna, T. Lucas, H. Huikil, M. M. Laughlin, T. Thompson, J. B. Peters, S. Page, J. Glimes, N. Murry, W. Thompson, M. E. Lucas, and J. Shipley; J. H. Thomas 10, for J. L. Fall, S. Stone, J. James of Butler, & 4 for himself; W. Hibbs 2; J. Russell 2; J. Herbert 10, for A. Morris, P. Corbit, M. Sarchet, J. Hersh and D. Gist; E. West 2; A. M'Guire 2, for Mrs. Hargrave; J. Dalby, jr. 10, for S. Johnson, S. Shaunon, J. M'Allister, Dr. Adams, and T. Oliver.

M. Lyon, Cincinnati, acknowledges the receipt of pay from T. J. Finch 2, and J. Beall 2.

A camp-meeting will be held on the farm of James Wheeler, two miles west of Smithfield, to commence on Thursday 22d of August The ministers, preachers and people on the adjoining stations and circuits, are invited to attend.

GEO. HUGHES.

A Camp-Meeting will be held for Union circuit, commencing 22d of August, on the Mount Braddock farm, owned by widow Mason and heirs, and is about one mile from the old Camp ground, on the farm of Col. Paul. We request the attendance of the President, and all our ministers, stationed and unstationed, as well as the ministers and members of other Churches who can make it convenient to be with us.

J. M. PIPER, *Sup.*

A Camp-Meeting for the benefit of the Zanesville circuit and station, of the M. P. Church, will be held on the land of Bernard Workman, near the residence of C. Springer, commencing on the 30th of August, 1839.

We request all our ministers, stationed and unstationed, also the ministers and members of other Churches, who can make it convenient to attend with us. JAS. ROBISON, *Sup.*

ADVERTISEMENTS.

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods, and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

YOUTH'S DEPARTMENT.

GEORGE WASHINGTON AND THE FAVORITE COLT.

George Washington's father died when he was a little boy. When he was about ten years old, his mother had a favorite colt which had never been broken.

George had frequently eyed this colt, as it pranced round the field, proudly snuffing up the wind, wheeling and halting, and displaying its fine proportions; and more than once he wished that he was on its back, and *he* would curb his neck for him.

One day, at length, he told his wishes to some of his school-companions, and engaged them to meet him early next morning, when with their assistance, he would have a ride.

Accordingly, the little party assembled the following day, soon after sunrise, and repaired to the field, where the young Arabian was kept, at no great distance from the house. With some effort, they contrived to pen him, and with still more effort to put a bridle upon him.

"There, now I have you," said the exulting George, as the headstall passed over the ears of the terrified beast. "Now we'll take an airing together, if you please. Come, boys, hold him."

Several took hold of the bridle, while the athletic youngster, with a single leap, vaulted upon his back.

For a moment, the colt stood quite still, as if petrified with astonishment, at the daring of his young master. It was plain, however, that the spirit of his unsubdued nature was at work; and the next moment, with his eyes almost starting from their sockets, and his nostrils wide opened, he darted from his position, leaping, and rearing, and whirling, and pitching, and bounding, and at length set forward as if a tornado had been after him.

"Hold on! hold on, George!" exclaimed one of his companions, so terrified at the unexpected result of their enterprise, that he could scarcely stir—"hold on!"

"He'll be off," said another.

"He'll be killed," said a third.

"Never fear for George," said a more courageous lad: "don't you see how he sticks to him?"

The rider did keep his seat surprisingly. But the struggle between them was desperate. Each determined—the one to subdue his charge—the other to throw his rider. And for a time it was doubtful on which side victory would setttle; but, at length, the colt, exasperated beyond endurance, made a furious plunge, and falling headlong burst a blood-vessel which caused his death in an instant.

It was a tremendous fall; and, for a moment, it seemed impossible but that horse and rider should have shared the same fate. But it was not so. George received no essential injury.

But it grieved him to see lying before him the lifeless body of the spirited animal, whose death he was now sensible had been occasioned by his censurable folly and rashness. His mother, too! her fondness for this animal came crowding upon him, to render his trouble still more distressing.

Shortly after, a call to breakfast was heard. Some of the companions of George, I believe, had been invited to breakfast with him that morning; but now however much they could have desired to be excused, they went in, and were soon seated at the table.

For a time, little was said—less than usual. Whether Mrs. Washington remarked this, I cannot say. But, at length, breaking the silence, she inquired whether they had seen her fine sorrel colt in their rambles.

There was now no escape. The case was to be met, and met at once. The integrity of George had been tried in still younger days; and now, again tried, it nobly stood to the test. He replied to the question put by his mother—

"Your sorrel colt is dead, mother."

"Dead! George," exclaimed Mrs. W., with a good deal of surprise—"dead, do you say?" her hands relaxing from some service which she was performing at the table.

"Yes, he is dead."

"How happened it, George?"

"I will tell you, mother. I am the only one in the fault." And now he proceeded to give her a circumstantial and correct account of the whole transaction.

Before the story was ended, the flush which had for a short space risen upon the cheek of Mrs. W.,—an evidence of her displeasure,—had all passed away. In conclusion she observed, quite kindly and calmly, "While I regret the loss of my favorite, I rejoice in my son, who always speaks the truth."

From the Youth's Cabinet.

EARLY RISING.

The present age has been truly styled 'the sleepy age,' and if we may be allowed to judge from signs and appearances, the rising generation bid fair to excel the last in their devotion to this object. Time once was when the fashionable hour of rising was before sun-rise, but the wiser heads of our own times have been pleased to defer it until one or two hours after sun-rise. Experience will decide which of these modes is best. Formerly the glow of health was seen on every cheek, now pale countenances are common.

Very few think of the evils that attend late rising. If you rise at a late hour, you of course get about your business late, and thus are behind all day, and lose many advantages which might have been improved to some good had you only been up in time. Besides this, your business or whatever you have to do, comes all together; and you must of necessity let some part pass, or do it imperfectly.—Your mind becomes dull and stupid, and you are totally unfit to perform the duties of life. In this manner a great amount of time is lost.

We hear complaints made almost every day of the shortness of life; while it would appear, judging from actions, that it was altogether too long, and men were endeavoring to shorten it by sleeping.

Most people think there is no evil in lately rising, but I think there is evil. It deprives us of our time, all of which ought to be improved, and of our health, by which we are rendered unable to perform all the duties incumbent upon us; and also beclouds our minds, so that we are led into many errors from want of judgment to guide us right. Whatever will do this, must be evil; therefore late rising, because it has this effect, must be evil, or sinful.

Let a reformation be commenced, by the young. Let the old continue in the evil practice if they wish, but as for us, we will practice early rising, at least until we have no more time to improve, no health to lose, and no more use for our reasoning faculties: then when those things shall happen, we may as well *sleep* as do any thing else, but not before.

A YOUTH.

From the Alexandria Gazette.

THE CHILDREN'S PLEDGE.

History informs us that when Hamilcar, the father of Hannibal would impress upon the heart, of his boy, the future Carthagenian General, hatred to the Romans, he took him to the altar of his gods, and there made him swear eternal hostility to Rome. The sagacity of the act was equal to his depravity. The christian father, when he leads his son, the pride of his present, and the hope of his future years to the altar of the true God teaches him to love all mankind, and for that reason to hate that which is fitted to entail misery. If we can succeed in creating, an *hereditary enemity* in the minds of our children to all intoxicating drinks, we shall confer a great blessing on them and on society. It is love for these exhilarating potations that has already swept thousands of our youths into an untimely grave, while the desolate hearts of bereaved parents and friends have bitterly mourned the wreck of his brightest hopes and fondest anticipations.

The following pattern of an original pledge if I may so call it—was presented at the late Sabbath School celebration of the Fourth of July, in Alexandria, with upwards of seventy youthful names signed to it. Let every parent cut it from the paper, append a strip of white paper to it, and ask all his children to sign it.

THE PLEDGE.

This little band
Do with our hand
The pledge now sign,
To drink no wine,
Nor brandy red
To turn our head,
Nor whiskey hot
That makes the sot,
Nor fiery rum
To turn our home
Into a hell,
Where none could dwell,
Where peace would fly,
Where hope would die,
And love expire
Mid such a fire;
So here we PLEDGE *perpetual hate*
To all that can intoxicate.

SPEAK TO THAT YOUNG MAN.

Does not your blood chill when he takes the name of God in vain, and blasphemes his Maker? O the forbearance of the Almighty! O the indulgence of the Eternal Jehovah! Could this swearer have a discovery of the enormity of his crimes, and the power and glory of the Omnipotent, he would exclaim with the dying Altamont, "Hell itself is a refuge, if it hide me from its frown." Venture to speak to him, Christian. "A word fitly spoken is like apples of gold in pictures of silver." Had his many prayers been answered, his undying soul, long before this, would have been sent to the dark caverns of eternal despair. It is true, he has been frequently admonished. So have many others, who have at last listened and repented. Be not weary in well doing, for in due season you shall reap, if you faint not. God, in his wise providence, may have left it in reserve for you, as an instrument, to recover that wretched young man. Speak to him, Christian, and may power from on high accompany your warning.

Speak to that young man, whom you saw weeping in the sanctuary of God, during divine service. He knows that you are professedly a Christian, and he expects it of you. The spirit of God has reached his heart. He feels himself to be a wretch undone. His conscience is burdened with its guilt, while in his inmost soul he cries, "God be merciful to me a sinner!"—Speak to him, Christian.—Show him the way to the Saviour. Do you not remember the gall and the wormwood, when you were in his situation? How you mourned because Christians passed coldly by you and heeded not your sorrows. Speak to him kindly and affectionately. Tell him about the love of the blessed Redeemer, and his soul will melt within him.—Then bid him look by faith and live.

THE OHIO.

No river in the world rolls for a thousand miles a current so smooth and peaceful. Its tributaries wind through as many valleys in ten different states. The Tennessee, the first in size, having passed a navigable course through three states for more than one thousand miles, falls into the Ohio fifty miles above its mouth; the Cumberland—five hundred and seventy miles—being navigable for steamboats to Nashville, and for keel-boats 300 miles further; the Wabash, 200 miles; Green river, 230 miles from the mouth of the Ohio river—navigable 20 miles, and 200 yards wide at the mouth; the Kentucky, 504 miles—navigable 150 miles; Great Miami, 482 miles—navigable sixty-four miles to the Salines, where annually is made from five to seven hundred bushels of salt; the Great Muskingum, 950 miles. These are the principal auxiliaries which give substance and strength to the Ohio. In its course of more than a thousand miles, it washes six states, and with its tributaries has more than 5000 miles of navigable waters. Its mean width is 600 yards with the exception of its lowest fifty miles, the average width of which is 1000 yards. The average rapidity of its current is three miles an hour. It rises fifty or more feet. At low water its surface at Cincinnati is supposed to be 130 feet below the level of Lake Erie, and 437 above the tide water of the Atlantic.—Such is the Ohio.

POETRY.

THE BRIDE'S FAREWELL.

Farewell mother, tears are streaming
Down thy pale and tender cheek,
I in gems and roses gleaming
Scarce this sad farewell can speak.
Farewell mother, now I leave thee,
Hopes and fears my bosom swell,
One to trust who may deceive me,
Farewell mother, fare-thee-well.

Farewell father, thou art smiling,
Yet there's sadness on thy brow,
Winning me from that beguiling
Tenderness to which I go.
Farewell father, thou didst bless me
Ere my lips thy name could tell,
He may wound who can caress me,
Father, guardian, fare-thee-well.

Farewell sister thou art twining
Round me in affections deep,
Wishing joy, but ne'er divining
Why a blessed bride should weep.
Farewell brave but gentle brother,
Thou art more dear than words can tell;
Father, mother, sister, brother,
All beloved ones fare-thee-well.

THE BRIDE'S RETURN.

[ORIGINAL.]

In gems and roses I parted
With those I held dear on earth,—
To abide with one true-hearted
I quitted the place of birth.

In mis'ry and want I return,
To the lovely scenes of youth,
To find consolation and mourn
Him who hath fallen from truth.

For years around our peaceful hearth
No mis'ry or want was there,
But Bacchus with his train of mirth
Came, and left us in despair.

I cannot chide the feeble one,—
I feel my heart is broken;
And father, dear, blame me alone,
Let peace to him be spoken.

In days that have passed and gone,
Wreaths of fame circled his brow,
Still let their remembrance remain,
And oh! don't censure him now,

ICILUS.

Printer's Run, Aug. 10, 1839.

LADIES' DEPARTMENT.

THE ELDEST DAUGHTER.

1. *Humility.* If the eldest daughter is to be the pattern of the younger children, she must be taught to *think little of herself.* If she is to exercise a guardianship over them, she must be humble. Pride is generally associated with arrogance; and a haughty, overbearing spirit will destroy her influence in the family, and cause her to be hated rather than beloved by the younger children. This will lead to contention and strife, and destroy the peace of the family.

2. As soon as she has an opportunity of associating with other children, she must be taught a *sacred regard for the rights of others.* If this is neglected, collisions and conflicts innumerable will ensue to disturb the peace of the family.—There is generally a natural disposition in the elder children to be tyrannical and overbearing towards their younger brothers and sisters. This, if permitted, will spoil their tempers, destroy their happiness, and ruin her own disposition. The eldest sister must be taught to understand and respect the rights of the younger children. She must not be allowed to appropriate things which belong to them to her own use, without their consent, nor to exercise over them an arbitrary authority. She must feel that all the authority she possesses, is delegated from her parents, for special occasions. At other times, she must stand on a level with them.

3. *Generosity.* Selfishness is a plant that did not grow in the garden of Eden. It is a mushroom which has started up in the *dunghill* of man's degradation, since the fall. It is a most unamiable trait of character. It renders its possessor an uncomfortable companion. It is repulsive in all its forms. A selfish person will not suffer us to love him. He prefers his own feelings and interest to all others—shuts himself up in his own narrow cell and makes himself the circumference and centre of all things. His sympathies and friendship are only awakened when there is a prospect of some sort of gain to himself. If the eldest daughter is permitted to be selfish in her feelings, and in her intercourse with others, she will rarely be loved by the younger children. She must be willing to make sacrifices of feeling to gratify them, and to be generous of her own things, if she would secure their confidence, and render them and herself happy. I do not mean that she should be compelled to surrender her rights to them. This would make them the tyrants, and take away her ability to be generous, and very likely it would sour her disposition, and render her unhappy. But she must be taught that there is more satisfaction in participating with others the enjoyment of good things, than there can be in solitary gratification—and more real pleasure in pleasing others, than there can be in gratifying ourselves at the expense of their feelings. "Let every one of us please his neighbor for his good, to edification; for even Christ pleased not himself." This is the true principle of genuine benevolence, and we cannot begin too early to instil it into the minds of our children.

4. *Gentleness* Nothing, perhaps, adds a greater charm to the female character, than the grace of gentleness; and in no case is it more needed than in that of the eldest sister. Contrast the conduct of the *gentle* and the *rough.* The latter seizes hold of her little brother as though he were a stick or stone, and pulls him about without the least regard to his feelings or comfort. This perhaps is done without thought or ill design; but it will be sure to disturb the temper of the little one, and lead him to dread her approach, as he would dread the fire. But not so with the gentle.—Her light soft step, and mild winning voice, soothe his feelings; and the tenderness of her manner, as she gently clasps him in her arms, and presses him to her bosom, wins his affection, and makes him cheerful and happy.—How important, then, to the quiet and harmony of a rising family, that the eldest daughter should be *gentle as the lamb!*

5. *Kindness and Forbearance.* How much evil may be prevented in a family, by a kind and affectionate disposition on the part of the eldest daughter towards the younger children! This will lead her to sympathize with them in all their little troubles, and to bear with them, if they happen to be impatient, fretful, or unkind. None of these dispositions should be allowed, it is true, in the younger children; yet if they are met with ill-nature in the elder sister, the evil will only be aggravated—while kindnes and forbearance may correct it. But how often does the contrary disposition lead to the most cruel neglect, on the part of the elder children! The younger ones are, perhaps, left at home in the care of the elder. Their happiness is entirely disregarded, while the elder ones pursue their sports by themselves. Or they are sent together on a walk of pleasure, or to school.—How often are the little ones left to pass a ditch, or climb a hedge or fence alone, while the elder, instead of kindly assisting them, only reproach them with their selfishness. Cultivate, then, in the eldest daughter, a kind and affectionate spirit, that her presence may always be like a guardian angel to the little ones!

6. Special pains should be taken with the eldest daughter that what she learns should be *correctly learned.* This is especially important with those parents who pursue the plan of laying the foundation of the children's education in the nursery. But it is vastly important to all, for it is more difficult to unlearn errors, and correct bad habits, than to acquire good habits at first. Correctness of language should be regarded as a cardinal point; and children should never be suffered to use provincialisms, coarse expressions, vulgarisms, nor bad pronunciation.

When these habits become fixed in a family, it is difficult ever to correct them. Indeed, many well educated, and some great men, retain their *chimney corner dialect*, even in their public performances. But it is quite as easy to teach children to speak correctly as incorrectly—and if proper attention is paid to the first child, there will be little difficulty in maintaining correctness of speech in the family.

If, in all these particulars, the mother succeeds with her eldest daughter, she will find the task of rearing the rest of her children, and establishing them in correct habits, comparatively easy. But if she fails with her first daughter, she will find her troubles with the young ones vastly accumulated.—*N. E. Spectator.*

From the Mother's Nagazine.

THE CONVERTED HUSBAND.

"For what knowest thou, O wife, whether thou shalt save thy husband?" 1 Cor. vii. 16.

In a village of one of the New England States, some years since, at the commencement of a powerful revival of religion, among other individuals who came to converse with their minister upon religious topics, was a Mrs. B. the mother of a large and interesting family. Two of her children were already grown to maturity. She informed her pastor that she had entertained a hope of interest in the Saviour for sixteen years; but that she had been induced to defer uniting herself to the people of God by the remonstrances of her husband. By his kindness, he had acquired such an ascendency over her affections, that to please him had been, she feared, the chief object of her wishes and pursuits. Within a few weeks, her eyes had been opened to perceive the superior claims of the gospel. She now realized for the first time that her husband and children were travelling the broad road together. They had never reared a family altar.

Although from custom they frequented the house of God on the Sabbath, yet the truths of the Bible had never found a lodgment in any of their hearts. She now felt satisfied that it was her duty to take up her cross, and to follow Christ. "I have been deluded," said Mrs. B. "by the belief that my way was hedged up by an insurmountable obstacle. I have substituted the good opinion of my husband for the approbation and smiles of my Saviour." "I advise you to converse with your husband on the subject," said her minister. Mrs. B. replied, "I have of late urged my husband to yield his consent; but he says if I profess religion, he will never live with me another day.—Though I fear the consequences of going forward in the way that my conscience dictates may be painful, yet I fear still more the evils that threaten my family, if I continue to neglect a known and positive duty." Her minister promised to propound her for admission.

On returning home from worship, on the day that she was received into the the church, Mr. B. told his wife, as she knew his mind on the subject of her professing religion, he should be consistent with his former declarations, and ordered separate lodgings to be prepared for him that night. His wife silently and implicitly acceded to his wishes.

The next morning he told his family that imperious business called him from home to be absent for a few days. His horses and carriage were soon in readiness, and he hastily and abruptly left his dwelling.

Mrs. B. now felt the necessity of exercising that faith which is an anchor to the soul. But she said within herself, "Shall a man complain for the punishment of his sins?"

Immediately on Mr. B.'s leaving home, Mrs. B. requested her eldest daughter to manage the household concerns in the best manner she was able, that she might herself enjoy the privilege of retiring, with her Bible, to her closet. The day was spent in fasting and prayer, and in reading lessons of heavenly wisdom from the word of God.

To her great joy, every page seemed to be illumined as with a sunbeam. She now felt that she could endure the loss of all things for the sake of him who bore her sins in his own body on the tree. Her soul, though elevated above the perishable things of time and sense, was in heaviness at the thought of an eternal separation from him she so dearly loved—from the companion of her youth, and perhaps too from her beloved children. She upbraided herself as an accessory, if not the guilty occasion of their life of worldliness; for had she fulfilled the sacred obligations imposed by an early hope of reconciliation to God, her husband and her children might, long since, have been devout worshippers in the courts of the Lord.

It was nearly sunset, when the noise of rattling wheels arrested her attention. Till now, no external object had disturbed her thoughts. The door suddenly opened, and her husband stood pale and trembling by her side.

"My dear wife," he exclaimed, "can you forgive your misguided husband? I have learnt by sad experience this day, by the way side, that my opposition against you originated in hostility to the claims of God. Can you forgve me, and will you supplicate the forgiveness of God for me? for I have no cloak or excuse for the least of my sins."

Under an overwhelming sense of the goodness of God, in thus subduing and enlightening the mind of her dearest earthly friend, they prostrated themselves in the attitude of prayer, and wept, and confessed before the Lord their sins of heart and life. Mr. B. informed his wife that on leaving her in the morning, he went in direct opposition to the dictates of an enlightened conscience; that her silent and acquiescent conduct proved to him indubitably the efficacy of religion; and when contrasted with his own feelings, then "lashed into a storm," his soul was filled with shame and remorse. At times he expected to be dashed to the ground; twice he alighted from his carriage, and falling upon his knees, he would have confessed his sin and guilt; but his mind was dark and his heart was hard. He faintly ejaculated, "God be merciful to me a sinner." But on resuming his seat in his carriage, with an involuntary grasp he held the reins, as if the horses were hurrying him forward with uncommon velocity. His business was at M——, sixteen miles distant from his home. At eleven o'clock he had progressed but eight miles on his way. Under a horse-shed he tried to compose his mind, but in vain; he found himself wholly incapable of attending to any worldly business. He endeavored to rid himself of such uncomfortable reflections as crowded upon his mind with a force which he was unable to resist.—For several hours, he felt like a guilty murderer flying from justice. At length he perceived that his opposition to God had manifested itself by the indulgence of ill-will towards his affectionate wife.—He resolved at once to return home, and ingeniously confess to her, and ask her forgiveness. On doing so the scales of unbelief fell from his eyes, and tears of gratitude and penitence flowed in abundance.

Mr. B. immediately resolved on a religious life, which he determined to commence by rearing a family altar. But he had a stammering tongue; and so slow was his speech, that he trembled, lest in his attempt to honor God, he might expose himself to the ridicule of his grown up sons and other adult members of his family. He hesitated and delayed. His business at M——— yet remained unaccomplished, was really pressing and demanded immediate attention. He retired to his closet to ask the Lord to assist him in the duty of family prayer on the following Friday. But his mouth was shut.—How could he ask the Lord to assist him in a duty on Friday, which he might not live to perform then, and was manifestly a present duty? He saw the inconsistency of such a petition. He rose from his knees, went in pursuit of Mrs. B. and related to her the exercise of his mind. He then told her, that if she would bring out the little stand, and the great Bible, and would assemble the family, he would try to perform the duty of family worship, let the sacrifice of feeling be what it might. Mrs. B.'s emotions of gratitude and joy were indescribable. She hastened to execute this glad commission.

As this father bowed himself, with solemn awe, before the Majesty of heaven and earth, a breathless silence pervaded the youthful spectators of this affecting scene, and for the first time in their lives, they realized a present Deity. The Spirit of the Lord came down and sat upon their hearts, the effect of whose operations was like that of the refiner's fire, and of fuller's soap. Who can measure the extent of that change, which, within a few days, had been wrought in a family whose hearts had so long been wedded to their idols? The tongue of the stammerer, now unfettered, was employed in anthems of praise for redeeming love and mercy; and the exclamation rose involuntarily to the lips of every beholder,—"What hath God wrought!"

Mr. and Mrs. B. were now, with one heart, as seduously and as perseveringly engaged in their efforts for the salvation of their whole family, as they had formerly been to secure for them a portion in the perishable things of time; and their efforts were not in vain in the Lord.

On learning the subsequent history of this family, who will not rejoice in view of the timely *decision* of Mrs. B.? Both parents, and all the children except two, have in rapid succession paid the great debt of nature, leaving behind them satisfactory evidence that they had experienced the grace of God which bringeth salvation, in answer to the prayers of a *decided Christian* mother.

FEMALE INFLUENCE.

It was remarked by Mr. Pepys—"I cannot but think that if many a young and beautiful woman could be made to see in a strong point of light the extent of her influence, either to do good or to do evil, it might awake the consciences of some to exert themselves in the cause of virtue, and deter others from affording that countenance to vice which is given, by discovering too plainly, that it is not wholly disagreeable to those who in words profess themselves the patronesses of virtue. No one who does not enter into the feelings of a young man, can conceive how much less formidable the ridicule of all the men in the world would be, than that of the woman he happens to be acquainted with."

A bloody battle was fought on the 31st March last, between the troops of the Province of Corienta, of the Republic of Rio de la Plata, and other troops of the same Republic, and of the Oriental Republic, in South America, the former of which was attempting to be revolutionized. The battle was fought at Pago Surgo, and resulted in the total defeat of the Corientas troops, with the loss of 2000 killed.—*Ohio Republican.*

NOT TO BE BEATEN.—Mr. J. Rob, a gentleman of this town, has in his garden a single stalk of Baden corn, containing TWENTY EARS!! Ten of them are full and good ears. The remainder have not yet attained their full growth, so that we cannot state what degree of perfection they may arrive at. The stalk is free from suckers.—*Ohio Standard, M'Connelsville.*

CRIME.—We were informed by a gentleman who passed through town a few days since, that a man by the name of O'Kane, or O'Shane, was committed in Somerset, Perry county, for the murder of his son.

In Athens, Athens co., four men were convicted and committed for the commission of murder.—*Ib.*

CENTENARY OF METHODISM.

The present year, being the first centenary of Methodism, is celebrated as such by the followers of Wesley throughout the world. In England more than a million of dollars had been contributed as a thank offering, at the last accounts, and a much larger sum is anticipated during the year.

In the United States, the Methodist E. Church have resolved on a similar celebration: and, in various parts of the country, the work has commenced. At the late New York Conference it was resolved that subscriptions be opened in all the churches, and the first preparatory meeting for the city of New York was held on Monday, in the Greene street and Forsyth street churches.

The Rev. Bishop Waugh presided, assisted by twelve vice presidents. Dr. Palmer and John B. Hall were appointed secretaries; and after very able and spirit-stirring addresses by the Rev. Mr. James, Rev. Dr. Bond, of Baltimore, Rev. C. A. Davis, Rev. Dr. Bangs, and others, the centenary offerings were solicited;—and we learn that more than seven thousand dollars were received in subscriptions and donations in sums varying from a thousand dollars to ten cents. This amount is to be increased by similar meetings in all the churches.

The whole centenary fund is to be divided between the superannuated preachers and widows and orphans of deceased preachers, the cause of education, and Christian missions at home and abroad.—*N. Y. Commercial Advertiser.*

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, OHIO, THURSDAY, AUGUST 29, 1839. NO. 4.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

POETRY.

THE DYING BOY.

"Mother—I'm dying now!
There's a deep suffocation in my breast,
As if some heavy hand my bosom pressed;
And on my brow
I feel the cold sweat stand:
My lips grow dry, and tremulous, and my breath
Comes feebly up. Oh! tell me is this death?
Mother, your hand—
Here lay it on my wrist,
And place the other thus beneath my head,
And say, sweet mother, say, when I am dead
Shall I be missed?

Never beside your knee,
Shall I kneel down again at night to pray,
Nor with the morning wake and sing the lay
You taught me.

Oh, at the time of prayer,
When you look round and see a vacant seat,
You will not wait then for my coming feet—
You'll miss me there."

"Father—I'm going home!
To the good home you spake of, that blest land
Where it is one bright summer always, and
Storms do not come.

I must be happy then,
From pain and death you say I shall be free,
That sickness never enters there, and we
Shall soon meet again!"

"Brother—the little spot
I used to call *my* garden, where long hours
We've stay'd to watch the buddings things and flowers,
Forget it not!

Plant there some box or pine,
Something that lives in winter, and will be
A verdant offering to my memory,
And call it mine!"

"Sister—my young rose tree—
That all the spring has been my pleasant care,
Just putting forth its leaves so green and fair,
I give to thee.

And when its roses bloom—
I shall be gone away, my short life done;
But will you not bestow a single one
Upon my tomb?"

"Now, mother sing the tune
You sung last night; I'm weary and must sleep,
Who was it called my name? Nay, do not weep,
You'll all come soon!"

From the American Biblical Repository.

CAMPBELLISM.

BY REV. R. W. LANDIS.

The translation of the New Testament adopted by the Campbellites.

We had thought upon dwelling upon the translation of particular words as e. g. *ekklesia*, which he makes the 'three doctors' uniformly render congregation, and the word *baptizo*, which he makes them always render *immerse*, even in passages where they are known to regard such renderings as absurd, as in 1 Cor. x. 1. But there are so many things in this translation that requires notice, that we are under the necessity of omitting any further remarks on these. For bad as they are, they are nothing in comparison with what is yet to be exhibited.

Incredible as it may appear, Mr. Campbell even while solemnly pronouncing this work to be the translation of Drs. Macknight, Doddridge and Campbell, was mutilating the text, and even leaving out hundreds of passages which they regarded as inspired. The following are a few specimens, in which he has omitted words, phrases, and sometimes whole verses.—He omits the following: Matt. vi. 13, 'For thine is the kingdom, and the power, and the glory, for ever, amen.' In ix. 13, he omits the words 'to repentance.' In xii. 35, the words 'of the heart.' In xiv. 22, 'Jesus,' and also in v. 25. In xviii. 29, 'at his feet, and,' and in v. 35, 'their trespasses.' In xx. 5, 'idle:' xxix. 22, 'and to be babtized with the babtism that I am baptized with:' xxvi. 9, 'ointment.' In xxvii. 35, he omits the following entire passage: 'That it might be fulfilled which was spoken by the prophet: They parted my garments among them, and upon my vesture did they cast lots.' In xxviii. 19, 'therefore.'

In Mark's gospel, among the passages he omits the following: ii. 17, 'to repentance:' iii. 5, 'whole as the other:' iv. 24, 'Unto you that hear, shall none be given.' In vi. 11, he leaves out the following: 'Verily I say unto you, It shall be more tolerable for Sodom and Gomorrah in the day of judgment, than for that city:' vii. 2, 'they found fault.' In xi. 14, 15, 'Jeses' is twice omitted: xii. 27, 'God:' xiii. 14, 'spoken of by Daniel the prophet:' xxiv. 12, 'eat.'

In Luke's Gospel the following are omitted; iv. 18, 'He hath sent me to heal the broken-hearted:' v. 41, 'Christ:' ix. 56, 'For the Son of man is not come to destroy men's lives but to save:' xi. 2, 4, the following words and phrases; 'Our—who art in heaven—thy will be done as in heaven so in earth:—but deliver us from evil:' v. 29, 'the prophet:' v. 44, 'Scribes and Pharisees, hypocrites:' xxiv. 49, 'Jerusalem.'

In John's Gospel, the following; i. 43, 'Jesus:' v. 30, 'the Father:' vi. 58, 'the manna:' viii. 28, 'Jesus:' viii. 59, 'going through the midst of them, and so passed by.' In Acts ii. 20, he omits, 'according to the flesh he would raise up Christ:' viii. 37, 'And Philip said, If thou believest with all thy heart, thou mayest; and he answered and said, I believe that Jesus Christ is the Son of God:' x. 6, 'he shall tell thee what thou oughtest to do:' x. 21, 'which were sent to him from Cornelius:' xix. 10, 'Jesus:' xxiii. 9, 'Let us not fight against God.'

In Romans i. 16, 'of Christ:' xi. 6, 'But if it be of works, it is no more of grace; otherwise work is no more work:' xiii. 9, 'Thou shalt not bear false witness.' 1 Cor. vi. 20, 'and in your spirits which are God's:' vii. 39, 'by the law:' xi. 24, 'Take, eat.' Galatians iii. 1, 'That ye should not obey the truth.' Philippians iii. 21, 'That it may be fashioned.' Collosians i. 14, 'through his blood:' i. 28, 'Jesus.' 1 Tim. ii. 7, 'in Christ:' iii. 3, 'not greedy of filthy lucre:' iv. 12, 'in spirit.' Hebrews x. 9, 'O God:' xi. 13, 'And were persuaded of them.' 1 Peter i. 22, 'forever.' 1 John iv. 3, 'Christ came in the flesh.'—Rev. i. 8, 'the beginning and the ending:' v. 14, 'Him that liveth forever and ever.'

In the foregoing omissions, I find that Mr. Campbell has strictly followed in the steps of the Unitarian editors of the "Improved Version." He has even been bolder than they, for in a number of instances, the clauses which they enclosed in brackets, (thereby intimating that there was not sufficient proof of their spuriousness,) he has had the hardiness to omit altogether. We cannot trust ourselves to speak the sentiments we entertain of such atrocious treatment of the word of God. No one can be at a loss how to estimate such conduct.

Out of all the forgoing passages, Drs. Campbell, Macknight, and Doddridge have not omitted a single word or phrase in their version of the New Testament, and yet Mr. Campbell omits them all, and not less than five or six hundred others, and pledges himself that the version which he offers to the public is made by "Drs. Campbell, Macknight and Doddridge!"

But this is not the worst of it. He has even left out of their version, as he calls it, passages, for the genuineness of which they strenuously contend. Take a single specimen. In Rev. i. 11, (and it will be recollected that Dr. Doddridge was the only one of the three doctors who translated the Revelation,) Mr. Campbell omits 'I am Alpha and Omega, the first and the last.' It is on this clause that Dr. Doddridge has the following note: 'I cannot forbear recording it, that this text has done more than any other in the Bible towards preventing me from giving up to that scheme, which would make our Lord Jesus Christ no more than a deified creature.' Yet does Mr. Campbell make the reader believe that this very text is omitted by Doddridge. The same thing is true in relation to passages contended for by the other translators: by Macknight, for example, in 1 Cor. x. 28, etc.

I have myself examined and compared with Griesbach, upwards of three hundred passages from which Mr. Campbell has omitted words, phrases, and texts, nor have I examined by many hundreds, all the passages. The reader will be satisfied of this when I inform him, that Mr. Campbell in the controversy with a '*Friend of Truth*,' was compelled to admit that he has altered the language of Drs. Campbell, Macknight and Doddridge, in the translation about three thousand times. And the Rev. Mr. Jamieson, before spoken of, states that, upon comparing together the first and second edition of this pretended translation, as far as Mathew's and Mark's Gospel, he found in this short compass upwards of six hundred alterations in phraseology, and upwards of a hundred in doctrine.

Now, what is the conclusion to which an unsuspecting reader must be led, who confides in the declaration of Mr. Campbell? One would image that no book was ever issued with more scrupulous care bestowed upon it in order to have it correct. And yet I venture to affirm that there has never been a work stereotyped with half the glaring evidences of carelessness, that are found to be in this. In his appendix, Mr. Campbell after Griesbach, pronounces the phrase '*And he followed not with us*,' in Mark ix. 38, to be spurious; and tells us that it is 'rejected from this improved version;' and yet by turning to his text we find it still there! So little has been the care with which he has prepared this work, that he not even compared his list of 'spurious readings' with the text. He also professes to omit the words 'And turning to his disciples he said,' from Luke x. 23, pronouncing them, in like manner, to be spurious; and telling us in the appendix that he has rejected them from the text: but, upon turning to the text we find them still there!—The word 'you,' in Colos. i. 10, he, after Griesbach, pronounces to be spurious, and says that he has rejected it from his version, but on turning back, we find it still there! So shameful has been his negligence while professing to correct the words of eternal life, that he has not only not troubled himself to compare his spurious readings with the text itself; but has made up his appendix by just running over the margin of Griesbach's text and collecting the reading which he dominates spurious. In this way he has pronounced many readings spurious which are still in his text. He followed Griesbach so implicitly in this respect, as even to copy his false references: e. g. in his appendix he tells us, after Griesbach, that the word 'Jesus' is left out of John i. 44, when that word was never in the verse. Thus without even consulting his text he followed Griesbach in numbering his verses. See his Testament of John ix. 28, also, with appendix. We have not room to specify every instance of this grievous negligence, but the following is too glaring to be passed over. From Phil. iii. 16, he omits the words 'Let us walk by the same rule, let us mind the same thing;' and he also declares that he has from the same verse rejected the following clause: 'In order that it may,' when such a clause was never in the text. These astounding disclosures, show that, notwithstanding all his professions to the contrary, he has not even been at the pains to give his book a cursory perusal, before issuing it. And remember, reader, we copy all these from the *fouth edition stereotyped!* Such has been the care he has taken, while engaged in expunging from, and adding to, that word which is the savor of life unto life, or of death unto death, to immortal souls! This is the book of which he says in the preface, 'Aware of all the difficulties in our way, and most solicitous to have the stereotype pocket edition of this work as perfect, in its typography, as any in existence, we have been at the labor and expense of preparing two editions at the same time, so that any errata discovered after the sheets of the third edition were worked off, might be corrected in the standing form of the pocket edition,' etc. Here, reader, are the naked facts of the case. Such are his professions; and thus are they proved to lack the slightest shadow of support from the work itself.

As Mr. Campbell professes to rely upon Griesbach as his chief authority for omitting the foregoing words and phrases from his text, (which profession is however most untrue, for he goes farther not only than Griesbach, but even than the editors of the Unitarian 'Improved Version' in rejecting passages, and he also refuses to admit passages which Griesbach has retained,) it may be desired by some, who have not the means fully to investigate this subject, though most interested in it; that the Christian public should be acquainted with the character of this favorite authority of Mr. Campbell. No one can entertain a higher respect for Griesbach's talents and learning than myself; yet, notwithstanding a few remarks in his preface to vol. ii. of his critical edition of the Greek Testament, Unitarians do claim him.

The reader, however, will judge from the following, with what sentiments a serious Christian ought to regard this gentleman's claim to be a follower of Christ. De Wette, a famous professor of gneology in the University of Berlin, maintains that the Pentateuch was composed about the time of the captivity; that the Jewish Ritual was of gradual formation, accessions being made to it by superstition; and that the Book of Chronicles, (which says he, 'Is filled with scraps and inconsistences,') was foisted into the canon by some of the priesthood who wished to exalt their own order. His *Beitrage* containing these sentiments, was published awhile before the death of Griesbach, and actually came out RECOMMENDED BY HIM.—He says, 'If you object to the young literary adventurer (De Wette) that he has endeavored to bring Judaism into disrepute, my answer is, that this is no more than Paul himself has labored to do.'*—This, then, is the man whom Mr. Campbell has professed to follow in his version. Could Paine, or Voltaire, have said more, in so few words, against the Bible?

That he should not be followed implicitly, will appear, if we consider that many of his statements are false; many of his conclusions not supported by their premises. In frequent instances his premises lead to conclusions quite the reverse of his own, while other critics, of as high repute as Griesbach, have published critical editions of the Greek Testament, in which they approximate much nearer the received text than he.

1. The celebrated Nolan, in his Greek Vulgate, has fully shown that the *criteria* by which Griesbach has made his decisions are fundamentally erroneous.

2. The learned Wakefield pronounces Griesbach's testimony representing a matter of fact, to be 'infamously false.'—Griesbach asserted that the reading of Acts xx. 28, in the Ethiopic version was, the 'church of *the Lord*;' and it is this to which Wakefield refers. Yet, on the credit of Griesbach, Mr. Campbell (though professing to give the version of Doddridge) reads it in the same manner.

3. Dr. Lawrence who examined this subject very profoundly, in the tract, entitled, 'Remarks on the Systematical Classification of Manuscripts adopted by Griesbach in his edition of the Greek Testament,' has shown that the general principles of that particular classification employed by Griesbach as the groundwork of all his critical emendations of the *Texus Receptus*, are most incorrect. He illustrates the difference between Griesbach's principle of classification, and his own, by the application of both to the disputed text in 1 Tim. iii. 16, where his own produces a conclusion precisely the reverse of that which had been yielded by Griesbach. Yet Mr. Campbell without any hesitation omits the word 'God' in that passage, on the authority of Griesbach. In the same essay Dr. Lawrence has likewise shown that Prof. Griesbach's account of facts is frequently *very* erroneous.

4. But Griesbach is far from being the only recent editor of a critical Testament to which the great body of critics attach importance. The celebrated Matthaei, styled by Dr. Middleton, 'the best Greek scholar that edited a Greek Testament,' published a Critical Testament in twelve volumes, which approaches much nearer the received text than Griesbach, with whom he is at variance, The famous Eichhorn, after giving a high character of this edition of Matthaei, says: 'for a long time I have followed the *middle path* between the two parties.' The whole system of classifying MSS. which lies at the very foundation of Griesbach's decision is rejected by Matthaei as entirely worthless. Thus agreeing with Mr. Nolan and Dr. Lawrence.

*See Stuart's Letters to Channing, sub fine.

YOUTH'S DEPARTMENT.

From the Youth's Companion.

SPEAKING TRUTH.

Maria loved the truth. She could not in any way be tempted wilfully to deceive, and the very spirit of honesty and sincerity shone in her face. Yet she had acquired a careless habit of observing things, and of insisting that they were so and so, when very likely they were just the reverse. Thus she was often suspected by those who did not perfectly understand her character, of deviating from the truth intentionally.

It happened one rainy day that Maria did not return from school at noon, on account of the weather. She sat down near the window after her companions had all gone, intending to study her lesson, but as it generally happens when children try to study and look out into the street at the same time, the book was soon forgotten. When her companions began to assemble for the afternoon school, Maria hastened to tell them what she had seen since they had left her in the morning.

"I always thought Lucy was a good girl," said she, "but I guess I shan't ever think so again."

"Why, what has she been doing?" asked Elizabeth.

"I was sitting by the window, and Lucy and Abba came out of their house and began to drive their hoops up and down on the pavement, and all at once Lucy ran against her sister on purpose and knocked her down, and I shouldn't wonder if the poor child was half dead, for the blood streamed down from her head all over her face."

"And what did Lucy do, when she saw that Abba was hurt?" asked Elizabeth.

"Oh, she went and gave her a sort of twitch, and pulled her up, and said, 'It's just good enough for you,' and they both went into the house."

"What is that you are saying?" asked Mary, approaching the speaker.

"I'll tell you, and any body else who wants to hear," said Maria.

Several of the girls drew near, and as it happened, Lucy, who had entered the room just as the offer was made, came with the rest, to hear the news.

"Come, tell me, and I won't tell any one," said she smiling.

"No, I don't think you will," said Maria, "for it is of some of your own faults we are speaking."

Lucy turned away looking surprised and hurt, and the girls went on with their conversation in whispers.

"Let's tell Miss Thayer," said Mary.

"Oh, I *wouldn't*," said Elizabeth reproachfully.

"But she ought to know what a bad girl she has in school," urged Maria.—Accordingly the moment the teacher made her appearance, Maria ran to communicate the whole affair.

"I am sorry to see you so eager to bring bad news," said Miss T. "But we will attend to this matter presently. Meanwhile, I hope we shall find it too bad to be true."

"Oh, but I saw it myself, and am just as sure as can be, that it is true."

It so happened that owing to some other circumstances, Miss Thayer was afraid that Maria had described the affair as it really occurred. She observed also that Lucy seemed dejected and unhappy, and that the pleasant smile which generally shone upon her face, had given place to an expression for which she could scarcely account.

The teacher who loves her pupils, and who desires to see them kind and affectionate in their intercourse with each other, is sad indeed when she sees them forgetting the law of love. Miss Thayer had never had occasion to reprove Lucy for any fault; it therefore became exceedingly painful to do it now. It was evident that Lucy was not in very good humor, and as long as that was the case, it was useless to attempt an investigation of the matter. The next morning, however, she called Lucy to her, and inquired into the truth of Maria's statement.

"Why, Miss Thayer," said Lucy, as soon as her tears would allow her to speak, "it is not true that I pushed Abba on purpose. We were driving our hoops and Abba, just in play, drove her hoop into my path to stop me, and I was running so fast that I went right against her and knocked her down. I helped her up as quick as I could, for I was frightened, and thought I had killed my sister; but she said, 'It's just good enough for me, for trying to stop your hoop;' and Miss Thayer, she is here with her head all bound up, and can tell you all about it."

Lucy went to her seat very much relieved, for she had been very unhappy since all her companions had heard this foolish story about her. As for Maria, no words could express her sorrow for the trouble she had made by her carelessness. "I guess I won't say a thing *is so*, but that I *believe* it is so," said she earnestly, "the next time I am going to tell any thing."

A WORD TO THE GUILTY.

The following is one of the most eloquent sketches which we recollect to have seen. It is rich in figure, chaste and delicate in style, and highly refined in sentiment.—*Philadelphia Album.*

"I dislike the man who deliberately trifles with the affections of woman. I would rather shake hands with a highwayman, than with a gentleman who has sacrificed to his own vanity the life-long happiness of an inexperienced girl. I fear this sort of conduct has never been sufficiently reprobated, and females so often betray the rights of their sex, by accepting with pride the homage of a man, who has become notorious for the conquest and desertion of their sisters, as if his mercy and love could be depended upon, who has once been cruel to an affectionate woman! The world laughs, and stores of lying proverbs and stupid jests on the briefness of woman's love, are administered: but you will find, if your heart be not hardened by selfishness, that this will be in vain. Perhaps you had no intention of being serious, you only tried to be agreeable, and to please for the moment; you had no conception that your behaviour could be misconstrued, and you shudder at the bare thought of earning the icy damnation of a seducer. It may be so, for there is a descent to the hell of seduction though that descent is perniciously easy, and

"*Nemo repente, fuit turpissimus*,"

but what if, while you were meaning nothing, your trifling created anguish, your sport became death to the object of it? When, by exclusive attentions, you excited a regard, by the developement of talent, or by the display and devotion of personal graces you have fascinated the mind and the heart, when, by the melting and the sinking eye, the faltering voice, the fervid tone, the retained hand, you have awakened the passion you cannot allay—when you have wilfully done this in the cold blood of vanity, and it suits your convenience or sated coxcombry, to finish the scene by altered mien, a distant courtesy, or an expression of surprise at the expected efforts of civility; will you be able to quiet your conscience with a jest? Will you sleep on an adage of fools, or a lie of your own? What if the poor being, whose hope you have changed into despair; whose garden you have blasted with mildew and rust; whose heaven you have darkened forevermore, shall suffer in silence, striving to bear her sorrow, praying for cheerfulness, pardoning without forgetting you, till the worm has eaten thro' to life, and the body is emaciated which you have led to the dance, the voice is broken, on which you have hung, the face wan which you have flattered, and the eyes frightfully bright with a funeral lustre, which used to laugh radiancy, and hope, and love, when they gazed upon you? What if a prouder tempter, a more ardent imagination, and a stronger constitution, should lead to spite and impatience, and recklessness of good and ill; if a hasty and loveless marriage should be the rack of her soul, or the provocation of her sin! Is there mandragora could drug you to sleep while this was on your memory, or does there really live a man who could triumph in such bitter wo? But

"*verinm et mutable semper Femina.*"

O believe it not! For the sake of our household gods, call it and cause it to be a lie! Be ye sure that coquettes are the refuse of their sex, and were only ordained to correspond with the coxcombs of ours. Woman have their weaknesses, and plenty of them, but they are seldom vicious like ours; and as to their levity of heart, who shall compare the worldly, skin-deep fondness of a man, with one rich idolatry of a virtuous girl? A thousand thoughts distract, a thousand passions are the substitute for the devotions of a man; but to love is the purpose; to be loved, the consummation; to be faithful, the religion of a woman. It is her all in all, and when she gives her heart away, she gives a jewel, which if it does not make the wearer richer than Crœsus will leave the giver poor indeed.

DESCRIPTION OF LORD BYRON.

FROM "VIVIAN GREY."

"If one thing was more characteristic of Byron than another, it was his strong shrewed common sense—his pure, unalloyed sagacity. I was slightly acquainted with him in England, for I was then very young. But many years after I met him in Italy. It was at Pisa, just before he left for Genoa. I was then very much struck at the alteration of his appearance. His face was very much swollen, and he was getting fat. His hair was grey, and his countenance had lost that spiritual expression which it once so eminently possessed. His teeth were decaying; and he said that if he ever came to England, it would be to consult Wayte about them. I certainly was very much struck at his alteration for the worse.—Besides, he was dressed in the most extraordinary manner. He had on a magnificent foreign foraging cap, which he wore in the room, but his grey curls were quite perceptible; and a frogged surtout; and he had a large gold chain round his neck, and pushed into his waiscoat pocket. I imagined, of course, that a glass was attached to it; but I afterwards found that it bore nothing but a quantity of trinkets. He had also another gold chain, tight around his neck, like a collar. I was not long at Pisa, but we never parted, and there was only one subject of conversation—England, England, England. I never met a man, in whom the *maladie du pays* was so strong. Byron was certainly at this time restless and discontented. He was tired of his dragoon captains, and pensioned poetasters, and he dared not come back to England with what he considered a tarnished reputation. His only thought was of some desperate exertion to clear himself. It was for this he went to Greece. When I was with him he was in correspondence with some friends in England, about the purchase of a large tract of land in Columbia. He affected a great admiration of Bolivar. The loss of Byron can never be retrieved. He was indeed a man—*a real man;* and when I say this, I award him, in my opinion, the most splendid character which human nature need aspire to. Byron's mind was like his own ocean—sublime in its yesty madness—beautiful in its glittering summer brightness—mighty in the lone magnificence of its waste of waters—gazed upon from the magic of its own nature, yet capable of representing, but as in a glass darkly, the natures of all others.

Another Hero Gone.—Jonathan Mason, a soldier of the revolution, recently died in New Hampshire at the age of 74 years. It is stated that he was once taken prisoner, and that on being bro't before Gen. Burguoyne, that officer questioned him as follows:

"Well, my lad, what do you think of yourself now?"

"Same as I always did."

"But what do you think of being a prisoner?"

"Why, I think that you and all your men will be in the same fix in three weeks."

"All the Yankees in America cant make me a prisoner of war."

"You'll see."

In three weeks, sure enough, Burguoyne and all his men fell into the hands of the Yankees.

A modern writer observes, that "he who speaks lightly of female society, is either a numscull or a knave"—the former not having sense enough to discern its benefits, and the latter hates the restraints it lays on his vices.

Boz says that the word "dear," when used by young ladies towards one another, is often synonymous with "wretch!"

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,-----AUGUST 29, 1839.

☞Our paper will be issued every other week for some few weeks yet, to give time for the completion of our subscription list, and for other arrangements; it will then be issued weekly. Fifty-two numbers, however, will be furnished for the volume.

We shall be absent shortly for two weeks to attend the annual conference; we offer this apology in advance for any deficiencies which may appear in our department of the paper during our absence.

By arrivals from Europe, two days later than the British Queen, it appears that the French government had sent officers to the Sultan and Pacha to recommend a suspension of hostilities, and that there was some reason to hope that Austria, Russia and Pussia would use their influence to restore peace.

Departed this life on the 17th inst. in the 92 year of his age, Moses Dillon, Senior, of this town.

Recent news from Texas states that a contest had taken place between the Indians under Bowles, the Cherokee chief, and the Texan troops, about 75 miles west of Nacogdoches.—The loss on the part of the Texans is said to be two killed and upwards of twenty wounded;—number of Indians not known but was supposed to be 5 or 600.

T. P. Armstrong writes us from Bethlehem, Ia. Aug. 13th:—"the season has been very dry—corn crops short,—wheat fine."

We learn from the Herald of the 21st inst. that the old Bank of Steubenville is about to be revived, and will shortly commence business. It is understood that our old friend Gen. Stokely is to be President, and O. Bollard, late of New York, Cashier.

The following is from the Charleston (S. C.) Mercury of the 14th inst.

"New Books.—The "Condition of the African Race" is the title of a small volume published by Haswell, Barrington, & Haswell, Philadelphia, on the great questions of the day, which will naturally occur to every one on reading the title. The author examines the character of slavery in this country, in a commendable spirit. Few will probably complain that he has done injustice to us in the use of such observation as he has made upon the actual condition of the Southern Slaves. The book deserves to be read."

Saturday week, in passing through the streets of Gratiot, we found the road crowded to the annoyance of the traveller, with a large number of people, assembled to enjoy the sport of a footrace:—thought we, this is a very rational entertainment, and argues much for the intelligence of the neighborhood, to see it so largely attended. It would seem from this and the following extract, that the spirit of racing is coming upon the people:—

"A hog race, for a purse of fifty dollars, came off at West Union, Ohio, last Saturday week.—The editor of the Star, printed there, gives a very amusing description of the fun. Five hogs had been trained for the sport for several weeks.—They were ridden by lads 12 years of age, and the distance ran was one mile, which was performed by the winning animal in 8½ minutes! E. R. Smith's sow, a lank, long-legged 'critter,' took the prize, which was expended at a neighboring tavern in a jollification."—*Ham. Intel.*

Refined sources of amusement, these! Great compliments upon the intelligence of Ohio!!

Messrs. Yontz, Hamilton and Griffith are erecing a large steam grist and saw mill, at Brownsville, fourteen miles west of this place, on the pike. The saw mill is now in operation. We hope their enterprise will be profitable, as it is calculated to be useful to the public.

AUGUSTA COLLEGE.

By the favor of W. J. McDowell we received the following Catalogue of the Officers and Students of Augusta College. This Institution is under the patronage of the Methodist Episcopal Church, and is said to be in a flourishing condition.—We give the following extract from the Catalogue:

BOARD OF TRUSTEES.

Rev. Joshua Soule, D. D., *President.*
Thomas Ingles, Esq., *Secretary*, Cincinnati.
Squire G. Shropshire, *Treasurer*, Augusta.
Hon. John M'Lean, Ohio.
Rev. James B. Finley, Ohio.
Marshall Key, Esq., Washington, Kentucky.
Martin Marshall, Esq., Augusta.
John Payne, Esq., Augusta.
Dr. George W. Mackie, Augusta.
George Doniphan, Augusta.
Rev. James Savage, Germantown, Kentucky.
Joseph T. M'Kibben, Esq., Augusta.
Rev. Francis A. Savage, Minerva, Kentucky.
John Mears, Augusta.
William Bucker, Esq., Georgetown, Ohio.
Dr. John F. Tomlinson, Augusta.
William C. Marshall, Esq., Augusta.
Thomas Myers, Augusta.
Vachel Weldon, Augusta.
Joseph Schoolfield, Esq., Bracken county.
John McDowell, Portsmouth, Ohio.
Rev. William Burke, Cincinnati, Ohio.
James Byers, Esq., Mason county, Kentucky.

VISITING COMMITTEES.

From the Ohio Conference.	*From the Kentucky Conference.*
Rev. Charles Elliott,	Rev. H. H. Kavanaugh,
" Wm. B. Christie,	" Isaac Collord,
" Robt. O Spencer,	" Ths. N. Ralston.
" William Herr,	
" Jos. A Waterman.	

BOARD OF INSTRUCTION.—FACULTY.

Rev. Joseph S. Tomlinson, D. D., *President and Professor of Natural Philosophy & Chemistry.*
Rev. Henry B. Bascom, D. D., *M'Kendree Professor of Moral Science and Belle Lettres.*
Rev. Joseph M. Trimble, A. M., *Roberts Professor of Mathematics.*
Rev. Burr H. M'Cown, A. M., *Bracken Professor of Greek and Latin, and of the Spanish and French Languages.*
Josiah L. Kemp, *Principal of the Preparatory Department.*
Isaac Abert, Moses T. Bowman, } *Assistants.*
John Marshall, *Teacher of Primary School.*

EXPENSES.

Tuition.—In the Collegiate Department, $16 per session of five months; in the Preparatory Department, $11 per session.

Boarding.—In the College Refectories, the students are furnished with boarding and room at $2 per week. When the keeper of the Refectory furnishes the room, and supplies light, fuel, and attendance, the price is $2.50 cents per week; and this is the customary price throughout the village.

EXAMINATIONS, ETC.

The Collegiate year is divided into two sessions, each consisting of 21 weeks—the *first* commencing on the second Monday in October, and the *second* on the first Monday in April. At the close of each session, there is a public examination of all the students, occupying about 4 days. The *Commencement* for conferring degrees, is held on Friday of the last week of the second session, or about the 20th of August in each year.

Every young gentleman, upon application for admission in the institution, is presented with a copy of the printed Statutes; and, having had them in his possession sufficiently long to have read, and understood them, is called upon to say, whether he approves of the regulations therein contained, and is willing to abide by them; and, upon answering in the affirmative, is requested to sign his name in the Matriculation book to the following PLEDGE:

"We whose names are hereunto subscribed, being admitted students of Augusta College, having read with attention the By-Laws of said College, do hereby declare, upon our honor, that we cordially acquiesce in these laws, and shall constantly obey them; and that we will not be guilty of profane cursing and swearing, card-playing, or at any game at which money or property may be hazzarded, indecent language, or disrespectful conduct towards the College officers or instructors; and that, without the special leave of a professor, parent or guardian, we will not visit, for any purpose whatever, any coffee-house, grocery, or house of similar kind, where spiritous liquors are sold."

ORIGINAL IRISH ANECDOTE.

Our friend F. of Belmont, O. related to us not long ago, that, a few years since, in passing the mountains, he happened in company with an Irishman, who was on his way to visit his brother in Athens co. of this state. As it was the first trip of our Hibernian to the west, he was greatly excited at the immense droves of cattle he was perpetually passing, on their way to the East. A little this side of Frost town, they met a larger one than usual. Full of admiration, and desirous of knowing whence these all came, and meeting in the rear of the drove a splendid looking Sciotoan, well mounted, with his whip in his hand, whom he took to be the owner;—the son of Erin accosts him,—"pray Misther what part might your dhrove be from?" Piqued at the frequency of this question, with much warmth and contempt, replied the Buckeye—"from *hell*, sir!" Quick as lightning retorted our Irishman; "Your pardon, Sir,—I might have known that if I had luckt and saw the *devil* dhriving."

This, said our friend, was done with such ease and grace that it produced the very highest effect. It was to the by standers like a clap of thunder from a clear sky, who stood for a moment alarmed for the consequences. But soon a roar of laughter closed the scene;—even the drover himself, like Milton's devil "grin'd" "a ghastly smile," and learning from experience would be more likely to treat the next man that accosted him civilly.

We are informed, by a private communication, that the Dysentary has been very prevalent, in the neighborhood of Wilmington, Delaware, and, that it was attended with considerable mortality.

Take care of your hides.—We quizzed one of our ready cash men the other day about money *shaving*. "O," said he, "the money men of this place have quit shaving and gone to *skinning!*"

We have had excessively dry weather in the vicinity of our office for some time. The corn is irrecoverably injured with the drought. The light showers which have just fallen will be of but little benefit to it.

Wheat in this town is 75 cents per bushel, and flour $4 per barrel.

A number of communications came all at once, a little too late for this number.

We remember, some ten years since, to have heard a person of considerable standing, humourously say, that nothing was so 'alarming and repulsive to his feelings as the thoughts of becoming an *old man*.' The first time we were saluted with the appellation, Father ******** it made our ears tingle; and it was with great reluctance that we became reconciled to the thoughts of getting old. The following, from the Boston Atlas, is quite discriptive of that feeling, which, we believe, is common to all when first beginning to crouch under the weight of years.

"How imperceptibly does age steal on us, and we are considered old and advanced even before we know it. About two years since, in a neighboring town, I met an old lady and her daughter, who had, as we often see, stockings and socks for sale. I asked the price, and was examining them, when the daughter spoke up and said, 'Mother, perhaps the old gentleman will take two pair, if you put them so and so.' I shall never forget the sensation I felt at this first sound of *old gentleman*. I strongly reprimanded the young lady for calling me old, and telling her I believed it was customary with the French to consider nobody old but the 'Old Harry,' I passed it off as well as I could. A few days after, it being winter, there came by me one afternoon a large party of young men, one of whom I overheard to say, 'why, there is *old* Mr. ——.' 'Gone,' says I to myself, 'hook and line. I must give up the ship, and consider myself an old man.' "

AGRICULTURAL.

"*The Cocoon, and Western Rural Reformer.*"—We have received the first or specimen number of this work, to be published under the patronage of the "Kentucky Silk Society," which was organized on the 13th of this inst., in Lexington. The reader will best understand the nature of this work by the following notice from it:

"The *Cocoon*, and *Western Rural Reformer*, will be published by the Executive Committee of the Kentucky Silk Society, and edited by some suitable person whom they may appoint. It shall be exclusively devoted to the rural pursuits of the West, free from all partyism of any kind, strict in its morals, and ardently attached to a system of education of all the people, which will make all practically acquainted, not only with literature and science, but also their application to domestic economy. It will contain 24 pages each month, and will be forwarded to subscribers at $1 per annum, in advance. Editors and post masters are requested to act as agents. ☞Address, free of postage, Leonard Wheeler, Corresponding Secretary of the Kentucky Silk Society, Lexington, Ky."

We shall give an extract or two in our next from the "Cocoon."

From our observations on the subject we are satisfied that the New England people are the best Book Farmers, but the Pennsylvanians the best practical Farmers.

The following is an extract from a private letter from my brother Joseph, who at present resides on a farm near Wilmington, Delaware, about 30 miles from Philadelphia. As it refers to subjects of interest to the farmer, we will take the liberty to use it for our paper.

Staunton, Del., Aug. 18, 1839.

Dear Brother:—We have had quite a pleasant spring and summer; as much so as I have any recollection of. We have no extremes of cold or heat, wet or drought; just at the present we seem to be threatened with an excess of rain.—On Thursday night last quite a heavy blow, attended with gentle rain, commenced from the N E which continued till Friday evening, when both ceased; but to-day the rain has recommenced.—The wind has prostrated all the corn in the country, but perhaps it may not do it much injury. We have had an unusual fruitful season. The only thing that is likely to be scarce is apples; scarcely the tenth tree had any on, and a large portion of these have been whipped off by the late blow. The clover crop was almost an entire failure, owing to the deadly effects of last year's drought; but other grasses, though late, afforded quite good crops of hay. The oats crop is luxuriant. The wheat is good, but considerably injured by the mildew and rust, and the corn crop, if this blow does not injure it, will be very full.—All kinds of vegetables are superabundantly plenty.

I am of the opinion, and I find the same opinion to be common amongst the observing folks here, that the too free use of lime has an active agency in producing the frequent failure of wheat crops in this part of the country. It seems to render the stalk and blade too sappy, and being a slow cold manure, it keeps the grain too long in maturing, which holds it long exposed to the attacks of the great wheat distroyer here, mildew and rust.

I have observed in the Zanesville Gazette considerable said about live fences and thorns, &c. &c. Now I will merely tell you, for *your* information, that all kind of thorns used here, for fencing, are fast going to decay. I have seen no young hedges planted for the last three or four years, but numbers have been cut down, and numbers more will soon have to be done so. I think you would probably render yourself and the public great service, if you would carry your project of planting a forest of chesnut, into successful operation. It is decidedly the most valuable timber for fencing with which I am acquainted.—It is very durable and of rapid growth. I think that ten acres, once well set, would keep your whole farm well fenced. Black locust would also be very valuable for posts. Chesnut grows here now on almost every kind of soil.

I remain your affectionate brother,

Jos. Springer.

What is said here about the effects of lime upon the health of the wheat crop, is of much importance, though we think the sentiment should be received with caution. Should it be admitted that such effects do follow liming, are they not the necessary effect of enriching land by any species of manure? Is not wheat on rich soil thus effected more than on poor, before the application of manure of any kind? This year our wheat on the low strong land was much effected with rust, that on the higher and thinner but slightly; very little manure had been applied to either, and no lime at all. Rich soils, whether originally so or made such by the application of manures, send up a strong luxuriant growth, which is longer maturing than that of thinner, and of course, we should suppose, would be more exposed to rust, scab, &c.

The allusion to the hedge fencing is to us quite interesting, because it confirms us in the opinion we had formed, from many years observation, viz: that the thorn can never be relied on for permanent fencing. Let it be remembered that these observations are made on a section of country, into which the thorn was introduced as early as any other part of the United States, and where, from the scarcity of fencing materials, the most thorough experiment has been made. From the best observations we can make upon the subject, we are of opinion that nothing promises greater utility to the farmer than a grove of chesnuts and black locusts, as suggested in this letter; they are both of quick growth, and the one would supply posts and the other rails.

From the Religious Telegraph and Observer.

EDUCATION OF FARMERS.

Mr. Editor—I have, for several years been fully convinced, that neither lawyers, nor physicians, nor clergymen, nor professors of colleges, nor any other class of the community, have so many inducements, or so many facilities for becoming really intelligent, scientific men, as farmers. No class of men have an occasion for so constant, or so extenisve an application of science, in their profession.—Botany, mineralogy, geology, chemistry, natural philosophy, entomology, and the natural history of animals generally, are brought into use, directly or indirectly by every farmer, almost every day he is engaged in his business.

If it should be asked, what the farmer has to do with botany, the question may be answered by asking another, viz: If the farmer has nothing to do with botany, or a knowledge of vegetables, who has? Does not the whole success of his business depend upon a knowledge of the various plants he cultivates together with many in the way of cultivation? Some may ask, how can geology be used by the farmer? The first object of geology is to give a knowledge of the competent parts and of the structure of the earth and of course of the nature of the soils. The question might be answered by a volume of facts; I will give but one. In New Jersey, there are extensive tracts of land, now worth from fifteen to a hundred dollars an acre, which, a few years ago, were not worth fencing; the application of marl, has effected the change. Except for a knowledge of that, the land would have continued as worthless as at first.

What use has the farmer for chemistry? A great part of his business is a series of chemical experiments. Not a furrow turned, nor manure applied, not a fence made, nor root or a plant preserved or prepared for food, without an application of chemical science. But what has the farmer to do with natural philosophy? Every plough, harrow, rake, hoe, scythe, axe, cart, wagon, yoke or harness, not constructed to the principles of natural philosophy, imposes unnecessary labor upon man or beast.

And can entomology, or a knowledge of insects be applied to farming? In the year 1837, a single species of insect, the wheat fly, cost one state, Pennsylvania, several millions of dollars. The canker worm, the grass-hopper, the cut worm, and numerous other insects, frequently present themselves though small, yet powerful enemies to the farmer, who, of course, has occasion to understand their weakness, while he has such fatal proof of their power. The horse, the ox, the sheep, the swine, and other domestic animals, the farmer has occasion to understand, both in health and disease.

Some parts of the mathematics the farmer has daily occasion to use in his business. Practical geometry, in one form or another, comes into almost constant use in farming operations. A portion of arithmetic, is, of course indispensable.

But some may say, perhaps, that however important and necessary an extensive knowledge of science may be to the farmer, he has not the facilities for acquiring it. Is that possible? Is not the daily use of any science or art, the best of all possible modes of obtaining a familiar and thorough knowledge of it? It may be questioned even now, whether farmers do not possess a greater amount of really useful knowledge, than any other class of the community. They certainly have not so many technicalities of science. They have not so many Latin and Greek terms to apply to things, or the laws which govern them, as those devoted exclusively to scientific pursuits but do they not know as much of things themselves! Cannot almost any farmer give the best scientific botanist much useful information about plants?

The graduate of a college may know, that what we call oak, the Romans call quercus, and that the Greeks called it drus, and still be unable to distinguish oak from chesnut. The plain, unpretending farmer, though ignorant of the terms applied by the Greeks and Romans, to these useful products of the forest, could readily inform the scholar, whether a tree, or a stick of timber was oak or chesnut and whether it was white, red, grey, black, Spanish, or some other oak. Also what were its properties and uses. Of course the difference between the scholar and farmer is that the former has three terms, but not an idea; while the latter has but one term, and a great number of ideas connected with it. The question then comes, who is the man of useful knowledge and sound learning, the ignorant farmer, or the learned scholar? However it may be with others, no farmer will hesitate for an answer. It may be added, that this is not merely a supposable case, but one which actually exists in thousands of instances in our country.

The first steps requisite for rendering farmers the most truly and the most generally enlightened, as they are much the largest class of the community, is to have them understand and appreciate the knowledge they already possess; the second is for them to improve that knowledge and the natural advantages they enjoy for acquiring more. And what are these advantages? First, a farm is a far better place for acquiring really useful knowledge, and for acquiring it more thoroughly than any hall of science, which is or can be constructed and furnished by the hands of men. It is a "*Cabinet of Nature*," more richly furnished with specimens, and a labratory where chemical and philosophical experiments are going on upon a larger scale, than can be found in any High School, Academy or College.

Second, the business of the farmer, if he guides it by the hand of science, and by careful observation, furnishes means of instruction which can be found in no other profession. The laws of animal and vegetable physiology, of chemical science, of mechanical philosophy, hydrostatics, and of natural science generally, can be intimately and daily developed by experiments which furnish his bread and his success in business, not only without cost, but with great satisfaction and pecuniary profit.

Third, the winter evenings of farmers, if properly occupied by reading, experimenting, and comparing the statements of books with their own experiments and observations would furnish ample time and opportunities, for storing the mind with principles, or the general laws of science, to direct their summer operations. These evenings are spent far more profitably, if aided by "*Social Lyceums*," or weekly or semi-weekly meetings of some ten or a dozen, or even five or six neighboring farmers, for the purpose of conversation, experiments, and reading on subjects previously selected for the purpose.

Fourth, as a school of morals the farmers certainly has the best. The best proof of this is its results. Whether colleges, academies, and high schools, may or may not with propriety be considered schools of morals, industry, health, and of useful knowledge, farms are certainly schools peculiary favorable for the whole.

I have given a few brief hints on a great and interesting subject connected with the highest prosperity and the liberties of our country. On some future occasion, if time and circumstances should permit, I may enlarge upon the subject, and shall remain, in the mean time, with high esteem, Your friend,

J. Holbrook.

FOREIGN NEWS.

The Liverpool steamer arrived on Sunday, bringing English news to August 1. The price of Cotton had become apparently stationary, and the money market somewhat easier.

Great disturbances had taken place in consequence of meetings of the "Chartists" at Birmingham. The avowed object of their movements is universal suffrage and the vote by ballot. In consequence of the distracted state of the city the Annual Celebration of the First of August by the abolitionists of Birmingham was postponed.

The Sultan of Turkey is dead. The Pacha of Egypt seems to be prospering in his revolt, having gained a great victory over the Turkish army near Aleppo.

HIGHLY IMPORTANT FROM TEXAS.

Battle between the Texans and Cherokees—the Texans victorious—Bowles the daring Cherokee Chief killed.—It may be recollected that some weeks since we published a statement of the hostile movements of Bowles—of the close proximity of the Texans to his camp and of the probability of a severe battle being fought. By the arrival of the steamer Velocipede from Red river the news has been received that the action took place on the 15th inst., and that it resulted in defeat of the Cherokees and death of Bowles.

The Texans were commanded by Generals Douglass and Rusk and their loss was only two killed, one mortally and five slightly wounded. The Cherokees left 13 dead in the field, carrying away all their wounded as usual. The action took place near the Delaware village on the Neches about 75 miles north-west of Nacogdoches. Gen. Douglass speaks in the hightest terms of the conduct of his men. The action commenced about half an hour before sunset. Most of their baggage was captured, 5 kegs of powder, 260 lbs. lead, and many horses, together with cattle, corn, and other property.

Another action was fought on the next day, in which the daring and wily Bowles was killed. He has always been considered one of the worst enemies of the new republic and his death will quiet the fears of many who have looked upon him as an extremely dangerous man.—*N. O. Picayune.*

THE FLORIDA WAR.

This business seems likely to go down to posterity as an inheritance from the present generation. The following letter shows just how much good Gen. Macomb's treaty has done, and is nothing more than an exact fulfilment of what we prophesied a month ago. The letter is taken from the Charleston Courier of the 6th inst.

Ass't Ad't General's Office,
Army of the South.
Fort Brook, (E. F.) July 20.

Sir—It becomes my painful duty to inform you of the assassination of the greater part of Lt. Col. Harney's detachment by the Indians, on the morning of the 23d inst., on the Coleosaharchie river, where they had gone in accordance with the treaty at Fort King, to establish a trading house. The party consisted of about 28 men, armed with Colt's rifle; they were encamped on the river, but unprotected by defences of any kind; and it is said without sentinels. The Indians, in large forces, made the attack before the dawn of day, and before reveille, and it is supposed that 13 of the men were killed, among whom was Major Dullam, and Mr. Morgan, settlers. The remainder, with Col. Harney escaped; several of them severely wounded. It was a complete surprise.

The Commanding General therefore directs, that you instantly take measures to place the defences at Fort Mellon in the most complete state of repair, and be ready at all times to repel an attack, should one be made. No portion of your command will, in future, be suffered to leave the garrison except under a strong escort. The detachment at Maitland, will be immediately withdrawn.

Should Fort Melon prove unhealthy, and the Surgeon recommend its abandonment, you are authorized to transfer the garrison, and reinforce some of the neighboring posts. I am, sir,

Geo. H. Griffin.
Ass't Adj't General.

Lieut. W. E. Hanson, Com'r of Fort Mellon.

Office of the Herald,
St. Augustine, Aug. 3.

News has just came from Tampa that Col. Harney was attacked early in the morning of the 23d ult., at Coleosaharchie, of his command of 28 men, 13 and the two settlers were killed, the remainder with the Colonel escaped. This is the most treacherous act committed since the war commenced, and is demonstrative of the intentions of the Indians, and bears out all the Herald had said since Macomb's orders were published.

The following is an extract of a letter received in Charleston, from a gentleman residing in St. Augustine, dated August 3.

"Time will only permit me at present to say, that we have just heard, by mail, from Tampa Bay, that the Post on the Coleosaharchie under command of Col. Harney, was recently attacked by the Indians, who had 'gone in under the treaty,' and 15 out of 30 men killed. Colonel Harney himself narrowly escaped on board a vessel in the harbor. These are some of the fruits of this miserable and fraudulent treaty—and these too, are the very Indians who accompanied Col. Harney from Tampa to Fort King to dupe the Commander-in-chief of the United States Army. Surely the Government can no longer doubt the 'good faith' and 'peaceable intentions' of the Seminoles, the opinion of the people of 'St. Augustine' and 'Tallahasse,' to the contrary notwithstanding."

From the Middletown Mail.

TRUE COURAGE.

Judge Gould, of Florida, has had the moral courage to refuse to kill a personal enemy, or suffer himself to be openly killed by one. There is no doubt that it requires more bravery to decline a challenge than to fight a duel. In the Southern States and Territories, this is especially the case. Judge Gould should be applauded by the press throughout the country, for this example to young men. The subjoined card is from the St. Augustine Herald:—

A Card.—D. W. Whitehurst, amid the other venom he has spit at me, insinuates that I am actuated by *cowardice*. I confess that *I am a coward* upon *principle*—and *upon oath*—that to keep the ten commandments has been a part of my education, and were not *D. W. Whitehurst* perfectly convinced of these facts, he would never have *dared* to use such language towards me. James M. Gould.

The Canadian Government has released eleven more of the Prescott prisoners. —*ib.*

The Baltimore papers represent the construction of that part of the Baltimore and Ohio railroad which lies between Harper's Ferry and Cumberland, as progressing with great energy. Many of the contractors and hundreds of the laborers are upon the ground.—*ib.*

There is said to be a man in Shelby county, Indiana, who is one hundred and twenty years old, and has a son only thirteen.—*ib.*

At the latest accounts from Havana, the yellow fever was raging terribly among the shipping in that port. Several vessels had been deprived of their whole crews.—*ib.*

Singular Death.—Mr. Joseph Day of Townsend, Mass., was killed a few days since in the following extraordinary manner. He was engaged at a lathe in his work shop, when the ends of a handkerchief which was tied round his neck, became entangled in the band, and he was strangled: he was found in a few minutes after he entered the shop a corpse.

One of the crew of the ship Franklin sued the master for giving scanty and bad food during the voyage from Liverpool, and recovered $27 damages.—*N. Y. Star.*

The Thames Tunnel is expected to be open for foot passengers in about 15 months.

The Austrian Minister was at Nashville on the 16th, on his way to the Hermitage on a visit to Gen. Jackson.

The Printing bills paid by the late Legislature of Pennsylvania amounted to seventy five thousand dollars.

A man named Arthur Wall, is living at Raleigh, N. C., who is 119 years of age.

The inhuman slave trade is carried on to such an extent in Brazil that it is credibly stated that over 60,000 negroes have been landed on that coast within six months.

There is a boundary difficulty going on between Missouri and Iowa. The territory in dispute is very large and valuable, and the matter appears to be gathering rather a serious aspect.

3000 strangers were at the Saratoga Springs on Tuesday the 30th ult.

Two new papers have been started in New York, under the titles severally of The Humbug and The Wag. They are fit symbols of the "spirit of the age," if they do not belie their titles.

THE RECORDER.

ZANESVILLE:

THURSDAY,----AUGUST 29, 1839.

The following is from the Philanthropist of the 13th inst., and is its response to our request to publish our defence against the attacks of Zion's Watchman, which attacks the Philanthropist had republished in its columns.

We "asked a fish" and received a "scorpion."

"PUBLICITY" YOU SHALL HAVE.

"The editor of the Methodist Protestant Letter Press congratulated his readers in his second number, that the government of their church *acknowledged and secured the rights of all.* This called forth certain strictures from Zion's Watchman, which we republished in a late number of our paper. The editor of the Western Recorder, a new Methodist Protestant paper, published at Zanesville, writes nearly a column and a half strictures upon the strictures, concluding with the following notice of our humble self.

'Since writing the above, we see the editor of the 'Philanthropist' has copied this article from the Watchman into his columns, and as he has made no objection to it, of course, has endorsed the *******. The editor of the 'Philanthropist' is less excusable, if possible, than the original publisher of this article, because he is a member of the Methodist Protestant Church, and ought to be acquainted with the provisions of his own discipline. But, that he never referred to the constitution of his church, to see if these things were so, is plainly inferable, from the fact that he continues to credit the 13th Art with the above quotations, after the 'Watchman,' instead of the 12th. If *high* party excitement would influence a man so intelligent and amiable as Dr. Bailey, that he would swallow, without *examination*, whatever came from one of the corps, what would be its effects on ordinary minds?

'We ask it as a matter of *justice*, on the part of the 'Philanthropist,' as he has published the foregoing article in his paper, that he publish our reply. We wish him to give it entire, and not to mutilate it.'

"We shall not publish the reply, for the same reason, that the Recorder might have spared itself the trouble of writing it:—it is "*much ado about nothing.*"

"There are but two errors in the article from Zion's Watchman, one in number, and one in logic. The editor quotes Art. *thirteen* instead of *twelve;* and then, having given his readers the data, that they may judge for themselves, draws from them the following inference.

"Hence it will be seen, that the constitution of this church, so far from 'securing the rights of *all*,' does positively deprive the colored members of all their rights, not allowing them either to vote, or to be sent to the General Conference.'

"If he had said, "does by *implication*" deprive the colored members of their rights, the inference would have been logical.

"It is entirely discreditable to the editor of the Western Recorder, to attempt to conceal the fact, that the constitution of the Methodist Protestant church does *not* secure to colored people their rights. We aver that it does *not*, and he knows it. The constitution of Ohio provides that, "in all elections, all *white* male inhabitants above the age of twenty-one years," &c., &c., "shall enjoy the right of an elector." Now, although this does not *positively* deprive colored men of the right of suffrage, that man would be esteemed marvellously dull or dishonest, who should contend that the Ohio constitution, did not *in fact* deprive them of the right. The provisions of the Constitution of the M. P. church, quoted by Zion's Watchman are these—

'Every minister and preacher, and every *white* lay member shall be entitled to vote in all cases.'

'Every minister and preacher, and every *white* lay member &c. shall be eligible as a representative in the General Conference.'

"These two provisions, if there be no other provisions in the constitution to qualify them, do indeed and in truth deprive the colored people of the right of suffrage and eligibility. But, says our logical friend of the Recorder, "This is the first time that we have learned that providing for the rights of one class of men 'positively' took away the rights of another class!" That he may be more learned hereafter, we recommend to him the study of the Ohio state constitution and the practice under it.

"But there is a qualifying provision in the constitution of the M. P. church, one by which the framers of that instrument just saved themselves, and that is all, from the guilt of *positively depriving* colored members of their rights. It is as follows:

'Each Annual Conference shall have the exclusive power to make its own rules and regulations for the admission and government of colored members; and to make for them such terms of suffrage as the conferences respectively may think proper.'

"The sum of the whole matter is simply this. In the Methodist Protestant church, the colored members have no *constitutioned* right whatsoever. The constitution was made by *white* men for the protection of the rights of *white* men, and no other; and it is sheer dishonesty to attempt to give it a more liberal construction. The last provision so far from securing any right or privilege to colored people, leaves the whole question of their admission, government, and rights, to the arbitrary, uncontrolled decisions of the annual conferences.

"And now, what are the facts? We venture to assert that there is not a single conference in the South, that has made any provision at all, for their admission to the rights of suffrage and eligibility. We know that within the limits of the Ohio Conference they have no such rights; and the same, we doubt not, is true of a majority, if not all, of the conferences in the free states. And, were any one, more liberal than the rest, to confer these rights upon them, it could revoke them at pleasure. So, that there is not a single security in the Methodist Protestant church, (notwithstanding its boasted liberty and equality,) for the equal rights of its colored members.

"We have a word for friend Springer. In the two numbers of the Western Recorder received at our office, we have seen no illusion to slavery or emancipation. If the Recorder is pledged to silence on the anti-slavery question, the sooner it is amalgamated with its *Southern* neighbor,—the Methodist Protestant,—the better. The land is already sufficiently cursed with *neutrality.*"

The editor of the Philanthropist, it seems, admits, very reluctantly, that his brother of the Watchman was in error, attempting at the same time to cover all over much as possible; but, his admissions are behind the truth nine parts out of ten, as can be seen by every candid man, without explanation, who looks at the thing. But he thinks if the Watchman "had said 'does by *implication* deprive' the colored members of their rights, the inference would have been logical."—What a wonderful logician the Dr. must be. He has certainly taken his lessons in the old Peripatetic school, so famous for its dexterity in the art of quibbling. How a constitution which admits the rights of a class of individuals, and then refers these rights to the people themselves for adjustment, can be said to take them away, either directly or *impliedly*, is a kind of reasoning we cannot understand. But it suits the Dr.'s purpose to say so, and he is lord of his own "Philanthropist," and will hear no one but himself talk in it, of course his dictum will satisfy his readers.

The reason here assigned for not publishing our defence is because it is 'much ado about nothing.' Who, we ask, dear Dr., made *you* the judge of this matter? We have seen much from your pen about southern dictation, but a more contemptible piece of dictation and *injustice* we have never witnessed. The bump of benevolence, or "philanthropy," it seems, is so largely developed in the Dr.'s cranium as not to leave the least room for that of common "justice." Judging from this act we should think it extremely doubtful if he even understood the meaning of the term.

The Dr. says "it is entirely discreditable to the editor of the Recorder to *attempt to conceal* the fact that the constitution of the M. P. church does not secure to colored people their rights.—We aver it does not, and he *knows* it." Again; "the constitution was made by white men, for the protection of the rights of white men, and no other; and it is sheer *dishonesty* to attempt to give it a more liberal construction." Here we are told in so many words, by the Dr.'s 'humble self'—bless the modest creature!—that we are *dishonestly* and *knowingly attempting concealment.* Very decorous insinuations these for an 'humble' man. Dr., where did we attempt "concealment"?—Why did you not give us the specification of our "dishonesty"? &c.—Now we "aver" that we attempted no "concealment," and to give back the Dr.'s own polite language, "he knows it." And for him to refuse to give us a hearing, and then to put into circulation such invidious insinuations as these, is not only "entirely discreditable" to him, but, is "*dishonesty*" in the extreme. "Attempt to conceal"! If the Dr. had not "*concealed*" our defence, his readers could have seen the disingenuousness of this charge.

In establishing the constitution, the convention of the M. P. church had difficulties, in relation to the colored people, which the convention neither made nor could control, and the Dr. "knows it." In view of these difficulties the convention admitted the right of the colored man to suffrage, and then referred the whole subject to the annual conferences, who come immediately from the people, who are the fathers of the constitution itself. Now, this view of the subject we gave in the article on which the Dr. animadverts, without any attempt at "concealment." Whether the church, in this arrangment on the subject, has been guilty of any injustice towards colored men, is a question on which every one will take the liberty to form his own opinion. We think, from the following considerations, that no injustice is done them:—1. Their right to suffrage is acknowledged in the constitution, and of course the principle conceded; 2. There were none, that we know of, who were members of the church, or that cared any thing about her privileges, when she was organized, nor do we know of any at present. Now, how a man can be treated with injustice, by withholding from him what he does not seek, nor care a fig about, is what we cannot understand. If any colored man, or plurality of colored men, in the church, or out of the church, who wished to be connected with her on those conditions, had asked an annual conference for the exercise of the right of suffrage, &c., and the conference had refused to extend them, then that particular conference would, we admit, be guilty of injustice towards colored men. We know of no such *refusal.* Does the Dr? If so, he is right in exposing it. If not, his remarks about the annual conferences, because they have not acted in advance of their duty, to gratify the morbid sensibility of an ultra-abolitionist, is perfectly captious and unbecoming any candid and dignified man.

O! but, were an annual conference "to confer these rights upon them (colored people) it could revoke them at pleasure," &c. Admitted. And so can the church revoke or alter the constitution itself at pleasure. The government of the M. P. church is a government of public opinion, and not the government of a dictator; and this is what constitutes its liberality. Such are its provisions, that the government, constitution and all, must ultimately conform to the public sentiment. And now Dr. the whole field is before you;—do you convince the church that her constitution may be improved, and it *can* and will be done. But there is one thing of which we would apprise you; if ever you exert much influence over the church, you will have to conduct yourself towards her with a little more candor and decency of costume. Your conduct reminds us of the *gros vert mouche*, (big green fly) it pays no attention to the sound and healthy parts of the animal "constitution," but if it can find a scab or an ulcer, about that it is perpetually buzzing, not to cure, but for what purpose you know Dr.

The Dr. says of us; "that he may be more learned hereafter, we recommend him to the study of the Ohio State constitution and the practice under it." Why, bless the man, it is altogether likely that we have forgotten more about the Ohio constitution, and the practice under it, than he ever knew. We remember well, that a few years since, in his city, we were giving close and scrutinizing attention to the practice under the Ohio constitution, while his head was filled with nothing but visionary notions about a wild goose chase over the Rocky Mountains, to become the head of a clan on the shores of the Pacific.—Dr., we have seen nothing, yet, from your pen, that convinces us that you are a great adept in constitutional law. We think there is little doubt but you know more about the virtues and qualities of a *vegetable* pill, than you do about the principles of political casuistry.

The Dr. says again;—"We have a word for friend Springer";—i. e. "a word" of advice.—You are rather too young Dr. for this. So far as years are concerned, we are the best part of a quarter of a century in advance of you in point of experience. You had better tarry awhile at Jericho, 'till your beard grows a little longer, before you *assume* to advise us on the subject of our duty.

As it regards the pitiful insinuation that we are "pledged to silence on the anti-slavery question," we throw it back, without any reply, upon the littleness which originated it;—and, to satisfy the public whose press is muzzled,—who occupies "neutral" ground,—who stands "pledged to silence" on certain subjects, we make to the Dr. the following proposition, viz: we will open our columns to what he may write on the "anti-slavery" question, if he will give an equal amount of his columns for what we may write on the subject of ecclesiastical slavery.

We wish your answer to this in your next. If you say nothing about it we shall take for granted you decline accepting the proposition.

Dr., the order of Providence has placed you at one post,—it has placed us at another. It has connected you with one enterprise,—it has connected us with another. It has made it your *special* duty to oppose African, ours to oppose ecclesiastical slavery. Now, we fear to desert our post and go over to yours, lest, when the Grand Rounds of eternity shall have visited us, we will be found criminally deficient in duty. Without any intention, therefore, wilfully, to desert our station, we make to you the above overture, in hopes that it will afford each of us an opportunity of furthering the interest of our respective missions. Now for your moral courage, Dr. We cannot let you out of this position on the *argumentum ad* "implication."

In conclusion, we have a "word for friend Bailey;"—if you are an abolitionist of *six hundred horse power*, we are not to be alarmed at a few flourishes of your pen. If you will conduct yourself towards us as a gentleman, we will treat you as such; if differently, we shall treat you accordingly.—As it respects "emancipation" we were a friend to that before you ever thought upon the subject. Had it depended upon our will there would not have been a slave in America for thirty years past.

We learn from a letter from the Rev. R. Boyd to Zion's Watchman, that Goodcil Buckingham, a probationer, was dropped at the late Pittsburg Conference of the Methodist Episcopal Church, by a vote of 49 to 29, because he had delivered two abolition lectures in the course of the year. It is stated that he was "presented by his elder and colleague as deeply pious, habitually serious, greatly devoted to his work, and possessing more than ordinary talent and education, and exceedingly anxious to continue to give himself wholly to God and to the work."

The following is from the Watchman of the 17th inst., and is signed by over 170 names:

☞SPRINGFIELD DISTRICT.

A CALL FOR A CONFERENCE OF LAYMEN.

"We, the undersigned, lay members of the M. E. Church on Springfield district, N. E. Conference, after due deliberation and consultation, are of opinion that it is a duty we owe to ourselves and the church to which we belong, to give a united and decided expression of our opinion in relation to the oppressive course pursued by our presiding elder during the last year. And inasmuch as he has been re-appointed to the district this year, contrary to our known wishes and remonstrances, we recommend that a conference of the laity of the district be held at Williamsburgh, Mass., on Thursday, the 29th of August, to consult on the most judicious course to be pursued under existing circumstances."

We see in the same number of the Watchman that the Athol circuit of the above district, have rejected the preachers sent by the Conference, as we take it, and advertised for others. These movements will soon bring matters to a crisis on the anti-slavery question in the M. E. Church, and must evidently terminate in an other secession.

We attended a quarterly meeting on this, Zanesville circuit, at Brownsville on last Saturday week. There was a larger number of members in attendance on Saturday than usual,—especially at the quarterly conference. The circuit is in good spirits and a prosperous condition.

A correspondent quizzically inquires if "Mary Jane," "Ann," &c. be dead. Take care boys—be cautious, lest their scrutinizing eyes should detect you in some misdemeanor; you might then be made to feel to your sorrow that they are still living.

A correspondent from the Ohio conference writes to us:

"Our Western conferences are out of joint as to rotation. I see that the general conference has requested the annual conferences, severally, to so arrange the time of their session as to be respectively in rotation, for the convenience of having a general agent visit them in rote.—Now, unless there is a motion made at this time, it will be two years more before it is brought about. ****** Should not yours meet first, the Ohio next, then Illinois, and so on to Tennessee?"

This suggestion is of considerable importance, and we wish it could be carried into practice.—Could not the Pittsburg conference meet the first Tuesday in September, the Ohio third Tuesday, the Illinois two or three weeks after?

The Ohio conference met on the 27th of this inst. at the Stone Chapel, on Tanner's creek, Ia.

The Illinois conference will meet on Wednesday, 11th of September, at Canton, Fulton co., Illinois.

The following resolutions were passed on the 10th of the present inst., by the quarterly conference of the Highland circuit, Ohio conference.

1. *Resolved*, That we use our best endeavors to sustain the Western Recorder.

2. That D. C. Carson be appointed agent for the paper.

This appears to be going to work the right way. If there was an agent appointed in each circuit to co-operate with the preacher, it would greatly benefit the interest of the paper, we have little doubt. This agent by keeping a correct account of who paid and who not, could give information how our accounts stood to successive preachers on the circuit.

As our paper goes for free discussion, we could not in consistency with our profession, reject the following proposition. Its author, though not a member of our fellowship, we believe is a respectable man, and entitled to a hearing. Truth shrinks not from investigation.

JAMESTOWN, O., 10th Aug. 1839.

Friend Springer:—The "Western Recorder" has appeared at my office, and I was glad to see the following sentence,—"The Recorder will take a firm stand against Clerical Supremacy."

I will submit a proposition for discussion, which if any of your correspondents feel disposed to attack, I will endeavor to defend; or, if permitted, I will go on to sustain it, whether I meet with an opponent or not.

Proposition. All the authority to preach, baptize, &c., now in the world, is derived from the commission given by Jesus Christ to his Apostles, as recorded in the New Testament. And further, that *any man* who has embraced the christian religion, and complied with the requisitions necessary to constitute him a disciple of Jesus Christ, and has acquired a knowledge of the oracles of God, as taught by the Apostles and Prophets, and has the ability to teach others, has the right to do so. W. WINANS.

COMMUNICATIONS.

ZANESVILLE CIRCUIT,
BROWNSVILLE, Aug. 16, 1839.

Mr. Editor:—I seize the opportunity of a leisure moment to drop you a few lines, because I know it will delight you to hear good concerning Zion. I can say with great confidence that "the Lord of Hosts is with us; the God of Jacob is our refuge." Our protracted meeting commenced on the 30th of July near Rushville, (Baker's School House) and continued six days, to the great joy and comfort of all who were interested in the prosperity of Zion. Our congregations were very uniform and solemn; the veterans of the cross most devoutly engaged in prayer; and the living sacrifices burned with vivid brightness, until the great Original, the Ancient of days, answered from the cloud of mercy,—"thine alms hath come up as an everlasting memorial before God." The fiat was obeyed, and many witnessed the salvation of God, and many more trembled at his word.

In the closing up of the exercises, we found eight safely moored into the harbor of gospel liberty, whilst some from other orders of the christian church were greatly blest. Glory be to God for his superabounding grace to us-ward. The car of truth must onward move until the watchmen on the walls of our republic shall hear the reverbriating chorus—*victory!—victory!!—victory!!!*—like distant rumbling thunders, rolling throughout the universe of God. Where is the man, or set of men, who will presume to have the temerity to say that the God of Israel is not with us? If so, why not your approbation, your prayers, and your every effort for the spread of the Redeemer's cross? May the walls of bigotry and sectarian prejudice, which are erected under a mistaken policy, soon be shaken by the spirit of God, and laid in general ruins. However the world may affect to dispise the genuine christian he is beyond their power. They feel too sensibly the difficulty of attaining that very state of feeling and disposition which is displayed in a follower of Christ, to entertain in their heart any mean or degrading opinion of the character which they apparently undervalue. Every thought which is wrung from their conscience, by its unwelcome obtrusion upon their contemplation, rises in judgment against their indifference.—God has not permitted them to dispise a true christian; they may pass by him with haughty and supercilious coldness; they may deride him with taunting and sarcastic irony, but the spirit of the proudest man, Mr. Editor, that ever lived, will bend before the grandeur of christian humility.

You are at once aware, and you recoil upon your own conscience, when you meet with one whose feelings are purified by the gospel of the Son of God. The light of a christian's soul, when it shines into the dark den of a worldly heart, startles and alarms the gloomy passions that are brooding within.—Is this contempt? No; but all the virulence which is excited by the christian graces can be resolved into envy, the feelings of Devils, when they think on the pure happiness of angels, and to complete their confusion, which is at that moment the feeling in the christian's heart, is pity, most unfeigned pity.

A christian is a child of God, a brother of Christ, a temple of the Holy Ghost, an heir of the kingdom, a companion of angels, a partaker of the divine nature.—He is a wonder to the world, a terror to Devils, an ornament to the church, a delight to Heaven.—His heart is full of pain, his eyes full of tears for a perishing world, his mouth full of sighs, and his hands full of good works. Oh God! grant me this spirit of benevolence, and to my brethren also in the ministry—and the praise of my salvation shall be unto the great Head of the church continually.

Yours in the bonds of a peaceful gospel,

D. Y. OSTROM.

HIGHLAND CO., O., Aug. 13, 1839.

Bro. Springer:—The Lord has stood by me this year, and His power has been manifested in the conversion of some souls. I closed my labors last night, on Highland circuit—the master of Assemblies was present—five joined the church, which makes *forty-seven* in all this year; mostly from the world. It does me good to see the ranks of Satan deserted. We have on this circuit a friendly, good people; all that is wanting on their part is a little system and energy in supporting their ministers. Were it not for some noble spirits the cause might, in this respect, suffer. I believe that your paper will get a good support in the bounds of this circuit; there was a resolution passed in the quarterly conference to sustain the "Western Recorder." It is my prayer that you may be well sustained for the good of our cause.

Yours, &c. JOHN GUEST.

MILFORD, Harrison Co., Va., Aug. 6, 1839.

Mr. Editor:—Although this has been a year of pruning and sorrow, the prospects of doing good are increasing, and the state of religion is no doubt fifty per cent. better than at the commencement of the year. I do hope that the circuit is redeemed from anarchy, and feel thankful that things have taken a different turn. The brethren are waking up to duty,—and especially have got in the spirit of building. We have two meeting houses on the way, one of which will be ready for service in about three weeks. We have also a parsonage in progress, 18 by 30 feet, which will be ready for occupancy this fall. Our congregations, with some few exceptions, are good. I have received the first number of your paper, and am pleased with it. Yours, &c. R. SIMONTON.

There has been a constant succession of rains at New Orleans for the last ten or fifteen days preceding the 18th ult.

The number of letters brought by the Great Western, was 9530.

MOBOCRACY REBUKED.

Judge Jay, charging the grand jury of West Chester County, N. Y. has very properly called their attention to some mobocratic indications in relation to the State Prison in that county. He proceeds upon the true principle that the evil should be nipped in the bud—that "an ounce of prevention is worth a pound of cure.'—After alluding in just and severe terms, to the prevalence of mob rule, he says:

"It is with pain, gentlemen, that I feel myself bound to call your attention to a recent indication of the existence of this very spirit among ourselves.

"In the *Hudson River Chronicle* of the 23d of April, published in the village of Sing-Sing, the editor, after announcing that the agent of the Auburn State Prison had been pelted with rotten eggs, and that the inspectors finding that the populace were determined to tar and feather him, had insisted on his resignation, and one of the officers of the prison had been committed to the jail on a charge of perjury, exclaimed,—'*Would to God we had the spirit of the Auburn people among us,—the walls of the Mount Pleasant State Prison, would lie as low as their foundation, in less than twenty four hours.*'

"It is surely a fearful sign of the times, when the editor of a public journal ventures thus to breathe forth a prayer to his Maker, that his fellow-townsmen might be endowed with the vile sprit of the Auburn rabble—a spirit which he himself declares would ensue the destruction in less than twenty-four hours of a most costly and important edifice, erected at public expense, by public authority, and for public purposes. And why it is desirable that the people of the village of Sing-Sing should rise in rebellion against the people of the State of New York, cover themselves with infamy, and turn loose upon society hundreds of convicted felons? merely because the officers of the prison had, as is alledged, been guilty of abuses and cruelties. The officers are responsible to you, gentlemen, and if they have committed crimes, ought to be punished, not by the demolition of the prison, but by confinement within its cells. If humanity or expediency require that this extensive structure should be razed to the foundation, it belonged to the representatives of the People, then assembled in the Legislature, and not to a village mob, to pronounce its doom. And did the editor suppose that if his prayer was heard, that the people of Sing-Sing would vent their indignation *only* on the walls of the prison? The spirit for which he prayed was a spirit that pelted the Auburn agent with rotten eggs, and determined to *tar and feather* him.

"I forbear making any further comments on this extraordinary and reprehensible article; and in bringing it to your notice, I trust it is unnecessary for me to disclaim the base intention of prostrating this place and the office I hold to the purpose of party. The editor himself is alone responsible for the language I have quoted, nor does it derive any countenance whatever from the sentiments professed by the political party to which he is attached. But it appeared to me fit and proper that this court, whose peculiar duty it is to guard the public peace, should not permit that language to pass without animadversion; and I believed also, that you, gentlemen, would see in it an additional reason why you should be vigilant in preventing every attempt to substitute force for law, and anarchy for social order.

"A very long experience in this court, no less than the acknowledged principles of human nature, convinces me that so far as legal punishment is to prevent crime, it must be applied to its first outbreaks. It is in vain to punish for grand larceny, so long as pilfering is permitted with impunity—in vain will the murderer be consigned to the gibbet, while courts and juries deem petty assaults and batteries beneath their notice; and if mobs are suffered to insult and to dictate, we must expect to see private dwellings and public edifices, and even life itself, sacrificed to their savage and senseless fury. In my opinion, criminal courts are rarely more usefully employed than in inflicting the penalties of law upon slight violations of the rights of persons and of property: because they are then repressing passions, which if unrestrained, would almost inevitably lead to disastrous excesses. Permit me therefore, gentlemen, to remind you, that your range of inquiry embraces the most petty misdemeanors as well as the most atrocious felonies; and that no offender is either above or below your cognizance. In conducting your investigations, you will be careful to remember that as the accused is not permitted to make any defence before you, the testimony adduced against him should be carefully weighed, and that to warrant an indictment it ought to be sufficient, if uncontradicted, to warrant a verdict of guilty."

Remarkable Religious movement in Bengal.—In the London Missionary Register for June, received by the Great Western, we find a highly interesting account of a remarkable religious awakening among the Hindoos in the vicinity of Kishnaghur, one of the stations of the Church Missionary society, on the Jelingha, a branch of the Hoogly, about 70 miles north of Calcutta. It seems that in 55 villages, extending for sixty miles along the Jelingha, to the N. E. and S. W. of Kishnaghur, more than 3000 Hindoos have thrown away their idols within a few months, and expressed a desire to be admitted into the Christian church. The movement bears a strong resemblance to that witnessed by the Apostles on the day of Pentecost, and will remind the reader of similar recent scenes in the Society and Sandwich Islands.—*N. Y. Ob.*

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts. - -	1 copy for a year.
" $5 - - -	12 copies.
" 10 - - -	25 "
" 20 - - -	60 "
" 30 - -	100 "
" 50 - - -	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia.

HYMENEAL.

MARRIED—In Falls township by Daniel Y. Ostrom, V. D. M., on the 25th of July, Mr. SYLVESTER SARCH, to Miss KEZIAH TANNER, both of Falls township.

By the same, on the 15th of August, Mr. CORNELIUS STARKY, to Miss JULIA ANN JOHNSON, both of Hopewell township.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "ferms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

Received pay for the first volume of the Recorder.—Of S. Rodman $2; of D C. Carson 15—for W. Johnson, W. Tharp, T. Karr, C. Strayley, we have it L. Strayley, is that right? J. Rockhold, J. M'Ginnis, G. Corn and S. Chalfant one dollar; of J. Palfreeman 2—for J. Dixon; of O. White 2—for J. Mullvean; of G. Reeve & Son 2—for J. Hocking; of J. Allen 2; of I. Hull 2; of J. Swern 2; of H. Nesmith 4, for first vol. Recorder and in full of old accounts; of H. Eyeman 2; of W. Ross 10—for D. Shultz, W. Melvin, C. Scott, L. Cunningham and J. Scott; of O. White 2—for John Forshey; of Jos. Thrap 8—for G. Vandenbark, A. Edwards, S. Preston and himself; of J. H. Thomas 5—for E. H. Christman, S. D. Sample and E. Henderson in full including Com. ——— of A. M'Guire 10—for J. Holly, W. Knox, R. Mounts, J. R. Johnson and two dollars in advance for some name yet to be forwarded; of John H. Honour, Charleston, S. C., 10—for W. G. Mood, J. Kingman, W. Kirkwood, S. D. Miller and himself; of J. W. Simpkin 4—for A. Morris and T. Bryant; of J. Sturman 2; of C. Cady 4—for M. Horton and R. Cowl; of J. Beatty 10—for W. Davis, J. Moon, W. Fitzsimmon, E. W. Stevens and S. Remington; of R. George 2.

Letters Received.—D. C. Carson, J. Palfreeman, W. Ross, T. P. Armstrong, J. Guest, R. Simonton, D. Y. Ostrom, J. H. Thomas, A. H. Bassett, A. M'Guire, "A Listener," J. H. Honour, J. W. Simpkin, 30 cents postage, J. Sturman, C. Cady, G. Reed, Jos. Springer, we have sent you the three first numbers to Wilmington, and J. Beatty.

LADIES' DEPARTMENT.

From the New York Dispatch.

HOW TO REDUCE YOUR HOUSEHOLD EXPENSES.

'My dear, I want some money for a shopping tour.' 'My love, I cannot afford it.' 'I do not call often.' 'Only six times a week.' 'That is but once a day, at any rate—but if I cannot have it I cannot. I suppose I can fudge through the summer with the spring fashions.'

The discussion had become somewhat in earnest—and half a pout gently curled the young wife's lip. The husband was fond, but not foolish—though some will have it that the terms are synonymous. He proposed the terms of a compromise, to which the wife, glad of new employment, acceded. He told her what he could appropriate for the whole household expenses, rent excluded, and put the week's allowance in her hands, installed her chancellor of the domestic exchequer, and the keeper of the purse. 'Now,' said he, 'If you can manage to feed us all comfortably, and still do your private shopping—try it. Here is precisely the sum I have used weekly for house-keeping, and it is as much as I can spare.'

The little wife soon discovered that the price of beef was abominable, and provided a cheaper substitute. Sir Loin was no longer deemed essential three times in a week, and some very worthy commoners, Messrs. Mutton, Lamb and Veal, were raised to the peerage. The wife's Mother's Glass's law was put in requisition, and the table was graced occasionally with very clear *ricafacimeintos* of the fragments of yesterday's dinner. All the mysteries of pudding, pie, and domestic confectionary and fancy bread, filled up the corners, and used up the inconsidered trifles which are too apt to be wasted in a family not actually starving.

And how did they live? Most comfortably. The husband declared that he never fared so well in his life—but asked no questions. The wife wanted nothing but time to go shopping in. Women are always better sub-treasurers than men; and the money she managed to abstract, and still leave no apparent *hiatus* in the daily fare, would have astonished any one of the great department servants of our friend, Uncle Sam.

Bargaining in one department taught the lady to bargain in others. Having no occasion to go shopping for amusement, she went just twice in the week, for several actual purchases, and those she made at a fair price. The mere say-so of a fashionable milliner, or a dry goods clerk, did not induce her to believe an article worth a hundred per cent more than its value. She pinned them down to their facts and figures, and made her purchases as if she wanted to save money, rather than spend what she had, and assaulted her husband for more. So slipped the week—the happiest one for both parties to the matrimonial copartnership they had ever known. He attended to his proper business down town—she had employment about the house which relieved her of ennui, and cured her of all inclination to extravagance.

At the week's end there was something over, which she tendered to her husband. 'But you want a new hat, my dear.' 'Oh no, not at present. This can be re-trimmed, and will answer till the summer style is settled.' 'You told me last week you must have some new frocks.' 'I know I thought so—and have made some purchases this week—but my wardrobe is on the whole quite respectable, and I am sure I can manage.' 'So you have learned to manage, have you—but I don't want this money.' 'What shall I do with it then?' 'Oh, there are rent, fuel, clothing for children, servants wages, and other matters, all coming due in their season. You must put this to next week's share—and meet all your expenses, as they fall.' 'Then I am to be permanently in office?' 'Certainly, until you Swartwout—and with no other bond than this'—

'Why father, I think you *are* childish'—said the little girl, as she burst into the room. Children will intrude sometimes. To make too long a story short, our friends find this an excellent domestic arrangement. Women, to be prudent in money or in secret, require only to be trusted, and many a lady gads expensively for the want of employment. Try them husbands.

HOW TO CHOOSE A GOOD HUSBAND.

When you see a young man of modest, respectful, retiring manners, not given to pride, to vanity or flattery, he will make a good husband; for he will be the same 'kind man' towards his wife after marriage, that he was before it.

When you see a young man of frugal and industrious habits, no 'fortune hunter,' but who would take a wife for the value of herself, and not for the sake of her wealth; that man will make a good husband, for his affection will not decrease, neither will he bring himself or his partner to poverty or want.

When you see a young man whose manners are of the boisterous and disgusting kind, brass enough to make him think every one inferior to himself, don't marry him girls, he will not make a good husband.

When you see a young man, who is using his best endeavors to raise kimself from obscurity, to credit, character and affluence, by *his own merits*, marry him; he will make a good husband, and one worth having.

When you see a young man depending solely for his reputation and standing in society upon the *wealth of a rich father* or other relations, don't marry him for goodness sake, he will make a poor husband.

When you see a man, always employed in adorning his person, or riding through the streets in gigs, who leaves his debts unpaid, although frequently demanded; never do you marry him, for he will in every respect make a bad husband.

When you seen a young man, who never engages in any affrays or quarrels by day; nor *follies* by *night*, and whose *dark, black* deeds are not of so mean a character, as to make him wish to conceal his name, who does not keep low company, nor break the Sabbath, nor use profane language, but whose face is seen regularly at church, where he ought to be, he will certainly make a good husband.

When you see a young man, who is below you in wealth offer you marriage, don't deem it disgrace, but look into his character; and if you find it corresponds to these directions, take him and you will get a good husband.

Never make *money* an object of marriage, for if you do, depend upon it, as a balance to the good you will get a bad husband.

When you see a young man, who is attentive and kind to his sisters, or aged mother; who is not ashamed to be seen in the streets with the woman who gave him birth and nursed him, supporting her weak and tottering frame upon his arm, who will attend to all her little wants with filial love, affection and tenderness, take *him* girls, who can get him, no matter what his circumstances in life, he is truly worth the winning and having, and will in certainty, make a good husband.

Lastly—always examine into the character, conduct and motives, and when you find these good in a young man, then may you be sure he will make a good husband.

WOMAN.

Woman, woman!—truly she is a miracle. Place her amid flowers, foster her as a tender plant, and she is a thing of fancy, waywardness, and sometimes of folly—annoyed by a dew drop, fretted by the touch of a butterfly's wing, ready to faint at the rustle of a beetle. The zephyrs are two rough, the showers too heavy, and she is overpowered by the perfume of a rose bud. But let real calamity come, rouse her affections, enkindle the fires of her heart, and mark then how her heart strengthens itself; how strong is her purpose. Place her in the heat of battle, give her a child, a bird, any thing she loves or pities, to protect, and see her as in a related instance, raising her white arms as a shield, and as her own blood crimsons her upturned forehead, praying for life to protect the helpless. Transplant her into the dark places of the earth, awaken her energies to action, and her breath becomes a healing, her presence a blessing; she disputes inch by inch, the strides of the stalking pestilence, when man, the strong and brave, shrinks away pale and affrighted. Misfortune daunts her not; she wears away a life of silent endurance, or goes forward to the scaffold with less timidity than to her bridal. In prosperity she is a bud full of imprisoned odors, waiting but for the winds of adversity to scatter them abroad—pure gold, valuable, but untried in the furnace. In short, woman is a miracle, a mystery.

Mrs. Ann S. Stephens.

MISCELLANEOUS.

From the Youth's Cabinet.

AN EXTRACT FROM A VISIT TO THE CATSKILL MOUNTAINS.

But I must hasten to the Mountain House, which, I told you, we saw at the great distance below. It may be seen from the Hudson River. It stands upon a rock, called "Table Rock," because it is so wide and smooth, being almost as level as a floor. When you approach the Mountain House, from the West, or by the way I approached it, you do not see it till you are very near it. It then seems like a palace built in the forest.—When I got there, nothing could equal the view which burst upon me all at once. It was the most grand prospect I ever saw, and I shall be wholly unable to describe it to you.

You may imagine yourself standing at a perpendicular height of 3000 feet, with the Hudson river rolling along beneath you, and the country on its banks, stretching away as far as the eye could reach, with its pretty villages, and beautiful farms, and meadows, and forests. On one side, you may see the Green Mountains in Massachusetts. On the other in Vermont, and the hills near lake Champlain. You may here look into five different states, Connecticut, Massachusetts, New Hampshire, Vermont, and New York.

The day was beautifully clear, and I stood and gazed, till my eyes were fairly tired, and even then I had not seen half.

A GENERATION OF ROYAL IDIOTS.

[Extract from Thomas Jefferson to Governor Langdon of New Hampshire, written in 1810.]

When I observe that the king of England was a cypher, I did not mean to confine the observation to the mere individual now on the throne. The practice of kings marrying only into the families of kings, has been that of Europe for some centuries. Now, take any race of animals, confine them in idleness and inaction, whether in a sty, a stable, or a state room, pamper them with high diet, gratify all their appetites, immerse them in censualities, nourish their passions, let everything bend before them, and banish whatever might lead them to think, and in a few generations they become all body and no mind; and this too by a law of nature—by that very law by which we are in the constant practice of changing the character and propensities of the animals we raise for our own purposes.—Such is the regimen in raising kings, and this is the way they have gone on for centuries. While in Europe, I often amused myself in contemplating the characters of the reigning sovereigns of Europe. Louis the XVI was a fool to my own knowledge, and in despite of the answers made for him at his trial. The king of Spain was a fool, of Naples the same. They passed their lives in hunting, and despatched two couriers a week, one thousand miles, to let each other know what game they had killed the preceding days. The king of Sardinia was a fool. All these were Bourbons. The Queen of Portugal, a Bragranza, was an idiot by nature. And so was the king of Denmark. Their sons, as regents exercised the powers of government. The king of Prussia, successor to the great Frederick, was a mere hog in body as well as in mind. Gustavus of Sweden, and Joseph of Austria were really crazy, and George of England you know was in a straight waistcoat.—There remained, then, none but old Catherine, who had been too lately picked up to have lost her common sense. In this state Bonaparte found Europe; and it was this state of its rulers which lost it with scarce a struggle. These animals had become without mind and powerless; and so will every hereditary monarchy be after a few generations. Alexander the grand son of Catherine is yet an exception. He is able to hold his own. But he is only of the third generation. His race is not yet worn out.—And so endeth the book of Kings, from all of whom the Lord deliver us.

BATTLE OF BUNKER HILL,

AND DEATH OF GEN. WARREN.

Warren, (then a brigadier-general in the Massachusetts militia) was not unconcerned in the battle of Lexington. Scouts of his had notified him on the 18th of April, that a detachment of troops was to march that night toward Concord; and then remaining himself upon the watch, he saw Colonel Smith and eight or nine hundred men embark for Charlestown.—Knowing the stores and ammunition at Concord to be their object, he instantly sent messengers over the surrounding country to give the alarm, and himself rode at night, passing so near the enemy as to be more than once in great danger of capture. His messenger to Lexington was Colonel Revere; who on suddenly turning a corner as he passed through Charlestown, found himself close to a British party. In a moment he put his horse at full speed, and before they could well ascertain him to be a foe, was far beyond the reach of the balls which they had fired after him.

When the enemy were returning from Concord, he was among the foremost in hanging upon their rear and assailing their flanks. By pressing them too closely he again narrowly escaped death. A musket ball took off a lock of hair, which curled close to his head in the fashion of that time.

When his mother saw him after the battle, and heard of his escape, she entreated him with tears not again to risk his life so precious. "Where the enemy is, dear mother," he answered, "there must your son be. Now is no time for any of America's children to shrink from any hazard. I will set her free or die!"

On the 16th of June, when Colonel Prescott received his orders, and marched with his thousand men to fortify Bunker's Hill, the session at Watertown was so protracted, that Warren could not leave it until late at night. As soon as he could, he prepared to join Prescott, in despite of the pursuasion of his friends. To their assurances, that most of the detachment, and especially he, daring and conspicuous as he was—would in all probability be cut off, and that he could not be spared so soon from the cause, he replied "I cannot help it,—I must share the fate of my countrymen; I cannot hear the cannon, and remain inactive." Among his most intimate friends, was the afterwards distinguished Elbridge Gerry; with whom he lodged regularly in the same room, and on that last night on the same bed. To him when they parted after midnight, Warren uttered the sentiment, so truely Roman, and in this instance prophetic, "*Deluce et decorum est, pro patria mori!*"

By day-break he was at the camp in Cambridge, where, finding that the British had not shown themselves, and sick with an aching head, from mental and bodily toil, he sat down to snatch a little repose. But he was soon roused by the tidings that the enemy were in motion, and instantly rising, he exclaimed "my head ache is gone." Others doubted what the object of the enemy's threatening movement was;—he at once saw it to be the unfinished fortification on Bunker's Hill. The Committee of Safety, (which sat at the house where he was,) having resolved immediately to despatch a reinforcement thither, Warren mounted his horse, and with sword and musket, hastened to the scene of strife. He arrived just as the fight began, and seeking out General Putnam, (who was already there,) desired to be posted where the service was most arduous. Putnam expressed his sorrow at seing him in a place so full of peril; but since you have come, added he, "I will obey your orders with pleasure." Warren replied that he came as a volunteer, to obey and fight, not to command.

Putnam requested him to take his stand in the redoubt where Prescott commanded, and which was considerably in advance of the slightest defence, behind which Putnam and his men were stationed. On his entering the redoubt, he was greeted with loud huzzas; and Prescott like Putnam offered him the command. He again refused it, saying that he was a mere volunteer, and should be happy to learn service from so experienced a soldier. He was constantly active, going through the ranks, cheering on his comrades, sharing their perils, and playing his musket against the advancing enemy. When the British had twice been driven from the height with a thousand slain; when the exhaustion of powder and ball, leaving no means of resistance but clubbed guns against fixed bayonets and fourfold numbers, necessarily made the third onset successful, Warren was the last to quit his station. The slowest in that slow and reluctant retreat, he struggled for every foot of ground, disdaining to quicken his step though bullets whizzed and blood streamed all around him. Major Small, of the British army, recognized him, and eager to save his life, called upon him for God's sake to stop and be protected from destruction. Warren turned and looking toward him, but sickening at the sight and the thought of his slaughtered countrymen and the lost battle, again moved off slowly as before. Major Small then ordered his men not to fire at the American General; but it was to late. Just as the order was given, a ball passed through his head, and he fell and expired.

His body lay on the field all the next night. When one who knew his person told Gen. Howe, the next morning that Warren was among the slain, he would not believe it, declaring it impossible that the President of the Provincial Congress should have been suffered to expose himself so hazardously. An English surgeon however, who had also know Warren, identified his corpse; and to prove the daring of which he was capable, added that but five days before, he had ventured alone into Boston in a small canoe, to learn the plans of the British, and had urged the surgeon to enter into the American service.

General Howe declared that the death of one such adversary balanced the loss of five hundred of his own men. Warren's body was buried with many others, American and English, near the spot where he fell. His younger brother, Dr. John Warren, at first sight of the body, fainted away, and lay for many minutes insensible on the ground. We draw a veil over the grief of his mother, when after a torturing suspense of three days, the truth was disclosed to her. In General Warren's pocket an English soldier found a prayer book, with the owner's name written in it. The soldier carried it to England, and sold it for a high price to a kind hearted clergyman in Roxbury, with a request that he would restore it to the General's nearest relation. It was accordingly given to his younger brother, whose son, Dr. John C. Warren, still retains it. It was printed in 1559, in a character remarkably distinct, and is strong and handsomely bound.—*Boston Weekly Magazine.*

A GOOD ONE.

A few years since, an aged clergyman in the western part of this country, speaking of the solemnity attached to the ministerial office, said that during the whole term of forty or fifty years that he had officiated there, his gravity had never but once been disturbed in the pulpit. On that occasion, while engaged in his discourse, he noticed a man, directly in front of him, leaning over the railing of the gallery with something in his hand, which he soon discovered to be a huge quid of tobacco just taken from his mouth. Directly below sat a man who was in the constant habit of sleeping in meeting, with his head thrown back and mouth wide open. The man in the gallery was engaged in raising and lowering his hand and taking an exact observation, till at last, having got it right, he let fall the quid of tobacco, and it fell plump into the mouth of the sleeper below! The whole scene was so indescribably ludicrous, that for the first and last time in the pulpit, an involuntary smile forced itself upon the countenance of the preacher. The unexpected intrusion of so unpalateable a morsel awoke the sleeper, and he never was known to indulge in the practice afterwards.

Two gentlemen of the Bar overtaking a waggoner on the road the other day, and thinking to be very witty upon him, asked why his fore horse was so fat, and the rest so lean? The waggoner knowing them, answered 'that his fore horse was a lawyer, and the rest were his clients.'

'Have you ever seen a snail?' said a wag to a person not remarkable for speed. 'Yes.' 'Then you must have *met* him, for it is impossible for you to have overtaken one.'

'John,' said a schoolmaster, 'you will soon be a man, and will have to do business; what do you suppose you will do when you have to write letters, unless you learn to spell better?' 'Oh sir, I will put easy words in them.'

A man was boasting about his knowledge of the world, when a wag in the company asked him if he had ever been in Algebra. 'I cannot exactly tell,' said he, 'but I think I once passed it on the coach.'

The path that leads to fortune too often passes through the narrow defiles of meanness, which a man of exalted spirit cannot stoop to tread.

A beautiful exclamation.—When the queen of France, consort of Louis Philippe, first heard of her late daughter Marie's death, she ejaculated, "My God,—I have a daughter less—but thou hast an angel more!"

THE PRINCE OF QUACKS.

A New York paper states Dr. Brandreth has invested a sufficient capital in the New York Expositor, to establish that paper on a good and sure foundation. Another paper also states, that he pays the N. Y. Mirror one thousand dollars per annum for advertising his pills. Dr. Brandreth during the few years he has been in this country, he has paid a sufficient sum to printers throughout the U. States, to make a hundred persons independently rich. We have been informed, that during the year 1838, he paid to printers for advertising, job work, &c., upwards of the enormous sum of one hundred and seventy thousand dollars! He seldom disputes a printer's bill, but always pays over without any murmuring or objections whatsoever. The doctor is liberal, and his generous disposition has frequently been taken advantage of by many of his large agents, in different parts of the country; notwithstanding all which he has amassed immense wealth, and is now reputed to be worth two hundred thousand dollars!

Every true friend of his race must read the above paragraph with loathing and abhorrence. To think that the people of the United States can be gulled to such an extent, to swallow vile drugs by the "cart load," and the mercenary newspaper press lend its aid to extend the base imposition!!

"Are you the man of the house?" queried a stranger of a denizen of this city the other day. "No, but my wife is," was the subdued response.

The chief cook at the United States Hotel, Saratoga Springs, gets a salary of $500 a month.

The Mississippians are beginning to fear for their cotton crops, which promised so well in the early part of the summer. There have recently been heavy rains in that section of the Union, and the damage already done is said to be considerable.

The Court of Common Pleas of Hamilton county, at its late term, passed sentence upon twenty-six criminals tried and convicted against the State. These will make quite an addition to Mr. Warden Vanhook's family at the big stone house.

A yankee farmer, who recently removed to Virginia and purchased a large tract of what is called *waste land* in that slave state, received thirty-thousand dollars for his first crops from it.

The fund commissioners of Indiana have secured at New York, an additional loan of six hundred thousand dollars for internal improvement purposes.

The corn in Clermont county is suffering greatly for the want of rain. The Courier says that in the immediate neighborhood of Batavia much of this crop is already cut off.

The Mint.—An investigation has been going on at New Orleans of the affairs of the Mint. It appears that the expenses of the establishment in salaries, &c., were $52,000, and amount of money coined $40,243!

Niles' Register, suspended a few weeks ago, has been moved back to Baltimore and re-commenced.

The Pittsburgh Gazette completed its fifty-third year on the 29th day of July.

SUICIDE.

A man of the name of Nathaniel T. Duncombe, formerly residing in the city of New York, committed suicide about the middle of last month, in the town of Madison, Wisconsin territory. He had a quarrel with his wife,—to whom, judging from his letters, he appears to have been most devotedly attached,—and she, through the influence of those calling themselves *friends*, refusing to reconcile matters, he was driven to the commission of the dreadful deed. One of his letters ends with the following postcript:

"After writing the above I have come to the determination to try once more; and if all fails, and if she remains inflexible to my requests, as I find it hard to part with her, as well as with life, my doom is sealed, and I shall leave this world, with all its allurements, to find that rest which death, the poor man's friend has for me."

Middletown Mail.

A large poisonous worm, an inch and a half in length, was found last week in the very heart of a cabbage, by a woman in Pennsylvania, who was preparing it for the table. Housewives should keep a look out for such monsters. This is not the first incident of the kind, of which we have heard.—*ib.*

The health of the Atlantic cities the present season, has been good beyond any recent precedent.—*ib.*

The value of the real estate belonging to the City of New York, is estimated in the Evening Star at upwards of twenty-three millions of dollars. A rich corporation.—*ib.*

The credit of the State of Massachusetts on the Stock Exchange of London, it is said, is far better than that of any other state in the Union—twelve per cent. better than that of New York, and thirteen per cent. better than that of Pennsylvania, a State which hitherto has been able to obtain large premiums on her loans. So much for the stability of the institutions of Massachusetts.

Nine hundred and seventy eight of the factory girls in Lowell, have deposited in the Savings Bank, in that city, $100,000, it is said. The amount would be much larger, but no interest is allowed on more than five hundred dollars, so that when they individually reach this sum, they invest elsewhere.

Judge Thompson, of Indiana, at a late sitting of the Circuit Court, at which he presided, gave the following decision:—'That if a subscriber to a periodical failed to notify the editor to discontinue the paper at the end of the term subscribed for, or pay up the arrearages, he was bound for another year.'

The Philadelphia Savings Institution has failed. The immediate cause of the failure is said to have been an excessive issue of certificates in the form of post notes, which as they reached maturity, the company were unable to redeem.

A gentleman died lately in Bradford, England, who bequeathed five hundred pounds sterling to his widow, on the condition that she should marry again within six months after his decease. She is said to be handsome in person and of an amiable disposition—and it is thought she will have no difficulty in finding a person who will be willing to assist her in fulfiling the conditions of her husband's will.

A Monster.—A tremendous rattlesnake found near Huntsville, Ala., is thus described in the Democrat: Length, 11 feet 9 inches; circumference in the largest part of the body, 19 inches; 9 1-5 inches around the head; 3 inches around first rattle; 2 around the last; length of the whole series of rattles, 3 feet 8 inches; number of rattles, 83; length of the two poisonous fangs, 2¾ inches; weight 37½ pounds; and yielding nearly 5 quarts oil.

The Cherokees.—The immediate source of the difficulties which led to the death of the two Ridges and of Boudinot, appears to have been the discordant views entertained by the two great divisions of the nation, as to the contemplated union. The west Cherokees, or those who emigrated early, disagreeing with the eastern or new comers. There is no confirmation of the death of Ross, who, as well as his friend Mr. Gunter, are said to have taken the precaution to assemble around them in time a sufficient force for protection.—*N. Y. Star.*

The Woman of a Century.—While the President of the United States was seated at the breakfast table in this city on Saturday morning, he was informed that an old lady upwards of one hundred years of age was present, anxious to see him. Upon this, the President went into the hall to bring her in. It appeared that she is in her one hundred and fourth year. Her name is Hannah Gouge, and she lives at 132 Reade-street. She said that she had seen every President of the United States, had shaken hands with Washington, and was quite delighed to see the present incumbent. She walked without assistance, but was escorted back by Robert W. Bowyer, Esq.—*N. Y. pap.*

ADVERTISEMENTS.

O. WHITE,
BOOK BINDER,
NO. 104, MAIN-STREET,
ZANESVILLE, OHIO.

August 1, 1839. 2tf

Cattle for Sale.

TWENTY-FIVE thriving young CATTLE for sale Inquire at this office, 5½ miles west of Zanesville.

July 18, 1839. 1tf

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods and inspected specimens of perhaps all the improved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, OHIO, THURSDAY, SEPTEMBER 12, 1839. NO. 5.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

ORIGINAL PAPERS.

For the Western Recorder.

ON THE SHORTNESS OF HUMAN LIFE.

"As for man, his days are as grass: As a flower of the field so he flourisheth. For the wind passeth over it, and it is gone; and the place thereof shall know it no more."—Psalm ciii. 15, 16.

The man who can coolly look on and see the mortality of his species, see the ravages of death, see his fellow beings dropping off by scores and by hundreds from the stage of existence—the man who can do this, I say, is a strangely complicated being—is one whose feelings I do not envy, and whose heart is not susceptible of the finer sentiments that glow within the human breast. Who can stand unmoved as it were, and view with cool indifference, his nearest, dearest friends—those whom his heart holds dear, snatched away by the relentless hand of death, and carried away to that "bourne whence no traveller returns." Show me that man, and I pledge myself that I will show you one that is devoid of the noblest sentiments of the soul. It is not for a few weeks, or months, or years, that they are gone from us—Ah! no it is forever!—Weeks, months, and years roll onward, and Time stops not in his wayward flight; but they appear not, they are no more seen in the places that once knew them! Ah no! as the poet expresses it—

"They have no share in all that's done,
Beneath the circle of the sun."

Ah my friends how solemn the reflection—man was born to die. Yes, those eyes, that now sparkle with life and animation, will soon be sunken and glazed in death.—Those cheeks that now bloom with health, and in which the blood of youth mantles high, will ere long be pale and sallow, covered with the damps of the tomb!—Those hearts, that now beat high with rapture or sympathy, will soon be still and motionless.—Those limbs, those active limbs, which now thrill with life and energy, must of necessity be one day, we know not how soon, cold, clamy and nerveless,—yes, wrapped in the habilliments of the grave! How solemn the reflection—yet how seldom do we bring these solemn truths home to our own hearts and understanding, how prone are we to put off the evil day—and how often do we, by our actions, declare to the world, that here we *have* a continuing city and *here* an everlasting place of abode.

The Psalmist beautifully illustrates the fleeting nature of man in the words which we have chosen, as the foundation of these remarks. Or in the words of Mr. Wesley,

"The morning flowers display their sweets,
And gay their silken leaves unfold,
As careless of the noontide heats,
As fearless of the evening cold.

Nipt by the wind's untimely blast—
Parch'd by the sun's directer ray,
The momentary glories waste,
The short-lived beauties die away.

So blooms the human face divine,
When youth its pride of beauty shows,
Fairer than spring the colors shine,
And sweeter than the virgin rose.

Or worn by slowly rolling years,
Or broke by sickness in a day,
The fading glory disappears,
The short-lived beauties die away!"

But though these bodies shall die and repose in the tomb—though we shall slumber in the dust as our fathers have done—though worms shall destroy this flesh, we shall rise again! Yes! this mortal shall put on immortality—this corruption shall put on incorruption. What, I ask, are we placed in this world for? To dwindle out a few short years here, and then sink into oblivion? How many poor but honest men are struggling all their days against the tide of adversity, tossed about upon the stormy billows of misfortune! How many do we see, who have not wherewith to shield them from the chilling winds of a winter's storm. How many do we see, who are cast out upon a cold unfeeling world, without a friend, without a home, without a place wherein to lay their defenceless head, and yet we see their fellow worm rolling in wealth and affluence, basking in the sunbeams of worldly prosperity—and how often trampling upon the sacred rights of their poor brother. And these men, according to the philosophy of some, live out their brief existence here, and then alike sink into nonentity! Away with such doctrine!—If this is philosophy, I pray God that I may be kept from its contaminating influence. Ah! no, there is an immortal principle within me, which tells me in language that cannot be mistaken, that there is a resurrection of the body, and a glorious immortality beyond the confines of the grave!

"Yes these new rising from the tomb,
With lustre brighter far shall shine,
Revive with ever-during bloom,
Safe from diseases and decline."

Go to nature for a lesson on this subject. See the farmer sowing his seed, which becomes corruption, rots into dust, but from its very *dust* the new grain bursts forth into life, and yields him a plentiful harvest. So it is with the human body, when lain beneath the clods of the valley, it dissolves into and co-mingles with its mother element, and over its silent chamber the winds of ages and centuries pass; but at the sound of the archangel's trump, which shall shake from their foundations the mighty pillars of the universe, the narrow gloomy cells of the grave shall be opened, and from the ashes of slumbering nations shall arise, Phœnix-like, new bodies, thrilling with immortal vigor—with the blooming verdure of heaven upon their cheeks, and attended by the angelic hosts of heaven, shall wing their flight to the regions of eternal sunshine! What think you is that man's feelings who has lived all his days at enmity with his God—who has trampled the offers of the Redeemer beneath his feet—oppressed the poor and unfortunate—wronged the widow and the orphan—set at naught the counsels of Jehovah? Ah! what must the anguish of his heart be when he approaches the brink of the Jordan of death. All is gloom beyond—a deep and dark abyss of awful uncertainty yawns to engulf him—he shrinks and groans in despair, and calls upon his friends to succor him in this his hour of need: but alas! he calls in vain, there is no strong arm to save—his days of probation are ended—he is now about to leave this world—the home of his treasure—the scene of his pleasure and revellings! but oh! how his soul shrinks at the thought, as he approaches the verge of eternity—he casts his eyes imploringly around upon his friends; but they are not able to deliver him, he is then thrown back upon his own strength, which has failed him, and with an expiring shriek, his affrighted soul leaps from the feeble tenement, and plunges into the dark abyss of an impenetrable futurity!

But how is it with the christian, he who has been the honest disciple of his Saviour—who has fought the good fight of faith—who has endeavored to walk in the commandments of his God blameless—though he has had to war against all the powers of earth and hell, he has come off victorious through the merits of his Redeemer—he can approach the grave without terror—he can stand upon the brink of Jordan, with undismayed soul, and through its boisterous waves, with the eye of faith, he can discern the promised land—he is about to change worlds; but it is for the better; his soul is about to wing its flight to the God who gave it, and his dust to return to dust; but he is infinitely the gainer by the transition—he changes this world of storms and tempests, and gains one where his soul shall bask in the beams of eternal sunshine and joy! He is enabled to cry out even in the agonies of expiring nature, O death where is thy sting! O grave where is thy victory! Thanks be to God who giveth us the victory through our Lord Jesus Christ!

W.

Pittsburg, August 27th, 1839.

For the Western Recorder.

MORE "SKETCHES" ABOUT STEAM BOAT VOYAGING.

Cincinnati, Aug. 7, 1839.

To A. H. B.

I perceive in the first number of the Western Recorder a somewhat repulsive picture of a steam boat voyage taken by you, on the Ohio river, on a recent occasion. Without intending to doubt the accuracy of your picture, I wish to intimate that the *portrait*, however correct in that particular case, will not find its *original* in all Ohio steam boats indiscriminately. Within a few days past, I made a steam boat voyage of 500 miles, and I found it very different from the one you describe. With about forty cabin passengers, I embarked at P—— on board the steamer Sandusky, (Capt. J. Dohrman) in the evening, and had a pleasant run down to Beaver shoals, which, having reached after dark, we lay by until morning, as the shoals could not be passed in safety in the night in the present stage of water. This act of prudence was of course disapproved by a few inconsiderate passengers, who, knowing nothing of the danger, set up their judgment in preference to that of an experienced navigator and prudent commander. And to the rash indiscretion of such passengers are to be traced many of our steam boat accidents. Captains yield their own judgment to the fretful importunity of injudicious passengers, whose whole object is *speed—speed*, at no matter what hazard or cost. Our captain, however, is not the man to be influenced by such complaints. He alone is *responsible*, and he trusts his own judgment in such cases. His doctrine is, "*safety* first, and *speed* afterward; but SAFETY, speed or no speed."

But I intended to say, that during the voyage of three and a half days, I heard not a *profane* or *obscene* word, from *officers*, *passengers* or *crew*.—There was not a *card*, *dice*, or any thing of the sort cast on the voyage, not even for "innocent pastime." There were no intoxicating liquors, including wine, beer, &c., drank in either cabin during the voyage—there was none on the table, and very little drank at the *bar*. And yet, would you believe it, the voyage was a very pleasant one. The table was excellent, the officers sober, accommodating and pleasant, and the company intelligent and agreeable. The Bible, Evangelical Family Library, and such books as we happened to have with us, afforded us instructive reading; and at night several of the officers and passengers provided us quite a pleasant treat of instrumental music. So, although we drank no brandy, lost or won no money, swore no profane oaths, we passed our time quite as agreeably as we should, had we indulged in these *luxuries*. The quiet, orderly and moral arrangements which prevail on the SANDUSKY may be accounted for in the fact that her chief officers are *religious men*—the captain and chief engineer at least being members of the M. P. church.

If sir, you think it expedient to *commend good* as well as to *censure evil*, you may make what use you choose of the facts here furnished, by way of informing the public where to find a boat all unlike, in management, the one you have portrayed.

Yours, M. M. H.

CINCINNATI, Aug. 16th, 1839.

Mr. Editor:—I rejoice that I have the privilege of communicating the facts presented in the above communication of my worthy friend. You will rejoice with me, sir, if not your readers also, to learn that there is at least one pleasant, and probably safe means of conveyance up and down the Ohio river, by steam power.

This is the age of *reforming enterprises*. But where is reform more greatly needed than in the managements of our *steam boats?* Why then do we hear so little of reform there? We have had enough of the annoyances and horrors of steam boat travelling with the ordinary mode of management. But when it is known that there are one or more steam boats plying upon our waters, conducted with decent and prudent management, I think that every friend of reform should, from principle, as well as for his own comfort and safety, patronize such vessels. Our *tee-total* friends are publishing lists of *Temperance Taverns*, for the purpose of directing the traveller where to find wholesome and orderly places of entertainment. And should not the friends of good order begin to publish a list of such steam boats as are conducted decently and soberly, that men of steady habits may know what vessel to employ to accomplish a voyage without the ordinary annoyances of gambling and drunkenness and profanity.

I rejoice that my intelligent friend, as above, has commenced for us a list of *Reform Steam Boats*. We have the SANDUSKY at the head of this list. I trust that her officers and proprietors will ever be ambitious to make her worthy of this character and distinction. There may be yet others conducted upon such principles. But until it is known, I doubt not that the *Sandusky* will have the preference by those of the travelling community who know the facts, and who have regard for *morals* as well as for their comfort and safety. I learn that she makes regular trips between Pittsburg and Louisville. It was but the other day that I saw her pass up our river, and with a warm heart I felt to wish her *good speed* and a prosperous journey. And did I wish to make a voyage, I would wait a week, if necessary, for Capt. Dohrman.

You will have the goodness, Mr. Editor, to publish the above communication of M. M. H. with the humble suggestions appended. And I should be gratified if you or any of your correspondents would furnish, through your paper, any further light or information bearing upon the subject in hand.

Respectfully, A. H. B.

For the Western Recorder.

ON ORIGINAL SIN.

That all mankind have fallen under the empire of death, through transgression, the apostle most positively asserts, and few men, who profess to believe the Bible, pretend to dispute. Paul says by one man sin entered into the world and death by sin, and so death passed upon all men for that all have sinned. As no man can account for death being brought into the world but on the ground of transgression, so none can account for the moral evils that exist in the world on any other principle. It is a fact that every human being carries with him the seeds of dissolution and mortality. Into this state we are fallen, through the offence of Adam: see Rom. v. 18. This fact is proved by the mortality of all men. It is not less a fact, that every man that is born into the world brings with him the seeds of moral evil; these he could not have derived from his Maker, for the most pure and holy God can make nothing impure, imperfect or unholy. Into this state we are reduced, according to the Scripture, by the transgression of Adam, for by this one man sin entered into the world, as well as death. As like produces like, so Adam must transmit those properties which constitutes his natural and moral likeness; all his posterity must resemble himself. Nothing else than a constant miraculous energy presiding over the formation and development of every human body and soul, could prevent the seeds of natural and moral evil from being propagated.—That these seeds are not produced in men by their own personal transgressions, is most positively asserted by Paul, Rom. v. 19. And that they exist before the human being is capable of actual transgression, or of the exercise of will and judgment, so as to prefer and determine, is evident to the most superficial observer, as in the propensities of children long before reason can have any control over passion. It is also demonstrated by the death of millions in a state of infancy.—It could not, therefore, be personal transgression that produced the evil propensities in the one case, nor death in the other.

A. P.

MISCELLANEOUS.

FALSE PRIDE.

It has always been a matter of regret with me, that false pride could not be made like theft, a criminal offence. It is the partner of about as many crimes as any other vice; for such I hold it be, at least some descriptions of it. It is much to be pitied, and generally leads to impropriety. How many honest men have been made scoundrels by the false pride of a foolish wife and extravagant family? It is a compound of ignorance, deception and envy, and the world is full of it. So long as it operates upon individuals alone, it is a matter of trifling consideration; but strange as it may appear, its influence strikes at the very root of a virtuous and flourishing community.

Does the successful merchant make his son a mechanic? Very seldom. Does the professional man make his son a mechanic? More seldom still. But does not the more fortunate mechanic make his son the guardian of cloths and calicoes? Why is this? Is the yard stick more honorable than the jack-plane?—the goose quill more dignified than the type? But unfortunately, the absurdity runs farther! Look back 30 or 50 years, and behold the barefooted adventurer at the present time rolling in wealth or suspending his annual income of some three thousand dollars per annum in manufacturing ladies of his daughters! Does he teach them the usual rudiments of housewifery? Very rarely. Is it because the heathful exercise of domestic duties is disgraceful? Oh no! False pride says 'it is ungenteel for ladies to work'—as it would tarnish the fair hands and fingers that bring such sweet sounds from the Piano, to dust the glorious instrument itself.

How extremely ridiculous is this illegitimate pride! Thousands of daughters, whose mothers have been raised in a kitchen, and their fathers in a horse stable, would feel insulted if they had ever made a loaf of bread, or washed out a pocket handkerchief! They would more likely prate about "society," "mixed company," and the dignity of their ancestors! A few years more roll round, and the thrifty and imprudent parent dies, and then comes the scrambled often to twelve divisions of his hard earned estate.—How small does a large fortune appear when apportioned to numerous heirs. The daughters must marry gentlemen, for pride dictates it; and gentlemen, of course, must squander their patrimony. And what has the parent bequeathed to society and his country?—Children raised in idleness, without the stimulant to add one iota to the general substantial prosperity of the community.

Can there be any doubt but honest labor is becoming more and more stigmatized? A grovelling imitation from the cellar to the garret! a spirit of extravagance in all classes! to indulge in which the most unprincipled means are resorted to! Let it proceed with the same rapid march that it has commenced, and it will be a stigma to earn your "bread by the sweat of your brow." Infect the country, the farmer, with the same poison that flows through our larger cities, and you make the country of Franklin a parallel to that of Montezuma!

With us labor is every thing! It is more precious than the mines of Mexico—more valuable than countless wealth. It is not only the foundation, but the main arch of our confederacy; unite education, and they form a tower of strength upon our liberties to remain forever. The precious metals of earth may exalt a nation to the highest attitude of transcient glory, but like the brilliant phenomena that illuminate the heavens, they dazzle but for a moment, and as in the case of Spain, sink into darkness and gloom. Not so with the labor of man—its glory is centered in the earth, and we behold it in the strides of internal improvement, the success of invention—the perfection of mechanical skill, and the inculcation of those exalted moral principles which give durability to our institutions, and raise mankind in their own nature and existence. Industry is the grand lever upon which this nation must depend for its continued growth, and indolence does not more retard its usefulness than false pride does to bring it into disrepute—just as the turning of a small valve makes powerless the mightiest engines.

From the North American.

THE ELOQUENCE OF DEMOSTHENES.

BY LORD BROUGHAM.

Appended to his lordship's sketches of public characters, is a volume of dissertation on a variety of subjects. Running over the table of contents, my eye was arrested by the "Dissertation on the eloquence of the ancients." After a rapid perusal of the dissertation, in which the noble author displays a comprehension of the whole subject, and a minute accuracy in detail, my eye was arrested by the last paragraph, which contains the most masterly and complete description of the eloquence of the great Athenian, which it has been my fortune to meet from ancient or modern pens.

I have read nothing which surpasses this closing paragraph, since my youthful enthusiasm was first kindled at reading the oration "De Corona."

Hereafter I may take a more extended notice of these volumes, and will close this with the wish that the dissertations may be read by every youth—yes, and by every full grown man in the land.

After an analysis of several of the orations of Demosthenes, the author adds:

"Such was the first of orators. At the head of all the mighty masters of speech, the adoration of ages has consecrated his place; and the loss of the noble instrument with which he forged and launched his thunders, is sure to maintain it unapproachable forever. If in such varied and perfect excellence, it is required that the most prominent shall be selected, then doubtless is the palm due to that entire and uninterrupted devotion which throws his whole soul into his subject, and will not even, no, not for an instant, suffer a rival idea to cross its resistless course, without being swiftly swept away, and driven out of sight, as the most rapid engine annihilates or shoots off whatever approaches it, with a velocity that defies the eye. So too, there is no coming back on the same ground, any more than any lingering over it. Why should he come back over a territory that he has already laid waste—where the consuming fire has left not a blade of grass? All is done at once; but the blow is as effectual as it is single, and leaves not any thing to do. There is nothing superfluous—nothing for mere speaking's sake—no topic that can be spared by the exigency of the business in hand; so, too, there seems none that can be added—for every thing is there and in its place. So, in the diction there is not a word that could be added without weakening, or taken away without marring, or altered without changing its nature, and impairing the character of the whole exquisite texture, the work of a consummate art that never for a moment appears, nor ever suffers the mind to wander from the object and fix itself on the speaker. All is at each instant moving forward regardless of every obstacle. The mighty flood of speech rolls on in a channel ever full, but which never overflows. Whether it rushes in a torrent of allusions, or moves along in a majestic exposition of enlarged principles, descends hoarse and headlong in overwhelming invective, or glides melodious in narrative and description, or spreads itself out in shining illustration, its course is ever onward and ever entire;—never scattered, never stagnant, never sluggish. At each point manifest progress has been made, and with all that art can do to charm, to strike, to please. No sacrifice, even the smallest, is ever made to effect—nor can the hearer ever stop for an instant to contemplate or to admire, or throw away a thought upon the great artist, till all is over, and the pause gives time to recover his breath. This is the effect, and the proper effect of eloquence—it is not the effect of argument. The two may be well combined, but they differ specifically from each other."

After this, no one will dispute his right to the place which the scholars, both of English and America, have assigned to Lord Brougham.

INSTANCE OF HEROIC CONDUCT.

The following instance of high minded self devotion which recently occurred in Florida, is related by a correspondent of the New York Star:

About the first of June last, Mr. Simeon Dell, a resident near Newnansville, in Atachua County, happened to be travelling home from a place called Alligator, distant 40 miles from the first named town, and stopped at a lone house on the road, with a view of remaining a few minutes to refresh his horse. He had been there but a short time, engaged in looking at a thrifty cornfield, when he was suddenly startled by the report of fire arms, and turning round discovered that the man who occupied the house, who was distant about thirty yards from him had fallen dead at the fire. At another glance he perceived near by a party of seven or eight Indians, without being discovered by them, and might have easily escaped under cover of the high corn; but recollecting that there was in the house a woman and two children, he hesitated not a moment what course to take. The Indians were advancing, and in going to the house he saw that his own person would be wholly exposed; he made a rush, however, and before he reached it was struck by two balls, one in the arm and the other in the breast, the latter of which nearly proved fatal. He succeeded in getting inside, hastened to close the door and prepare for defence, the family meantime exhibiting great terror and distress.

The following story of the affair is nearly in his own words, as related to the writer, by whom he was seen about the 10th of June with his wound yet green, but convalesing:

I determined, said he, to run the risk of losing my own life rather than go away, which I easily could have done unharmed, and leave that poor woman and her children to be sacrificed by the Indians. As soon as I had reached the house and closed the door, I seized an old gun, and putting in some powder, with great difficulty, from a bad flint fired her off at random, in order to let the enemy know that we had a gun, giving at the moment several loud whoops as an evidence of confidence. I had great trouble in finding bullets in the confusion, though I succeeded after considerable delay; but by the time I did, and re-loaded, the Indians had retired under cover of a cornfield, from which they had fired several rounds, whooping and yelling alternately. I got, said he, only a single shot at one of them, and he being mostly concealed in the corn, I had not a good view, and am not positive that I hit him. After remaining about half an hour making the most terrific yells and noises, not choosing to rush upon a house where there was a gun, they retreated, much to the relief of all, leaving us in safety, though the woman of the house had received through the crevices of the building, one or two slight wounds. When all danger was considered to be over, the tenants were removed to a neighbor's, as more secure, and Mr. Dell, though much hurt, had the satisfaction of realising that he had succeeded in preserving three defenceless and innocent individuals. Mr. D. is an exceedingly modest, unpretending man, a very worthy and respectable citizen, a member of the church, and of great benevolence as well as courage.

His manner of relating the above, as though he had done nothing more than what barely ought to be done by any man—the patience and willingness with which he bore the restraints of confinement, and the acute pain of his wounds was sufficient evidence of a nobleness of character and high-minded generosity which belongs only to the good, the humane and truly brave. An act like this, is to achieve more that is really great than heroes and conquerers have done, to win a name of high renown; the deeds of the one are heralded to the world, in all the pomp of a formal history, while bright and chivalrous acts like this occur, almost unnoticed and unknown in the walks of private life—unheard of perhaps, beyond the circle of the humble individual who seeks no trumpet to sound his fame abroad, but the simple consciousness of having done that which was demanded of him as a man, a patriot, and as a Christian.

MURAT CALLED TO HIS DEATH.

WHILST poor Murat was thus engaging the attention of his attendants with these important reminiscences, so uncontrovertibly true, the door of the chamber slowly opened, Giovanni Della Casa entered, and, with downcast eyes, announced that sentence of death was passed, and would be executed in half an hour.

Joachim beheld the speaker with perfect calm—not the slightest change was visible in his countenance—not for an instant did he lose his presence of mind.—He met the hideous features of this far more terrible of deaths with as much indifference as he had faced it when it was disguised under the trappings and the panoply of war. Taking in his hand the cornelian seal on which was graven his wife's image, he gazed on it, and then again dwelt on the miniatured features of his four children on which he dropped a tear. Desiring that the cornelian he then held within his hand might after death be taken from its grasp and given to his wife, and the miniature to be buried with him; he walked erect into the room of death, in which were drawn up, in double file, twelve soldiers. And upon this thrilling operation King Joachim stood, looking as though he were upon parade.

The proposal made to him of being blindfolded, he mildly rejected with a smile; then placing his right hand, which grasped the effigies of his family, upon his breast, he exclaimed, in a calm, clear voice, "Spare my face—aim at my heart?" Twelve muskets answered to the words, and sent twelve balls into the breast which had never harbored any other feelings than those of generosity, benevolence, and virtue.

The engraved cornelian and the picture were taken from his strong death-grasp. His mutilated remains, together with the portraits of his family, were buried in the very church which had been erected by his munificence.

Such was the deplorable and atrocious end of the illustrious warrior, whom death had respected in more than two hundred battles. He was in the forty-eight year of his reign over Naples.—*Maceroni.*

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,--------SEPT. 12, 1839.

☞Our paper will be issued every other week for some few weeks yet, to give time for the completion of our subscription list, and for other arrangements; it will then be issued weekly. Fifty-two numbers, however, will be furnished for the volume.

☞The editor is absent attending the sitting of conference now in session at New Lisbon.—He will be at his post in time to superintend the issuing of the next number. J. W. W.

Accident.—On Sunday morning the 1st inst. the body of Archibald M'Cann was found in the canal at this place. He was a resident of the country, but was seen in town a day or two previous, and is supposed to have became intoxicated, a practice to which he was unfortunately addicted, and in that condition to have fallen into the canal. J. W. W.

Com. Patterson, commandant at the Navy Yard, Washington city, died at his residence in that city, on the 25th of August. Com. Patterson distinguished himself in that memorable affair, the burning of the Philadelphia frigate, at Tripoli, and more recently, while in command of the Caroline on the Mississippi, previous to the battle of New Orleans. His loss will be deeply felt by the country, both as a public man and a private citizen. J. W. W.

We learn by the Louisville Journal that the Hon. James Clarke, Governor of Kentucky, died at his residence in Frankfort, on Tuesday, the 27th ultimo. Mr. Charles A. Wickliffe, Lieut. Governor, by law becomes the Acting Governor during the remnant of the term of his late Excellency. J. W. W.

A Mrs. Franks, of Malta, Morgan county, O., lost her life by the accidental discharge of a rifle in the hands of William Van Horne, of the same place. Mrs. Franks was sitting in the door of her dwelling nursing a small child at the time she received her death wound. The rifle was discharged while Van Horne was in the act of climbing a fence in pursuit of a chicken, and the ball passed through about three inches of wood before striking her. The ball lodged in her bowels and remained until her death, which occurred three days after. Every effort was made to prevent fatal consequences, but in vain. This is another warning to those using fire-arms. J. W. W.

Yellow Fever.—This dreadful disease is raging to some considerable extent, in the cities of Charleston, S. C., Augusta, Mobile and New Orleans. J. W. W.

We perceive by the proceedings of the town council of Hamburg, S. C., that "it shall not be lawful to bring any person that is known to be sick in the corporate limits of said town, without a special permit from a majority of council, under a penalty of five hundred dollars, for such offence, and that the Marshal is hereby ordered, and the citizens requested to report all violations of the above Ordinance, and that the above penalty be collected from such persons who receives and brings them into town." Is this right?—is it just? The distinction here made between the rich and the poor is uncalled for. Suppose the diseased person or his friends be not worth five dollars instead of five hundred, and a permit cannot be obtained from the council, should he be suffered to perish in the outskirts of the town? Or, if the five hundred dollars were paid, would that sum be a sufficient recompense for introducing disease, and perhaps death, among its citizens? J. W. W.

Florida.—Four canoes with Indians on board, were captured by the barges of the U. S. steamer Poinsett, on the 5th of August. Tuskuenago and Tiger-tail, two Seminole chiefs, and families, were among the prisoners. J. W. W.

Destructive fire at St. Johns, (N. B.)—By a letter received in New York, we learn that a most destructive conflagration devasted St. Johns on the 20th ultimo, which destroyed one hundred buildings on North Market wharf, Nelson street, (east side,) Dock street, (west side,) Market square, Prince William street and Union street. The destruction of property is estimated at about one million of dollars. Large amounts were insured at several offices in the United States and Great Britain. No lives lost. The fire of 1837 burnt down 115 buildings. J. W. W.

Martinique has again been visited by an Earthquake: two shocks of about 40 seconds each were experienced. J. W. W.

We learn by our late exchanges that France has agreed to recognise the independence of Texas. J. W. W.

"Hope I don't intrude," said a loafer, ven he popped head foremost into a bee-hive.

"Remember me," said a shark to the man ven he bit his leg off. J. W. W.

The following extract pleases us so much that we cannot keep from presenting it to our readers. Would that such times were to come again before our youthful days are passed, and gray hairs and tottering steps warn us that the silken cord which binds us to this beautiful earth will ere long be broken. We have read much about female courage, but we have never seen any thing that equals this:

"We have been often diverted at a tale of old times in New England—short to be sure, but to the point. It so fell out that two young people became very much smitten with each other, as young people sometimes do. The young woman's father was rich—the young man was poor, but respectable. The father could stand no such union, and resolutely opposed it, and the daughter dare not disobey—that is to say, she dare not disobey openly. She met 'him by moonlight,' while she pretended never to see him—and she pined and wasted in spite of herself. She was really in love—a state of 'sighs and tears,' which women oftener reach in imagination than in reality. Still the father remained inexorable.

Time passed on, and the rose on Mary's damask cheek, passed off. She let no concealment, like a 'worm in the bud,' prey on that damask cheek, however; but when her father asked her why she pined, she always told him. The old gentleman was a widower, and loved his girl dearly. Had it been a widowed mother who had Mary in charge, a woman's pride never would have given way before the importunities of a daughter. Men are not, however, so stubborn in such matters, and when the father saw his daughter's heart was really set upon the match, he surprised her one day by breaking out—'Mary, rather than mope to death, thee had better marry as soon as thee chooses, and whom thee pleases.'

And then what did Mary? Wait till the birds of the air had told her swain of the change, or until her father had time to alter his mind again? Not a bit of it. She clapped on her neat plain bonnet on her head, walked directly to the house of her intended, as the street would carry her. She walked into the house without knocking—for knocking was not then fashionable, and she found the family just sitting down to dinner. Some little commotion was exhibited at so unexpected an apparition as the heiress in the widow's cottage, but she heeded it not. John looked up, inquiringly. She walked directly to him, and took both his hands in hers: 'John,' said she, 'father says I may have thee.'

Let any pretty girl try us, if she dare! and she will find her *match!* J. W. W.

In presenting to our readers the following recommendatory extracts from our editorial brethren, we think, evinces *no* want of modesty on the part of the editor, or ourself, as *pro. tem.* Too much modesty is a bad recommendation, especially in a worldly point of view. Every public man, and every new measure, is first brought before the public by a *puff*, and alas! in a great many instances, many of them are sent to the shades of oblivion by the same means. May our guardian Genii protect us from such a fate. J. W. W.

We have received two new papers within the past week, "The Republic" from Springfield, and "The Recorder" from Zanesville, both of which we cheerfully add to our exchange-list, and introduce to our readers with pleasure. "The Recorder" is a handsome and well conducted imperial sheet, which is published at two dollars per year, by the Rev. C. Springer, editor and proprietor. Its miscellaneous selections evince taste and judgment, and an intelligent spirit presides at its editorial table. Its principal aim, we believe, is to espouse the cause of the Methodist Protestant church of the Western States; and in this work it will doubtless exert an influence similar, in kind and degree, to that of the "Correspondent" some years ago. Our old friend, Moses Lyon, of Cincinnati, thinks it the best Protestant Methodist paper in the Union, and in a matter of this kind he is pretty good authority.—"*Mail*," *Middletown, O.*

"*The Western Recorder.*"—We have received from a friend unknown, the 2d number of the first volume of neatly executed imperial sized paper bearing the above title, edited and published by the *Rev. C. Springer*, J. W. White, printer, at Zanesville, Ohio, on every Thursday, at $2 per annum if paid in advance.—The principal object of the Recorder seems to be, to "sustain the interest of the Methodist Protestant Church *in the West;*" yet it will give a general variety, suitable for family reading. The editor displays much ability in his editorial articles; and no doubt, will make the Recorder a valuable acquisition to that society in the west.—*Jeffersonian, Carrollton, O.*

We have been favored with the second number of a very neat imperial sheet, just commenced at Zanesville, Ohio, entitled "*The Western Recorder.*" The Recorder is principally devoted to the advancement of the Methodist Protestant church, but contains much interesting Agricultural and Literary matter, and in our humble opinion, is one of the best little papers in the West. We recommend it to all persons wishing to subscribe for a religious newspaper. It is edited by the Rev. C. Springer, and furnished to subscribers at two dollars per annum in advance.—"*Post,*" *Bloomington, Ia.*

Western Recorder.—We have received the first number of a paper bearing this title, published at Zanesville, Ohio. It is a sheet in the size and quality of the Olive Branch, edited and owned by the Rev. C. Springer, and under the patronage of the Pittsburgh and Ohio Conferences of the Protestant Methodist church.—We joyfully hail the appearance of this auxiliary, in the cause of Methodist reform in the west. We are personally acquainted with Mr. Springer the editor, who is well qualified for the place he has taken. He formerly edited the Methodist Correspondent. On a bare circulation of his prospectus, six hundred names have been sent in; and no doubt, but under the conduct of so experienced an editor and owner, the Recorder will entirely succeed and prove a noble Sentinel of Liberty in the Great Valley of the Mississippi. Mr. Springer, proposes to give the following character to his paper.—"The pages of the Western Recorder, will be open to the discussion of all moral questions.—It will give articles on literature, mechanics, agricultural,—an abstract of religious and political intelligence;—and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements, and prices current:—another portion to sustain the interests of the Methodist Protestant church, in the West. The Recorder will take a firm stand against clerical supremacy."—*Olive Branch, Boston.*

"*Western Recorder.*"—This is the title of a weekly paper recently started at Zanesville, Ohio. It is edited and published by Rev. C. Springer, of the Methodist Protestant church, and a portion of it is devoted to the interest of that denomination. It is got up in good taste, the selections are good, and from the number before us, we judge it will prove a good family newspaper. Terms; $2.00 in advance; $2.50 at the end of three months; $3.00 at the end of the year.—*Luminary, Fayetteville, N. Y.*

AGRICULTURAL.

Since our last we have made inquiry of our neighbors, some of whom have been practicing with lime manure for a number of years. They agree in saying that the principle suggested in Joseph Springer's letter is correct, viz:—That lime will keep wheat from ripening, and of course will hold it longer exposed to those diseases to which wheat is incident at that stage. And all theories and abstract reasonings must give way to experiment in matters of this kind. It is found to be best, upon actual trial, to apply the lime to corn land. It seems to benefit the corn immediately, without any draw back. And after a crop of corn and oats be taken from the limed field, the wheat should succeed. It will still be benefitted by the lime manure, but perhaps these circumstances less exposed to its deleterious effects. The richer the land, the more lime it will bear without injury. We should suppose from 30 to 80 bushels of slacked lime might, with safety, be applied to each acre any season, without endangering the crop; putting the less quantity on the thinner soil. If too much be applied, and particularly if it should be a dry season, it will fire the grain.

We have never, ourself, commenced the liming practice until this year. But we are surrounded by a lot of Pennsylvania farmers, who have been at it longer, and have applied more of it perhaps than any neighborhood in the Muskingum valley. Farmers from different parts of the county are visiting these old practitioners to learn from their experience. Liming, here, is found to benefit grasses, on the uplands, very extensively.

EXTRACT FROM AN ADDRESS

On the Silk Business—Delivered in the Court House, Lexington, Kentucky, on the 8th day of July, 1839, *by* S. R. Jones.

The first thing to ascertain in an inquiry relative to the practicability of the silk business in Kentucky, is whether our soil and climate are adapted to the growth of the mulberry—for all will agree that it is folly to attempt to raise silk worms, unless we can first raise a sufficient quantity of their natural food to gratify their voracious appetites. Experience has fully demonstrated the fact that no substitute can be found for mulberry leaves. The leaves of lettuce and other herbs, of the currant, lime, and elm trees have been tried but without success. Recently some one has claimed to be the benefactor of mankind by making the astounding discovery that the silk worm will actually eat salsafy, rather than starve to death! Other substitutes have been proposed, but all are equally futile. These foolish speculations have had a tendency to injure the cause; for coming, as they do, from those who are, by reputation at least, philosophers, they have created the impression in many minds, that our country is incapable of producing the mulberry tree. The reverse is the fact; in proof of which allow me to refer you to the isothermal relations existing between this country and China. By isothermal lines is meant equal temperatures in different latitudes of the same hemisphere; and North America is so similarly situated, in this respect, to China, that the mean annual temperature of any given latitude in one, will be found to be very nearly that of the same latitude in the other. For example, at Nangasaki, a silk growing city in the province of Kiusu, situated in North latitude, 32 degrees 45 minutes, the mean annual temperature of the warmest month is 87 degrees, Fahrenheit, of the coldest month 44, and of the year 61. In Augusta, Georgia, which is only ten miles further south than Nangasaki, the mean temperature of the warmest month is 83 degrees, of the coldest 46, and of the year 67—showing a difference so slight as to be unworthy of notice. Pekin and Philadelphia, are in the same latitude, and situated alike in other respects—the mean annual temperature of the former is 55 degrees and of the latter 54. Kentucky is situated between these two parallels, and, of course, cannot be an exception. Other instances might be adduced; but these are sufficient to show that China has no advantage over us in point of climate—nor has she in point of soil: for if the following, from an ancient Chinese author, be correct, and that it is we have abundant testimony in the fields and forests of Kentucky and Ohio, we cannot lack the proper kind of ground to grow this tree upon. "Every species of tree (says the author alluded to, in a work entitled Thoughts on Silk Worms) requires a particular soil, except the mulberry tree alone, which grows everywhere, and consequently there is not a single place in the empire, where silk worms cannot be raised." Having, therefore, both the climate and the soil, why may not we, too, in all *our* empire, cultivate the tree and raise the worm?

But we should not have made this comparison between the soil and climate of China and our country, were it not for the necessity of showing the whole grounds upon which our confidence is based. We have every testimony, independent of this, which an honest man can ask, that the mulberry tree will grow luxuriantly here. Already have the best varieties of China, and of every other country, been introduced among us; and a doubt no longer exists, in the minds of those who have examined the subject that they will prosper with us—and even should they not, we have native trees, which need no acclimation, and which, I fearlessly assert, are equal to any other variety in some respects; and superior to many other varieties in some respects. Seeing, then, that we have an abundant supply of native trees, and can cultivate successfully the best exotics, why are we so dilatory in commencing the culture of silk?

Many are the objections made against the business, as an *excuse* for an answer to the above interrogatory, but none, perhaps is more general, or has injured the cause more seriously, than one which we find in every one's mouth who is too much prejudiced or too indolent to give the subject a fair examination. It is the very fashionable cry of "Humbug, mania, speculation." But it scarcely deserves a passing notice, as facts can have no influence upon those who use it. It has been the fate of every improvement and improver, from the days of Noah to the present time, to be assailed by such convincing arguments as these. They are the *mobocracy* of the mind; and whenever any one is unable to suppose fact with fact, and argument with argument, he immediately *Lynches* his opponent by raising the hue and cry after him of mania, humbuggery—and thinks he has done honorable battle and gained a glorious victory. But as in the time of Noah, so now, these croakers shall be swept off by the very facts which they suppose; for truth must triumph at whatever cost.

Another objection, more specious, but probably not more injurious than the above, is that of the fearful, "I wish the cause success, (says one,) but I fear it cannot succeed. Some have already been injured by it; others may be. I, therefore, especially as my fears and hopes, for the success of the cause, are about balanced, will not lend it my influence, lest, peradventure, it might be said, that I counselled in a cause that led to loss in some." Very well, sir—we *beg* not your aid; but where would you now be, had all our fathers reasoned thus when throwing off the yoke of bondage? Would you be sitting in the council with the great, yourself, perhaps, the greatest? and looking to the highest honors in a mighty empire? Or would you be the vile slave of a slave, as vile himself as the meanest vasal that ere served a king? The latter in all human probability. In all great enterprises some must suffer. It ever has been so. It ever will be so. But the question is not, will one man suffer? but, will the great majority be benefitted? I, myself, have suffered much in this cause. But do I thence despair? By no means, for I see, not far distant in the future's mystic page, a rich reward in my country's wealth and independence, and I press forward; and shame on the fearful friend who falsely says, "I wish the cause success, but will not lend a hand, lest it should be said, I counselled in a cause that led to ill in some." The wishes of such friends are secret prayers for failure; and their open hopes, are covert deprecations for our ruin—for no mere man ever yet prophesied contrary to the latent wishes of his heart.

But it is not so much my business to answer objections against the silk culture, as to state facts and arguments in favor of it. I shall, therefore, proceed to consider another important question in this part of our inquiry, viz: Will the silk-worm prosper with us? This question has been answered already in the arguments adduced to prove the adaptation of our climate to the mulberry tree; for it can scarcely be supposed that a country so well suited to the production of the food, can be destitute of the peculiarities necessary to the growth of the insect to devour it. Nor is it reasonable to suppose that a climate so very like the native home of the silk worm, can be uncongenial to it. But here, as in the other case, we are not left to rest our confidence upon inferences drawn from a similarity of soil and climate, nor upon mere abstract reasonings: but we have facts, strong, innumerable, and stubborn facts, to prove, beyond the possibility of a doubt, even in the minds of the most sceptical, that the silk worm will grow among us—nay, that it will not only grow, but grow as large, and produce as much, as fine, and as valuable silk, as in any other country in the world. All that it asks at our hands is food enough, air enough, and room enough; and these are in the power of every one to grant. The silk culture is, therefore, *practicable;* and the next question is, *Is it profitable?*

In answer to this I will say that the culture of silk is not only profitable, but is capable of yielding a larger profit, according to the capital invested and the time employed, than any other agricultural pursuit. I do not here allude to the speculation in mulberry trees, for the market for these must soon cease, unless the leaves can be made profitable for feeding; but I allude to the growing of the silk worm, which will be a permanent business and much more lucrative than diving in the Persian Gulf for pearls, digging for gold in the mines of Mexico, or seeking diamonds on the shoals of Brazil.

In proof of this position, I need only refer you to the enormous profits that one single acre, properly set in Chinese multicaulis mulberry, and carefully husbanded in feeding, will yield in one year, as estimated by our correct and practical fellow citizen, E. P. Roberts of Baltimore, Maryland. "From our own experience (says he) we have no hesitation in saying that an acre planted in the morus multicaulis, will furnish leaves enough to feed one million of silk worms at the first feeding." Upon which hypothesis he thus calculates:

"One million of worms will yield 333¼ lbs. of silk, which when made into sewing silk will be worth, at $7 per pound, the lowest price $2333 33¼ Deduct the expenses of manufacture, as follows: 2 women or girls are competent to attend four machines, (Brook s) with the aid of four boys to turn the wheels. In six months with easy work these can convert in sewing silk 333¼ bushels of cocoons. I set down the wages of two women at $3 a month, which for six months will amount to $36; allow their board to be worth $20 per month, it will be $120. The wages of the boys at $5 per month.—$120, their board at 10 per month $240. Cost of two women, two months to reel the silk into skeins $52. Interest on cost of 4 machines, at $45 each, $10.80. Cost of cleansing, coloring, and doing up in separate skeins, if done at a dye-house, $249.75. Costs of feeding on morus multicaulis leaves $41.63. Now let us see how the account current will stand:

One acre of silk in account with cultivator,	Dr.
For wages of 2 women 6 months,	$36 00
" board of " "	120 00
" wages of 4 boys, "	120 00
" board of " "	240 00
" costs of two women to reel,	52 00
" interest on costs of machines,	10 80
" costs of cleansing, coloring, &c.	249 75
" cost of feeding,	41 63
" balance as per contra,	1463 15¼
Total,	$2333 33¼
One acre of silk in account with cultivator,	Cr.
By value of 333¼ lbs. of silk at $7 a lb.	$2333.33¼
By balance, as per contra, or clear profit of one acre in silk culture, the silk converted into sewing silk,	1463.15¼

This sum to be gained by usury, at six per cent. per annum, will require a capital of $24,385,89. A very high value, surely, for one acre of land!

But this, great as it is, is not all; for Mr. Roberts' calculation is based upon one crop only, per annum. Two, or even three crops of equal value, as has been clearly shown by incontestible evidence, may be raised off the same land, in the season—which, of course, would double or treble the profits and the capital necessary to equal it at six per cent. per annum. What an immense gain from ten square chains of land! and yet it is not only possible, but probable, nay certain; and can be realized by us, as it has been by others. The profits of ten acres, according to this estimate, will be from fifteen to forty-five thousand dollars a year, and who could ask more off so small a piece of ground? But this estimate of Mr. Roberts, sanguine as he is in it, is perhaps a little two extravagant for every season; and if we reduce it one half, which will certainly bring it within the average under any casualty, it will still show a greater profit than is produced by any other agricultural pursuit.

All, however, may not have the ability or the inclination to turn the products of their mulberry orchards into sewing silks or other still more valuable forms, and it may, therefore, be necessary to make a brief expose of the profits of a silk farm, the product of which is sold in the cocoon. It will be recollected that the yield of an acre is estimated at 333¼ bushels, which at $4 a bushel, the lowest market price for good cocoons is $1333.-33¼. Three hundred days work are amply sufficient to produce this quantity, which at seventy-five cents a day, (a fair average as most of the labor can be performed by children) is $225. $108¼ will cover all the incidental expenses, such as interest, transportation, &c., leaving a nett profit of the cultivator of $1000. This is the result of one crop only, in the season. Two or more crops, which I know to be practicable, not only from the testimony of others, but also from personal experience, will show a corresponding increase of income.

These calculations are all based upon the position that the ground is set in multicaulis trees of two years standing, four feet apart each way, and capable of supporting four hundred worms a tree each feeding. The land, too, is here taxed with all the labor of production, which, by most of our farmers can be done with forces which usually are entirely useless. This will, of course, make a difference in the result of our estimates, varying according to the different circumstances of cultivators.—*The Cocoon.*

For the Western Recorder.

Mr. Editor:—The habit of correspondents *Italicizing* the *best* of their ideas, or those which they wish particularly to impress upon the minds of their readers, forcibly reminds me of an anecdote of a poor sign painter. An individual having opened an house of entertainment for the accommodation of the travelling public, employed this painter to "show his genius" by portraying upon his sign-board the figure of a horse. The attempt was made, and after considerable labor the job was finished, but yet not to the entire satisfaction of the *artiste*, who, after viewing his performance for some time, was fearful lest the species of the animal should be mistaken; however, to make "assurance doubly sure," he wrote underneath—"*This is a Horse!*" This, I presume, is the case with some writers,—having, in their own opinion, conceived a splendid idea, but fearful that it may not be duly appreciated by their readers, they must have it in *italic*, which amounts to the same as the poor painter's writing "this is a horse." This is, generally, an useless practice, and one that is very troublesome to The Printer.

The Governor of Missouri has been fined five dollars for firing a pistol in the street contrary to the laws.

Ministering Angels.—A constable named Southarn at Newark, N. J. was soundly flogged and had his clothes torn from his back by a posee of Women, for attempting to prevent a man from beating his wife.

Instruction to Postmasters.—The following is an extract from a letter which the Post-Master General recently addressed to the Postmaster at Newport, R. I. to which we wish to call the attention of our subscribers:

"Postmasters may enclose the money in a letter to the publisher of a newspaper, to pay the subscription of a third person and frank the letter if written by himself, but if the letter be written by any other person, the Postmaster cannot frank it."

The State of Maine keeps a fortification and encampment on the Aroostook river to protect the timber on the disputed territory. At and near Fort Fairfield there are upwards of 16,000 tons of timber hewn, which would be exposed to thieves.

It is said that potatoes enough have been raised in Maine, the present season, to supply the whole United States, and the crops generally are of the most promising description.

The Last.—The Cleveland Herald says.—"About one hundred Ottawas of the Maumee, the last of the tribe remaining on this side of the Mississippi, arrived here in the Commodore Perry, on their way to the far west. We believe these are the last of the race in the State, except the Wyandots in Crawford county."

Appalling Statement.—From a statement made by a committee of the British and Foreign Sailor's Society, it appears that within the short period of four months, previous to April last, there have been, upon the most moderate calculation, two thousand and six hundred lives lost by the wrecking, stranding, foundering, &c. of vessels at sea!—or, on an average more than twenty-one every day during the period of four short months!

St. Louis.—The number of new buildings erected in St. Louis and its suburbs this season is said to exceed 1,200—about 900 of which are substantial brick or stone.

Quarrel.—A dispute is raging between Iowa and Missouri, about a strip of land of very great value, which threatens to be as troublesome as was that between Ohio and Michigan.

The people of Iowa have become insane about the matter, they are for imprisoning every Missourian who attempts to exercise jurisdiction. Missouri is desirous that Congress should adjust the matter. So it goes.—*Ham. Intel.*

We like to see a young man wear his old coat, until he can afford to buy a new one.

GERERAL HAMILTON.

The New York Express of Thursday, gives the following as a recollection of 1804:

"On the 14th July, General Hamilton expired at the country seat of Wm. Bayard, now at the foot of Bank street, on the North river. He fell in the duel the day previous with Colonel Burr. The city was thrown into great consternation. All classes, both political classes united in paying his memory proper respect.—The merchants, the members of the bar, the mechanics, all held meetings and adopted suitable resolutions. The stores were closed—all business was at a stand. The ships in port, including the French and British frigates, hoisted their colors half mast. The procession to the grave was comprised of all classes, in regular order. He was buried in Trinity church yard. His monument with his simple name and age may be seen on the side adjoining Rector street. A large and beautiful willow which shaded his ashes was recently blown down by the storm. The correspondents and whole proceedings of the causes and consequences, are given in the journals of the day, and occupy four columns. Governor Morris delivered the Funeral Oration in Trinity church. The grand jury found a bill of wilful murder against Aaron Burr."

EXTRAORDINARY DISCOVERY.

The Chronique de Paris relates the following extraordinary scene as having taken place at the court of Assizes. A youth of about nineteen was brought to trial for having broken a window of a baker shop and stolen a two pound loaf.

The President—"Why did you steal the loaf?"

Prisoner—"I was driven by hunger."

"Why did you not buy it?"

"Because I had no money."

"But you have a gold ring on your finger; why did you not sell it?"

"I am a foundling: when I was taken from the bank of a ditch, this ring was suspended from my neck by a silken cord, and I kept it in the hope of thereby discovering at least who were my parents; I cannot dispose of it."

The Procueur du Roi made a violent speech against the prisoner, who was sentenced to imprisonment for five years.—Immediately upon this a women, more worn down by poverty than age, came forward and made the following declaration.

"Gentlemen of the Jury twenty years ago, a young woman was seduced by a young man of the same town, who after deceiving abandoned her. Poor and distressed, she was obliged to leave her child to the care of Providence. The child has since grown up, and the woman and the seducer have grown older; the child in poverty, the woman in misery; and her seducer in prosperity. They are all three now in court. The child is the unfortunate prisoner whom you have just pronounced guilty, the mother is myself:—and their sits the father!" pointing to the Procureur du Roi.

THE RECORDER.

ZANESVILLE:

THURSDAY,-------SEPT. 12, 1839.

THE PHILANTHOPIST AGAIN.

We deposited our fourth number in the post office, on Thursday evening, on the Monday following we received one sent back to us, with the following note upon it;—"returned by the editor of the Philanthropist;" and our exchange from that office has also failed to reach us. The Dr. must be in a great pet with us indeed, and must entirely have lost his balance to act in this kind of style. We hope when he gets a little over his proroxism he will act more like a man; put us on his list of exchanges again, and favor us with the perusal of his paper. Dr. you will bear in mind, that in this matter, you began with us.—From this movement we take it for granted that the editor of the Philanthropist declines accepting our proposition, made to him in our last, for an exchange of columns, to further the interests of our respective enterprises.—The public can now see whose press is "pledged to silence." We shall here take the liberty to exhort the Dr. a moment, with one of his own editorials, taken from directly beside the article in which he attempts to stricture so smartly on us, in which he is giving it to a poor brother editor for having declined to publish any thing more on the anti-slavery question. Hear it Dr.

"The truth is, there is a vast deal more servility, than even the bread-and-butter plea will excuse. Few papers would lose, by their conducted assuming a more independent tone. It is an exaggerated cowardice that makes the press crouching and time-serving. The people are not so intolerant, as their timid servants imagine. The tyranny of public opinion in this country, is magnified. An editor writes an unpalatable article. Rebuked for his hardihood, by some three or four discontinuances, directly accuses the *public* of intolerance, when perhaps there are hundreds more of his readers, who though displeased with his sentiments, have never thought of proscribing him. The editor is to blame. He suffers himself to be put in terror by three or four foolish malcontents, and then to excuse his own meanness in yielding up his right of free utterance, would make the world believe that his readers are too illiberal to tolerate his occasional independence.

"O, for a race of free-souled editors! The press should be like the sun, pouring its penetrating light on all things. Its voice should be unfettered as the winds of heaven. Whatever can in any way affect the interests of the people, *that*, the people should know. More especially should they be guarded against ignorance on any question involving sacred principles and important results. And it becomes an imperative duty to the conductors of the press, when they perceive that such a question is misapprehended by the people, and the motives of those engaged in its agitation misunderstood, to open their columns for the rectification of error, unless they would expose themselves to the just charge of aiding in the perpetuation of popular delusions. And this they ought to do, whether a majority of their readers like it or not. In such a case, they owe allegiance to a higher power, than public opinion, —even to the God of Truth, who will hold no man guiltless that does not set his face against falsehood."

Now all this eloquent prayer "for a race of free-souled editors"! &c. &c. is a mere *humoug*.—Although the Dr., like a little gamester, is mounting and gaffing every editor who will not forsake his pathway, and hook himself to the car of the Philanthropist, to be dragged in its train, yet when he is called on to commit the interests of his paper to a subject of as much magnitude, as the history of the world will show, as any other subject whatever, he is as mum as any one in the land. Such a man deserves to be held up to the public odium, until he learns to behave a little more civilly among his neighbors. It is a pity that Abolitionists would not select men of a little more candor and moderation to conduct their public journals. A good cause often suffers in imprudent hands.

☞P. S.—Since the above article was in type, which was prepared for publication by the editor prior to his departure, we have received a number of the Philanthropist for Sept. 3. Whether the Dr. has, upon a "sober second thought," concluded to swallow his ire and continue the exchange, or whether the paper was sent us by a friend, we are unable to say. However, be that as it may, we would advise the Dr. to be calm, and for the future be careful whose *wool* he attempts to finger. This adviee we give as an umpire, being nowise interested in the affair.

J. W. W.

We refer our readers to the communication of J. H. Honour, in this No., in which they will see a statement of the condition of the Charleston church in regard to finance. We would again remind our brethren of their obligation as christians to aid their brethren, whom the Providence of God has so severely afflicted. We heard one of our wealthy and liberal members say it was his intention to give that church $100. Now is the time, my brother. We inform Bro. Honour that we shall speak to Bro. S. at the conference, in relation to the prospectus, and let him know, in a subsequent No., what he wishes done, &c.

CORRECTION.

Steubenville, O., Aug. 27, 1839.

Bro. Springer:—I find it necessary to request a correction of one item in my agency account, as published in the 3d No. of the Recorder,—viz: John Burns is charged with $10 as his subscription, and no credit given; whereas, it should be $25 subscribed and $10 paid. How the above error has happened, I am at a loss to determine; but I think if you will refer to my list, you will find it correctly stated.

Jer'h. Browning.

We referred to the list and find it exactly as published. We would recommend that all such documents as that, be read by copy before they are forwarded for publication; this would save the poor printer many a censure.

Our camp-meeting in the vicinity of this office commenced on the 30th ult. as advertised, and closed the following Tuesday. As the groceries and retailers were kept at a distance, the disturbers of such meetings remained with them, and gave little annoyance to the worship of God. General good order prevailed. The meeting, in a spiritual point of view, was very profitable on Monday. A high state of religious excitement pervaded the encampment, which continued till its close. Twenty-seven were added to the church, and about that number professed to obtain religion. Among the number is a considerable part of the youth of this neighborhood.

Our correspondent A. H. B. (see first page,) has placed at the head of Reformed Steam Boats, Capt. Dohrman, of Steubenville, who commands the Sandusky. We shall take the liberty to place next, Capt. M. Lucas, of the same place, who commands the Tremont. Both these captains are professors of religion, and kept the best of order on their respective boats.

COMMUNICATIONS.

Charleston, S. C., Aug. 19, 1839.

Rev. C. Springer—Dear Brother:—I cordially welcome the arrival of the Recorder, another able auxiliary in the cause of religious freedom, and by way of commencing, I send you five subscribers, with payment in advance for one year. Direct them all to this city, commencing with the first number. I always feel anxious to learn how our cause prospers throughout our wide spread country, and now I have a good opportunity of doing so, as I receive intelligence from various sections by means of the different papers published by the Church. First, there is the general paper, the Methodist Protestant, containing general information; and then the Olive Branch from Boston, the Letter-Press from Philadelphia, and last, though not least, the Recorder from Ohio: I give them all a hearty greeting, and peruse their contents with great satisfaction.

Our cause is gaining ground in this State, tho' our operations are much hindered for the want of ministerial aid. In this city we have had much to contend with, and our faith has been severely tried—but though cast down, we are not destroyed, and amid all our discouragements, our motto is "onward." You are aware that we sustained a great loss by the destruction of our house of worship by the great fire of last year, which had been erected at a cost of about $10,000, on which there remained, at the time of the fire, a debt of $4000. This was a serious disaster, but we ralied our energies, and determined to try again. Relying upon the assistance of our brethren abroad, conceiving that we had peculiar claims upon their sympathy and support, a case exactly parallel to ours not being likely again to occur—we contracted for the erection of a new building, determined that it should be one honorable to the cause of ecclesiastical liberty in this southern emporium. It has been completed at a cost of near $15,000, and will not yield for correct architectural proportions & neat appearance, to any church in the city, and I doubt if it is surpassed by any other Methodist Protestant church on the continent. Our expectations, however, with regard to contributions from abroad have by no means been realized. To be sure the subject was very spiritedly taken up by our church periodical, and particularly by a brother under the signature of "Timotheus," who proposed a plan, which, if acted upon generally, would have afforded us great relief, and have been burdensome to none, but from apathy, or indifference, or some other cause, but little has yet been done, compared with what was anticipated. Dr. Davies, who was last year in charge of the church, very kindly devoted a considable time in travelling in Maryland and Virginia, for the purpose of making collections, and Bro. Brewer did the same in Georgia; appeals were made in various ways for aid, and the whole amount received out of this city, up to this date, amounts to the comparatively small sum of $1267, viz: from Maryland $700—Georgia $337—Alabama $210, and Virginia $20. Still we do not despair. A meeting was held not long since to consult upon what further steps should be taken, when it was resolutely determined that *the debt should be paid*. The next question was—How? and the conclusion was, that if others could not, or would not help, to do it ourselves. We have obtained a loan from the State for ten years of $10,000, payable in annual instalments, with interest; and each member is to contribute annually as much as his circumstances will possibly allow, until the debt is liquidated. It may be many years before this is effected, but if God spares our lives and health, *it shall be done*.—We value our religious liberty at too high a price to suffer it to be destroyed for the want of money, even if, for the obtainment of that money, we are compelled to suffer many privations.

The Georgia conference, of which we are a component part, has not been able for the last three years to supply us with a preacher, in consequence of which we made application to the President of the Maryland conference for ministerial assistance, who procured for us the services of Bro. Wm. C. Poole. He remained fifteen months, and then Dr. Daniel Davies was sent to supply his place. At the close of the conference year we petitioned the conference to re-appoint him, but much to our disappointment, he was returned to us only for three months, at the end of which time he was to go upon a circuit. Great exertions were made to induce the President to continue him for the remainder of the year, but without effect—thus we had the prospect of being again left without a pastor, and at a time too when one was most needed, but by the untiring exertions of Bro. Davies,—to whom we are greatly indebted, and who will ever retain a high place in our warmest affections—we have succeeded in making arrangements with Bro. T. G. Clayton to become our superintendent.—But as we consider it somewhat hazardous for an entire stranger to come to the city at this season, we have thought it advisable to wait until he can come with perfect safety, in consequence of which we shall be probably without a superintendent for about three months. In the meantime the charge devolves on me, but having to attend to my worldly concerns during the whole week, without any intermission, I find it rather an ardous task to preach twice, sometimes thrice, on each Sabbath, and one night in the week, besides attending the other meetings to which we have always been accustomed, such as prayer meetings, love-feasts, leaders meetings, &c. &c.

Our church now numbers 180 whites, and 600 blacks. The public services are well attended, and our prospects are quite encouraging in a religious point of view. May the good Lord grant us an increase of zeal, fervent devotion, and unwavering faith, that the times of refreshing may come from his presence.

Your brother in the gospel,

Jn. H. Honour.

Woodsfield, O., Aug. 22, 1839.

Bro. Springer:—Two numbers of your paper, the Western Recorder, has reached this region of country. I am happy to state to you that the friends are well pleased with it, it being of convenient size, the printing well executed, and the matter excellent. Truly it will be very consoling to the friends of our church to hear of its spiritual prosperity through the medium of your paper. Misrepresentation can be detected, and the people know the truth as it is. I do hope you will have abundant success in your enterprise; that God will bless you in your undertaking, and that the preachers and people will do all they can to encourage its circulation.

We have just closed a protracted meeting near the town of Bealville. A good state of feeling was exhibited throughout the meeting; it grew better and better until it closed. Existing circumstances rendered it necessary to bring the meeting to a close at the very time when the prospects seemed the brightest. I think that the friends generally on this circuit feel encouraged to hold on their way, although there is no special excitement here at present; we do not infer from this that the people are not growing in grace. If the members of a church can only exclaim in the language of the Psalmist, and say,—"O! God, my heart is fixed," they have nothing to fear. I feel resolved to press onward toward the mark for the prize.—The labor on this circuit is tolerably hard, it being a two weeks circuit, the distance around about 100 miles, and twelve regular appointments, and the country very mountaineous; but still I feel more encouraged at the present to hold on than ever I have. Much, very much remains to be done in the vineyard of the Lord, and whatsoever our hands find to do we should do it with all our might. I often think of the old adage, that it is better to wear out than to rust out. If Woodsfield circuit ever dies, it will die a very slow and lingering death. But we are persuaded better things concerning it, although it has, and yet meets with the most inveterate persecution from without, and has several times been deserted by its pastors, yet there are a few who seem resolved to force their way through all opposition. I hope that my successor will discharge his duty toward this people, and that the people will try more than they have done to discharge their duty to him. This has been a very pressing season, but I think the coming season will bring with it a sufficiency to supply the wants of Itinerant ministers, if the people are only willing to give it. May the God of all grace aid us all in the discharge of the various duties assigned us, that neither preachers or people may bring a reproach upon the cause of Christ. Brethren pray for us.

Yours in the gospel of Christ,

Charles Caddy.

Steubenville, O., Aug. 27, 1839.

I have just returned from the camp-meeting held on Mt. Pleasant circuit.—The ministers in attendance were those travelling the circuit, Bro. G. Brown, Bro. Ragan, Bro. Ross, Bro. Maynard, Bro. B. Burns, and Bro. Heath, together with several of the unstationed brethren from the neighborhood of the meeting. There was, as is usual on such occasions, a very large concourse of people in attendance on the Sabbath; and at other times the congregations were quite respectable in point of numbers. I left the meeting on Monday afternoon, at which time the congregation had become considerably reduced by reason of a heavy rain. Some I believe had obtained the pearl of great price; and glory to the God of salvation was heard to resound through the grove from the lips of happy believers. Great solemnity appeared to rest upon the people, and great attention paid to the word preached. Blessed omens, these, of good. It is to be hoped that the seed sown fell in many good and honest hearts, that will bring forth fruit to the glory of God.

But in the midst of the solemn service, and the general good attention and good order, there were some disposed to treat all with contempt, and even to make the worship of God a source of high diversion!! How amazing the thought to a reflecting mind. The above reflections brings to my recollection a circumstance that took place under my ministrations in the year 1803 in Jefferson county, Virginia, in the vicinity of a small town called Front-Royal. I was then travelling what was called Winchester circuit; many sinners were turning from their evil ways to God, while many others were trying to harden themselves in inquity, so that some of the vile were setting their hearts to become still more vile. The circumstance referred to is, a man by the name of Owen Smith, who took the lead in religious exercises by way of mockery, had been engaged in reaping during the fore part of the day; after dinner Smith undertook to exhibit to his companions his skill in mimicry of the people of God, and to ape the exercises through which they sometimes were seen to pass; amongst other gestures and actions he fained to have lost all his physical powers and fell and lay as though he was dead. In this condition his companions streatched him out upon a bench, and fixed him as is done with persons really dead. Here an arrow was sent to the centre of his being. He rose up and remarked to his companions in wickedness, "boys we must quit this, we don't know how soon it may be the case in reality." But they turned it off with a laugh!!—"Fools mock at sin," but God had smitten him. They all went to the field to reap, but Smith could reap but a few steps; he retired to a shade at a short distance, and from the shade he was soon seen to take the direction of home—he got out of the field and there he died! The same evening about the going down of the sun a person of the neighborhood found him dead! The spirit was fled to appear in the presence of God! Awful thought! The undersigned was called upon a few days after to preach a funeral discourse on the occasion, and being informed of the facts in the case, you will not think it strange, Mr. Editor, that my mind was filled with wonder and amazement at such a request. The appointment was made to be attended to on a Sabbath afternoon; a large concourse was assembled, and never did I look upon such an awe stricken congregation. It did appear to me as though every soul was fully convinced of the reality of religion, and that the individual's death was a direct judgment of God, and a solemn and awful warning to all scoffers, not to trifle with things sacred and so dear to God and his people. Yours, &c.

Jer'h. Browning.

Mr. William Besant sr. and lady, who live about a mile from this office, and to whom we read this letter, and who were witnesses of this dreadful visitation, bear testimony to all the facts as here stated, except they say Smith's death was the next day after his profane mimicry of religion. They both agree in saying that it was one of the most alarming events, and that the public mind was more appalled at this severe retribution on scoffers of religion, than any thing that ever passed under their notice through life. "Behold ye dispisers and wonder and perish."—Ed. Rec.

Wellsville, O., Aug. 28, 1839.

Brother Springer:—As the present Conference year is almost at its close, and as I have not written any thing for publication from this station before, I think it proper, and perhaps it will be interesting to some of your readers, to give you a succinct account of our prosperity and present prospects in this place. You are no doubt aware of the discouragements under which this people have had to labor for the two past years, by reason of the injudicious conduct of their two former ministers. They have, however, sustained themselves very well under these embarrassments, and are now in a fair way to prosper. On our arrival here last fall we found the church much discouraged, and rather lukewarm,—their spirits depressed, and their exertions for Zion's prosperity considerably relaxed.—As the best means of recovery from this state of spiritual declention, we recommended deep humiliation and self-abasement, before God. And to our great joy we found the church willing, to come down into the dust at Jehovah's feet.—And after sometime struggling and *hoping* against *hope*, we were enabled to arise and proclaim the glory of God risen upon us. At our second quarterly meeting, the great head of the church poured his spirit upon the people. Stout hearted sinners bowed at the altar of mercy—and from the deep-toned anguish of their penitent hearts cried, *God be merciful to me a sinner*. About fifteen professed to obtain the pardoning benefits of the blood of the new and ever living covenant. And twenty-one united with us in church fellowship, most of whom are now in full standing, and evidence to the world that they have been with Christ. For these mercies and blessings we thanked God and took courage. At our third quarterly meeting God was present with his aid; sinners again bowed at His altar and prayed for pardon, and His mercy and power was displayed in the emancipation of some from the slavery of sin and satan, into the liberty of God's dear children. Ten more were added to the church, who still show themselves worthy of their relation to us.—Two others have joined, making in all 33 that have united with this society the present conference year. I would here observe that the number reported to Bro. Ragan, (as published in the first number of the Recorder,) by Bro. Browning, was not a designed exaggeration, but no doubt through mistake from some source.

Having now given you a brief account of our past success, I will proceed to say, that we have lived in peace and love with this dear people, and notwithstanding the unfavorable impressions that have been made upon the minds of many, (by the representations given of them by their former inconstant ministers,) respecting particularly the officiary of the church, yet we are now convinced that they are an agreeable, pious and worthy people, manifesting no disposition to tyrannize over their preachers; nor will they be tyrannized over. They are fully willing to submit to law founded npon gospel premises, but they detest usurpation, and will, if possible, put down the usurper. Our prospects here are still flattering, and if this station should be favored with an evangelical minister next year, I have no doubt but it will flourish, and this soon become a desirable appointment.

Our friends here are much pleased with the paper. We hailed the first number with joy, and wished for your success;—prosperity attend your efforts.

I am, &c. Israel Thrap.

Richwood, Union co., O., Aug. 22, 1839.

Dear Brother:—Our quarterly meeting closed on Tuesday morning at 2 o'clock. We had one of the best meetings I ever had the privilege of attending. Protestant and Episcopal Methodists cordially united in the whole of the exercises. The meeting was kept up with much interest from the beginning to the end. Fourteen were added to the church, seven or eight of whom professed religion, among them was my son John; seriousness appears to prevail among the people.

Yours, respectfully,

Wm. Hamilton.

Alleghenytown, Pa., Aug. 24, 1839.

Bro. Springer:—I have great pleasure in stating to you, that your paper is very well received here. I have heard no objections, but many *commendations*, not only here but in Pittsburg, and all around from wherever I have heard. I have no doubt but it will be well sustained. The people speak of paying for it, not grudgingly, but willingly. For my own part I am very much delighted with a medium of communication in the west of so creditable a character, and feel myself bound to support so far as in my power. I think a considerable number more subscribers can be had here by a little exertion.—I look for better times in the Pittsburg conference since I have seen the first number of the Recorder. I believe, since its appearance, it has already had a cheering influence upon the church.—Success and prosperity to your enterprise.

Yours, sincerely,

John Beatty.

Plainfield, O., Aug. 23, 1839.

Mr. Editor:—I send you the amount of the first volume of the "Recorder." I have received the three first numbers, and am truly gratified with the matter they contain, as well as the fitness of its arraignment. I am pleased with your course and sentiments in relation to politics as contained in your 3d No.; and am glad there is open such a medium for the diffusion of political and religious intelligence, and congratulate you, most cordially, upon your merited success.

Yours, with respect,

James Sturman.

A CONVERSATION BETWEEN REASONABLE AND INCONSIDERATE.

Reasonable. Good morning, I am glad to see you; I want to have some talk with you on an important subject.

Inconsiderate. Ah! very well; what subject is that?

R. Before I enter upon the subject I wish to ask you a question or two.

I. Go on; I will answer them if I can.

R. Do you not believe that the doctrines preached by the Methodists, are the pure doctrines of the Bible?

I. Certainly I do, and have always believed that I have been awakened under them, and blest a thousand times by the promulgation of those doctrines; and I believe that millions besides myself have been rescued from eternal ruin by the same means.

R. Do you not also believe, that the principles of church government adopted by the Protestant Methodists, are in accordance with the Bible and the rights of man?

I. Yes indeed: if I had not believed that I should never have joined the church.

R. Then, of course, you must believe that both ought to be supported and spread far and wide, and you know this cannot be done without money. And our cause is retarded very much for the want of efficient itinerant men, and as you have said this gospel has been a great blessing to you, I hope you feel like doing all you can in supporting our preachers.

I. Well, I do not believe in preachers preaching for money.

R. Do you believe that preachers ought to love their families, or that it is their duty to see that their families enjoy the comforts of life?

I. O! yes; I know it is said "if a man provide not for his own household, he has denied the faith," &c. But—but—I—I—I have so many uses for my money that—I—do not feel it my duty to give much in that way.

R. How much do you make clear on an average, yearly?

I. Well, I don't know, exactly; but I reckon several hundred dollars.

R. And how much do you give towards the support of that cause, yearly, which you say has been such a blessing to you?

I. Why, sometimes I have given two dollars a year, and sometimes more; but I have bought another farm, and I owe some for that, and I must pay my debts if the preacher gets nothing.

R. I am acquainted with more than one preacher that has sacrificed more than five hundred dollars, and at length, being involved, they had to retire from the work of the Lord to save their credit and provide for their families.

I. Well, but some of our preachers have got farms, and I do not believe that we ought to pay them any thing.

R. Nor I either, if we would go and work their farms, while they are giving us———

I. Yes, but some of them have boys that can work their farms.

R. This excuse will not do, unless you can prove that the boys are bound to support themselves and the rest of the family, and the father too, that he may serve the church for nothing. Would you be willing to leave your wife and children—comfortable fire-side—all your earthly business—brook the storms of winter—miserable roads—heat and cold—and travel from two to three thousands of miles, yearly, to serve the public for nothing, or even for the salary allowed to our preachers?

I. Ah! but I am not a preacher.

R. And can you prove that preachers ought to love their familes *less* than other men—that they are not bound to provide for their children as well as other men? Now, it does appear to me unreasonable and unjust for us Protestant Methodists, who have all had a voice in settling the salary of our itinerants, to call a preacher to serve us, and at the end of the year send him off with one-half or two-thirds of the amount which we agreed to give him.

I. Well, indeed, it does appear to be unjust. I now see that I am wrong, and I am glad we have had this conversation. I confess my inconsistency, and I will now propose a plan: Let every member, male and female, in each class, be requested to set down in a book what they are willing to give each quarter, and I will give my portion according to my ability, with the rest of my wealthy brethren, to make up the balance.

Let us stir up our leaders also to do their duty, not only to prompt the members, but to solicit aid out of the church, many of whom are only waiting for an opportunity to lend their assistance; the cause will then "go ahead," and we shall have preachers of ability to serve us.

A Listener.

STATISTICS OF THE PRESS.

The following information respecting the number of Newspapers, Magazines, and Periodicals published in the United States, on the 1st of July, 1839, is derived from the returns made to the General Post Office Department. We copy it from the Globe.

Maine,	41
New Hampshire,	26
Vermont,	31
Massachusetts, (at Boston 65)	124
Rhode Island,	14
Connecticut,	31
New York, (at N. Y. city 71)	274
New Jersey,	39
Maryland, (at Baltimore 20)	48
Pennsylvania, (at Philadelphia 71)	253
Delaware,	3
Dist. Columbia, (at Washington 11)	16
Virginia, (at Richmond 10)	62
North Carolina,	30
South Carolina,	20
Georgia,	33
Florida Territory,	9
Alabama,	34
Mississippi,	36
Louisiana, (at New Orleans 10)	26
Arkansas,	4
Tennessee,	50
Kentucky,	31
Ohio, (at Cincinnati 27)	164
Michigan,	31
Iowa Territory,	3
Wisconsin Territory,	5
Indiana,	69
Illinois,	33
Missouri,	24
Whole number,	1555

Of the above, 116 are published daily, 14 tri-weekly, 30 semi-weekly, and 991 once a week. The remainder are issued semi-monthly, monthly, quarterly, principally magazines and reviews. Many of the daily papers also issue tri-weeklies, semi-weeklies, and weeklies. Thirty-eight are in the German language, 4 in the French, and one in Spanish. Several of the New Orleans papers are printed in French and English.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

Received pay for the first volume of the Recorder.—Of William Reeves $10—for M. Rayne, W. S. Thorn, J. Stout sr., E. D. King and H. Stanford; of J. Herbert 10—for J. Needham, Geo. Crow, J. Kreps, J. Porter, and J. Jordon; of A. Perdieu 2; of D. Street 1, six months; of J. Brown 2; of B. Hull 2; of C. Woodruff 2—for W. Hurdle; of J. Wilson 2—for A. Moore; of R. Burkham 2; of S. Fairbank 2; of S. Hamilton 4—for S. Graham and W. Hamilton; of C. Powelson 2; of W. Dunn 2; of D. Vandenbark 2; of S. Rodman 2—for P. Wolf; of J. R. Tallentire 10—for L. Hays, T. Belknap, I. Lewis, N. Cash, and E. Lukins; of S. Johnson 2; of Arthur Patton 2.

Letters Received.—Of J. Herbert, W. Reeves, A. Perdieu, (send by mail at our risk,) "R," W. Hamilton, I. Thrap, J. R. Tallentire, (we examined the list you sent us, and M. B. Lukins is not on it; H. Foster's was sent to Eastport as ordered, but is now changed to Brick,) W. L. Baldwin and Arthur Parton.

POETRY.

[*Published by request.*]

THE FAMILY BIBLE.

How painfully pleasing the fond recollection
Of youthful connexions and innocent joys,
When blessed with parental advice and affection,
Surrounded with mercies and peace from on high;
I still view the chairs of my father and mother,
The seats of their offspring as ranged on each hand,
And that richest of books which excels every other,
The family bible that lay on the stand—
[*Chorus*]—The old-fashioned bible—the dear blessed bible—
The family bible that lay on the stand.

The bible, the volume of God's inspiration,
At morning and evening could yield us delight,
And the pray'r of our sire was a sweet invocation
For mercy by day, and safety by night;
Our hymns of thanksgiving with harmony swelling,
All warm from the hearts of the family band,
Half rais'd us from earth to that rapturous dwelling
Describ'd in the bible that lay on the stand.

Ye scenes of enjoyment, long have we been parted,
My hope almost gone—my parents no more,
In sorrow and sadness I live broken-hearted,
And wander alone on a far distant shore;
Yet why should I doubt a dear Saviour's protection,
Forgetful of gifts from his bountiful hand,
O, let me with patience receive his correction,
And think of the bible that lay on the stand.

As it may not be generally known that the above is a parody on Wadsworth's "Scenes of my childhood," we will here give it. Where is the man of advanced life, and separated from his nativity, that can read it without feeling?

THE OLD OAKEN BUCKET.

How dear to this heart are the scenes of my childhood,
When fond recollection recalls them to view—
The orchard, the meadow, the deep tangled wildwood,
And ev'ry lov'd spot which my infancy knew;
The wide spreading pond, and the mill which stood by it,
The bridge and the rock where the cataract fell,
The cot of my father, the dairy-house nigh it,
The old oaken bucket—the iron-bound bucket,—
The moss-cover'd bucket, which hung in the well.

That moss-cover'd vessel I hail as a treasure,
For often at noon, when return'd from the field,
I found it the source of an exquisite pleasure,
The purest and sweetest that nature can yield;
How ardent I seiz'd it, with hands that were glowing,
And quick to the white-pebbled bottom it fell,
Then soon, with the emblem of truth over-flowing,
And dripping with coolness, it rose from the well,
The old oaken bucket—the iron-bound bucket—
The moss-cover'd bucket arose from the well.

How sweet from the green mossy brim to receive it,
As pois'd on the cord, it inclined to my lips;
Not a full blushing goblet could tempt me to leave it,
Tho' fill'd with the nectar that Jupiter sips.
And now far remov'd from the lov'd situation,
The tear of regret will intrusively swell,
As fancy revisits my father's plantation,
And sighs for the bucket which hangs in his well,
The old oaken bucket—the iron-bound bucket—
The moss-cover'd bucket, which hangs in his well.

MISSIONARY.

TEXAS.

All that I shall write will pass under the review of the people of Texas, in the Christian Advocate which is read there—and I am sure that after all I can do with my pen, they will feel the deficiency and feebleness of my plea.

The whole length and breadth of the republic form our mission field in Texas. We are not, as in most other missions, limited to a sea port easy of access, or to a prominent frontier point, or to one or two interior posts, but such is the amplitude of the door opened to us, such the wants and calls of the people, that we, though few (but eight preachers,) have stretched our circuits over nearly all the denser settlements. They are scattered from the Sabine to the Colorado, from the Gulf of Mexico to the Red River.—Vast intervals lie between them unoccupied; but such is the universal readiness of the work, its importance, its peculiarity in every respect, that there can hardly be a choice of positions, the only tactics which apply to it are such as in military language would be expressed as taking the field by a *coup de main*. Hence we have thrown our plans over its whole superfices and located Ruterville, the seat of our literary institutions quite in the centre of the republic.

From these remarks it is perceived that the importance of this mission identified with the importance of the whole country itself. The character and destination of the latter must be taken into the estimate of the former.

What then my dear sir, is Texas?—What is her position among civilized states? What her co-operation with them in the great enterprises of the age, and the progress of the race? Of course these questions cannot be answered here: but a glance at her condition and prospects may not be irrelevant to my present purpose. Take then, the map of the republic and examine its geographical position. Nature has furnished it with boundaries. The Sabine river separates it from the United States on the east, the Red river on the north, the Rio Brasos on the South west, while on the northwest it stretches indefinitely, and will perhaps, reach California on the Pacific. Its coast commands the best ports of the Gulf of Mexico—the harbors of Mexico being all poor. The navigation of that important sea will be chiefly commanded by Texas. The western boundary is yet unsettled; but there can be no doubt that its determination will be chiefly with Texas herself. The most limited estimate we can make of the geographical extent of the country, must give it at least six times the area of the state of N. York. Now this young and noble land has been placed by God in a position the most felicitous for climate, soil, and navigation which the continent affords—the very niche of the western world where all that can conspire for the prosperity of a nation has centered. She is almost midway between the northern and western continents, the very key to the sea that mostly divides them—and in the immediate neighborhood with the coast trade of the W. Indies, her commercial importance cannot but be great. Then pass over her interior and breathe her balmy airs, and view the beauties of her unrivalled scenery, and the fertility of her soil. Whatever slanders may have been published about the inhabitants of Texas I have met with but one sentiment respecting its natural features—that of unmixed admiration. With the exception of very rare and brief changes from the northwest, the climate is uniformly brilliant and mild in the winter, and during the hottest part of the summer the most exhilerating breezes—sometimes increasing to moderate gales, sweep from the gulf over the whole land. In the interior the surface is gently undulating, forming what are called the rolling prairies—a species of landscape, when, defined as it is, by the line of beauty, covered alternately with groups of timber and the luxuriant grass and flowers of the prairie, with vast herds of cattle scattered over it, and frequent streams intersecting it, creates in the mind of the passing traveller the illusion that he has got into some land of beautiful visions—some Eldorado, where magic powers are operating to shape and color all things into beauty.—There is no sublimity, no rugged grandeur about the scenery of Texas; but the most bland, the most unmixed beauty, the very spirit of beauty seems breathed over her hills and dales and skies. I have rode day after day over these rolling prairies when every few rods would throw into view some new prospect on which the eye might rest with delight for hours, while my way has seemed to be through a cultivated flower garden, and the air was fragrant with perfume. Every traveller in Texas understands what these remarks fail to describe.—With these advantages, she possesses a richness of soil unsurpassed by the best specimens of the valley of the Mississippi, and adapted, by its various elevations, for the productions of all climates. In the south it affords luxuriant harvest of cotton, sugar, corn, &c., while in the higher lands of the north, it is adapted for the staples of our northern states.

No land excels it for the raising of live stock. Immense herds of cattle already cover the prairies and hogs fill the timber lands—slight enclosure for the calves of the former, and a pen for the latter, to keep them tame, are almost all the care requisite for them—for the pastures of the prairie, and the masts of the forests keep them ever fat. Men disabled to work make fortunes by their herds.

This is the physical character of Texas—a land in which are assembled all the facilities for enterprise, wealth and comfort, which are distributed over our western States, and which are attracting to them the population of the civilized world.

A land so goodly in all respects cannot but soon be populated. Accordingly, a population estimated at about 150,000, is already scattered over its extent, and some of our south western States are pouring themselves into it. During my stay there one of the most common objects was the caravans of emigration. All the products of the country are kept at a high price by the consumption of new comers. There is a spirit, too, which seems inspired by the very climate, favorable to the greatness of this peculiar country—an energy, a chivalry, and a generosity, met with no where else. The achievements of this young nation, in her numerous difficulties with her Mexican and savage foes, have afforded instances of valor and success which may be ranked with the best in our revolutionary history. She presents one of the best examples of that Anglo-Saxon energy, which seems ordained of God to accomplish the great destinies of the new world.

Now, my dear sir, this is the field of the Texas mission. Over this land of promise, ministering religion to these one hundred and fifty thousand souls are scattered your handful of missionaries. I have said that the claims of this mission are the most commanding of any on the whole map of our missionary operations. What are your missionaries doing there, sir? They are not holding up a dim torch on the frontier of a pagan realm, amidst darkness that may be felt. They are not laboring to undermine, by piecemeal, an immense fabric of social, civil and religious error, vast and ancient as the pyramids, like most foreign missionaries. Their work is in every respect peculiar—it has no parallel in extent and promise in the history of missions. The attractions of the selectest portion of our globe become suddenly disclosed to the world; an immense population flow into it, amidst the privations of a new land, and wars with savages and semi-barbarians, a new and independent nation rises up as by magic, civilized and free, and destined, without doubt, to carry the arts and religion of enlightened nations to the Pacific and Darien, as the States and Canadas are to Oregon and Behring's straits. In the midst of these sudden and unparalleled openings, behold your missionaries, laying the foundation of religion in a new and civilized empire, to whose future career no limits can yet be fixed. Not disputing the ground, inch by inch, with errors of previous creeds, but welcomed by the national voice—the whole field yielded to them at once—the arms of a nation extended to receive them. They are building up a new moral empire. The religion and education of a great State are consigned to their responsibility.—How is the christian world regarding this vast door of Providence? How is the Methodist church regarding it? Would we not suppose that scores of men would have been despatched to it, and the trump of gathering sounded through the land for a regiment more? How is it in fact? Eight missionaries stand there, the representatives of Methodist interests for missions! All the regular clergy of other denominations put together do not equal this number.* Perhaps not more than twelve or sixteen regular ministers of the gospel can be found in Texas! If a pagan nation should throw down its altars, and welcome the ministers of Christianity, committing to them the formation of its institutions of learning and religion, what a sensation would it produce through Christendom, and what a rivalry among Christian sects to be first in responding to the call! But is it less interesting to see a nation rise up at once, from nothing to freedom and civilization, and to the noblest hopes of the future, and lift the same beckoning hand to the Christian world?

Dr. Ruter was a man of sober observation. But how did he contemplate Texas? Read his letters—look at his plans. The fires of youth kindled again in his nerves, as he rode over her prairies and slept in her forests. In about six months he planned the whole settled part of the country into circuits, formed a great project for institutions of learning, travelled and preached night and day, broke down a noble steed, and at last fell himself, covered with the glories of a martyr, and gathering around his grave the regrets and tears of a grateful country. I shall lay before you other thoughts hereafter.

Affectionately, &c.

A. STEVENS.

Providence, R. I., July 20th, 1839.

*There are local preachers in Texas, both Methodist and others. By regular clergy are meant here, those whose employment is preaching.

From the American Biblical Repository.

CAMPBELLISM.

BY REV. R. W. LANDIS.

The translation of the New Testament adopted by the Campbellites.

[CONCLUDED.]

These inamadversions, and numerous others of similar import which might be made, show how little reason there is for attributing so much weight to the decisions of Griesbach, as is done by many. If Mr. Campbell's statements respecting his own acquirements in literature, and his qualifications as a translator, are to be relied on, he certainly knew better.

It may be said that many of the passages omitted by Mr. Campbell do not affect the great leading doctrines of Christianity. Be it so; yet the omission of passages which do not affect the vitals of Christianity, (when no sufficient reason is offered for their omission,) affords no excuse, and thus prepares the way for leaving out others that do. One of the finest geniuses and most accomplished scholars that America has yet seen, has well observed: "Only unsettle the popular mind as to any one object which it has been accustomed to venerate, and the perversion of it with regard to many others is much facilitated."*

But many of Mr. Campbell's omissions do affect the leading doctrines of Christianity. For besides the foregoing long list of passages, he has omitted a great number of others, (not one of which is omitted by Drs. Campbell, Macknight and Doddridge,) which go to support the doctrine of the Trinity, the proper deity of Christ, and the personality and deity of the Holy Ghost. The following are some of them:

I. *The Trinity*—This doctrine is supported by Colos. ii. 2, "To the acknowledgement of God, (i. e. the Spirit,) and of the Father, and of Christ." Mr. Campbell invalidates this proof by omitting the words "and of the Father, and of Christ." He omits also 1 John v. 7, a passage, of which, with the highest deference to the gentlemen who have abandoned it, I am bold to say, not only never has been proved spurious, but never can be, at least, on the ground now taken against it. It is granted freely, that in the very few *ancient Greek Mss.* that now exist, this text has not been found; and this is granting all that is demanded, so far as regards the premises. But what then? Why—therefore the text is spurious! This conclusion may be legitimate; but the connection between it and the premises is not obvious to my mind. In Diocletian's time, how many thousands of Mss. were sought out and burned; and in the great fire at Constantinople alone, A. D. 476, no less than 120,000 perished in the flames, and yet from the poor remains that now exist, this sweeping conclusion must be drawn! It is unnecessary here to dwell upon the point, but to us the argument does appear to be utterly irrelevant.

II. Mr. Campbell omits also the following proofs of the eternal power and Godhead of Christ.

It is well known that when the New Testament writers apply to Christ, from the Hebrew Scriptures, the name Jehovah, they always translate it by *Kurios, Lord*, thereby evincing that Jesus is Jehovah, as in Matt. iii. 3. Proofs of this kind Mr. Campbell has expunged in abundance: e. g. Mark ix. 24. 2 Cor. iv. 10. 2 Tim. iv. 1. In Matt. xxiii. 8, in the phrase, "One is your Master, even Christ," he omits the words "even Christ." From Phil. iv. 13, "I can do all things through Christ that strengtheneth me," he omits "Christ," and has it, "I can do all things through him who strengthens me." From Colos. i. 1, he omits the phrase "Lord Jesus Christ," and thereby strives to invalidate the evidence that "grace and peace" come from the Lord Jesus Christ equally as from God the Father. In Jude 4, "denying the only Lord God, even our Lord Jesus Christ." Knowing that the connective *kai, and*, must here be rendered by "even," he omits the word "God" from the text, and thus renders it: "Denying the only sovereign Lord, even our Lord Jesus Christ."

*Works of Dr. Mason.

He leaves out also the word "God" from acts xx. 28, (without giving the least notice in his appendix,) though Griesbach himself declares that he is not by any means satisfied with fully rejecting it.—The passage reads; "Feed the church of God which he hath purchased with his own blood." From Rev. i. 11, he omits that whole clause where Christ says of himself: "I am Alpha and Omega, the first and the last."

From 1. Tim. iii. 16, he omits the word "God." The text reads: "Great is the mystery of godliness, God was manifest in the flesh." Mr. Campbell makes it read, "who was manifest in the flesh." In our common version of the Bible, 1 John iii. 16 is thus rendered: "Hereby perceive we the love of God, because he laid down his life for us." Mr. Campbell has it "the love of Christ." The reader can judge for himself of the object of Mr. Campbell in this alteration.

Again, though Mr. Campbell is very willing to follow Griesbach in rejecting proofs of the Diety of Christ; he has not had the honesty to follow Griesbach where he has inserted new proofs of his Deity. As, for example, in the following instances: Acts xvi. 7, "They essayed to go into Bithynia, but the spirit of Jesus suffered them not." Eph. v. 21, "Submitting yourselves one to another, in the fear of Christ." Colos. iii. 15, Let the peace of Christ rule in your hearts." etc. These texts being parallel to others in which God is spoken of in precisely the same manner as they speak of Christ, furnishes an unanswerable argument in favor of his Deity; which those Unitarians who follow Griesbach are called upon to meet. But Mr. Campbell concluded that it was much the easiest way to omit these emendations altogether; though he has followed Griesbach in others, where he thought the Deity of Christ was not so clearly expressed. As e. g. Rom. xv. 29. 2 Thes. ii. 8, etc.

III. *The Holy Spirit.* Being sick at heart from witnessing the continued exhibitions of depravity, brought to view by the investigation on this subject, we have omitted many passages which should be dwelt upon in considering the preceding topic; and for the same reason, shall give but a few specimens under the present. Jude 20, Dr. Doddridge renders "Praying with the holy spirit;" Dr. Macknight, "Praying by the Holy Spirit;" but Mr. Campbell gives the Unitarian rendering, "Praying by a Holy Spirit." And this Mr. Campbell styles, the translation of Drs. Doddridge, and Macknight! 1 Thes. ii. 13, "Through sanctification of the Spirit;" Dr. Doddridge renders it; "By sanctification of the Spirit;" Mr. Campbell, for obvious reasons, prefers it, "Through sanctification of the Spirit." 1 Pet. i. 2, Dr. Doddridge renders, "By sanctification of the Spirit;" Dr. Macknight, "Through sanctification of the Spirit," but Mr. Campbell has it, "Through sanctification of the spirit." Thus does he endeavor to do away with the personality of the christian Comforter. Acts vi. 3, "Look ye out seven men—full of the Holy Ghost and wisdom;" Mr. Campbell has it, "Full of spirit and wisdom;" not only departing from Doddridge's version; but even going further than the Unitarian editors of the "Improved Version." For they not feeling at liberty to expunge the word "holy," enclosed it in brackets. But omitting other instances similar to the above; we will name one more, as a specimen of what Mr. Campbell has done in numerous instances where he feared that it might appear too glaring to omit the words altogether. Gal. iv. 6, "The Spirit of his Son." Drs. Doddridge and Macknight both give it the same rendering, and understand the Holy Spirit to be here referred to. But Mr. Campbell disposes of the Holy Spirit, by giving the passage the following expression; "The spirit of his Son." The alteration only consists in the change of a capital letter for a small one; but every one knows that whenever in the New Testament the word Spirit is employed to designate the christian Comforter, the first letter is a capital; though when used in any other sense it is not so.

We add but one word in closing this review. There can be no doubt that some few errors have crept into the Greek text of the New Testament. But then neither Professor Griesbach, nor any other person, is yet able, from the data which we have, to point them out with sufficient certainty to justify our rejection of any portion of Scripture. And what benefits can possibly accrue from attempting it; when it is admitted on all hands that no doctrine is essentially affected either by the rejection or retaining of all the readings of Mills, Griesbach, etc., put together. We object not to the collation and classification of Mss., but to the dogmatical conclusions attempted to be deduced from such collation. And how absurd is it for those, who maintain that the Greek text is in an unsettled state, to attempt to unsettle popular confidence in the best of all modern translations, by introducing into it the crudities of an unsettled text, at the same time that they admit that all the alterations contended for, do not affect, either pro or con, one solitary article of the Christian system.

From the Louisville Gazette, August 6.

SHOCKING MURDER.

On Friday last some persons from the neighborhood of upper Main street waited on Mr. Spurrier the Coroner and informed him that a negro man named Jem, belonging to Abyer or Abyger McGuire on the corner of Main and Clay street had been barbarously murdered by his owner on Wednesday and that a hasty and secret interment of the body had been made on Thursday morning before daylight. Mr. Spurrier instantly proceeded to the place of interment and had the body raised. It presented a shocking spectacle of inhuman treatment, the shoulders, breast, back, loins, &c. &c. being horribly scored, and the head and face bruised and smashed so that the brains oozed through at the broken parts of the skull just above the nose. Mr. Spurrier summoned a jury upon view of the body, and from what testimony could be procured it appeared that Abyer McGuire owned the slave, and for some reason not in evidence, on Wednesday last about noon ordered Jem into the stable to be flogged. When there he tied the negro's hands together and proceeded to flog him. After sometime he was seen beating the slave inhumanly with a leather strap; then with a halter rope knotted at the end and finally inflicting blows of the heaviest and severest kind upon his head, face, shoulders, breast, back, loins &c., continuing without intermission this inhuman treatment—some of the bystanders leaving the place in horror. At length it appeared, McGuire used his clinched fists to beat the negro about the head and face till he knocked him down, when the despairing creature being tied, and helpless from this savage treatment, implored for mercy in the most piteous supplications—but for him there was no mercy in this world. McGuire in reply to his supplication jumped upon the prostrate wretch, burying the heels of his shoes or boots in the negro's face and bruising his skull between the eyes so that the brains oozed out; and he then jumped on his breast when the unfortunate victim became senseless. Jem died early that evening and McGuire proceeded to have a grave prepared and next morning before day conveyed the body to the grave and interred it, immediately after which he rode off.

The Coroner's Jury found a verdict of 'murder' against McGuire and a warrant for his apprehension was issued but he has not yet been taken. He is a tall spare man of thin visage, sandy complexion, grey eyes, and dark hair, probably from thirty five to thirty-eight years of age, a native of the Green River country in this state; born within nine or ten miles of Bowling Green, where his family resided several years.

As this is one of the most appalling cases of inhumanity to a slave on record in this State, we hope for the honor of our city that no expense will be spared to insure the apprehension of the murderer. It is perhaps the duty of the city authorities to offer a large reward for the apprehension of both McGuire and his accomplice, Murphy.

SINGULAR INCIDENT!—THE TENNESSEE MOTHER.

Some few years ago, a young man left his home in the State of Tennessee, with a horse-drover, for the purpose of assisting in driving a lot of horses into the "Georgia Market." The Tennessean, meeting with a sale for *all* his horses, and not wishing to retain one to carry the young man home, advised him to remain in Georgia, and seek employment as a laborer on one of our railroads, stating that it was a profitable business, by pursuing which, he could not fail to make money. Naturally a simpleton, the young man followed the advice of the individual who should have protected him, and who had enticed him from his home, and sought employment on the Monroe Railroad. Here he was unfortunately thrown into bad company, and was induced to forge an order, amounting to about forty dollars, on a store for goods. The forgery discovered, he was indicted, tried, convicted, and sentenced to the Penitentiary for five years. His trial took place at the March term of the Superior Court, in Monroe county, 1838, since which time he has been confined to hard labor in the Penitentiary.

His mother, an old lady of sixty years, residing 450 miles from Milledgeville, hearing of the unfortunate condition in which her son was placed, and knowing the imbecility of his mind, with all a mother's affection, determined to proceed at once to this place, and to make his true situation known to the proper authorities. But alas! how was a poor and lonely woman, without money or friends, having no conveyance of her own, to get to Milledgeville? With a resolution truly heroic, this old lady determined to travel on foot the whole distance, accompanied by a sister ten years younger than herself, she actually started over mountain, stream, and valley; she walked the extraordinary distance of four hundred and fifty miles, to petition the Governor to pardon her unfortunate son. An investigation of the case induced the Governor to extend to the unfortunate youth a remission of his sentence, and we had the melancholy pleasure of seeing the old lady and her sister, together with the son, slowly wending their way back to their home in Tennessee. What will not a mother's affection accomplish! The incident, in the "Heart of Mid-Lothian," of Jennie Dean's trip to London, for the purpose of procuring a pardon for her sister, bears no comparison to this proof of filial affection on the part of a mother to an unfortunate son. May they all reach their homes in safety, and may the young man, under the guardianship of his aged mother, be retained, in future, from the commission of crime! The drover who enticed him from home, and left him to suffer in a land of strangers, knowing his imbecility, should supply his place in the Penitentiary.

Great rail road project.—Meetings have been held, and the project urged of constructing a rail road from Boston to St. Louis.

Red Ants.—A small bit of camphor laid in any place infested by these troublesome insects is said to cause them to make a precipitate retreat.

ADVERTISEMENTS.

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts.	-	-	1 copy for a year.
" $5	-	-	12 copies.
" 10	-	-	25 "
" 20	-	-	60 "
" 30	-	-	100 "
" 50	-	-	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can soiicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia.

O. WHITE,
BOOK BINDER,
NO. 104, MAIN-STREET,
ZANESVILLE, OHIO.
August 1, 1839. 2tf

Cattle for Sale.

TWENTY-FIVE thriving young CATTLE for sale Inquire at this office, 5½ miles west of Zanesville.
July 18, 1839. 1tf

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods, and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.
August 1, 1839 p2

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, OHIO, THURSDAY, SEPTEMBER 26, 1839. NO. 6.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.

No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.

To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.

All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.

A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Religious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

RECORDER will take a firm stand against Clerical Supremacy.

POETRY.

A SKETCH.

...as a fawn-eyed boy—and on his brow
...s light—the holy light of innocence.
...e eight revolving summer suns had shed
...h beauties on his head, and lavish, left
...ir golden glories in his shining hair—
...t in his smile went beaming forth the look
...t limners give unto the stripling Love
...herub-like, yet stamped as with the deep,
...l wisdom-pregnant smile of riper years.
... now the chiselled pouting of that lip
...arted with a childish eagerness—
...he is on the grass-grown, velvet bank,
...ll laving the long blades of ribbon grass
...t fringe its base—the meadow rivulet
...h noisy glee, dances and whirls along
...gladsome way, and shouts its tiny boast,
...l plashes beady foam on wave worn stones
...t breast its onset. And above his head
...listless willow stoops its graceful form,
...l sweeps its flowing branches in the stream.
...th eagerness—for he hath seen and loves
...grasp the glitter of the springing trout,
...e wary far than he—that scorns his snares.
...l now the pliant rod—the twisted line,
...rce hook and treacherous fly do compass its
...truction.

Ho! a bite!—pull, pull!—No fish—
the sharp barb high swinging with a sweep,
...nts with unyielding fang relentless hold
...n the cherub-fisher's *trowser seat;*
...ile the free trout goes giggling to his nook
...l leaves him there—with disappointed hope,
...ne.

Awhile he stood, in mute amaze,
...d watched with brow half merry—rueful half,
...e speckled gold and silver of his prey
...t should have been—receding 'neath the
... sedge—
...as but a pause—then lit his flashing eye
...th reason's fire—and his pale Parian brow
...shed for a moment up with living light—
...y gravy!" with a shout he cried—"*egad!*
... catched a gudgeon!"

MISCELLANEOUS.

"THE LAST OF THE MAMELUKES."

The Pacha of Egypt, I believe in 1818, ...embled together the whole corps of the ...melukes, as if for a feast; and having ...cured all egress except a steep and pre...itous descent over the sides of the ele...tion, (the platform of the Citadel,) he ...stroyed them with cannon and musket... They came, according to custom, in ...ir richest costume, with their finest ...ms, and bearing about them all their ...alth. At a signal given by the Pacha, ...ath burst forth on all sides. Crossing ...d enfilading batteries poured forth their ...me and iron, and men and horses were ...once weltering in their blood. Many ...ecipitated themselves from the summit ...the Citadel, and were destroyed in the ...yss. Two, however, recovered them...ves. At the first shock of the concus...n, both horses and riders were stunned; ...ey trembled for an instant like eques...an riders shaken by an earthquake, ...d then darted off with the rapidity of ...htning; they passed the nearest gate, ...hich fortunately was not closed, and ...und themselves out of Cairo.—One of ...e fugitives took the road to Ell Ezish, ...e other darted up the mountains—the ...rsuers divided, one half followed each. It was a fearful thing, that race for life ...d death! The steeds of the desert, let ...ose on the mountains, bounded from ...ck to rock, forded torrents, flew along ...e edges of precipices.—Three times the ...rse of one Mameluke fell breathless—...ree times he heard the tramp of his pur...ers, he arose and renewed his flight.—...e fell at length, not to rise again. His ...aster exhibited a touching instance of ...ciprocal fidelity; instead of gliding ...wn the rocks into some defile, or gain...g a peak inaccessible to cavalry, he ...ated himself, by the side of his courser, ...rew the bridle over his arm, and await... the arrival of his executioners. They ...me up, and he fell beneath a score of sa...es, without a motion of resistance, a word of complaint, or a prayer for mercy. The other Mameluke, more fortunate than his companion, traversed Ell Ezish, gained the desert, escaped unhurt, and in time, became the Governor of Jerusalem, where, at a later date, I had the pleasure to see him—the last and only remnant of that redoubtable corps which, thirty years before, rivalled in courage, though not in fortune, the elite of Napoleon's army.—*Damas.*

THE VILLAGE GRAVE YARD.

The following beautiful and eloquent extract is from the "Village Grave Yard," written by the Rev. Mr. Greenwood, of Boston:—

"I never shun a grave yard. The thoughtful melancholy which it impresses is grateful rather than disagreeable to me. It gives me pain to tread on the green roof of that mansion whose chambers I must occupy soon; and I often wander, from choice, to a place where there is neither solitude nor society.—Something human is there, but the folly, the bustle, the vanities, the pretensions, the pride of humanity, are all gone. Men are there, but their passions are all humbled, and their spirits are still. Malevolence has lost its power of harming; appetite is satiated, ambition lies low, and lust is cold; anger has done raging; all disputes are ended: and revelry is over; the fellest animosity is deeply buried; and the most dangerous sins are safely confined to the thick piled clods of the valley; vice is dumb and powerless, and virtue is waiting in silence for the trump of the archangel and the voice of God."

[Prize Composition by Miss ANNA S. LANSING, of the Second Department of the Albany Female Academy, for which the gold medal was awarded.]

Death the support of Life.—"There is neither waste nor ruin in nature:" for the smallest particle of matter in the vast universe around us, is composed of an infinite number of atoms which can never be destroyed, but being united to other atoms, constitute a new combination.—One plant decays, scatters its seed, and another springs up, perhaps more beautiful, in the place that it occupied. Even that which we look upon with disgust and horror "is a step in the progress of life." "The tiniest thing that moves—we behold decay moving through its veins, and its corruption, unconscious to itself engenders new tribes of life. There is not such a thing as beauty, there is not such a thing as life, that does not generate from its own corruption, a loathsome life for others." The dust which we trod under foot, has become a beautiful rose-bud, filling the air with its fragrance; or a lofty oak, imparting its shade to every thing around. It may have formed a part of the winged eagle, who hovers in regions of space, or the gigantic elephant which treads the earth with majesty. It may have tended to the formation of the human frame. How strange that the dust of the earth should give to the lip of loveliness its richest glow! to the ear its innumerable and exquisitely minute cavities! and to the eye its floating humors and its brilliant colorings! How strange that it should form the inclosure to the "divine spark" itself, the soul! That it should form the tenement of fancy that loves to soar in the unknown regions! The memory, that treasurer of the soul!—the reason, that weighs and balances, that guides and determines and proves!

Changes are continually going on among all living bodies. The drop of water that to-day sparkles in the diamond, gives its calm quiet beauty to the pearl, soon becomes the fleecy, heavy cloud, floating in the blue sky, and again descending gives freshness and health to the humble night flower, or the burning blush to the cheek of the early rose.—The snow flake of winter revives when the sun-beams are yellow and warm, and forms a gem for the spotless cup of the lilly, or is restored in the blossom of the jessamine.

Although change and decay are stamped upon all animated nature—although the flower which buds and blossoms in the morning, in the evening lies withered and dead—although the frame of youth which glowed with health and strength and beauty, lies in the cold dark sepulchre—yet there is one thing earthly which mocks death and decay—the never dying soul—that which alone attests man's divine origin—alone renders him superior to the brute creation. The soul is immortal, eternal. It undergoes no change, suffers no decomposition; but when decay has fixed its signet upon the human frame, it rises, like a Phœnix from the funeral pile. Free and unveiled, it embraces its divine destiny. The touch of death renews its youth.

Don't mention it.—A merchant having sustained a considerable loss, desired his son not to mention it to any body. The youth promised silence, but at the same time requested to know what advantage could attend it "If you divulge this loss," said the father, "we shall have two evils to support instead of one—our own grief, and the joy of our neighbors."

Beauty is worse than liquor—it intoxicates the holder and beholder.

From the Buffalo Journal, July 26.

PERILOUS ADVENTURE AT THE FALLS.

An occurrence of most thrilling interest took place at Niagara Falls yesterday afternoon, attended with imminent peril to the lives of two individuals, but resulting in a most happy and providential deliverance.

The new bridge to Iris island is planted in a frightful rapid where the current is from 20 to 30 miles an hour, and is only about 100 or 150 yards above the brow of the great precipice or perpendicular fall. A carpenter by the name of Chapin was engaged with others in covering the bridge, and while at work upon a staging about one hundred feet from Iris island, accidentally lost his footing and was precipitated into the rapids, and in the twinkling of an eye swept away toward the great cataract. Speedy and inevitable destruction seemed to await him; but fortunately he was not injured by the fall, and even in this most hopeless condition retained perfect self possession. Turning his eye toward the only point of hope above the fearful precipice; he succeeded by great dexterity in swimming, in effecting a landing upon a little island some twenty feet in width and length, the outermost of the group of little cedar islands situated some thirty or forty yards above the falls, and about equal distant from Goat island and the American shore.

There he stood for an hour, looking calmly and beseechingly back upon the numerous spectators who lined the bridge and shores, but with whom he could hold no conversation on account of the distance, and the roar of the rapids.

There is a man in the village of the Falls by the name of Robinson, of extraordinary muscular power, great intrepidity and withal an admirable boatman—and he was probably the only one that could have been found within 30 miles—generously volunteered his services to attempt reaching the island in a boat and bring Chapin off. A light boat of two oars, similar in construction to the White Hall race boats, was soon procured, and he embarked.

He proceeded with great deliberation & consummate skill darting his little boat across the rapid channels, and at the intervening eddies holding up to survey his situation and recruit his strength for the next trial. In a few minutes he neared the island, but a rapid channel still intervened, sweeping close to the island, and rendering the attempt to land very difficult. He paused for a moment and then with all his strength darted across and sprang from his boat—his foot slipped and he fell backward into the rapid current. With the spectators it was a moment of thrilling and breathless silence; his boat seemed inevitably lost, and himself in fearful jeopardy. Retaining, however, his grasp, on the boat he sprang in, and again seizing his oars brought up under the lee of the little island. All again felt a momentary relief, but still the great labor and hazard of the enterprise remained to be overcome. A cool head and a strong arm could only effect it—Robinson proved equal to the task. Taking his companion on board, in the same careful and diliberate manner, though at infinitely greater hazard and labor, they effected a safe landing on Goat island.

There the spectators assembled to give them a cordial greeting. A scene of great excitement ensued—the boat was drawn up the bank, and it was moved and carried by acclamation that a collection be taken upon the spot for Chapin and his noble hearted deliverer Robinson. It was a generous one and was thankfully received; but the reflection to Robinson that he has rescued a fellow being under such circumstances will be to his generous heart a much richer one. After the collection, Robinson and Chapin took their seats in the boat and were carried in triumph on the shoulders of their neighbors to the village.

The intense interest of the whole crowd was heightened by the presence of Chapin's wife and children, who stood on the shore watching with unavailing horror and agony what seemed his inevitable and fearful fate. With what devout and heartfelt gratitude must they have thanked God, when the husband and parent once more stood by their side safe and sound.

THE POWER OF VIRTUE.

If any young man would win to himself the hearts of the wise and brave, and is ambitious of being the guide and leader of them, let him be assured that his virtue will give him power, and power will consolidate and maintain his virtue. Let him never then squander away the inestimable powers of youth in tangled and trifling disquisitions, with such as perhaps have an interest in perverting or unsettling his opinions, and who speculate into his sleeping thoughts and dandle his nascent passions; but let him start from them with alacrity, and walk forth with firmness; let him early take an interest in the business and concerns of men, and let him, as he goes along, look steadfastly at the statutes of those who have benefitted his country, and make with himself a solemn compact to stand hereafter among them.

THE FALLEN OAK.

We noticed a day or two ago that a large oak tree had fallen among the tents, at the camp-meeting, near Cockeysville, on Monday last, and what was very remarkable, no one was injured thereby.—We have since learned that the circumstances connected with this fact are somewhat singular—some of which we will mention. It is stated that a very impressive and solemn sermon had been preached by the Rev. M. Morgan, the prominent points of his discourse being the judgments and mercies of Providence—after he had concluded, the Rev. Mr. Collins rose, to close the meeting, as is usual, with an exhortation, enforcing the remarks of the preacher; and while in the warmth of his feelings he portrayed the many mercies of the Deity, towards his large audience, and just as he finished a most feeling and impressive sentence—when not a footfall was heard, nor a breadth of wind to rustle in the grove—when all around seemed still as death,—suddenly the old oak gave away, and fell with a tremendous crash among the tents, but, as heretofore stated, without injury to any one, thus proving the declarations of the speaker that mercy is the darling attribute of the Deity. As soon as could be, the audience gathered round the fallen and broken oak, on the stump of which the Rev. Mr. Reese kneeled, and closed the meeting, with a grateful and appropriate prayer, during which, many a hearty response was heard.—*Balt. Pat.*

THE ALARM-WATCH.

A lady who found it difficult to awaken so early as she desired in the morning, purchased an alarm-watch. This kind of watch is contrived so as to strike with a very loud whizzing noise at any time the owner pleased. The lady placed the watch at the head of the bed, and at the appointed time she found herself effectually roused by a loud rattling sound.—She immediately obeyed the summons, and felt better all the day long for her early rising. This continued for several weeks. The alarm-watch faithfully performed its office, and was distinctly HEARD as long as it was promptly OBEYED. But after a time the lady grew tired of early rising, and when wakened by the noisy monitor, merely turned herself and slept again. In a few days the watch ceased to rouse her from her slumber. It spoke just as loudly as ever, but she did not hear it, because she had acquired a habit of disobeying it. Finding that she might just as well be without an alarm-watch she formed a wise resolution, that if she ever heard the sound again, she would jump up instantly, and she would never allow herself to disobey the friendly warning.

Just so it is with conscience. If we obey its dictates, even to the most trifling particulars, we always hear its voice clear and strong. But if we allow ourselves to do what we fear is not quite right, we shall grow more and more sleepy until the voice of conscience has no longer any power to awaken us.

From the New York Sunday Morning Atlas.

CONSUMPTION.

It is our duty to warn all—the young especially—from nurturing the destroyer. There is not a lady in New York, who, instead of guarding against its approaches, does not invite its attendance. The shoes alone, that are worn by the females of this city—the thin, slightly got up, brown paper soled, elegant slippers—made to show off a foot to the greatest advantage, are sufficient to carry off one-third of the whole female population.—Their shoes are no wise impervious to the weather. The first storm in which they are caught saturates them completely, and then, not unfrequently, the first seeds of consumption are sown.

Nor is it here alone that this dreadful malady is engendered among females.—Their nurturing, their education, and their habits, all predispose them to it.

Their nurturing first. Instead of wholesome plain food being administered to children of tender years, their stomachs are overloaded with sweets. Candies and comforts are sucked and eaten until a child loses its appetite, and then the fond parents wonder what ails the darling.—The cloyed stomach shows its condition, in the pale and sallow countenance; and youth, blooming youth that ought to be, first prepares the human form for consumption.

Education now comes in, is a hand-maiden to the nurturing system, and she plays her part with much success, to undermine a portion of the health that has escaped the evil effect of injudicious treatment. They must not run, jump, skip, laugh or romp—it is so unlady-like. They must not scamper up a hill at the top of their speed, inhaling the fresh air of heaven, giving freedom and firmness to the limbs—color to the cheek—health to the constitution—vigor to the frame—and dismissal to the family physician—it is so unlady-like to run. They must clip their steps as they do their speech. Tho' they were to die a thousand deaths, they must be lady-like. And thus to walk mincingly; to courtesy with a grace—the constitution receives a second blow. This itself would be almost sufficient to bring on consumption at once, and to prevent all further approach to womanhood, but that the dance, which is, providentially, necessary to the accomplishment of a lady, affords a little exercise some twice or thrice a week. But oh! how immeasurably preferable would this exercise be in the open air, to the music of the birds—the winds, or the ripling of the streams, than in a close room, a few feet square, to the scraping of catgut on an asthmetic fiddle!

At last the young lady having been one-third done for by her mamma, and one-third by her governess, she undertakes to have a finger in the pie herself, and to use up the remaining third part of her constitution on her own account.—She dresses to invite the approaches of consumption—she lies in bed of a morning until after the sun is up—the hot sun—and she cannot walk out at all, or if she does, enfeebled by her slothful habits, she is more enfeebled by the heat of the day; and we read eventually that this young creature, having completed her three stages, and having become ripe for death, at an early age is gathered by *consumption* and garnered in the grave.

There are thousands of young women in this city, who never saw that glorious sight, the rising sun, in all their lives.—They are content to see it in poem or romance; but the original, which beggars all discription, they cannot see, because it would interfere with their engendering habits.

BEAUTIFUL REFLECTIONS.

And even now, as he paced the streets and listlessly looked round on the gradually increasing bustle and preparation of the day, every thing appeared to yield him some new occasion for despondency. Last night the sacrifice of a young, affectionate and beautiful creature to such a wretch and in such a case, had seemed a thing too monstrous to succeed, and the warmer he grew the more confident he felt that some interposition must save her from his clutches. But now, when he thought how regularly things went on from day to day in the same unvarying round—how youth and beauty died, and ugly griping age lived tottering on—how crafty avarice grew rich, and manly honest hearts were poor and sad—how few they were who tenanted the stately houses, and how many those who lay in noisome pens, or rose each day and laid them down at night, they lived and died, father and son, mother and child, race upon race, and generation upon generation. without a home to shelter them or the energies of one single man directed to their aid—now in seeking, but not a luxurious and splendid life, but the bare means of a most wretched and inadequate subsistence, there were women and children in that one town, divided into classes, numbered and estimated as the noble families and folks of great, reared from infancy to drive most criminal and dreadful trades—how ignorance was punished and never taught—how jail door gaped and gallows loomed for thousands urged towards them by circumstances darkly curtaining their very cradles' heads, and but for which they might have earned their honest bread and lived in peace—how many died in soul, and had no chance of life—how many who could scarcely go astray, be they vicious as they would, turned haughtily from the crushed and stricken wretch who could scarce do otherwise, and who would have been a greater wonder had he or she done well, then even they, had they done ill—how much injustice, and misery, and wrong there was, and yet how the world rolled on from year to year, alike careless and indifferent, and no man seeking to remedy or redress it:—when he thought of all this, and selected from the mass the one slight case on which his thoughts were bent, he felt indeed that there was little ground for hope, and little cause or reason why it should not form an atom in the huge aggregate of distress and sorrow, and add one small and unimportant unit to swell the great amount.—*Murray.*

PRIDE.

The proud heart is the first to sink beneath contempt—it feels the wound more keenly than others can. Oh, there is nothing in language can express the deep humiliation of being received with coldness when kindness is expected—of seeing the look, but half concealed, of strong disapprobation from such as we have cause to think beneath us, not alone in vigor of mind and spirit, but even in virtue and truth. The weak, the base, the hypocrite, are the first to turn with indignation from their fellow mortals in disgrace; and whilst the really chaste and pure suspect with caution, and censure with mildness, these traffickers in petty sins, who plume themselves upon their immaculate conduct, sound the alarm-bell at the approach of guilt, and clamor their anathemas upon their unwary and cowering prey.

According to Nature.—An exchange paper says—"You'll as soon see a white blackbird, as a young lady who does not love babies, it's contrary to their nature."

Genuine Wit.—The printer of an eastern paper says that many of his patrons would make good wheel-horses, they *hold back* so well.

KNOWLEDGE IS POWER.

CURIOUS ILLUSTRATION.

At a meeting which took place the other evening for the purpose of forming a North London Mechanics' Institution, Mr. Basin Mongagu, as an illustration of the maxim that knowledge is power, related the following anecdote. He was walking a few months ago in Portland Place, when he observed a large crowd of people assembled, and found that it was in consequence of a large mastiff dog having a lesser one in his gripe. Several persons tried by splitting the mastiff's ear, and by biting and pinching its tail, to make it let go its hold, but in vain.—At last a delicate and dandified young gentleman came up, and making his way through the crowd into the circle, requested to be allowed to separate the dogs; assent was given amid jeers and laughter, when the dandy slowly drew from his pocket a large snuff box, and having taken a pinch himself, inserted his fingers again into the box, and withdrawing a large pinch deliberately applied it to the mastiff's nose. The snuff operated so powerfully on the animal's olfactory nerves, that it not only immediately let go its hold, but made its escape as fast as it could. The dandy was loudly cheered, upon which he stopped for a moment, and said, "gentlemen, I have merely given you a proof that 'Knowledge is Power.'"

POETRY.

The poetry of the imagination, altho' it may glitter more, is neither so rich nor so glorious as the poetry of the heart.—We have very few poets of the latter description. In childhood, and somestimes in youth, we are alive to the poetry of the heart. While the mind is pure and artless, devoid of every thing that can be termed sinful—free from anxious and corroding care, all nature appears to us very much as Eden appeared to our first parents. Every thing upon which we gaze seems to be good, and lovely, and beautiful. Our hearts claim acquaintance with all that meets the eye, and we feel deeply impressed by every little event which takes place around us. To such poetry as this, the beatified inhabitants of another world are no doubt awake; and as they touch their golden harps, their living souls seem to leap along the strings, and float on the harmonious notes, as they rise like incense to the great fountain of love and joy. In this world, poetry does not always mingle with devotion, though I believe that a poetic soul is generally impressed more easily with devout sentiments, than those minds which are of a more earthly cast. But I believe, that in the world to come, poetry and devotion become melted into one—that we are rendered keenly and acutely sensitive to all with which we hold intercourse, and thus our bliss becomes heightened into continual rapture. Indeed, the representations of heaven, which we have in the Scriptures, appear to favor such an opinion.

DANDIES.

As I was passing up Westminster street the other day, I was very much amused at a few remarks made by two little urchins who were trotting on before me. They had just met one of our modern dandies, whose upper lip was pretty considerably shaded with dark, grizzly-looking hair.

"What's that?" asked the younger lad.

"That," replied the other, "why that—that is—I don't know what they call it, but it belongs to the caravan."

"To the caravan?—why I wonder how it got lost? Perhaps it will bite!"

"No, I guess not; poke a stick at it, and see."

Not at all afraid, the younger did run after it, and coolly *poked a stick at it.*—"You impertinent little rascal," exclaimed the exquisite, turning suddenly round, "desist or I'll chastise ye, dam'me, if I will not!"

"Hey?" cried the astonished urchin.

"H-a-y!—yes, you low, vulgar, ill-born, illiterate scamp; I'll absquatulise you in an instant"—and elevating his foot to effect his purpose, and as ill-luck would have it, a seam gave way, and one leg of his pantaloons was entirely ripped apart.

"Burst his boiler! burst his boiler!" screamed the lads and away they scampered.

The best of the joke was, three ladies stopped by the way, and witnessed the whole affair, apparently with much gratification.—*Providence Jour.*

The following advertisement may contain as useful a recommendation for the fair sex of our day, as it did for those who lived more than a hundred years ago—and furnish, as it was originally designed to do, doubtless, an important hint to guide them in other respects:

"All ladies who come to church in new-fashioned bonnets, are desired to be there before divine service begins, lest they divert the attention of our congregation."

Most insects play on some instrument. The musquito plays an octavo trumpet; the doe bug a bassoon; the cricket turns a grindstone; and the bull-frog plays the Scotch bag-pipe.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,--------SEPT. 26, 1839.

☞The editor is again at his post.

We expect another hand in our office the last of this week; on his arrival we shall commence the weekly issue of our paper.

In consequence of issuing only every other week, and being absent from home so long, we are behind the news a little. *We* did not return in time to do justice to this number, but shall endeavor to do better in future.

In our absence from home abundance of rain has fallen. *We* have had no frost yet to injure vegetation of any kind. Pastures are much improved.

Though there are some cases of sickness, yet, the general health of the country is good.

We have tried our new wheat: it turns out well to the dozen, though we heard to the east of this much complaint on this subject, particular of wheat that grew on limestone land.

Wheat is 75 cents per bushel; the price of produce in general is going down.

The *Wesleyan* centenary subscription, in England amounts to more than one million of dollars, nearly half of which is already paid into the treasury.

The late Pittsburg Conference of the Methodist Episcopal church dissented from the resolution of the New England Conference, which recommended an alteration in the discipline on the subject of slavery, so as to exclude the unrepenting slave-holder from the church, by a vote of 86 to 5.

The mutineers, 39 in number, of the Spanish schooner Amistead, alluded to in the long article on the 3d page, have been taken to New Haven and lodged in the county jail, to await their trial before the United States Court on the 17th of this instant. Collections have been made to employ counsel on the behalf of the mutineers, so called. This whole affair is producing considerable excitement throughout the United States

A furious riot occurred a few weeks since in Marion, Ohio. Some Virginians claimed a negro as a fugitive from service, who was tried before Judge Bowen under the law of last winter regulating that subject, and released. After the negro was discharged, the claimants immediately seized him, and was for bearing him off in opposition to the law. *W*hen the citizens interfered on the behalf of the colored man, the assailants displayed their dirks, pistols and bowie-knives, and a dreadful scene ensued. The rioters were ultimately taken into custody, and the negro made his escape. Some injury was done but no lives lost.

The frost nipped the corn blades in the neighborhood of New Lisbon, about the 17th inst.

We have heard nothing of the Philanthropist, save the wandering number of the 3d inst., noticed by our pro. tem. editor, (which came pencil marked) since the issue of our fourth number. *We* regret exceedingly that the Dr. has suffered himself to get so out of temper with us as to withhold his medium of information. *We* should like to know of the Dr. if there be no way for us to compromise this matter.

A gracious revival of religion is now in progress in Alexandria, D. C., in which both the Methodist churches are sharing.

Benjamin Lundy, editor of the "Genius of Universal Emancipation," died on the 22d ult. in Illinois, of the bilious fever.

The Steam Boat "Great *Western*" of the Lakes, was recently consumed by fire in the Detroit river.

It is our intention to send a paper gratis to all the itinerant preachers in the west, and to any one elsewhere who will do any thing for our paper; they will therefore be so good as to let us know where they wish their papers sent.

We cannot attend to the communications of *M. Winans* until our next.

To some who have recently subscribed for our paper and ordered all the back numbers, we could not send the 1st and 2d, being out of them.

We have a number of communications on hand, all of which will be attended to in our next. Most of the receipts of moneys is deferred until our coming number.

The editor of the Marietta Intelligencer will do us a great favor to forward the Type for us in his hands, by the first safe conveyance, to Geo. Reeve & Son, Zanesville.

OUTRAGE AT PARKERSBURGH, VA.

On Friday last, Mr. David Putnam, jr. and Col. A. Stone, two respectable citizens of Harmar, Ohio, went to Parkersburgh to transact some business, and as they were about to cross the river on their return, were assailed by a mob, and both of them knocked into the river. Fortunately, they escaped without much injury, but from the spirit manifested by the assailants, there can be no doubt that they intended a most brutal outrage upon the person of Mr. Putnam. We do not intend to give the particulars of this assault, or comment upon it in the terms it deserves, until we learn whether the respectable citizens of our neighbor city give countenance to it. We cannot believe that they will consent that the odium of this disgraceful affair shall rest upon them. On the contrary, we trust they will use all diligence to bring the perpetrators to justice.

If Mr. Putnam has violated *law*, let him be punished by law. So long as we profess to be governed by laws, it is the duty of every good citizen to maintain their supremacy. We cannot imagine a case where a resort to *mob* law would be justifiable; and unless our Statute Book is to become a reproach, and the name of Liberty a by-word, every attempt to supplant law by violence should be promptly and fearlessly put down.—*Marietta Intelligencer.*

The New Haven Herald, of the 6th inst. says:—"One of the Africans of the Amistead, Simon, died yesterday in prison. He was brought here in a feeble state, and was one of the leaders of the revolt."

It is related of the African—Joseph, the leader of the slaves in the insurrection, on board the Amistead, that once he wanted the vessel anchored at sea, when the wind was ahead. He was told there was no bottom; he told them to let the anchor go; then seeing the schooner drifting, he jumped overboard, and was under so long, they thought he would never rise, but he at last appeared, came on board and said *there was no bottom to be found.* All the negroes of the sea coast of Africa are said to be excellent swimmers; in fact, may almost be called amphibious. They are often employed in searching after anchors, from which the cables have parted, and the depth to which they can dive, and the length of time they can remain under the surface of the water, is almost incredible.

AGRICULTURAL.

From Sinclair's Code of Agriculture.

ON DRAINING.

Relieving land from superfluous moisture, is one of the most important branches of husbandry. Unless that be accomplished, every other improvement, of which the soil is susceptible, must often be unsuccessfully attempted. Fortunately, no department in agriculture, has been of late more anxiously studied, nor with greater practical success.

The basis was laid by the discoveries of a farmer in Warwickshire, (Joseph Elkington,) who was led to it by an accident. It is a happy event for society, when such accidents occur to those, who have sense sufficient to avail themselves, of hints thus fortuitously suggested.

In discussing this subject, the following particulars shall be considered; 1. The advantages of draining; 2. The causes of wetness; 3. The sorts of drains commonly used; 4. The instruments employed; and, 5. The modes of draining the different soils, and the objects to which that improvement is applicable.

1. *Advantages of Draining.*

The benefit of draining is experienced, 1. In arable land; 2. In grass; 3. In woods and plantations; 4. In the improvement of wastes; 5. In the climate; and, 6. In various miscellaneous particulars.

1. *Arable Land.*—While land remains in a wet state, the manure laid upon it, is, comparatively speaking, of little use; —the seed sown often perishes;—the crops are sickly, and later of ripening;—and the operations of harvest are attended with uncertainty and danger; whereas, when land is thoroughly drained, it can be ploughed at any season with advantage,—it is easily managed, and kept clean at a moderate expense,—every exertion of good husbandry is attended with success,—it suffers less from the inclemency of the seasons,—the produce is generally ample,—the quality of the grain is excellent,—and the farmer will thrive, where his predecessor, cultivating a wet and undrained soil, was impoverished, or perhaps totally ruined.

2. *Grass Land.*—The beneficial effects of draining on grass land are also very great. Rushes and other aquatic plants soon disappear;—the finer grasses rise in abundance;—the pastures maintain a greater number of cattle and sheep;—the stock becomes superior in size and quality, and less subject to disease;—that destructive malady, *the rot*, so fatal to sheep, is prevented;—and if the land be mown, the hay produced, is so much improved in quality, as to be doubly valuable.

3. *Woods and Plantations.*—Draining is likewise an improvement of the most essential consequence to plantations, where they do not consist of aquatic trees. Land intended for planting forest trees, if wet, particularly requires draining; for the roots of trees, penetrating deeper than those of any other plants, the necessity of removing the *under*, as well as the surface water, is evident. Where this has been attended to, the plantations thrive, and the trees grow to a considerable size, much faster than can otherwise be expected.

4. *Improvement of Wastes.*—The improvement of wet moors, must be preceded by draining, stagnant water being injurious to all the valuable classes of plants. Care in particular should be taken, to render the land dry, before the application of lime, dung, or compost, otherwise the attempt will be ineffectual. At present, commons lying waste, are, in respect of drainage, in a most wretched state. The soil, in the first instance, absorbs as much water as it can contain, and the surplus water remains on the surface, in a stagnant state, highly injurious to the healthiness of the neighborhood.

5. *Melioration of Climate.*—By the removal of stagnant water, and the prevention of noxious exhaltations, the climate is rendered more healthy and genial, both to animal and vegetable life. Indeed since the introduction of draining into this country, agues, and other similar distempers, occasioned by the humidity of the soil, and the consequent impurity of the atmosphere, have been prevented, in a great measure, and the general health of the inhabitants has been greatly improved. Much water is discharged into the atmosphere, by spouty land, through the aquatic plants and coarse herbage which it carries; and it is a curious and important circumstance, in an experiment recorded, that while the air immediately above a wet soil, was only 57 deg. of Frahenheit, the dry part of the same field, and of a similar soil, was about 100 degrees.

6. *Miscellaneous Advantages.*—The drainage of one tract of land, may likewise furnish water by which the accommodation of another may be promoted for various useful purposes, as, for irrigation;—for mills, and other machinery;—for supplying houses, ponds, enclosures, canals, or artificial navigations. By peculiar modes of applying the arts of draining also, the quantity of water found in mines and quarries, may be diminished, either by cutting off the resources above, or by letting down that which often impedes their working, into a porous stratum below.

On the whole, there is no means by which the value of land can be advanced, or from which, when usefully applied, so many advantages can be derived, at a moderate expense, as that of draining.—The owner is benefitted by an increase of rent; the occupier, by that of produce; and the public by being thus supplied with greater quantities of the most essential commodities, and by having a source of useful employment furnished to the laboring classes of community. Unfortunately, both in England and Scotland, the greater part of the counties stand more in need of draining than of manuring, there are very few districts where a knowledge of this essential means of improvement, is so general or so perfect, as it ought to be.

To succeed with any prospect of success in the art of draining, it is necessary to ascertain the causes which produce wetness in land, and the different appearances which, according to soil and situation, it assumes. These causes are, 1. Surface-water; 2. Soils absorbing and retaining a superabundant quantity of moisture, either from their own texture, or the quality of their subsoils; 3. Land springs from surface-water; 4. Springs from adjacent water; and, 5. Back-water from ditches or ponds.

1. *Surface-water.*—On clay soils, wetness is commonly produced by surface-water. These soils are of different kinds, varying both in their color and texture; but they all possess, in a greater or smaller degree, those adhesive qualities, which retain the water that falls upon the surface, until it is either drawn of by art, or exhaled by the sun and the atmosphere. Such soils, therefore, require the aid both of surface and of under drains, to relieve them from superabundant moisture.

2. *Absorbing Soils.*—Loamy soils absorb water freely, and swell with it.—They usually retain, however, a greater quantity than is necessary. This is particularly the case, when they have a strong and impervious subsoil, through which no water can penetrate. As this surplus quantity is highly injurious to vegetation, it ought to be got rid of. Sandy soils, on a retentive bottom, also require draining, the water as it cannot descend lower, being lodged in the upper stratum; but there is seldom a necessity to go deeper than a few inches, into the clay, on which the upper soil is incumbent.

3. *Land Springs.*—In many cases, soils are greatly intermixed, and changes of sand and clay, or substances that are porous and retentive, will be found in the same field. Draining, in such cases, is attended with more difficulty, and requires more skill, than where the surface, and internal strata are thick, and regularly disposed. The means by which this can be best effected at a moderate expense, is to ascertain the quality of the soil by examining its produce. The porous soils collect reservoirs of water, which augment in times of rain, to the full level of the surrounding clay, from which it bursts out, and forms a kind of temporary spring, which renders the land over which its flows, wet, and unproductive. It then perhaps is absorbed by another porous stratum, and produces similar effects. Formerly, this mischief was endeavored to be remedied by small drains, made over the whole field, which seemed thus to be equally affected; but by cutting a trench, from the nearest and lowest part of the field to be drained, up to the highest and most distant sand-bank, in such a direction, as to pass through the intermediate sand-beds, the soil is radically cured. Besides these main drains, however, side-cuts are often necessry.

4. *Springs from subjacent Waters.*—A knowledge of the causes, and the nature of springs, arising from subjacent water, is so closely connected with the principles of draining, that it is necessary to explain it at more length. The earth is known to be composed of various strata, which, being in their nature and quality of opposite consistence, have acquired the distinguished names of *porous* and *impervious.* Sand, gravel, calcareous earths, and various kinds of rock, the parts of which are separated by frequent clinks and fissures, are denominated *porous* soils;—clay, shale, till, and certain kinds of gravel, with a mixture of argil laceous and cementing particles in their composition, and rocks of a solid and compact nature, and without fissures, are the principal strata that resist the admission of water, and are thence termed *impervious.* It is evident, therefore, that springs must originate from water falling, either in the shape of rain, or dew, or the melting of snow and hail, upon such porous and absorbent bodies; and that the water subsiding downwards, until it is obstructed in its passage by these impenetrable subtances, there forms reservoirs of considerable magnitude, which afterwards burst forth in all those different appearances which are met with. Thus springs are formed, the strength of which must depend upon the extent of high ground which receives and retains the rain-water; the size of the reservoirs, and the supply they furnish.

5. *Back-Water.*—A frequent cause of wetness is, the stagnation of water in the ditches that surround fields, particularly such as lie in the upper side of the enclosure, where the water, being confined, finds its way downwards into the open parts of the subsoil, and oozes out to the surface, forming, in wet weather, all the appearances of, and producing nearly the same effect as, a natural spring. Water conveyed in a drain, or small stream for mills, or confined in a mill-dam, or pond, has often the same effect. Where this happens in drains, the stagnant water should be removed, by giving more depth or declivity, to the ditch in which it lies. Where a dam occasions the mishcief, a cut should be made on its lower side, to incercept any water that may ooze through it. Old marl-pits full of water, and cattle-ponds improperly constructed, sometimes occasion this sort of mischief.

3. *The Sorts of Drains commonly used.*

There are four sorts of drains: 1. The open; 2. The covered; 3. The arched; 4. The vertical, or pit drain.

1. *Open Drains, or Ditches.*—These often answer the double purpose of conveying superfluous water and of enclosing the fields; though they certainly make a hazardous and inconvenient sort of a fence, without the addition of a bank a hedge, or a railing.

In cultivated land, where the ridges are of a proper length, breadth, and height, and the furrows of an adequate depth, and skilfully directed, much surface-water may thus be carried off; but where the country is flat, and the soil peculiarly strong, a complete drainage is absolutely essential, as the basis of its future improvement. The mode practised in "*the Carse of Gowrie,*" a district in Scotland, containing about 30,000 acres of rich clay and loam, has been attended with such great success, that it may be proper to explain it, as the same system may be applied to all tracts of clay similarly circumstanced.

1. The proprietors, by mutual consent, fixed on the most eligible lines for cutting long drains from fifteen to twenty feet deep, (provincially *pows,*) resembling small canals, for conveying the water collected in them, to the adjoining river. 2. Ditches of smaller size, were next drawn, surrounding and intersecting the farms, as so to serve for divisions of the different fields, the water of which they collected, and emptied into the large drain or *pow.* The depth of these ditches was seldom less than four feet; their width at top, six; and at the bottom, from one, to one foot and a half. 3. Where the fields are of an uniform level surface, the common furrows between the ridges, if sufficiently clear, will keep the ground dry; but as fields are seldom without some inequalities the last operation, after they are sown and harrowed, is, to draw a deep furrow through every hollow in the field, in such a direction, as to communicate with the other furrows that divide the ridges, and with the ditches at the extremities of the enclosures. These cross furrows, (provincially *gaws* or grips,) are opened by the plough, but widened, cleared out, and shaped by the spade, to enable them to discharge the water freely. To keep them clear, is a very essential part of the clay farmer's attention. The effects of the system of drainage, above described, are such, as to render the land so free and tender, that half the labor prepares the ground for the crop,—less seed is necessary,—less manure is required,—and, as neither drought nor damp have any imperious effect upon the soil, an abundant crop may be expected in all common seasons.

The necessity of making these *water-cuts,* or furrows, in wet fields, as soon as the plough leaves them, is strongly inculcated, as essential for the future dryness and fertility of the land. The cuts ought to be frequently examined, more especially after the melting of snow, to see that no impediment prevents the free passage of the water.—The cutting of water-furrows, ought likewise to be carefully attended to, after spring ploughing, to prevent water from lodging in any part of the field, however wet the weather; and for that purpose, the head-lands should be cut through, where necessary, that water arising from any sudden flood, may have a free passage. The spit of earth dug out of the water furrows should be laid on one side, opposite to the rise of the land, to prevent overflowing, and all the loose mould carefully shovelled out. This simple operation of *water-furrowing,* is attended with such beneficial consequences, that wetness may often be removed by such means alone, without the aid of additional drains; while the omission of it, may not only lessen the crop, but injure the soil for many years afterwards.

Water-furrowing is likewise of great advantage, in pasture fields; and the cuts, or furrows, ought to be carefully scoured out before winter. The water is thus prevented from lodging and soaking into the soil;—which is then less likely to suffer from poaching;—and the roots of the grass not being chilled by superfluous moisture, will necessarily come forward earlier in spring.

In some districts, open drains are made and turfed to the bottom, so that there is no loss of herbage. No water ever stands in these drains, and a part of a county, (the Coventry estate in Worcestershire,) that half a century ago, was mere morass, has now become, by means of these drains perfectly dry, healthy for sheep, and fit for cattle. Mr. Johnstone recommends that these drains should not be ploughed with the rest of the field, but should always remain in grass; for if loosened by the plough, the sides might be washed down, and the shape destroyed.

It is a general rule regarding open drains, with a view of giving sufficient slope and stability to their sides, that the width at top, should be three times as much as that which is necessary at the bottom, and in case of peat-mosses, or soft soil, it should be still more. In regard to the fall or declivity, it should be such as to allow the water to run off without stagnation, but not with so rapid a motion as to injure the bottom.

In all drains, it is a rule to begin at the lowest place, and to work upwards, and point out the level. This enables the laborers also to work in coarse weather, and prevents their being interrupted by wet, so early in the season, as otherwise might happen.

It is much recommended to all farmers, in low and moist situations, frequently to perambulate their farms, for the purpose of examining the state of their drains, and discovering every obstruction; nor ought even the trace of the mole, crossing an open drain, to escape their notice.

(*Concluded in the next number.*)

FOREIGN NEWS.

ENGLAND.

The Great Western steamer, arrived on Tuesday morning at 10 o'clock, after a passage of sixteen and a half days, having departed from Bristol on Saturday evening, August 24th, at seven o'clock.—She brings 110 passengers, among whom are the Rev. Dr. Beman, of Troy, and the Rev. Mr. Kirk, of Albany. There is but little general intelligence. Money is a little easier. The prospect of grain crops is about an average. Cotton meets a somewhat more ready sale. At Liverpool large sales have been made both to the trade and for export at improving rates, and should the weather continue favorable for the harvest, prices will probably improve to the extent of ½d per lb.

In Parliament Mr O'Connell has obtained a triumph over the Chancellor of the Exchequer, by having driven the latter from his purpose of renewing the charter of the Bank of Ireland. It is postponed until the next session.

The Royal assent has been given to the slave trade suppression bill. A very strong feeling of indignation prevails in England against the course pursued by Mr. Trist the U. S. consul at Havana, when the assent was made known to the Commons.

"Mr. O'Connell adverted to the newspaper statements which turned out to be correct, of a conspiracy on the part of Portuguese traffickers in slaves to have poisoned wine on the decks of their vessels in the case of capture, and to poison the water, and thus to destroy, by such horrible means, their captors; and expressed the hope that our government would promptly represent the facts to the Portuguese government, and require redress by the prosecution of the conspirators."

Parliament was to be prorogued Aug. 27th.

PORTUGAL.

The excitement produced in Lisbon, in consequence of its being known that the British government was at length seriously engaged in carrying out its declarations with respect to the suppression of the Portuguese slave trade, and had actually carried its bill for that purpose thro' the House of Commons without opposition, had somewhat subdided, and in the higher circles it had become clear that the warlike out-bursts of the government press would not be supported; and the new Premier, although raised to his present eminence by abuse of England, had found out that when words were to be verified by deeds, he would not be supported by many who had lauded and urged him on as long as the crisis was at a distance; and, in short, appearances were in favor of the Portuguese government succumbing to necessity.—*Correspondence of the Morning Chronicle, August* 12.

TURKEY.

London, Aug. 22. Letters from Constantinople of the 31st ult. comfirm the accounts previously received of the acceptance by the Porte of the meditation of the Five Great Powers in settling all difference between Sultan and Viceroy. Nevertheless Hadji Saib Effendi, accompanied by M. Anselm, an attache of the French Embassy, was to set out for Alexandria, with a splendid decoration for Mehemet Ali, and with an offer of the hereditary government of Egypt, and its dependencies, to the Viceroy and his family, provided he would consent to restore Syria to the Sultan.

Late intelligence from Constantinople to Aug. 3, states the rumor that Ibrahim Pacha was about to enter Koniah, and that in consequence of Russia preparing to act upon that movement, Admiral Roussin had ordered the French Admiral Lalande to hold himself in readiness to enter the Dardanelles. The young Sultan is indisposed. The Russian Ambassador had had several interviews with the Turkish minister Kogrew Pacha.

A report prevailed that the Pacha of Janina had raised the standard of revolt. The reported occupation of Bassora by Kueschid Pacha is said to have been confirmed. Prince Milosch had, since the death of his son Milan, forwarded to the Porte a new claim to be reinstated in his Government.

By news from Malta, we learn that Mehemet Ali is reported to have declared to the European Consuls that he did not mean to detain the Turkish fleet, and that it was at perfect liberty to return to Constantinople. Letters from Odessa announce the Russians were freighting transports in that harbour and at Taganrog.

The London Times says that King Louis Phillippe is sending a confidential agent to Constantinople, on some mission which he did not deem it expedient to intrust to the accredited Ambassador of France to the Sublime Porte.

The Sultan has deferred to reply to Mehemet Ali's pacific letter until the decision of the five great powers should be known. It is said the Sultan is willing to cede Syria and Egypt to Ibraham for life but declined to dismiss the Grand Vizier. It was reported Hafiz Pacha, the defeated Turkish general, had, with 4000 troops gone over to Ibraham.

The Five Powers, it would appear, are disposed to take the young Sultan under their protection, and recommend him not to accede to the terms of Mehemet Ali.—In case Mehemet uses force, Alexandria is to be attacked. The Captain Pacha of the Turkish fleet was waiting to be dismissed by the Egyptian Viceroy from his command, in order to repair to Malta with his treasures.

Mehemet Ali wrote, July 16, a letter to the young Sultan, declining his offer of giving to him the government of Egypt, and demanding, in addition, and in perpetuity, all the other provinces now under the Viceroy.

FROM THE PACIFIC.

An arrival from Montevideo to 7th July, states that the whale barque Richard of Salem, with a cargo, was wrecked off the city of Montevideo in a gale on the 5th.

They are beginning to enact Robespierreian scenes at Buenos Ayres. A government mob supposed to be hirelings of the Dictator Rosas, broke into the Senate chamber and murdered the President Don Maza in his seat—then shot his son, a colonel of a regiment. Don Cullen, a foreigner, has also been shot.

The French opposition journals loudly condemn the Treaty with Mexico.

The wheat harvests in the north of France were most abundant and the price of bread in Paris had fallen.

The army of Don Carlos are generally revolting against the odious General Marioto.

FROM TEXAS.

The Houston Telegraph of August 14th, says:

A letter has just been received at the War Department, from Gen. Rusk, bearing date of the 17th ult., stating that Brigadier General Dyer, of the Red River brigade, was on his march from Red River, in accordance with the orders of the Secretary of War, to the Indian settlements on the Sabine, with three hundred and fifty men. This march, in conjunction with a campaign intended by the Secretary of War, against the upper Trinity, will effectually clear the country of the Indian enemy, by destroying their last strong holds and resting place. No disturbances had taken place on the frontier, since the late engagement with the Cherokees. A force of 400 troops have been left in the country lately occupied by the Cherokees, under the command of Col. Burleson. They are to remain until they are relieved by other forces, and to be so disposed of as to guard every portion of the frontier.

From Florida.—Accounts from Garey's Ferry to 26th Aug. state that the Seminoles have all left Fort King. The Hostile intentions of the Indians, and their determination to disregard Macomb's treaty, are now no longer doubted. A bundle of four hundred red sticks has been found, indicating the recommencement of the war. Tigertail has scattered parties every where to murder all the white stragglers they meet.

OBITUARY.

Died at his residence in Defiance, Ohio, on the 2d of August, WILLIAM GRAY, formerly of this neighborhood. His health had been on the decline for better than one year. In May, 1838, he was attacked with consumptive habits; in the fall he had a spell of the chills and fever, and remained quite ill through the winter; but on the return of the mild weather in the spring he seemed to mend, but was taken worse about the 1st of July, and on the 2d of August departed this life in peace. He retained his senses to the last, and his dying breath was spent in exhorting his family to meet him in heaven.

There has been six burials at the Springfield meeting house, in this neighborhood, within three weeks:—two children of Mr. *W*ilkerson, on the pike, who died of scarlet fever; a child of Mr. French, with dropsy of the brain; a child, a few months old, of Mr. Marcillus, same disease; a child of Samuel Johnson, about three years old, with the croup; MARIA FLOWERS, about 13 years of age, of the flux. This last youth embraced religion at our late camp-meeting, and we are informed, left the world rejoicing in the "faith" she had so lately "obtained."

Miss ELIZABETH SHAW, daughter of James Shaw, of Newton township, was buried on last Sabbath. *W*e were told that she was engaged to be married on that day. Thus, it seems, her intended bridal became her burying day. Such events shew us the uncertainty of all human calculations.

THE RECORDER.

ZANESVILLE:

THURSDAY,--------SEPT. 26, 1839.

Our late Conference for the Pittsburg District closed its session, at New Lisbon, O., on Tuesday, the 17th inst. We had a pleasant and harmonious session, and were treated with hospitality and kindness by the citizens of the place. The next Conference will be held in Steubenville, Ohio, commencing on the second Tuesday of September, 1840. The District is in a healthy and prosperous condition.

During the sitting of the Conference meeting was held every night, both in the Episcopal and Protestant Methodist meeting houses, by our ministers, and a reciprocity of good feeling seemed to exist between the ministers and members of the two churches. How desirable and pleasant it is to see things move in this way.

MORE ABUSES OF EPISCOPAL POWER.

The following extract from Zion's Watchman, an Espiscopal Methodist paper, of the 7th inst., illustrates, in part, the nature of the power wielded by a Methodist Bishop. Similar exercises of this power we have often seen. The day will assuredly come when these shackles will be thrown off.

"The church in Washington street, Brooklyn, is made up of some of the most intelligent and pious in that city. They have a spacious and beautiful house, and parsonage, both paid for, we believe; and their house has usually been filled with an attentive congregation. Previous to the last session of the New York Conference, the official board named five members of the Conference, either of whom they informed the P. E. they would be glad to receive and support as their pastor the ensuing year. The P. E. promised them that if the Bishop did not send them one of the five brethren named, he would let them know it before hand, and inform them who was to be appointed to that station.

"As our readers will remember, the Conference set in Brooklyn. A short time before it arose, a committee from the board went to the P. E. and requested to be informed who had been put down for them on the list of appointments. But the Rev. Mr. Ostrander, PEREMPTORILY REFUSED to tell them, saying, at the same time, that they *should not* have either of the persons whom they had named! The appointment had been made, and it was like the laws of the Medes and Persians,—IT COULD NOT *be* altered!!

"Well, the brethren, by some means, soon ascertained that the person designed for them was the very man they did not want; and one whom they knew too well to believe he could be useful as their pastor the coming year. And, as far as we can learn, we should judge, that an appointment could scarcely have been made for that church, which would have been more offensive to the people than the one which was made, and which has resulted in so much trouble. But forthwith the committee went to Bishop Waugh, stated the circumstances of the case to him, and entreated him to alter the appointment before the Conference arose. And we believe they also went to Mr. Griffing, himself, and begged him to decline the appointment. This they supposed he could do, and have it changed without any difficulty, as he was one of the presiding elders, in the Bishop's cabinet, and consequently he could have it changed without any trouble, either to himself or any one else. But *no!* He would do no such thing. The Bishop, also, was INEXORABLE. We pass over a number of interviews that were had with the P. E. and the Bishop, for the purpose of effecting a change before the Conference adjourned. And a number of similar interviews were also had after the Conference finally adjourned, but they all served to show that Mr. Griffing was determined to force himself on that people, against their known wishes, and in this determination he was, of course, supported by Bishop Waugh. The *particulars* of this case we cannot now give, but if they ever should be laid before the public, they will show ——— we forbear.

"The result is, the Washington street church have been COMPELLED *to supply themselves* with a pastor, and we are told that the P. E. has informed them that they are no longer under his jurisdiction, and that he will not supply them with any other preacher until *they alter the deed of their house*, so that the church themselves cannot control it!!! And Mr. Griffing has lately set up a separate meeting in the same street, near the Washington street church, for the purpose of dividing and distracting that peaceful people.

"But, it may be proper to add, what we believe to be the fact, that our two other churches in Brooklyn sympathise with their Washington street brethren, and consider that difficulty substantially their own, so that the whole of them will stand or fall together.

"Thus we see, that the difficulty in Brooklyn has grown out of the attempt made by Bishop Waugh, D. Ostrander and B. Griffing, to FORCE upon a church the services of a man whom the people did not want."

We wish the reader to notice the proposition made by the P. E., D. Ostrander, to the Washington street church, that unless they would relinquish their control over their property he would withdraw from them his pastoral care. It will be recollected that in 1834 some tracts, alluding to the subject of church property, had been circulated in the city of New York, and that the editor of the New York Courier and Enquirer had stated, on the authority of these tracts, that, there was a controversy existing between the ministers and members as to who should control the property of the M. E. church. After the appearance of this article a formal denial of the existence of such a controversy, appeared in the Courier and Enquirer, of March 1, signed by thirteen pastors and ministers of the church in N. York, viz: L. Clarke, D. Ostrander, P. Chamberlin, N. Bangs, B. Waugh, F. Reed, J. C. Reed, P. P. Sanford, B. Griffing, P. R. Brown, J. P. Durbin, T. Mason, and T. Merritt. From the article which bear these signatures, we make the following extract:

"SIR:—We, the undersigned ministers of the Methodist Episcopal church in the city of New York, were very much surprised to see it stated in your paper of this morning (February 28) that there is 'a controversy existing between the members and preachers, as to who shall control the property of the church.'

"Now, we wish to say that we know of no such controversy, either in this city or elsewhere.—The preachers in the Methodist Episcopal church have not, nor ever had any desire to own or control the property of the church."

Now, how these gentlemen dare venture their reputation before the public in this way, directly in the face of their own discipline, and the ecclesiastical and legal prosecutions, which have been instituted, in various places, at the instance of the clergy, and by which the people have been deprived of their property, is to us a matter of surprise. The "preachers in the M. E. C. have not, nor ever had any desire to own or *control* the property of the church!" Astonishing!!—If the preachers have never had any "desire to *control*" the property, why have they prescribed a form of deed which conveys it subject "to the *rules* and *discipline* which from time to time may be agreed upon and adopted by the *ministers* and *preachers* of said church at their general conference?"* &c. &c. Why has the general conference instructed their preachers to "admit no charter, deed, or conveyance, for any house of worship to be used by us, unless it be provided in such charter, &c. that the *trustees* shall at all times *permit* such ministers and preachers belonging to the M. E. C. as shall from time to time be duly authorised by the general conference of *ministers* of our church to preach and *execute discipline* therein, according to the true meaning and purport of *our deed of settlement?*"† If they had no "*desire* to control the property," why did some of these very gentlemen above, vote in the gen. con. of 1828, for a new provision of the DIS., which makes it the prerogative of the presiding elder, or preacher in charge, to appoint the original board of trustees &c. and thus to consumate their "control over the property?"‡ Yea; and why have the preachers brought charges against trustees, and expelled them to reduce the majorities of their boards because they would not submit the property to their "control;" as in the case of Mr. Taylor in this county? We add, why has D. Ostrander, in this case, if he had "no desire to control the property," threatened to disfranchise the Brooklyn church unless they will yield to him the "control" over the property?

*See form of Deed in the discipline.

†Dis. for 1828. Part. 2, Sec. 2, on building churches, &c.

‡Dis. for 1828, p. 169.

We have received a communication from Jacob Niswonger, Tyler county, Virginia, ordering our paper. He states there are no Protestant Methodists there, but that some of the citizens seem anxious for a preacher, and that he has considerable subscribed for the support of a minister, should one be sent. We hope the President will attend to this call. The post office address of Bro. Niswonger is Middleburn, Tyler, Va.

We have received the 3d No. of the New York Luminary, "edited by a committee" of the M. P. church. Its publication has been suspended for some time, but the publishers say it shall "henceforth be issued weekly."

Definition of Eccentricity.—At our late Conference, on the examination of a member's character, the presiding officer asked, "is he not eccentric in his manner?" A member rose in his place and inquired of the chair—"What, Mr. President, are we to understand by eccentricity?" The chair seemed nonplussed for a moment, then promptly replied: "O! it means all sorts of queer things."

Conference Matters.

EXTRACT FROM THE PROCEEDINGS OF THE OHIO CONFERENCE.

The eleventh session of the Ohio Annual Conference of the Methodist Protestant church, was held at the Stone Chapel in Lawrenceburgh circuit, Indiana, commencing, August 27th, 1839, and closing on the 4th September, inst.

LIST OF MEMBERS.—*Ministerial.*

A. M'Guire,	M. M. Kenkle,	R. G. H. Hanna,
J. Guest,	N. Snethen,*	S. Morrison,*
J. Flood,	G. Evans,*	R. Dobbins,
A. Williams,*	B. Goldsbury,	W. Hughey,*
W. B. Cremeans*	D. H. Stephens,	D. Hannah,
T. S. Stillwell,*	J. Clarke,	G. Wheatley,*
A. H. Bassett,	D. Crall,	J. Simpson,
J. D. Medearis,*	J. Rose,	W. W. Paul,
W. A Cartwright*	S. Ewans,	J. M'Clain,*
J. Betson,*	T. Hicklin,	C. Wamsley,*
R. Douthart,	A. C. Barnes,	J. H. Thomas,
I. Hunt,	L. Hicklin.	* *Absentees.*

Delegates.

W. B. Evans, John Layman,	Cincinnati station.
John Budd, Springfield	"
James Johnson, Rehoboth circuit.	
Thomas Karr, Highland	"
Wm. Hamilton, Union	"
John Stephens, Miami	"
James Hibben, Washington	"
P. Smith, Ruddles Mill;	"
E. K. Mahan, Lima	"
Eb. Stibbens, Twin Creek	"
H. P. Bennett, Madison	"
James Edmonson, Spencer	"
Wm. Smith Lawrenceburgh	"
T.P. Armstrong, J. W. Johnson,	Charlestown"
Vincent Shinn, Cincinnati	"
Josiah Reynolds, Richwood	"
Josiah Hopkins, Wabash	"
John Burton, White River	"

Persons received into the Itinerancy, at this Conference.

Ministers.—Joseph Williams, Elijah Collins, Joseph Parke, Enoch Springer, James Edmonson.—*On Probation.*—Isaac Edwards, Samuel W. Thornton, E. K. M'Masters, Josiah Hopkins.—9.

Elected to Elder's orders.—Joseph Parke,† David Moore, D. H Stephens,† Enoch Springer, John M. Westerfield, S. Ewans.†—6.

Elected to Deacon's orders.—H. P. Bennett,† Reuben M. Dalbey,† Uriah M'Kinnon, Jacob Varner, Elijah C. Peacock, John Ford.—6.

†Ordained at this Conference.

Total number, 3639

N. B.—As several circuits did not report, we set down the number published last year for said circuits.

List of Unstationed Ministers and Preachers.

Cincinnati station—J. Haughton, G. Bailey, W. B. Evans, J. B. Dorman, A. Metcalf, G. G. Moore, M. Robinson, R. Miller.

Cincinnati circuit—J. D. Landon, J. Ward.

Eagle circuit—D. Inskeep, E. Newton, J. Vandament.

Highland circuit—Wm. Kearns, J. Varner.

Washington circuit—J. Dalbey, B. Ryan, S. Johnson, A. G. Keys, D. Jewett, J. Clemmons, I. Atkinson, S. Little, D. Craig, E. Rowan.

Xenia circuit—A. Jones, E. C. Peacock.

Springfield station—O. E. Hundley.

Miami circuit—D. Moore, W. Medearis, J. Stephens.

Union circuit—Joshua Inskeep, John Inskeep, H. Burdick, Wm. Hamilton, J. M. Young, E. M. Forshee, A. Davis, V. Thomas, P. Baker.

Lima circuit—E. Kearns, A. Bessey, A. T. Morrison, U. M'Kinnon.

Finley circuit—James Swaney.

Twin Creek circuit—C. Fall, T. Fall, E. Stibbens.

Richwood circuit—A. Perdieu, R. Chambers, S. Fulton, J. Beatty.

Blue River circuit—J. M. Westerfield, W. T. Smith, J. Caldwell.

Sugar Creek circuit—G. Baxter, T. Ship.

Wabash circuit—D. Amos, J. C. Wright, J. Briggs, H. Beall, J. Ship.

Madison circuit—A. Chitwood, T. Jones, T. Bland, A Hozea.

Charlestown circuit—C. Ruddle, N. Q. Hall, B. Allen.

Broad Ridge circuit—J. Robinson, J. Jones, W. Daniels, R. O. Linthicum, W. H. Sipple.

Lawrenceburgh circuit—J. Murray.

Spencer circuit—P. Clingler, J. Horn, J. Ford.

White River circuit—J. Thompson, T. Alexander, J. Williams.

N. B.—The above list is as nearly perfect as our information could render it. We fear, however, that all the names were not returned at the Conference.

Appointments of the Itinerant ministers and preachers for the ensuing year.

President—JONATHAN FLOOD.

Cincinnati station—A. C. Barnes, N. Snethen.
Cincinnati circuit—D. Crall.
Highland circuit—S. Ewans.
Eagle circuit—J. Rose; C. Wamsley, Sup. As't.
Xenia and Rehoboth circuit—R. Dobbins, I. Edwards.
Springfield station—D. H. Stephens.
Union circuit—I. Hunt.
Washington circuit—W. W. Paul.
Lima circuit—J. Guest.
Finley circuit—W. B. Cremeans.
Twin Creek circuit—R. M. Dalbey; J. H. Thomas, Sup. As't.
Sugar Creek circuit—Geo. Evans; S. Morrison, Sup. As't.
Miami circuit—Joseph Parke.
Blue River circuit—To be supplied.
Richwood circuit—J. Williams, J. Betson; J. M'Clain, Sup. As't.
Wabash circuit—R. G. H. Hanna.
Madison circuit—E. Collins; T. Hicklin and H. P. Bennet, Sup. As'ts.
Charlestown circuit—A. H. Bassett.
Lawrenceburgh circuit—Joseph Simpson.
Broad Ridge circuit—Wm. Williams; T. Smith, Sup. As't.
Ruddles Mills circuit—To be supplied.
Spencer circuit—J. Edmonson; J. D. Medearis, Sup. As't.
White River circuit—E. K. M'Masters.
Drift Wood mission—T. S. Stillwell.
Tippecanoe mission—Josiah Hopkins.
Wea mission—Enoch Springer.
Sinking Spring mission—David Hannah.
Conference Missionary—A. M'Guire.

Moses M. Henkle, B. Goldsbury, J. Clarke, A. Williams, C. Jeffries, S. W. Thornton, left in the hands of the President.

W. Hughey, Geo. Wheatley, W. A. Cartwright, L. Hicklin, R. Douthart, transferred to the unstationed list.

B. W. Johnson and J. Denham, withdrawn.

W. B. Evans, was appointed Conference Steward.

The Stationing Committee were, *President*, J. Flood—*Ministers*, M. M. Henkle, R. Dobbins—*Laymen*, J. Hibben, H. P. Bennett.

The Standing District Committee are, R. Dobbins, A. M'Guire, W. B. Evans, *ministers;* J. Layman, J. Hibben, T. P. Armstrong, *laymen.*

The following Report of a committee which was adopted by our Conference, we desire should be immediately laid before your readers, with a hope that it will receive due attention, and especially that every Superintendent will be prompt to his duty.

CENTENARY OF METHODISM.

The committee to whom was referred the subject of centenary action on the part of our church, beg leave to report—

That in their opinion, the present occasion should be improved in raising a revenue in the way of centenary thank offering, to be cast into the treasury of the Lord, for the promotion of such objects as demand special aid in the church in whose behalf we are called to act.

In considering this subject, two things claim our attention, 1st. The mode of raising funds; and 2d. The objects to which they should be applied.

I. With regard to the first, your committee would recommend the following plan, with such variations as circumstances may require.

1st. Let the Superintendents of circuits and stations give timely notice in all their congregations of a time at which a centenary subscription will be taken in each congregation, at which time an address or addresses suited to the occasion should be delivered, and an opportunity given for members and others to subscribe such sums as they may be willing to give as a centenary contribution.

2d. The names of all persons who shall subscribe as above, (and of such as shall be subscribed for by their friends,) with their residence and amount contributed, shall be entered by the Superintendent, in a suitable book to be kept by him for the purpose. And the names so procured, shall be forwarded by the Superintendent to the Secretary of the Conference, to be by him recorded in a substantially bound book, and safely kept in the archives of the Conference.

3d. Any Superintendent who shall not make exertions to procure subscriptions, as above directed, shall not be entitled to any benefit of such subscriptions taken by others, and any circuit or station failing to raise such subscription, shall be entitled to no dividend or interest from the general funds raised by that means.

4th. The moneys subscribed shall be paid as follows: All sums not exceeding $10, in six and twelve months; all sums over $10, and not exceeding $25, in two annual or four semi-annual payments; and all sums over $25, in three annual payments.

II. The *objects* to which the funds thus raised should be appropriated. In regard to this matter, your committee are of opinion that each contributor should have the right to designate the special object, (within the range of benevolent enterprizes in our church operations,) to which his donation shall be applied, yet our attention should, as we judge, be directed to two objects specially:

1st. We commenced the establishment of a Conference Literary Institution three years ago, and when a few brethren had made a purchase for the benefit of the church to the amount of $12,500, and were offered a tempting advance on the amount paid, the Conference by a most solemn pledge, not only agreed to take the property, but to sustain them in their position of pecuniary liability. Yet these brethren have been left to bear the burden of the Institution, almost wholly alone,—its operations have been suspended, and the whole property is now in imminent danger of being sacrificed, and the two responsible brethren in danger of severe losses, because this solemn pledge of the Conference has not been redeemed by us. Your committee are therefore clearly of opinion, that if by the means proposed, funds can be raised to save the property to the church, it should by all means be done; and that if this cannot be effected, in good faith and moral honesty, we are sacredly bound to raise all that may be procured in aid of our brethren whom we have placed in a relation of oppressive responsibility.

2d. It is universally known that a paramount obstacle in the way of our progress, is the want of adequate support to the itinerant ministry — To raise a permanent fund, the interest of which should be annually applied to the relief of the destitute and needy of our itinerant ministry, is another and cherished object with your committee, in the proposed centenary action.—Between these two objects then it is proposed to divide the proceeds of the centenary collection, in such proportions as the Conference or a committee by them appointed may direct, except where the donors specify the object to which their contributions shall be applied.

We would also propose that this Conference appoint a Standing Committee of three, to be called the *Centenary Committee*, with power to fill vacancies in their own body, whose duty it shall be to receive and apply, or invest the funds from time to time raised and paid over, under such restrictions and instructions as shall be given them by the Conference.

Your committee would suggest the propriety of communicating with the Pittsburg and Illinois Conferences, with a view to secure their co-operation in this matter.

Finally, we propose that a centenary subscription be immediately opened in the Conference.

M. M. HENKLE,
D. CRALL,
T. P. ARMSTRONG, } Com.

John Haughton, James Foster and John Layman, of Cincinnati, were appointed the Centenary Committee, as recommended in the above report

David Crall and John H. Thomas were appointed a committee to correspond with the Pittsburg and Illinois Conferences upon this subject.

[*Concluded in our next.*]

EXTRACT FROM THE PROCEEDINGS OF THE PITTSBURG CONFERENCE.

The sixth session of the Pittsburg Annual Conference of the Methodist Protestant church, commenced at New Lisbon, Sept. 10th, 1839.

Conference met at 9 o'clock, A. M., when an address was delivered by Z. Ragan, President of the Conference.

The following are the appointments of the preachers for the ensuing year:

President—GEORGE BROWN.

Pittsburg station—Joel Dalbey, jr.; A. Shinn, Sup. As't.
Allegheny station—John Beatty.
Pittsburg circuit—John Clark.
Clearfield circuit—Th. J. Addis, Wm. Turner.
Union circuit—Jas. Robison, J. B. Shearer.
Brownsville circuit—Wm. L. Baldwin.
Middletown circuit—John Fordyce, William Munhall.
Clarksburgh circuit—Robert Simonton.
Weston circuit—Samuel Clawson.
Suttonsville circuit—Henry T. Lawson.
Monongahela circuit—James Hopwood, Daniel Kinney.
Ohio circuit—John Herbert, Wm. Ross.
Washington circuit—To be supplied.
Steubenville station—John Burns.
Wellsville station—John Clarke.
New Lisbon station—Z. Ragan.
Mahoning circuit—John R. Tallentire, Wm. M'Cullogh.
Youngstown circuit—W. Reeves, J. B. Roberts.
Grand River circuit—Abraham K. Earl.
Cleveland circuit—L. M. Cochran, N. Linder.
Grainger circuit—John Wilson.
Sankusky circuit—J. Cowl, one to be supplied.
Bucyrus circuit—Seely Bloomer.
Wayne circuit—Robert Bamford.
Mt Vernon circuit—Moses Scott, G. Lanham.
Newark circuit—Wm. M'Connell, E. Sturman.
Zanesville circuit—Israel Thrap, T. Fairchild.
Zanesville station—Fielding A. Davis.
Lancaster station—Jacob Myers, Washington Maynard.
Pennsville circuit—D. Y. Ostrom, P. Bailey.
Cambridge circuit—William Marshall.
Pisgah circuit—Cornelius Woodruff.
Coshocton circuit—M. N. Warren, T. Stephens.
Adamsville circuit—Phineas Inskeep.
Deersville circuit—Rufus Richardson, J. Cameron.
Mt. Pleasant circuit—John Huntsman, one to be supplied.
Georgetown circuit—George Clancy.
Pleasant Hill circuit—Thomas Foster.
Woodsfield circuit—Charles Caddy.
Mill Creek circuit—Thomas Pinnell.
Greenbrier circuit—William G. Williams.
Ligonier mission—W. W. Tipton.
Bear Creek mission—C. C. Chapman.
Randolph mission—Daniel Gibbons.
Tyler mission—One to be supplied.
Allegheny mission—John Gisinger.

INTERESTING.

LONG, LOW, BLACK SCHOONER.

Narrative of the Mutiny of African Slaves on board the Spanish schooner Amistead—the murder of the crew, and the re-capture by the U. S. vessel Washington. Extraordinary heroism of an African Chief.

We give below, the authentic particulars as taken by the New York Sun, (at New London, Connecticut, on the judicial investigation,) of the mutiny on board the Spanish schooner Amistead. The conduct and heroism of the African chief CINQUEZ, after his capture, presents a most remarkable instance of untutored courage and the natural sense of the value of freedom.

In the month of June last Don Jose Ruiz, a wealthy and noble Spaniard, left his estate at Principe and proceeded to Havana to buy slaves. At Havana he purchased 49 from a cargo that had just arrived from the coast of Africa. To forward his purchase home he chartered the schr. Amistead, Roman Ferres, master and owner.—Together with his slaves he shipped a number of packages, partly his own and partly on freight.—The packages contained a regular assortment of goods for that market. There was some cookery, some cooper, and many dry goods, besides fancy articles for amusement or luxury.—Personally Senor Ruiz had but little money on board, altho' the captain was supposed to have specie to the amount of $8000 in doubloons. Besides this cargo the Amistead received on board Don Pedro Montez, and four slaves, as passengers. The slaves of Senor Montez were from the same cargo as those of Ruiz, but were all children between the ages of 7 and 12. Three of the four were females and one a male. The crew of the schooner consisted of the captain, his 2 slaves and 2 white men. The slaves of Ruiz and Montez were all Congolese negroes, only six weeks from the coast of Africa, four of which, at least, had been spent on the passage. One of the captain's slaves was a mulatto, and employed as cook; the other a black boy, named Antonio, who is yet on board the schooner.

The schooner is of Baltimore clipper built, about 170 tons burden, 6 years old, and was called the Friendship, which being Hispaniolised, means Amistead. She was insured at Havana to her full value—Senor Ruiz is insured $20,000, and it is supposed the rest of the shippers also were.

On the 28th of June, 1839, this vessel sailed from Havana for Guanaja, the port of entry for Principe. Among the slaves purchased by Ruiz was one called, in Spanish, Joseph Cinquez, who is the son of an African chief. This Cinquez is one of those spirits which appear but seldom.—Possessing far more sagacity and courage than his race generally do, he had been accustomed to command. His physical proportions are those best calculated to endure privation. His countenance, when in repose, looks heavy, but under excitement it assumes an expression of great intelligence. His eye is that of a Spaniard, and can exhibit every variety of thought, from the cool contempt of a haughty chieftain, to the high resolve which would be sustained through martyrdom. His lips are thicker and more turned up than those of his race in general, but when opened display a set of teeth rivalling in beauty the most regular of those which we praise so much in Caucasian beauty. But his nostrills are the most remarkable feature he possesses. These he can contract or dilate at pleasure. His general deportment is free from levity, and many white men might take a lesson in dignity and forbearance from the African Chieftain, who, although in bondage, appears to have been the Osceola of his race. In height he is just 5 feet 7 inches, has a full chest, large joints and muscles, and built for strength and agility.

For four days after leaving the Havana, all went well except that the winds were ahead.—Guanaja is only about 300 miles from the city of Havana, and is situated in the province of Puerto Principe, on the Island of Cuba.

On the fifth night, the captain being asleep on a mattrass on deck, with his mulatto slave by his side, was attacked by this chief with a sugar knife. The first blow did not inflict great injury, for after receiving it, he called to Antonio, also his own slave and a cabin boy, to get some bread and throw among the negroes, hoping to pacify them. The captain defended himself bravely, but he was overpowered by Joseph, who split his head open. While Joseph was engaged with the Captain, three others were attacking the mulatto slave and the white men. In the meantime the other negroes were making the most dreadful noises imaginable. While killing the Captain and the mulatto, the man at the wheel and another Spanish sailor, let down the stern boat and escaped. After the bloody business was finished, Joseph attacked Senor Montez, and would have killed him but for the interference of others.—As it was, Senor Montez received a very dangerous wound on the head and another on the arm. When the attack ceased, Montez went below. Ruiz had been on deck but no attempt was made to hurt him. Joseph followed Montez, and leading him on deck, tied his hands. Ruiz was tied immediately afterward, and then both were lashed together. Joseph and his three companions then went below and ransacked the cabin, after which he armed them with sugar knives, similar to that he used. This weapon is about 28 inches long, and 3 broad at the end. From that width it tapers off to the handle, where it is simply a piece of bar steel, about an inch square. There were but four muskets on board, and the use of these were unknown to the slaves. When the ransacking was ended, Montez and Ruiz were allowed to go below. Next morning Montez was taken out of the cabin, and although dangerously wounded, compelled to steer to the eastward. Having been master of a ship in early life, he understood boxing about without making head way. All this time the negroes pointed to the sun and then to their knives, and if for a moment the vessel veered perceptibly, they brandished their knives over the head of Montez in a most horrible manner. The poor wretches knew that they come from where the sun appeared to rise, but they understood nothing of navigation and were easily deluded.

About two days after the rising they had a heavy gale, which drifted them into the Bahama Channel. Here they boxed about again, but saw no vessels; at last, being out of water, the negroes ordered Montez to make the nearest land, which proved to be the Island of St. Andrews. Here the negroes met no one. After this Montez steered for New Providence, but the negroes were not disposed to land. By this time Joseph had learned to steer, and he took the helm in the day, leaving one of the white men to steer at night. Every night, Joseph slept near the helm, and had two of the most trusty negroes by his side watching, and ready to awake him on the least alarm.

During this interval the negroes broke open the hatches and pillaged the cargo. Among it they found wine, raisins, and a great quantity of medicine; all this they ate indiscriminately. Ten died in a short time, and others would have done so, had not Joseph forbidden the rest to touch any thing but what he gave then. Any infraction of this wholesome regulation brought down on the head of the offender a severe personal chastisement from the hands of the chief. Joseph lived abstemiously during the whole trouble, and insisted on the most perfect obedience to his orders. The only food eaten was portioned out by his hand, and not a box of the cargo opened but under his direction. He divided the spoil, taking the smallest portion for himself. He was the master spirit on board; every thing felt his influence. We confess that during all this time the whites were in a most wretched condition, and their hope of escape very small. In the night they steered to the west, and succeeded in persuading Joseph to keep to the north of east in the day.

About the fifteenth of this month, as the Spaniards suppose, for they had lost knowledge of dates and days, they came in sight of Long Island. In the interval they had been boarded by several vessels, one of which supplied them with a demijohn of water. They had seen many vessels and signalized them, but were unable to call their attention. When any vessel came along-side, Joseph would stand by Ruiz, the only man who speaks English, and watch him with fearful intensity.

The organ of communication between Senor Ruiz and the Congolese, was Antonio, the captain's slave. He is by birth an African, but has lived in Cuba 8 or 10 years. He speaks both Congolese and Spanish. He had been employed as cabin boy, and could Joseph have dispensed with his assistance, he would have been killed.

On the 20th of this month they were hailed by pilot boat No. 3, which gave them some apples. Joseph having some fear of betrayal, would not allow Ruiz to speak with these. Pilot boat No. 4 came along-side also, but they were not permitted to board. On the 24th they made Montauk light, and stood for it, hoping to run the vessel ashore, but the tide drifted them up the bay. They then came to anchor off Culloden Point, where the negroes went ashore to lay in water. Between the fifteenth and twenty-fourth they had anchored about thirty times at different places on the coast.

The negroes who went ashore at Culloden were almost naked, and the inhabitants were exceedingly alarmed. They were two days in the neighborhood without any attempt being made to arrest them. Only in two instances did they succeed with bartering the inhabitants for provisions, once for a doubloon, and once for a musket. While engaged in watering they were fallen in with by Captain Green, and another gentlenan from Sag Harbor, who had visited the point on a shooting excursion. Captain Green immediately saw that all was not right, and gave them to understand that they should be taken care of. There appears to be something contradictory in the report of these gentlemen, who say that the negroes asked what country they were in, to which the Americans replied America. Then according to the statement of the gentlemen, they asked the negroes if they had any money on board, and told them to fetch it. The negroes said they had, and went on board and brought back two trunks, which they said contained 400 doubloons. Captain Green said he lifted the trunks and heard the money rattle. He then told them that in the morning he would pilot them into Sag Harbor, upon which they returned to the schooner, taking the money with them. How this conversation could have occurred, when not one of the negroes can speak a word of English, is a mystery to us, unless Capt. Green, or his friend, speak Congolese. However, Capt. Green is going to claim salvage, if he told the collector at New London correctly, on the doubloons. In that case no doubt he will explain every thing satisfactorily. We only tell the story as he told it to us.

Either before or immediately after Capt. Green and his friend had retired, the boat of the cutter Washington came in sight and boarded the vessel. Immediately on seeing a gentleman in uniform, Senor Ruiz went up to him and said:

"These negroes are my slaves; they have risen and taken the vessel; that is the leader, (pointing to Joseph) and I claim your protection."

Lieuts Porter and Meade then immediately took possession, disarmed the negroes, and took the schooner in tow. Joseph on seeing this went below, and tying some gold about his person, he leapt out of the main hatch, and at one bound was over the side. While under the water he disengaged the doubloons, and came up about 100 yards from the vessel, having been under water at least 5 minutes. The boat was instantly manned and sent in chase of him. When the boat neared him he would stop, but just as it came within reach he would dive down and come up again some yards behind her stern. He thus employed them about 40 minutes, when seeing farther attempts useless, he gave himself up. When pulled on board the boat he smiled, and putting his hands to his throat intimated that he was going to be hanged. Joseph was then transferred to the Washington, but he seemed so uneasy, and displayed so much anxiety to rerurn to the schooner, that he was humanely gratified. On once more joining the Amistead the poor wretches clustered around him, making the most extravagant demonstrations of joy. Some laughed, some screamed, some danced, and some wept. Joseph stood in the midst, but did not even smile. When the noise had subsided, he addressed them in Congolese, which was translated by Antonio as follows:

"Friends and Brothers—We would have returned but the sun was against us. I would not see you serve the white man, so I induced you to help me to kill the Captain. I thought I should be killed—I expected it. It would have been better. You had better be killed than live many moons in misery. I shall be hanged, I think, every day. But this does not pain me. I could die happy, if by dying I could save so many of my brothers from the bondage of the white man."

By this time the excitement had rised to such a pitch that the officer in command had Joseph led away by force and returned to the Washington. Even this the hero bore with stoical dignity, while his poor countrymen uttered the most piercing yells. On board the Washington he was manacled to prevent his leaping overboard. Even this failed to elicit the slightest perceptible emotion. This was on Tuesday. On Wednesday he signified by motions that if they would take him on board the schooner again, he would show them a handkerchief of doubloons. He was accordingly sent on board. His manacles were taken off and he once more went below to receive congratulations, even more wild and enthusiastic than those of Tuesday. Antonio was told to watch and listen to him. Instead of finding the doubloons, he again addressed the negroes, which, according to the interpretation of Antonio to Spanish, and from Spanish to English by John Jay Hyde, Esq. editor of the New London Gazette, was as follows:—

"My brothers, I am once more among you, having deceived the enemy of our race by saying I had doubloons. I came to tell you that you have only one chance for death, and none for liberty. I am sure you prefer death, as I do.—You can by killing the white men now on board, and I will help you, make the people here kill you. It is better for you to do this, and then you will not only avert bondage yourselves, but prevent the entailment of unnumbered wrongs on your children. Come—come with me then—"

Antonio made the signal and the unsubdued chief was dragged from the hold, again manacled, and put on board the Washington. While making this speech, his cheek shone, and his eye often turned to the sailors in charge. The negroes yelled and looked as fiercely as he did. They leapt about and seemed like creatures under some talismanic power. On his way to the Washington, the hero moved not a muscle, but kept his eye fixed on the schooner. On board the Washington he made a thousand gestures and motions to be taken on deck, as if on some urgent and important errand.—But when led up he only looks at the schooner, and remains with his eye fixed on her till taken below again. He evinces no emotion, and had he lived in the days of Greece or Rome, his name would have been handed down to posterity as one who had practised those most sublime of all virtues, disinterested patriotism and unshrinking courage. Now most probably he will be hanged as a murderer and pirate.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

Received pay for the first volume of the Recorder.—Of O. White $3—1 for S. Galbreth, six mos., and 2 for John Vandenbark; of John Beatty 10, (this should have been credited in our last,)—for Wm. Davis, John Moon, Wm. Fitzsimons, E. W. Stephens and Stephen Remington.

Moneys received by A. H. Bassett, at the Ohio Conference, 1839, *for C. Springer, on account of the Western Recorder.*

Per Isaac Hunt, $8—for Wm. Edwards, Vincent Shinn, Abraham Hopper, L. W. Slade.

Per A. T. Morrison, 8—for Edward Kerns, G. Rumbaugh, H. Parker, G. Seaver & G. Mans.

Per D. H. Stephens, 16—for Edward Jeen, J. D. Medearis, Elizabeth Howard, John Vestal, J. Thompson, W. W. Paul, J. Williams, J. W. O'Havre,

POETRY.

SONG—TO C. S.

If thou would'st have me sing and play,
As once I played and sung,
First take this time-worn lute away,
And bring one newly strung.
Call back the time when Pleasure's sigh
First breath'd among the strings,
And time himself, in flitting by,
Made music with its wings.
Take, take the worn-out lute away,
And bring one newly strung,
If thou would'st have me sing and play,
As once I played and sung.

But how is this! though new the lute,
And shining fresh the chords,
Beneath this hand they slumber-mute,
Or speak but dreamy words.
In vain I seek the words that dwelt
Within that once sweet shell,
Which told us warmly what it felt,
And felt—what nought could tell.
Oh ask not, then, for passion's lay,
From lute so coldly strung;
With this I ne'er can sing or play,
As once I played and sung.

No—bring that long loved lute again,
Though chill'd by years it be,
If thou will call the slumbering strain,
'Twill wake again for thee.
Though time has froz'n the tuneful stream,
Of thoughts that gush'd along,
The look from thee, like summer's beam,
Will thaw them into song.
Then give, oh give that wak'ning ray,
And, once more blithe and young,
Thy bard again will sing and play
As once he played and sung.

THE QUESTIONER—A CHAUNT.

BY ROBERT NICOLL.

I ask not for his lineage,
I ask not for his name—
If manliness be in his heart,
He noble birth may claim,
I care not though of this world's wealth,
But slender be his part,
If yes you answer, when I ask—
Hath he a true man's heart?

I ask not from what land he came,
Nor where his youth was nursed—
If pure the stream, it matters not
The spot from whence it burst.
The palace or the hovel,
Where first his life began,
I seek not of it, but answer this—
Is he an honest man?

Nay blush not now—what matters it
Where first he drew his breath?
A manger was the cradle bed
Of him of Nazareth?
Be nought, be any, be ev'ry thing—
I care not what you be—
If yes you answer, when I ask—
Art thou pure, true and free?

LADIES' DEPARTMENT.

The following description of "heaven's last, best gift to man," is truly beautiful, and speaks volumes in favor of its author, Mr. Neal, and will, in a great measure, wipe away that prejudice which has, and still does, exist against that gentleman's writings. This prejudice is groundless, for no writer is more chaste in his thoughts or more elegant in his diction, than Mr. Neal. Our bachelor prejudices tell us there is *rather* more poetry than truth in this eulogy, but perhaps we are not a proper judge. J. W. W.

WOMEN.

BY JOHN NEAL.

It were no easy matter to describe the women of a small neighborhood—or of a single parish set apart, in one of the isles of the sea, from all the rest of the earth. How much more difficult to describe those of a large country, by a few general remarks. It is not so with the men. They may be hit off in the lump. They are the herbage, not the blossom of a country. They are all of a hue—they are not like flowers that blow under the pressure of the foot, and fade away before you have time to trace the perfume of their dying breath—to the trodden and crushed root you have scarred with your heel as you hurried by. They are not like women—as changeable as light, and as fluctuating as the shadow of summer-sea. They are more like the substantialties that you see about you, heavy, and rocky, and steadfast.

Men are the realities, women the poetry of this world. Men are the trees—women the fruitage and flower. The former delight in a rude soil—they strike their roots downward with a perpetual effort, heave their proud branches upward, in perpetual strife. Are they to be removed?—you must tear up the very earth with their roots, rock, and ore, and impurity, or they perish. They cannot be transplanted with safety. Something of their home—a little of their native soil must cling to them forever, or they die. Not so with woman—give her but air and sky enough, and she will seek no nourishment of the earth, strike no roots downward—urge no roots upwards—but content herself with sheding light and cheerfulness on every thing she touches. Would you remove her—you have but to unclasp a few green delicate fibres, to scatter a few blossoms, and to shake off a few large drops—like the rain drops of a summer shower—and, lo! she is ready to depart with you whithersoever you may steer. She does not cling to the soil, she does not yearn for a native earth—all she needs any where is something to grow to. Her vitality is untouched—her sympathies unhurt, by the influence of a new sky or strange air. It may be, that in her youth, her blossoming was about the door-way of a cottage—it may be that she is transplanted to a palace: made to breathe the hot and cruded air, to bask in the artificial sunshine of a city, in shadow, in smoke, and a most exaggerating atmosphere.—But even there she is happy—she carries her home with her; and though what she clings to may sicken at the heart and perish at the roots, for lack of its air, she will put forth her beauty, and scatter her perfume as before.

These things are easily said. But are they true? we are liable to be carried away by poetry and metaphor, and illustration,—poetry, and metaphor, what do they prove?—what are they good for?

Why should it be more difficult to describe the women than the men of a small neighborhood, of a remote parish of a large country? Try the experiment yourself. Go into the first church you see open, or to any other place where you may meet a multitude of women gathered together. Try to give a reader a general idea of their dress—nay try to give any body a general idea of part of it—of the fashion of their bonnets. You will find the hats of the men all alike in the whole house—I might say, on the face of the whole earth. Such is the very nature of woman: quick, apt, sensible and precipitate, with an eye for color that men have not, with an ear for music that men have not, and with a taste for shape that shows itself in every thing that she builds up. A woman studies change and variety—it is a reproach for her to dress alike—I do not say to be alike—for twenty-four hours at a time. She would blush to be caught twice a year at a ball in the same or similar dress. And where it may not be in her power to put on a new robe every day, it is the study of a large part of her life to appear to do so—to multiply and vary, by all sorts of contrivances, the few that she may have, now by altering the shape, now by giving a new dye, now by changing the ribands, or a flounce, or a furbelow, and now, it may be, by converting slips into frocks, or frocks into slips, or both into spencers or riding habits—all which a woman may do from her youth up, yet more from a love of change than from her secret wish to appear better than she is. And so with not a few of our men. The more youthful they are, the more sensitive they are: the more like women they are, the more changeable and capricious they are. But why should I complain of this? I do not—I only mention the fact for the purpose of showing how difficult it is to give to another a general idea of the character of a group of women.—Before the hue is copied—it is altered. Before the outline is finished, it is no longer the same.—You are in pursuit of the rainbow—you are describing a changeable landscape under the drifting clouds of a changeable sky—you are after a bird of paradise—a feather—a butterfly—

And every touch that woos its stay
Brushes its brightest hues away.

But is this a complaint?—if I say that flowers are not men; what say I more than every body, woman as well as man, should delight to acknowledge? Are we to be imprisoned forever, and aye with realities? Are we to live under a marble firmament that we may have more stability? Are we, who live in the very midst of change and fluctuation, who are never the same for two minutes together, who see all the elements circular forever and ever within us and around us, through all the vicissitudes of shadow and light, and youth and age; are we to speak irreverently of her, who, by the greater fineness and greater purity of her corporeal texture, is made more sensible than we, to the influences of sky and air, and sea and earth? As well might we deride the perfume of the flower, and the hue of the wild rose, or the flavor of a peach, for not being as fixed and immutable as the very earth we tread on. Are we to speak slightly of that, which, *with* all its changes, and *through* all its changes, is still a woman—the witchery and power, the pulse and lifeblood of our being? Let us remember that the charm of the very sky is its changeableness—of the very earth, is its being never the same for a long time together—of the very sea and air, that they change with every breath you draw and with every word you speak,

—like sunshine in the rill
Though turned astray, is *sunshine still.*

FEMALE HEROISM.

Many acts of female heroism are recorded in American history, which almost, if not quite eclipse the courageous daring of the most renowned male warriors. In the early settlement of the town of Wells, in this state, the wife of Capt. Littlefield is a brilliant example. Capt. Littlefield commanded a garrison in that place, and one morning took all his men but one soldier, from the garrison to a distant field, for agricultural labor. Soon after Capt. Littlefield left the garrison, four hundred French and Indians invaded the place, and the large number of the assailants so untimidated the remaining soldier that he sought a hiding place behind the cellar stairs. Mrs. Littlefield, with great coolness, and more than Spartan bravery, placed her children in a situation of as much safety as possible, arrayed herself in military habiliments, slung a drum to her side, and beat a military roll call, flew from post to post, pointing guns at each of the defences, and showing herself, as if by magic, at all the lookouts, apparently at the same time, which for a time kept the assailants at a distance. In the mean time, she watched from the tower the return of her husband, who she believed would hear the sound of the drum, and hasten to her relief. In a few minutes she espied him on his hands and knees, warily, crawling through the adjacent bushes; and having discovered herself to him, and made a signal for his instant approach, hastened to the ponderous gate of the garrison, which she suddenly threw open, and as Capt. Littlefield rushed into the yard, he fell, his coat became elevated and was pierced by five balls from the enemy's guns. Mrs. Littlefield, with her accustomed coolness, closed and barred the gate, and, having regained the garrison, felt herself safe under the tried courage and prudence of her husband. The enemy began cautiously to advance to the garrison, and one Indian, desirous of ascertaining the strength of the fort, climbed a large cherry tree near the pickets, who was discovered by Capt. Littlefield, and by him instantly shot dead. Several of the enemy rushed to the spot, took the dead Indian away, and in a short time retreated from the place, leaving Captain Littlefield and his heroic wife, master and mistress of the garrison.—*Eastern Baptist.*

DOMESTIC LIFE.

Pleasure is to woman what the sun is to the flower; if moderately enjoyed, it beautifies, it refreshes, and it improves; if immoderately, it withers, deteriorates and destroys. But the duties of domestic life, exercised as they must be, in retirement, and calling forth all the sensibilities of the female, are, perhaps, as necessary to the full development of her charms, as the shade and shower are to the rose, confirming its beauty and increasing its fragrance

YOUTH'S DEPARTMENT.

THE LITTLE RAGGED BOY.

It was some time ago stated by a gentleman at a public meeting, that a friend of his being in Utrecht, formed an intimacy with a magistrate of that city; but he had never heard anything of his origin, till one day, being at the magistrate's house, surrounded by elegance and comfort of every kind, the magistrate said to him: "You see me now, Sir, surrounded by every thing that can promote happiness and comfort in my old age; but perhaps you never heard what I was once."

"No," said my friend, "I never did."

"Then," said he, "I will inform you to what I owe all my present comfort. I was once a ragged, bare-footed boy, running about on errands in the streets of this city, of which I am now a magistrate, until one day a gentleman, who it seems had noticed me before, said to me: 'My boy, I have often seen you thus wandering about the streets; I wonder you like it; why don't you try to get some situation?' I replied, 'Sir, I don't know how.' 'Can you read?' 'No, Sir.'—'Would you wish to learn? if you will, I'll teach you.'

"He took the boy home, and taught him his letters; the boy seemed very grateful to his kind teacher, and continued to come till he was able to read.

"Now," said the gentleman, "I'll teach you the commandments of God, and I hope you will endeavor to keep them."

"Yes," said he, "that I will." "I hope you will," said the gentleman, "but I am afraid you are very blind."

The boy, thinking he meant this literly, put his fingers to his eyes, "No, Sir," said he, "I can see very well, and I will learn the commandments and keep them too."

"Don't be too confident," said the gentleman. However he taught him the commandments, and told him, he must make them the rule of his life. Every evening the boy examined his conduct by the commandments, and every evening he found himself uneasy. The more he compared himself with the commandments of God, the more he found of his own deficiency in keeping them, till he prayed to God to have mercy on him, and give him grace to keep his commandments; and having adopted these principles, his conduct was reformed, his practices were honest, he was placed in a situation of trust, and gradually arose from one thing to another, till, from the degrading situation in which he had been, he was raised to be a magistrate in a city.—*London Teacher's Offering.*

AN ONLY SON.

"Man's inhumanity to man,
Makes countless thousands mourn."

I knew an only son, a boy of rare promise; he grew up strong, bold and active, full of spirit and enterprise. His parents were opulent and intelligent; their views of life with all its responsibilities were broad and deep;—generous in their affections, they mingled extensively with society, which was elevated and ennobled by their influence. They were rich in their domestic joys; their son, their darling son, was a source of purest delight. There seemed no cause for solicitude for him; no weak points to watch over, to guard and support; he possessed a sound constitution; his intellect and his temper were as free from any defect as were his physical powers. The youth passed through his collegiate course honorably to himself and his friends, and being inclined to active life, he joined a commercial house in one of the largest cities. He was prosperous; and apparently formimg for himself a permanent home. All who had known him from his youth expected to see him standing foremost amongst our richest and honorable merchants when, suddenly, without any apparent cause, his partnership was dissolved.

The house to which he belonged continued in an honorable course of business till it had amassed solid wealth; while this young man, the hope of his parents went away alone, a prey to the ravages of alcohol;—the wine cup had ruined him. He had strict integrity, he had a capacity for all business, but he fell as a fortress which had been daily besieged till it is all undermined; a whole garrison on the ramparts cannot save it; it falls headlong, and all is buried in the common ruin. He went home to his distressed parents, but he had too much feeling to be willing to witness the misery he alone had caused;—he fled from his home, and sought a solitude of his own, and there yielded up all his hopes.

He took the dreadful poison till his powers were all destroyed; his memory was broken, his affections were scorched and scathed as by a stroke of lightning, and his reason—he seemed to have none; but at some lucid intervals it would rise in its full strength, goaded on by conscience, that worm that never dies, and gladly would he have taken his hated life. He died alone, and the cloud of oblivion settled over his memory. His parents never uttered his name. They drank to the dregs of the cup of bitterness; he passed away, and no trace is left behind him; deep furrows lie hidden in a few hearts, untold to that world which looks and passes by on the other side.—*American Temperance Union.*

MISSIONARY.

THE JEWS.

The General Assembly of the Church of Scotland have taken up the cause of Jewish conversion, and have appointed a committee to take measures for that end. The committee have resolved to send forth a deputation immediately to Palestine, to learn the state of the Jewish people now in that land, and to report to the General Assembly; so that, if there be a favorable opening, steps may be taken for the establishment of a mission among them. The deputation is afterwards to visit the Jews on the continent and collect information in those parts where they most abound. The Scottish Guardian remarks—

"It is understood that there are at present not less than 40,000 Jews in the Holy Land, and that every day is adding to the number. A British Consul has been stationed at Jerusalem, whose presence will be a protection to them. Very considerable religious excitement prevails among the Jewish people—greater, perhaps, than has appeared since the days of the Apostles and as the Holy Land is their grand centre, they not only know what is the state of mind of their brethren in other quarters, but a Christian influence diffused from Jerusalem, through those who had themselves been Jews, would tell with great force on Jews throughout the world."

EPITOME OF THE TIMES.

AN ALARMING AND FATAL EPIDEMIC.

Great anxiety is felt in the north eastern section of the Union, and particularly in Vermont, in consequence of the breaking out of a terrible sickness at Springfield, in that State. All that is yet known of the subject, is derived from a letter of which the following is an extract:—

"Our town is almost a string of hospitals. A virulent dysentary, accompanied with symptoms of Asiatic cholera, has broken out among us; and hardly a family escapes. The wives of two of my nearest neighbors died last night, and in every direction, this disease seems spreading. We are not exempt: J—— and B—— have the first stages of it. Our 'help' has left us, sick; and we are not as we were and wish to be. The cause is inscrutable. No stagnant water exists near. All nature is still clothed in verdant beauty and luxuriant vegetation. I stay at home only on this account. I have calls to visit others, when my own family can spare me. One, nay, several of our best young men and families, are down with this epidemic." Springfield is at the base of Green Mountain, hitherto a remarkably healthy situation.

Revival of Religion. The Nashville Banner of the 23d ult. says:—"A spirited revival of religion is now in progress in this place. Nearly two hundred persons within the last two months, have attached themselves to the Methodist church.—Public attention to this subject has in no wise abated, but within the last week appears to have considerably increased."

A Patron.—The Steubenville Herald says;—"A subscriber who has been patronizing us for nearly ten years without paying, and whose lovely wife not long since broomsticked our collector out of the house for presenting the bill, wanted to know of us, last week, why we stopped his paper."

A little girl, only 11 years of age, artfully contrived to steal $57 from a lad in New York, who had just drawn the money from a bank.

His Majesty, the King of Prussia, has sent in his subscription to Huddy's Military Magazine, published in Philadelphia. Talk of American triumph! Here is a scion of the great Frederick seeking martail knowledge of a Philadelphia Major!—*U. S. Gazette.*

A house was pulled down in Wilmington, Delaware, in order to arrest a man. The offender defended himself and quarters right boldly with brick-bats, &c.—It is certainly a new mode of executing the laws, to tear down a man's house about his ears.

Wool in Vermont.—This article is selling in Vermont at the average price of fifty cents the pound. It is estimated that the aggregate proceeds of this year's sales in that State, will be over $1,500,000.

The Greenville, S. C., Mountaineer, of the 16th ult., states that a few days previous a wagon load of prime wheat was purchased in East Tennessee at 37½ cents per bushel, and the gentleman who purchased it said that if he had gone a few miles further, he could have had it at 25 cents per bushel. The same informant says that in that section of country, the farmers offer to engage corn, when harvested, at from 12½ to 18¾ cts. per bushel.

Expedition.—The coat which Henry Clay wore yesterday, was in the loom on the day preceding. It was manufactured at Glenham, near Newburgh, where the Senator visited a manufacturing establishment. He saw this cloth in process of manufacture, and was surprised the next morning at finding a portion of it in his room, converted into a suit of clothes.—*N. Y. Dispatch.*

Curious Doings.—The N. Y. Star says, that at a recent assemblage of the Petty Sessions, a number of accused persons were on the book for trial, but neither Recorder or Judge could be found any where to try them——all gone to the Springs! So they were sent back to the Egyptian catacombs,—many, no doubt, innocent.

The office of the Troy Mail was entered lately, and $20 in cash stolen, besides a number of newspaper bills due by distant subscribers. The editor offers to forgive the cash stolen, if the burglar will collect the bills due, and return half the proceeds.

The use of steelyards, by butchers, grocers, &c., is prohibited in New Orleans under a penalty of twenty dollars.

The damage caused by the heavy storms in France, in blowing down trees, fences, &c., and in inundating farms and villages, and in carrying away bridges, &c., is esmated at 100,000,000 of francs, or near 20,000,000 of dollars!

They are raising tomatoes over 2½ lbs. weight in the vicinity of Cincinnati.

A Profitable Cruize.—Recently a whaling ship arrived at Wilmington, Delaware, after a cruize of only 14 months in the South Seas, bringing with her (after selling oil sufficient in South America to pay all her expenses during her absence,) 2,400 barrels of oil, $1,400 in specie, and 20,000 pounds of whalebone.

At Fort Wayne, Indiana, a drunken brute took his little son, aged about six years, from the school house, under pretence of taking a walk, then went to the river and threw him in. Some boys near by saved the child from drowning—then ducked the brutal father and let him go.

Great Robbery.—The store of a Mr. Tams, in Market street, Philadelphia, was entered on the night of the 16th ult. and robbed of $585 in bank notes, and $125,000 in notes of hand. The thieves obtained admittance to the store, and to the fire proof, where the notes and money were deposited, by means of false keys.

State Loan.—The Portsmouth Tribune of August 23, states that a "A letter was received here this week, announcing that the Fund Commissioners have succeeded in borrowing in New York $600,000, at 4 per cent. premium, in addition to the amount hitherto obtained."

The way they serve *Duellists* in Turkey "is the right way." A duel lately took place at Constantinople—in which one of the combatants was killed. The survivor was arrested, found guilty of murder, and *beheaded*. The parties were rival lovers.

The papers in Illinois calculate on an augmentation of no less than 40,000 persons to their population this year. The land sales in that State this year have exceeded $50,000.

Wheat has been sent this year from Wheeling to Portsmouth, from thence to Cleveland, and then shipped to Buffalo to be manufactured into flour for the New York market.

Money, which answers such a variety of purposes, has been used to hire a person into health. A gentleman cured his wife, who was complaining, by giving her a dollar a day for every day that she did not complain; if she uttered any complaint her wages were stopped for that day.

An ingenious Yankee has invented a labor saving machine to knead bread.—"Arrah!" says Patrick, "it is *natural* enough to *need* bread—give us more machines to supply it."

The way of the transgressor is certainly hard. A man in Mississippi stole a horse, and being overtaken and arrested, begged to be killed. He was tied to a bed post whole his captors took breakfast.—In their absence he got hold of one of their pistols, and shot himself through the head.

Free Negroes.—Under a law of Louisiana, a free negro woman was tried in New Orleans for remaining in the State after being notified to leave within thirty days. She was convicted, and sentenced to one year's imprisonment. Where will the unfortunate beings go?—*Ham. Intel.*

Two men convicted of Lynching a person in Mississippi have been fined 20,000 dollars. Dear revenge, this, we think.

An Effective Blow.—A young man in Middletown Valley, a short time since, killed a garter snake with the extraordinary number of one hundred and two young snakes in embryo. This is no snake story.—*Frederick Examiner.*

Perfect Love Destructive.—A young lady in Virginia, lately died after drinking immoderately of the cordial called perfect love.

A Good Law.—By the new election law of Pennsylvania, an offer to bet upon the result of an election in that State, involves a forfeiture of the right of suffrage at that particular election.

If this species of gambling could be put aside, there would be fewer illegal votes cast. When men have money at hazard they are prepared to use every means to effect their individual interest, regardless of the public good, and frequently produce results prejudicial to the country.

One dollar notes changed to *threes* of the Ohio Railroad Company, are in circulation in Ohio.

Eastern Railroad.—Number of passengers for the week ending Aug. 31, 7,255.

ADVERTISEMENTS.

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts.	-	-			1 copy for a year.
" $5	-	-	-	12	copies.
" 10	-	-	-	25	"
" 20	-	-	-	60	"
" 30	-	-		100	"
" 50	-	-	-	200	"

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia.

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods, and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

THE WESTERN RECORDER.

VOL. 1. ZANESVILLE, OHIO, THURSDAY, OCTOBER 5, 1839. NO. 7.

THE
WESTERN RECORDER
IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

Conference Matters.

EXTRACT FROM THE PROCEEDINGS OF THE PITTSBURG CONFERENCE.

(*Continued.*)

The following were the members of Conference.

Ministerial Members.

Z. Ragan,	Joel Dalbey, jr.
Asa Shinn,	John Beatty,
M. N. Warren,	James M. Piper,
W. M'Connell,	W. L. Baldwin,
J. Myers,	H. Kelly,
P. Inskeep,	W. G. Williams,
R. Simonton,	J. Hopwood,

A. Swan,	C. Wilkinson,
S. M. Prentiss,	W. Hamilton.

Probationers for membership in the Conference..

John Cowl, Washington Maynard, Daniel Kinny, Henry T. Lawson, William Ellis, James Robison, William Munhall, John B. Roberts.

Received into the Itinerancy.

Elders—Thomas Addis, John Fordyce, John Clarke, John Gisinger, Robert Bamford, James Heath, Samuel Hazlett.—*Deacons*—W. W. Tipton, T. Fairchild. *Preachers*—Thomas Stephens, Edward Sturman, Nathaniel Linder, J. B. Shearer, Abraham K. Earle, William Turner, William M'Cullough, Gabriel Lanham, John Milligan.

The following Preachers were ordained Deacons.

J. B. Shearer, W. Ellis, A. K. Earle, J. Milligan, G. Lanham, J. W. Brown,* W. Munhall, J. Diselms,* James Robison, John Cowl.

Those marked thus * were unstationed.

The following Deacons were ordained Elders.

Thomas Fairchild, William W. Tipton, Wm. Ross, Jas. Hopwood, Seely Bloomer.

Those elected to Deacon's orders but not ordained.

Jacob Nichols, Chas. Bird, James Magee, Henry T. Lawson, Nathaniel Smith, Samuel Catlin, Thomas Rutlege, Thomas Nesmith, James Nugen.

Those elected to Elder's orders but not ordained.

A. Summers, J. Robinson, S. W. Laishley, J. Cowl, H. R. Bonnett, A. Morrison, J. Allen.

The Stationing Committee.

G. Brown, Z. Ragan and J. Dalbey, jr., *preachers.*—D. H. Phillips and I. Cassel, *lay delegates.*

The Standing District Committee.

C. Avery, C. Springer, A. Shinn, *ministers.*—E. W. Stephens, J. Phips, H. Belknap, *lay delegates.*

In the case of Hugh Kelly, who was appointed last year to the New Lisbon station, the following resolutions were unanimously adopted: 1st. That the official and ministerial conduct of Bro. Hugh Kelly, in the New Lisbon station, was of a character justly deserving and requiring the official censure of this Conference. 2d. That the charges and specifications contained in the documents accompanying this report, be handed over to the proper officer to be submitted to the decision of a judicial committee, according to the provisions of our Discipline.

Resolved, That the case of W. W. Reynolds be referred to the executive officer of the District, for a judicial investigation according to Discipline.

The names of E. Woodward, A. Robinson, and Adolphus Morse, were, by a resolution of Conference, erased from the list of itinerant preachers.

James Palfreeman, J. F. Hamilton and G. Casto, were transferred to the unstationed list at their own request.

Resolved, That we respectfully request our beloved brother Shinn, to write a course of Theological Essays, to be published in the Western Recorder, for the benefit of our preachers.

Resolved, That this Conference highly approve of the Temperance enterprise, and that the preachers be requested to deliver lectures on all suitable occasions on the above subject.

Resolved, That the time for electing delegates in circuits to the Annual Conference be at the third Quarterly Conference.

The Centenary Report.

The committee to whom was referred the communication from the Ohio Conference, proposing to raise a centenary offering, beg leave to report—1st. We heartily approve of the proposition. We regard the effort to improve the interesting opportunity, both laudable and right, and while the parent connexion of Methodists beyond the flood are rapturously enjoying the jubilee of centenary Methodism, and of their abundance are casting great riches into the treasury of the Lord: and on this side of the great deep our elder brethren, the Episcopal Methodists, are emulating their zeal and joy, as an infant daughter of true Methodism let our feeble voice be heard on high, in cheerful gratitude to God for all his mercies to us. And let our hand be opened to present our offering too. 2d. Touching the manner of raising the tribute offering, and the objects to which it shall be applied, we recommend the adoption of the report of the committee of the Ohio Conference, which is as follows:

[*See last number Recorder for this Rep.*]

The report of the committee on boundaries is not among the Conference papers in our possession. The stationing committee had it. Perhaps it is now in the hands of Bro. D. H. Phillips, who served on said committee; if so, will he be so good as to forward it to Bro. J. Burns, in Steubenville, Ohio.

All things considered, our Conference just now closed, was unusually harmonious. The reports from nearly all our circuits and stations, were cheering indeed. Let our ministers and members hold on their way, trusting in the great Head of the church, with the most perfect assurance, that we shall yet be a great, useful and happy people, if we are only faithful to God and one another.

[*To be continued.*]

EXTRACT FROM THE PROCEEDINGS OF THE OHIO CONFERENCE.

[*Concluded.*]

Resolved, That it shall be the duty of each superintendent in the bounds of the Ohio District, to solicit subscriptions by companies, for the books of our church, in order to supply the several circuits and stations.

Resolved, That we rejoice in the establishment of a Western Periodical, devoted to the interest of the Methodist Protestant church, whose columns are to be kept open for the discussion of all moral questions, and we pledge ourselves to do all in our power to sustain the publication.

Resolved, That colored persons making application for membership in any of the societies of the Methodist Protestant church, within the limits of the Ohio District, shall be received under the same provisions specified in the Constitution, Art. 2d, Sec. 1st.

Whereas, This Conference has by a repeated vote declared slavery to be contrary to the morality of the Holy Scriptures, *And whereas*, No person guilty of immorality, can be innocently received by the church, to her communion, therefore,

Resolved, That this Conference recommend to the several Annual Conferences to take timely measures to empower the next General Conference so to amend the Constitution and Discipline of our church, as to preclude hereafter the admission of unrepenting slave-holders to the fellowship of the church, and to restore the general rule of John and Charles Wesley, on the subject of slavery.

Resolved, That this Conference tender their thanks to the brethren and citizens of this vicinity, for their generous hospitality in the entertainment of its members during the present session.

Resolved, That the President for last year, be requested to furnish a copy of his annual communication to this Conference, for publication in the Western Recorder.

Resolved, That our President be requested to make arrangements that a sermon be delivered at the opening of our next Annual Conference.

The next session of our Conference is appointed to be held at Cincinnati, commencing on the last Tuesday in August, A. D. 1840.

A. H. BASSETT, M. M. HENKLE, A. C. BARNES, *Pub. Com.*

Cincinnati, O., Sept. 13, 1839.

[PUBLISHED BY REQUEST.]

ADDRESS,

TO THE OHIO ANNUAL CONFERENCE OF THE METHODIST PROTESTANT CHURCH, IN ANNUAL SESSION ASSEMBLED.

Beloved brethren and fellow-laborers in the Gospel of our Lord Jesus Christ:—

Another year of our precious time is gone forever. Another year of our toil and labor is over. Another year our kind heavenly Father has mercifully watched over and protected our lives, through many dangers, diseases and deaths; and I trust that through grace we all feel that we are one more year nearer our eternal happy home.

We are met once more to consult upon and attend to the important concerns of our infant branch of the church of Christ. And I deem it my duty to lay before you, as the result of my travels and observations, a brief statement of the condition and prosperity of the church within the bounds of our District. By divine aid, I have been enabled to travel about 3000 miles, in visiting all the circuits and stations, and to preach about 200 sermons, besides other gospel labors, during the past year. I have found some occasion for deep, heart-felt sorrow. But, thank God, I have also found cause of gladness and joy. My sorrows have arisen, first, from a want of ministers to supply the circuits. And this want of laborers, I am confident, arises from the want of a competent support,—and this from a want of consideration and attention to the system recommended by our Financial Committee, and approved by this Conference. It has afflicted me much to think that a number of our most experienced and useful ministers have been driven by necessity from the vineyard of the Lord, from the want of a few cents from each member, once a quarter. I am grieved to say, that I could name the men, scattered through the bounds of the District, who are now in retirement, as lights under a bushel, who would at this time be in the field of itinerant labor, were it not that their families would suffer want, did they not engage in business for their support. I would recommend to the Conference, or Financial Committee, to consider whether any thing more can be done to roll away from our people this reproach. Surely, whilst thousands, nay, millions of dollars are advanced by those who are disfranchised by the assumed power and authority of the ministry, (and those who advance these thousands and millions, seldom know what becomes of their bounty,) our brethern, who stand on equal ground with the ministry, in regard to governmental principles, and the distribution of our funds, ought to provoke one another to righteous emulation on this all important point.

Another cause of sorrow is, that many of our brethren, particular in circuits, are in the habit of holding love-feasts with open doors, even without a door-keeper, thus violating the plain prohibition of our Discipline, that love-feasts should be held promiscuously as public meetings. I respectfully submit to the Conference whether some action should not be had on this subject, and at least a resolution adopted, enjoining that all our superintendents pursue the order of Discipline in this matter. Another cause of regret has been, that the general rules of John and Charles Wesley, as contained in our book of Discipline, are not read to our societies and congregations. I trust that some order will be taken on this subject, for the following reasons: 1st. Many have united with us, who, it appears, have not even seen our book of Discipline: 2d. Many have not had an opportunity of obtaining one: 3d. Some few, (and I trust they are but few,) have thought that to be members of the Methodist Protestant church, would free them from any obligation, regularly to attend to religious duties, that they are left altogether to their own choice in these things. In a word, some among us, both ministers and laymen, appear to think, that to live under a republican government in a church is, for every one to do just as he pleases, and believe what he pleases in Theology and Discipline.—But, as I said above, I trust we have very few of this class among us now.—Would to God we had none such.

But with all these sources of regret and sorrow, I have been comforted to find that we have so goodly a number of faithful ministers, and such a proportion of precious members who love our cause, and are as the salt of the earth. I have been gratified to find that our unstationed brethren have not all been idle. The preacher appointed to Blue River circuit, failed to reach there. At my request, communicated by letter, the brethren of that circuit called a Quarterly Conference, at which Bro. J. M. Westerfield volunteered to serve them, and did accordingly attend to the principal part of the circuit the whole year without any charge. At their last Quarterly Conference, which I attended, the brethren gave Bro. W. a vote of thanks for his services. Richwood circuit was left to be supplied. The unstationed brethren there, with the supernumerary assistant, Bro. M'Clain, have kept up the appointments generally, and they all stand fast. At a quarterly meeting in June last we prevailed upon Bro. Joseph Williams to take charge of the circuit for the balance of the year. Our beloved brother, J. H. Thomas, who was appointed Home Missionary on Twin Creek circuit, with the aid of unstationed brethren, has supplied the regular preaching places there, in the stead of Bro. D. Hannah, who has not been able to travel. I deem it unnecessary to particularize all similar cases, for there are others. Let it suffice to say, that if we have gained few or none on some circuits, we have lost few, if any, save by emigration.—Yet all feel the necessity of a regular ministry, and I trust that more will be done hereafter to encourage such to labor faithfully.

I would next mention that we are all deeply interested in our church Book Concern. Many of our circuits are destitute of a supply of our Hymn Books and Disciplines, while the Book Committee and their Agent have abundance, and are anxious to send them abroad. Few individuals feel able to send on for a quantity worth freighting. I would propose that some system be recommended for supplying our circuits with books, and respectfully suggest that each superintendent be requested to form a company and have an agent appointed to send on the amount raised, and to order such books as each subscriber wants.

In conclusion I would just allude to the Methodist Centenary enterprise. In October next, the hundredth anniversary of the rise of Methodism takes place. Methodists in Europe and America, design to celebrate the day. The Wesleyan Methodists in England originated the measure to raise as extensive sums as possible, in furtherance of religious and benevolent objects, during this centennial year, as thank offerings for the success and prosperity which have attended the Methodist connexion during the first hundred years, of their existance. More than a million of dollars had been raised some months ago in the Wesleyan Methodist connexion, and they will perhaps make it two millions by the time of the anniversary. The Episcopal Methodists in this country have more recently engaged in a similar enterprize, and are raising great sums in furtherance of Missionary and Educational purposes, amongst others. And surely we have as good a right as the other branches of the Methodist family to improve the occasion, Our beloved brother Stockton, of Philadelphia, urges attention to this subject, and proposes three objects to which the funds might be applied: 1st. Two Colleges, one in the west, the other in the east. 2d. The endowment of the church Book Concern. 3d. Foreign Missions. I do hope that our brethern will take hold of this in good earnest. It is known to the Conference that two individuals of our brethren have the entire burthen of the debts of our Literary Institution. Let us not disgrace ourselves by leaving them to suffer beneath these liabilities, but take prompt and effectual measures to relieve them.

Finally, my dear brethren, suffer a word of exhortation. Let us pray much for the spirit of meekness, humility and love, that in all matters brought before us here, we may attend to them with an eye single to the glory of God, leaving self out of sight. It is our greatest interest to be zealous for God, and devoted to his cause.

And now, may the God of all grace reign in all our hearts—govern all our passions—direct us in all our counsels, and inspire each of us afresh to go forth with cheerfulness to our several fields of labor, and give us more than double success the ensuing year. Such is the sincere desire and prayer of your aged brother and follow-laborer in the best of causes.

ADJET M'GUIRE,
Pres't. Ohio Con.

Aug. 27th, 1839.

"Mr. Magnanimity, father wants the loan of your newspaper, a few minutes; if you please."

"Run back, my son, and tell your father that I will lend him my breakfast with pleasure;—but as how I hav'nt got through with my paper yet."

YOUTH'S DEPARTMENT.

HOW EASY IT IS TO OBEY.

A LESSON FOR YOUNG CHILDREN.

If children only knew how easy it is to be obedient, I think they would often try it. It makes them happy, and much beloved by their friends. An obedient little girl is such a dear little girl, that her father and mother are always glad to see her run into their room, and her sisters love her every day and all day, and are pleased to have her with them. To be obedient, is a very simple and easy thing; it is to do *just as your parents tell you to do.*

Perhaps some little girl is reading this; now, little girl, (for I do not know your name, perhaps it may be Sarah, or Mary, or Elizabeth, or Fanny,) I wish you just to think how easy it is for you to obey. If your mother should say, "Mary, give me my work-box," what ought you to do?—Ought you to sit still and play with your doll? No! you should *instantly* leave your doll and give your mother her work-box.

If she should say, "Fanny, dear, come now and let us have our little lesson," should you say, "No, no, I don't want to?" O no, you should immediately run to your mother, and be very attentive a very few moments, and then you can go back to your play-things in peace and comfort.

Should you be playing out of doors and your mother says, "Sarah, do not go any further than the great tree;" what are you to do? Why only to be careful to go no further than the great tree.

Should your mother go out of the room and leave you with a basket of fruit, a sugar-bowl of sugar, a plate of cakes, or any thing else which little girls like—if she has ever told you not to *meddle* with things which did not belong to you, then is the good time to obey. Let her see when she returns that you have not touched one thing, and then she will know that she can trust you, because you are determined to obey. You see how easy it is to obey; you see it means that you are to do as your parents tell you.

I know a story of a little girl who always tried to be obedient. She was not six years old; she was only *one* year old. What I tell you may seem surprising, but this is a true story. Eliza's mother had an aunt, a fine old lady, who lived on a beautiful farm.

One day little Eliza, who was but one year old, was taken by her mother to visit this aunt. The moment Eliza entered the room where the lady was sitting, her little sharp eyes espied a large flower pot set in the deep fire place, and filled with the gayest colored flowers, roses, velvet, marigolds, London pride, yellow lillies, and many others. Scarcely stopping to have her bonnet untied, or even to give her aunt a kiss, the little girl ran up to the flowers and began pulling off their bright leaves and scattering them around. Her mother knew this would be very displeasing to the good lady, and as her daughter had frequently tried to obey, young as she was, she now took hold of both little chubby hands, and looked into her rosy face, spoke plainly and slowly these words, at the same time pointing to the flowers; "Eliza, you must not touch these flowers, nor put a finger upon one of them."

The little girl stood still and looked at her mother, as all children should who wish to learn to obey. For then they will know what she wishes them to do. Eliza understood her mother; she then tried to obey. She staid, I think, a week at this beautiful farm—she certainly did several days—and not once all that time, though she was continually running about the room, did Eliza put a finger upon one of the flowers; and not *once more* did her mother have to speak to her about it.—She would run up to them, she would look at them, she would smile and delightedly stretch out her arms towards them, but not once did she touch them. She *tried* to obey, and she did obey.—*Mother's Journal.*

From the World, a Philadelphia paper.

EXTRAORDINARY ADVERTISEMENT.

We find in the Ledger of Saturday last, the following extraordinary advertisement:

"ONE HUNDRED DOLLARS REWARD.—Ran away from the subscriber, No. 14 South Calvert street, Baltimore, on Wednesday, 7th inst. a ***** boy, named ALFRED, 18 years old, stout built, his ears rather smaller than usual, and may easily be detected by close questioning, and he has never before been among strangers. The above reward will be given to any one returning or securing said boy, so that the owner shall get him again.

"a10-3t* ANN M. HACK."

At the head of this advertisement is the figure of a negro in the act of running away, with a bundle swinging over his shoulder from a stick. We do not notice this for the especial purpose of finding fault with the Ledger, but for the just indignation of this community, a practice which has not been tolerated in the non-slave or free States, since the abolition of slavery in them. For many years past, the presses of this city have refused to admit such advertisements; and we believe that the last instance, except that now before us, in which a rule so salutary was violated, occurred about four years since, when an advertisement of a fugitive slave crept into one of our large daily papers, without the knowledge of its proprietor, and was removed so soon as he perceived it.—Public opinion here is entirely opposed to such advertisements, and we hope it ever may be.

We would accord to the slaveholder all his rights under the law, at least so long as the law remains; and therefore we would not tolerate the rescue of a fugitive slave, when the master's claim to him had been legally established. Neither would we instigate or aid a slave to flight or insurrection. But beyond this, our obligation ceases. Denying the abstract right of slavery, and regarding the relation as fraught with mischief to both bond and free, we cannot conscientiously do any thing to promote it, and will not therefore aid in discovering and restoring a fugitive slave, beyond the imperious requirements of the law. Now while the law prohibits us from rescuing, it does not require us to advertise a fugitive slave, and we will not act as a volunteer in aid of slavery. If, then, a slaveholder would offer us such an advertisement, we would say, "Go, sir, with an officer, and find him; he is not, and shall not be, harbored on our premises, or rescued from the officer by our aid, when found. To render you more than this passive aid would infringe a fundamental principle of our creed, the abstract wrong of slavery."

We believe that the press of New York has been equally scrupulous on this subject, with that of Philadelphia; for we do not recollect any such advertisements in the papers of that city. If such things were tolerated in either city, its presses would be crowded with them; for the great majority of fugitive slaves seek refuge in Philadelphia or New York.—But whatever be the practice of other presses, *this* shall not prevail with us; for on the subject of slavery, we cannot conscientiously aid our southern brethren beyond the strict, imperious requirements of the law.

NASHVILLE, (Tenn.) Aug. 21.

A most foul and unprovoked murder was committed in this city on Monday evening last, just before sunset. The facts in the case, as we learn them, were these: Mr. William Sandy, a discreet and respectable laboring man, residing just over the river, was in the city, and went into a small grocery, kept by Mr. William G. Harrison, to get some chewing tobacco. After purchasing it, some slight altercation between Harrison and Sandy took place, whereupon Harrison caught up a very heavy bludgeon and struck Sandy across the head, which brought him to his knees. Instantly the blow was repeated in nearly the same place—and Sandy was a lifeless corpse. They were both stout, able-bodied men. Harrison bustled about, after the murder was committed, armed himself, procured a horse, and rode off. As he left the stable, we understand several persons were standing by, one or two of whom attempted to arrest him; but he presented a pistol and got away. Directly afterwards several persons started in pursuit—but up to last evening at sunset no news had arrived of his arrest. The Mayor has offered a rewaed of $250 for his apprehension, and it is expected that the Governor will offer a reward also on behalf of the State. Previous to this murder Harrison bore a *bad* character.—*Banner.*

A MOTHER.

There is something in sickness that breaks down the pride of manhood; that softens the heart and brings it back to the feelings of infancy. Who that has suffered, even in advanced life, in sickness and despondency—who that has pined in a weary bed, in the neglect and loneliness of a foreign land, but has thought of the mother "that looked on his childhood," that smoothed down his pillow, and administered to his helplessness? Oh, there is an endearing tenderness in the love of a mother to her son, that transcendeth all other affections of the heart. It is neither to be chilled by selfishness, nor daunted by danger, nor weakened by worthlessness, nor stifled by ingratitude. She will sacrifice every comfort to his convenience; she will surrender every pleasure to his enjoyment; she will glory in his fame, and exult in his prosperity; and, if adversity overtake him, he will be dear to her by his misfortune; and if disgrace settle upon his name, she will love and cherish him, and if all the world cast him off, she will be all the world to him.

MAXIMS.

The earthly glory and grandeur of mankind are buried in the grave.

Be cheerful, but not light; solid, but not sad.

When God punishes another, he threatens thee, when he wounds another, he warns thee.

Every man is an architect of his own fortune.

Anger is an approach to insanity.

Bad books are the public fountains of vice.

To render good for good is man-like. To render good for evil is god-like.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,.....OCT. 6, 1839.

The expenses of the New York Luminary, a Methodist Protestant paper, the size of our own, is said, by the publishers, to be thirty dollars per week. Our weekly expenses are about the same.

A Cattle Show and exhibition of the Muskingum County Agricultural Society, will take place in Zanesville, at the McIntire Academy, on the 26th instant. The society will elect its officers on that day. The committee of arrangements desire the attendance of all who wish prosperity to the interest of Agriculture; and they solicit the citizens to "exhibit whatever they may have that will give interest to the exhibition, whether animal, vegetable, fruit, implements, article of manufacture, or any thing else."

The Ohio Annual Conference of the Methodist Episcopal Church, will hold its next session in this town.

On our late visit to New Lisbon, we noticed that the corn crops about Cadiz, Ohio, were quite abundant;—there were on the whole length of the road from Cambridge to Steubenville, plenty of apples—large growth, and fine loooking quality. On the summit of the highest Still Water hills, a good supply of peaches; but when we past (September 8th,) they were not ripe enough for use,—they were later than common.

During this week, we have had several hard frosts; and for some time past, light showers of rain.

A report was put into circulation that C. B. Parsons, who had recently left the Stage for the Pulpit, was about to return to his former profession; but, a letter from him in a late Louisville Gazette, contradicting the report, shows that he is still steadfast to the Cross of Christ.

The Rev. John Herbert, of Cambridge, Ohio, informs us that he has recently visited Andrew Whitter, a soldier of the revolution, who now resides about four miles south of that place, but was about two years since from Pennsylvania; he was one hundred and twenty-three years of age last spring, and was married to his last wife in his 80th year. He is still able to walk about the place, and has a good appetite for his food. He has vigor of constitution enough, if he meets with no accident, to last several years longer.

It is said that John Rowe, of Fayette county, Ohio, has made a number of experiments, which go to show that a certain weed is the cause of the "Milk Sickness," which is so afflicting in its consequences in the north-west part of this state. May-be Mr. Rowe has found out this secret, but we are inclined to doubt it.

Matthew Carey, of Philadelphia, died, in the 80th year of his age, on the 16th ult.

The arrival of the small-pox, in New Orleans, was announced on the 7th ult.

The Bank of Indiana has declined receiving on deposit, the government funds, on the terms specified by the Secretary of the Treasury.

James G. Birney, of New York, has recently executed a deed of emancipation in favor of twenty-one slaves, who fell to him from his father's estate, lately deceased, in Jefferson county, Kentucky.

The Charleston Mercury announces the death of Nathaniel Bowen, Bishop of the Diocess of South Carolina.

We acknowledge the receipt of the "Youth's Cabinet," of New York, in exchange for our paper. The "Cabinet" is "devoted to Liberty, Peace, Temperance, and Religious, Moral, Intellectual, and Physical Education." We hope it will continue with us, as it furnishes very appropriate matter for our Youth's Department.

We have noticed between abolitionists and their opponents, a contradiction, with regard to the condition of the slaves, since the abolition excitement; the latter affirming that the excitement had a tendency to render worse, instead of ameliorating the condition of the colored man; and the former denying the position.—Our limited acquaintance with the subject will not enable us to form a correct opinion. But, the following extract from a letter of Mr. Gurley, Corresponding Secretary of the Colonization Society, dated Vicksburg, July 6, 1839, so far as its observation extends, shows, from some cause or other, that the condition of the slave is improving. Mr. Gurley will, no doubt, be considered, by all parties, as good authority.

"It is delightful to observe an increasing concern for the religious instruction of the slave population, among all sects of Christians throughout this south-western country. No field of better promise is opening for the efforts of true and judicious Christian Ministers, than among this population in the South. The planters—with some exceptions—are disposed to encourage their servants to meet on the Sabbath, on their respective plantations, and receive instruction on religious subjects, from preachers who enjoy public confidence. Several Methodist ministers in the State of Mississippi, are devoting themselves exclusively to the religious instruction of the slaves. A Presbyterian clergyman has, for several years past, been devoted to this good work on four or five of the plantations in the neighborhood of Natchez, and been wholly supported by their proprietors. Loss of health has compelled him to leave his post; but another gentleman has been found ready to occupy it.—Planters who have long been unmindful of their obligations to secure the benefits of Christianity, as preached by true-hearted ministers to their servants, are now disposed to adopt measures for the purpose.

"The Methodist colored congregation in New Orleans is large, and comprises three or four hundred members of the society, who are not surpassed—as I was told by their preacher, a very intelligent white minister—for their exemplary lives and Christian spirit, by any church in that city. Nearly all are slaves, but they have been able to subscribe about two thousand dollars for the erection of a church—that in which they now worship being small and inconvenient.

"The Rev. Mr. Marshall, of the Methodist church, preaches every Sunday afternoon to a large congregation of the colored people in Vicksburg, who have made a subscription of about one thousand dollars towards the construction of a church.

"A portion of the colored population of Natchez find seats in the Presbyterian and Methodist churches, and in the construction of the Episcopal church, now well nigh completed, ample accommodations are to be made for their benefit."

The following is an editorial from the Methodist Protestant of the 28th ultimo:

"A writer in the "New York Observer" furnishes a most deplorable picture of the violation of the Sabbath in some parts of the West. Of Louisville and St. Louis, however, he gives a very encouraging account, and represents a religious influence as prevailing to a very great extent. And, in remarking upon Pittsburgh, he says he was never "in a large town where the contrast between the Sabbath and other days of the week was more striking."

"He nevertheless represents the Sabbath as dreadfully profaned along the course of all the main arteries. The steamboats leave the wharves full of passengers, and the freight is, in many instances, both received and discharged on the Lord's day. The following account of a Sabbath spent in a western village, will be read with mournful interest."

This editorial, and the extract which follows it, (which is omitted,) we think calculated to make a wrong impression with regard to the religious condition of the West. That there are, both in the East and the West, too many who are shamefully deficient in observing the institutions of religion, the Sabbath in particular, we admit; but, that the West, on this subject, is so much more deficient than the East, as to be cause of special lamentation, we think a very great mistake.

But the "Sabbath" is said to be "dreadfully profaned along the course of all the main arteries," &c. It is probable the writer referred to, arrived from the East in a stage-coach at "Pittsburgh," in a short time took passage on a "steam boat" for "St. Louis"—touched at all the principal landing places on the "main artery"—stopped long enough at each place to give time to make the top of the bank, but rarely the centre of the town, and after reaching his destination, writes back to the New York Observer, a communication, for which, in all probability he was paid, giving a glowing description of the profanity of the West. Now, suppose we were to crawl awhile about the wharves of Baltimore, Philadelphia, and N. York, and from the specimens of moral depravity, and profaneness there exhibited we were to give the character of the East—what would the public think of our intelligence or candor? Several years ago, we spent an afternoon at a friend's house, in one of the oldest settled neighborhoods in America, lying between Baltimore and Philadelphia. The conversation happened to turn upon the moral condition of the youth of that vicinity, when one of the company challenged the rest to point out a single sober young man in all the neighborhood. Would it be right for us, from this case, to represent the East generally, as a set of drunkards?

But there seems to be some bright spots in the dark picture. The writer "gives a very encouraging account" "of Louisville and St. Louis." Hopeful children these, indeed! If these are "encouraging," we should not know where you would go, in the West, to find any thing discouraging. Now, such writers, only betray, to those acquainted, either wilfulness or an ignorance of the subject about which they write.

We do not intend these remarks as an admonition to the editor of the Protestant, whom we esteem as a worthy man, and a prudent editor. But we wish to put him in possession of the fact, that there still remains in the West, from former recollections, a sensibility upon this very subject. Some twenty years ago there were swarms of Missionaries from the Eastern manufactories, reconnoitering this country, who represented the inhabitants generally as little better than heathens or savages. We saw about that time a communication from one of them, in the Boston Recorder, which was then their oracle, representing Monroe county, Ohio, as a moral waste. It stated there was not a regular religious society in the whole county. This county happened to be in our field of labor at the time, and we personally knew that there were hundreds of pious people therein, and a number of regular societies enjoying the stated means of grace—though not of the same order to which the writer belonged. This case we give as a specimen of the general representation given of the West. All this was designed, no doubt, to stimulate their pious adherents at the East to contribute liberally to the Education & Missionary Societies, so that provision could be made for the spiritual wants of this "moral wilderness." It is highly probable that such a consideration influenced the writer of the extract, which we have omitted. After giving a glowing description of the profanity of his village, he adds: "Now, I presume there are hundreds of places in the new States and Territories, as destitute, almost, of moral and religious privileges as M——; and what an argument is this, in favor of ☞increased efforts to send them the bread of life, and teach them to 'Remember the Sabbath day.' "

When the representations, made of this country, by the former missionaries, were generally known, they became obnoxious to a large majority of the people, and the re-action of public opinion silenced them. But, as the same causes still exist, the same effects may still be expected; of course, the representations of Eastern missionaries should yet be received with caution.—We claim no superiority for the people of the West, but we claim, that in point of religion and intelligence, they are equal to their Eastern neighbors.

It will probably be recollected, that the two chaplains to Congress, last session, were selected, one from each of the Methodist churches. The following humorous extract, relating to their elections, bearing date, 11th of last December, is from the correspondent of the Baltimore Transcript, and may be amusing to some of our readears.

"Most of the sitting of the House was consumed in the election of a chaplain to that body, the result of which was, the Rev. Mr. Reese of the Methodist persuasion, was after the fourth ballot the successful candidate. Now it happens that the Rev. Mr. Slicer—whose name I was sorry to see printed in my last letter without either the title granted by common courtesy, or that pertaining to his cloth, which was altogether an omission by accident on my part, or it may be that one of your *devils* with an antipathy to the profession common to them, might have expunged the abreviated title of Rev.—it happens, I say, that this gentleman, who is chaplain to the Senate, is of the Methodist persuasion also; but as the joint resolution of Congress requires that chaplains be of different sects, many of the members to-day thought Mr. Reese an ineligible candidate. The objection however, was overruled by one of the legal members explaining that Mr. Reese was a *Radical* Methodist, whereas, Mr. Slicer was one of the Episcopal *genus*, and therefore, the two Reverend gentlemen were as different in their religion as a Catholic and a protestant, which nice distinction having both convinced the House and amused it, Mr. Reese was finally elected. There were four other candidates, and you have no idea of the regular scramble that ensues here every session among the aspirants for this holy but very easy office. Formerly it was generally conferred on preachers residing in this city, but in these days of office hunting, even the pulpits have been seized with a craving for the loaves and fishes of the government, and hence every winter beholds a number of the Ministers of the Gospel flocking from all points of the compass, to struggle for this easy situation, for which they frequently electioneer in a bold, persevering manner, that reflects but little credit upon their profession.

"The chaplain's compensation for the session is five hundred dollars, and for this, one opens the proceedings of Congress every morning with prayer, and preaches once a fortnight. So you see that upon the whole it is an easy birth, and it excites no wonder to see so general a desire among the unsettled clergy who are fond of display, to *lionize* for a winter in Washington, even as a chaplain."

Jefferson College.—By the politeness of J. V. Harbaugh, Esq., of New Lisbon, Ohio, we have been favored with the catalogue of Jefferson College, at Canonsburg, Pennsylvania, for 1839. The Rev. Matthew Brown is principal of the Institution, which we are glad to learn is in a prosperous condition. The present number of students, in all the departments are 203.—The whole number which have attained to the degree of A. B. since the establishment of the College are 618; of A. M. 309,—Ministers of the Gospel, 236,—deceased 61. The following brief notice of the origin of the College is from the Catalogue:

"Jefferson College was chartered by the State, and regularly organized in 1802. Prior to that time, there existed an Academy, called Canonsburg Academy which commenced soon after the first settlement of the country. This was the first Literary Institution west of the mountains. It originated in a small log cabin, where the first Latin school was taught by the Hon. James Ross, of Pittsburgh, under the patronage and direction of the Rev. Dr. McMillan. The number of students having increased, a comfortable stone building was erected in 1790. The Canonsburg Academy was then instituted, and respectable Professors appointed in the various departments of Literature. Here many of the most distinguished men in the Western Country received their education, and may be ranked among the honored Alumni of the Institution, altho' their names do not appear among the Graduates under the College charter."

The following, though the mere effusions of a worldly mind, contains a number of valuable maxims with regard to the management of this world's affairs:—

HOW TO BE RICH.

"The way to get credit is to be punctual; the way to preserve it is not to use it too much.—Settle often; have short accounts."

Trust to no man's appearances—they are deceptive—perhaps assumed for the purpose of obtaining credit. Beware of a gaudy exterior.—Rogues usually dress well. Trust him if any one, who carries little upon his back. Never trust him who flies into a passion on being dunned; make him pay quickly if there be any virtue in the law.

Beware of him who is an office-seeker; men do not usually want office, when they have any thing else to do. A man's affairs are rather low when he seeks for support. Trust no stranger; your goods are better than double charges. What is character worth, if you make it cheap by crediting all alike? Agree before hand with every man about to do a job, and, if large, put it in writing; if any decline this, quit or be cheated. Though you want a job ever so much, make all sure at the out-set; and in a case at all doubtful, make sure of a guarantee. Be not afraid to ask it, it is the best test of responsibility; for if offence be taken, you have escaped a loss. If he be in fact responsible, he will like you the better, for he thus knows that he is dealing with a man who looks at the end of things and only expects to be well served. If not, he will be provoked and discharge you instantly. Thus you have it in your power always to protect yourself in any doubtful case, by simply insisting on security. "Once well begun, it is twice done."

No, is a very useful word—be not afraid to use it. Many a man has pined in misery for years, by not having courage to pronounce that little monosylable.

Work for a man that is punctual at less wages than for him who is not; you get the balance in certainty of payment. One dollar sure, is better than two doubtful; and it will avail more upon a shift. If you cannot get full wages take less; better do so than be idle.

Shun idleness. A shilling a day is better than nothing. The very act of being at work will procure employ, by and by, at a fair rate.—Men avoid him who is always strolling about the streets; he is judged unfit for any thing, and may die for want of employ.

If you can find nothing else to do, read and improve your mind, and fit yourself for better doing what you may have to do. Instruct your children: see that they have good schools, visit them occasionally, and take a glance at the method in which it is conducted. Do you think they will ever respect you, or be worth having, if you neglect them in youth, when the mind first takes its bent and inclination? No man who has a family should ever say that he has nothing to do. Dr. Franklin once lived upon fifty dollars a year, including all expenses. One may, in this country, carry himself well through with less money.

Stroll not about, begging patronage; What is patronage?

Nothing after your ability is known. Then, if you are fit for employ you will have it, if not, a better man should. You must stand competition; this is the life of business; get work by superior skill, punctuality and attention. Men who know their interest, will follow it in spite of friendship. Give me the skill, and you may have all the patrons. They will stick to you as long as you serve the best—no longer. If too many are in business, let the balance clear out, and they will soon do so, if the public do not falsely cherish them with fair words of patronage, which mean nothing;—"but every man for himself."

Recollect the main point is employ, and not fair words. One man giving a job is worth forty promising it—promises are the ruin of many, and usually impart nothing but a vitality to hope.—Many a man promises for mere good nature, and will wantonly promise the same to a hundred a day, and disappoint ninety-nine. Doubt every man who has not strictly complied with engagements. If he has disappointed others he may disappoint you. In fine, never think you have money at your command, until it is actually in your hand; and therefore take care how you promise it. Neglect of such prudentials hinders men from becoming rich, and produces hard times.

A cure for the Bloody Flux.—Take bark of the Ironwood tree, boil it in spring or other good water until it becomes as red as wine; let the patient take this for their constant drink, using it often and freely; it gives relief in a few hours.—[*Com.*

The steamboat Ohio, on her passage from New Castle to Philadelphia, ran over a small boat in the Delaware at about two o'clock on Monday morning, on board of which were two brothers named Newkirk, one of whom was drowned.

The Boston papers announce the death of the Hon. Harrison Gray Otis. Mr. Otis was one of the most accomplished minds ever reared in New England.—With a tranquil grace he had worn to extreme old age, that well merited honor and general respect which were the fruits of fine talents well used. The death of such men in such circumstances is like the quiet fading of stars from a serene sky.—*Charleston Mercury.*

Missing Vessels.—The brig *Planter*, Smith hence 25th ult. for New York had not arived on the 19th inst.

Brig *Star*, Hull, from New York, 19th ult. for this port has not yet arrived.—As these vessels were at sea during the gale of the 30th ult., it is feared that they are lost.

Capt. Whitney, of the brig *Po*, arrived at Philadelphia, reports that when in lat. 33, 20 N. long. 77 W. on the 6th inst., picked up a case of window sash marked Dick & Holmes, Charleston, S. C., care of G. Bulkley, 88 South st., New York. The case of window sash referred to is believed to be from on board of the brig Star.—*ib.*

LIABILITIES OF STAGE OWNERS.

At the late term of the Supreme Court of the United States, a case was decided of great public interest; and with the permission of Mr. Peters, the Reporter, we publish the points decided, and which must hereafter rule the conduct of the proprietors of state coaches.—*National Gaz.*

William B. Stokes, Plaintiff in Error,
vs.
Francis W. Saltonstall.

In September, 1837, the Defendant in Error, Mr. Saltonstall, instituted an action in the Circuit Court of Maryland for the recovery of damages against the defendant the owner of a line of stages for carrying passengers from Baltimore to Wheeling. On the 6th of December, 1836, Mr. Saltonstall and his wife were passengers in the stage, and, by the carelessness, unskilfulness, and default of the driver, the stage was upset, and Mrs. Saltonstall most severely injured. The jury found a verdict for the plaintiff for *seven thousand dollars*, and exceptions having been taken to the charge of the Court, the defendant, Mr. Stokes, prosecuted a writ of error to the Supreme Court.

1. In an action against the owners of a stage coach used for carrying passengers, for an injury sustained by the wife of one of the passengers by the upsetting of the coach, the owner is not liable, unless injury was occasioned by the negligence or want of proper skill or care in the driver of the carriage in which he and his wife were passengers; and the facts that the carriage was upset, and the plaintiff's wife injured, the *prima facie* evidence that there was carelessness, or negligence, or want of skill, on the part of the driver, and threw upon the defendant the burden of proving that the accident was not occasioned by the driver's fault.

2. It being admitted that the carriage was upset and the plaintiff's wife injured, it was incumbent on the defendant to prove that the driver was a person of competent skill, of good habits, and in every respect qualified and suitably prepared for the business in which he was engaged; and that he acted on this occasion with reasonable skill, and with the utmost prudence and caution; and if the disaster in question was occasioned by the least negligence, or want of skill or prudence on his part, then the defendant is liable in this action.

3. If there was no want of proper skill, or care, or caution on the part of the driver, and the stage was upset by the act of the plaintiff or his wife, in rashly and improperly springing from it, then the defendant is not liable to this action; but if the want of proper skill or care of the driver placed the passengers in a state of peril, and they had at that time a reasonable ground for supposing that the stage would upset, or that the driver was incapable of managing his horses, the plaintiff is entitled to recover; although the jury may believe, from the position in which the stage was placed by the negligence of the driver, the attempt of the plaintiff or his wife to escape may have increased the peril, or even caused the stage to upset, and although they may also find that the plaintiff and his wife would probably have sustained little or no injury if they had remained in the stage.

4. If the driver was a person of competent skill, and in every respect qualified and suitably prepared for the business in which he was engaged, and the accident was not occasioned by the fault or want of skill on his part, or that of the defendant or his agents, but by physical disability, arising from extreme and unusual cold, which rendered him incapable for the time to do his duty, then the owner of the stage is not liable in an action for damages for an injury to one of the passengers.

ROBERT OWEN.

London, July 11.—The presentation of Robert Owen at court by Lord Melbourne, is one of the most humiliating events which have recently occurred. It might have indeed, been hoped that we should at least, be spared the sin and shame of such national degradation. All parties who have any sense of propriety, even those who are decidedly favorable to Government, unite in reprobating and deploring this strange and unlooked-for insult to common decency. That a man, whose "beastly principles," as even the *Patriot* denominates them, would if carried, dissolve all virtuous and honorable society, should be brought at all into the presence of our virgin Queen, for the purpose of proposing his plans for the "improvement" of society, is in itself offensive enough, but that he should be introduced by the Prime Minister of England is so astounding, that it could not have been credited except on unquestionable authority.—*Times.*

Rev. John Scoble, of London, delivered a Lectnre at Chatham-street Chapel on Wednesday evening, on the practical working of Negro Emancipation in the British West Indies, as observed by himself during a recent tour of observation through Barbadoes, British Guiana, Trinidad and Jamaica. He has testified that the Emancipation has produced a great improvement in the condition of the whole people, but especially of the blacks—that the productions of those colonies have been increased and the value of real estate enhanced from 20 to 40 per cent. The morals of both whites and blacks have been greatly improved by the cessation of slavery, and the entire condition of the inhabitants changed for the better. Such are the conclusions of Mr. Scoble's Lecture which were fortified with an abundance of statistics. He was listened to with great satisfaction by a crowded audience.—*Sylvester's Rep.*

The following remarks we find in an exchange paper, uncredited. They are a just and discriminating criticism upon a work which has been much praised, but too little studied in this country, M. De Tocquevilles "Democracy in America." Of this work it may be safely said that it is the most complete and intelligible exposition of our entire political and social system that has ever been written either by foreigner or native.—Perhaps its most admirable feature is the thorough comprehension and judicious estimate of that principle in our system which is most apt to be completely overlooked, or sadly misunderstood by foreigners—we mean the principle of *decentralization*, or the distribution of power through a succession of agencies, beginning with the Federal Government and ending with the parish or township. He rightly judges, that so far from being a mistake or deformity in the system, this great principle of decentralization is the very soul and safety of the whole, the chiefest defence of liberty, without which we must inevitably run into a consolidated and essentially monarchical government. But to the extract.

De Tocqueville.—We notice that a continuation of the author's "*Democracy in America*," has been published in Europe. Are we not to have it here also? Those who have read his first publication will hardly rest contented under a privation of the second. We have in M. de Tocqueville what we had been earnestly demanding, year after year, as the superficial and narrow views of Hall, Trollope, Hamilton, and other English writers came successfully before the public, giving partial and incorrect accounts of us and our government. We have in M. de Tocqueville a philosophical observer of large mind, free from prejudice, and capable of understanding fully the whole nature of our constitution from first principles to the minutest details.—He is a man, too, who comprehends the spirit of the age, who can look upon the expiring glories of monarchy and aristocracy, and upon the rising vigor of the popular principle, without giving way to vain regrets for the one, and without yielding enthusiastically to the growing influence of the other. He recognizes the democratic principle as the one which is destined to rule, in its turn, through the approaching epoch in France; and to this country he came for the purpose of understanding it—to set it in action—to learn its inherent nature—how it may be controlled and modified by other elements combined with it—in a word, his object was to know how it may be made productive of the most good. To this purpose he is faithful throughout the whole course of his book. He stops not to note the unimportant minutiæ of our domestic life and manners; he observes details only in so far as they are illustrative of principles. What will strike every American with wonder in the intimate acquaintance which M. de Tocqueville displays with our structure of government—not a mere anatomical knowledge of ribs, and bones, and arteries—but a comprehension of the inward life the whole sytem, with pulses beating, and every organ of respiration in full play. He tells us some truths which Americans can never learn except from foreigners; and he pronounces many which, although not flattering to our self-love, must commend them forcibly to our better reason. We are anxious to know all that such a man has to say concerning us. The English translation of the first part is admirably done; we hope the second is in the same hands.—*Charleston Mercury.*

THE STOCK MARKET.

The New York *Sun* in the remarks below has given a very correct account of one of the great mysteries of the credit system—gambling in stocks, or as it is called in England stock-jobbing. But the *Sun* is mistaken in supposing that there is any great difference between London and New York, in favor of the former, in respect to these fictitious operations in Stocks—very few of what are called transactions in the Funds, on the London Exchange, are any thing more than wagers on their market price at a specified time. This system of gambling originated in London, and repeated but vain attempts have been made by Parliament to check it, as well as gambling in Marine risks, both of which are made illegal. We have been moreover assured that many of the conductors of newspapers in London are interested in these speculations, and make the press subservient to this concealed interest. The same is true no doubt of the New York Press.—The public do not yet dream of half the ways in which they are imposed upon.

Operations in Stocks, such as constitute ninetenths of the business of our stock exchange, and the daily reports spread out in the newspapers, are very different things from what originally constituted the business of the stock market, or what now constitutes the principal stock operations of England, which are probably conducted in a greater degree of honesty and respectability than in any other country in the world. In England stocks are constituted mainly of government securities, or in other words, the national debt, and are included under the general appellation of "funds." The sales of these "funds" or stocks, are usually effected at the stock exchange. They are usually made by a class of middemen, called jobbers, who are ever ready to buy or sell any quantity, either large or small, that may be desired. When the terms are fixed upon the sale is finally closed at the East India House, or at the office of transfer at the National Bank. To this end the jobber draws up a memorandum designating the name of the purchaser and seller with the amount and character of the stocks, and hands it to the clerk for that purpose. The clerk turns to the name of the seller in the transfer book of the particular stock in question, and ascertains that he owns such stock, he then makes out the transfer. The jobber draws up a receipt and signs the transfer on the book. The receipt is then handed to the purchaser upon his making payment, and the bargain is completed. The transaction just described is a real bona fide negociation. Such are caused chiefly by those who wish to make an investment of their surplus capital to insure a permanent and unvarying income.

The principal portion of operations at our stock exchange, however, are of quite a different character; being, in short, nothing but acts of gambling, and are as illegal as they are immoral. They are effected in this manner. One Jobber sells to another, at a certain future day, a stipulated amount of a certain stock.—When the time arrives, if the current price of the stock is less than what he agreed for, he receives the difference of the amount from his associate in cash; if it is more, he pays it; the whole operation is concluded between themselves, and is merely a mode of betting that a certain stock will be at a certain price on a certain day. As the laws do not recognize this species of trade, the loser cannot be compelled by legal process to fiulfil his engagement. But should he fail to do this, he is stigmatized as a "lame duck," and dares never again make his appearance on the Stock Exchange. This sort of operation brings into existence two classes of nondescript dealers, termed "bulls" and "bears—the first meaning those who strive to depress stocks, and the last those who endeavor to raise their value. These amimals act in pairs or in droves, to bring about an artificial speculation in the stocks in the market for their benefit, at the dead loss of those upon whom they manage to operate. It is thus that the nominal value of our stocks, solid and fancy, is raised or depressed, to forward the speculating contrivances or "concernings" of the stock jobbers; and of the tens and sometimes hundreds of thousands of dollars which the daily reports of the Stock Exchange would lead the uninitiated to suppose they had changed hands in the stock market, probably not one tenth, and sometimes not one twentieth, of the report is any thing more than a record of bets such as we have above described.—*Charleston Mercury.*

THE RECORDER.

ZANESVILLE:

THURSDAY,... .....OCT. 5, 1839.

he following notice of the N. Y. Luminary om Zion's Watchman of the 21st ult.

New York Luminary.—We are grati- to learn that the publishers of this er have determined to 'go ahead.' It evoted to the interest of the Methodist Church, and ought to be sustained.—ong the number of papers published the benefit of that church, not one, we eve, except the Luminary, is open to claims of the down-trodden slaves.—d will not the church in which so much been said and written, professedly in or of freedom, support one periodical which freedom's friends can be heard in alf of the suffering and the dumb?"

t is here stated that not a paper, except the minary, under the patronage of the Methodist hurch, "is open to the claims of the down-trod- slave." Now, we should like to know what Watchman means by being "*open* to the *ms* of the down-trodden slave." Does he n that a paper, before it can be thus "open," t be entirely or mainly dedicated to the in- st of the present abolition enterprise? If be his meaning we presume he is mistaken the character of the Luminary. We under- d that that paper is got up *mainly* to sustain interests of the Methodist P. church within bounds of the New York District, and we have le doubt but that its conductors know their y better than to abandon their own business attend to that of other men. If the Watch- n means by this "opening," that there is not ther paper in the church which will say Afri- sons are oppressed, and that the slave ought e free,—we say if this be its meaning, it most uredly knows better. Taking it for granted t his docile readers will believe his misrepre- tations of the Methodist Protestant press, . Sunderland then tries to make the church ridiculous with the following pitiful cant: ill not the church in which so much has been d and written, professedly in favor of freedom, port one periodical in which freedom's friends be heard in behalf of the suffering and dumb?" Wonderful incongruity!—ridic- us absurdity!! a church that makes so much about "freedom" will not regard the cries of "suffering and the dumb." Now all this al- ged inconsistency, on the part of the church, s not grow out of the facts of the case, but out he misrepresentations of Zion's Watchman. w it is that this editor can so perseveringly srepresent a church that has never laid a straw his road, is passing strange. We would wish think as charitably of his conduct as possible; t, really, there appears to be a degree of malev- nce at the bottom of this, which illy comports th the principles of the Gospel, or the charac- of a philanthropist. We are afraid that our ther of the Watchman, notwithstanding all laudable sympathies for the colored man, is at art, an enemy to liberal government. This is only supposition on which we have been able account for his virulence to the Methodist otestant church. An editorial remark in his per of the 28th ultimo, strengthens this suppo- ion. He says, "with no other Protestant urch, probably, is there so much sympathy of ling in the Methodist denomination, as with e Protestant Episcopalians. This is especi- y the case in England, and to a great extent this country." Now, why all this "sympathy feeling" for the Protestant Episcopal church? mply, because its government is despotic,* rticularly in Europe, and

"Birds of a feather,
Will flock together."

Episcopacy is in miniature what monarchy is magnitude; and no person can "sympathize" ith the one who is not in heart attached to the her.

*The government of the Protestant Episcopal urch is far more liberal in this country, than e government of the Methodist Episcopal urch. The former admits laymen into its uncils, the latter does not.

Our friends will bear in mind that we have not ubscribers enough yet, to sustain our paper as it should be. Five hundred more ought to be rthcoming, and we have no doubt will, if suita- le efforts are made. The preachers should take old of this thing immediately, when they each their circuits, without any delay. We ave struck several hundred more copies than e use, since we commenced printing the Min- tes of the Conferences, and hope they will soon e called for by new subscribers.

We are informed by brothers Bassett and Hib- en, of some of our subscribers not receiving their papers. These papers were mailed by our own and, and were deposited in the office at Zanes- ille. Had we the first number we would forward t *again* to the Jamestown subscribers, but we are out of that number. D's. name was not for- warded to us, neither were those of S. and J.

In consequence of being absent from home some two weeks, we got behind with our busi- ness, and were not able to record the names of some new subscribers, and to forward their pa- pers as soon as they should have been. And before we had time to carry out the accounts of money we received at Conference from our mem- orandum into our account book, we gave D. Y. O. several names which have paid. He will be good enough to examine the receipts published in this number, and regulate his memorandum accord- ingly.

Bro. Honour of Charleston, S.C., is informed S. J. Harris is agent for Bro. Shinn's intended pub- lication, and that he can refer the prospectus to him.

Prices.—Wheat is still selling in Zanesville at 75 cents per bushel,—Flour $4.50 per barrel. We understand that millers and others on the Ohio Canal, are paying but 70 cents for wheat. —*Gazette.*

COMMUNICATIONS.

PRESIDENTIAL NOTICES.

☞This communication came one day too late for our last.—Ed.

Holliday's Cove, Brooke co., Va., September 23d, 1839.

Mr. Editor:—You will do me a kindness by publishing the following appointments, and should it please Almighty God to favor me with life, health and strength, I will try to meet them in their order, viz:—

Washington ct.	Oct. 6	Brownsville ct.	Nov. 24
Monongahela,	13	Ohio,	Dec. 1
Middletown,	20	Clearfield,	8
Suttonville,	27	Pittsburg,	15
Weston,	Nov. 3	Pittsburg station,	22
Clarksburgh,	10	Allegheny,	29
Union,	17		

My calculation is that Steubenville will be the residence of my family. Letters may be directed to me at that place; but I would prefer getting them as I pass through the District. Forwarding letters will be attended with additional expense. If they remain in the office at Steubenville until my return, the business, concerning which they may be written, will not be attended to in time. While in Washington circuit letters may be sent to Washington, Pa.—While in Monongahela, to Waynesburgh, Pa.—While in Middletown, to Morgantown, Va.—While in Clarksburgh, to Clarksburgh, Va.—While in Suttonsville and Weston, to Weston, Va.—While in Union, to Uniontown, Pa. While in Brownsville, to Brownsville, Pa.—While in Ohio circuit, to Steubenville, Ohio. While in Clearfield, & Pittsburg circuits, Pittsburg and Allegheny stations, to Pittsburg, Pa. Attention to this matter may be of some importance in arranging our matters, getting vacancies filled, &c., as early as possible in the Conference year.

It is my design, if possible, to visit the missions in Western Virginia and Pennsylvania, but am of opinion that it will be best to delay a little, until the preachers in missionary regions shall have had sufficient time to get a proper understanding of their own field of labor, &c.

In haste, yours truly,

Geo. Brown.

Jamestown, O., 24th Sept. 1839.

Bro. Springer:—We are yet living in this region, and since the Conference I can see a great change for the better. Our people are aroused to duty, and have laid hold afresh. Prospects are increasing all around as far as I have been.

I shall trouble you to give the following notices for me. I intend, by permission of Providence to visit

Finley circuit	1st	Sabbath	in November.
Miami	" 2d	"	"
Lima	" 3d	"	"
Union	" 4th	"	"

I remain your brother in Christ,

Jonathan Flood.

Middletown, Va., Sept. 3, 1839.

Mr. Editor:—We have just closed our last quarterly meeting for Middletown circuit, and with it our labors for this Conference year. We are glad to have it in our power to say that this has been with us a pleasant year. Our closing quarterly meeting was the largest we have had during the year. The spirit of the Lord was with us to encourage His people—seventeen were added to the church at this meeting. We have had the pleasure of adding 140 members to the circuit during the year. Two of our worthy sisters, of this town, Mrs. Pierpoint and Mrs. Miller, have left the militant to join the triumphant church.—They both gave, in their last moments, the most satisfactory evidence that their peace was made with God. "O! let me die the death of the righteous, and let my last end be like unto his." This circuit is raising a subscription to build a parsonage for their preacher. Yours, &c.

W. G. Williams, *Supt.*

Westminster, O, Aug. 21, 1839.

Bro. Springer:—The Western Recorder meets a welcome reception in Lima circuit. We are glad that a medium of communication is open for the benefit of the church, in this section.

The cause of Christ is on the advance in this place; the time to favor Zion has come, and God's people are joyful in hope. We have had two camp-meetings in this neighborhood: one held by the Episcopal Methodist brethren, at which the Lord was present to bless—there were some distinguished conversions. I was kindly invited to take part in the labors of the stand, which proved to be a blessing to myself, and appeared to be so to the people. With but little exception all things seemed to move forward in the spirit of the gospel. "How good and how pleasant for brethren to dwell together in unity."

Our meeting commenced two weeks after the one above. Several of our Episcopal brethren pitched their tents with us, and engaged heartily in the work of the Lord, and a friendly feeling prevailed amongst us. When fervent petitions began to ascend the hill of the Lord, and the hearts of God's people tuned to the songs of Zion, the grove became a pleasant place, and the very air itself, apparently, seemed embued with the spirit of devotion. Then could be heard the mourner's exclamation, "O pray for me," and then could be seen the tear of sympathy stealing from the eye of tender hearted christianty. The fallow ground of the sinner's heart was deeply broken—the struggle was powerful but short.—Conversions were clear, and shouts exceedingly loud, so that they might be heard afar off. A greater time of rejoicing I never witnessed; some who were never known to do so before, praised God with loud voices.

A person who was acquainted with the influences of Methodism beyond the waters, and who was not then a member of any church, though he attended the worship of God among all orders of His people, while reposing on his pillow the last morning of the meeting, was informed by his eldest son that Edward and Ellen had obtained religion; he sprang immediately from his bed and repaired to the ground. It was affecting to see the old gentleman approach, bathed in tears, and praising God for what he had done for his children. He pronounced it the happiest morning he had seen since he sat his foot on the shores of America. Himself, Edward and Ellen have joined the church, and if they prove faithful, no doubt more will follow their example.

Another case;—a father in Israel, whose locks are whitened with the frost of many winters, and who had itinerated in the Methodist Episcopal church years ago, and who has been with the Methodist Protestant church from the beginning, on hearing a brother express his astonishment that doubts could remain in the minds of those who had proven the Lord and found his promises never failing, his mouth caught the word, and his soul the fire of devotional confidence, though never before known to be so excited, he exclaimed aloud, "not once, glory to God, no, not once in forty years have I known the promise of God to fail!" Hitherto these men were no more than willing to let shouting pass unmolested. I have seen times of great rejoicing, but never before such a time as this. Our intermissions were short, and our services continued most of the nights.—This meeting will no doubt be long remembered, and the fruits of it I hope will be seen crowding the gates of heaven in the morning of the resurrection.

As we did not open the door for the reception of members until the close of the meeting, not wishing to take any advantage of the excited feelings of the people, and many having left the ground, (some of whom would, no doubt, have cast in their lots with us,) there were but seventeen added to the church.

The Methodist Protestant church is on her march forward in this place, and is increasing in favor both with God and man.

Your friend and brother,

A. T. Morrison.

Mt. Tabor, Ia., Sept. 9, 1839.

Brother Springer—As my charge here has expired, and as I expect soon to remove, for a season, to my native State, I have a desire to communicate to you a few thoughts relative to our cause in this region.

I have lived with, and labored for this dear people, for the space of two years that have just gone by. The Lord has frequently, in mercy, remembered us, and blessed us, while we were together. Two years ago, when I commenced my labors here, I found about one hundred members, including Spencer & White river circuits; my first year's travel included both of these circuits—during that period our little borders were somewhat enlarged, and our members considerably increased. When that period ended, White-river circuit was again separated from Spencer circuit, which took off about forty members, and I was appointed to take charge of it. The principal part of the year passed away without any very special excitement; yet, we had many refreshing showers, and occasionally some accessions to the church. Toward the latter part of the year, it was proposed that we should have a camp-meeting, and a meeting was called at the Liberty meeting-house, near this place, in order to consult ways and means relative to the proposed camp-meeting. Some objected, and argued that a protracted meeting in the meeting-house would be the most apt to do good—that the time was once when camp-meetings were profitable, but that time had gone by. The motion finally prevailed to have one, and a cite was agreed upon, and some four or five pledged to build tents. The time appointed for the commencement of the meeting began to draw nigh—some of us began to build under rather unfavorable circumstances; yet, the neighbours turned out generally to assist in doing the public work.—We requested all who desired the revival of God's work on the occasion, to join us in observing the Thursday preceding its commencement as a day of fasting and prayer; we also appointed a prayer-meeting at the meeting-house, near the camp-ground, to convene at 4 o'clock, in the evening of the same day. When the hour arrived, there was but one person present besides myself who was willing to take up the cross. Well, thought I, this looks rather discouraging, yet, I cannot say that I felt much discouraged, for I did most sincerely believe that God would hear prayer, and convince all my dear brethren that it was not yet too late for camp-meetings to do good.

The hour arrived for preaching, and there were six tent holders on the ground—but none of our expected preachers had arrived. A small congregation was collected, and there seemed to be no other alternative, but to go forward myself. I tried to preach from Isaiah 40, 31: before the exercises closed, I felt somewhat encouraged. I made an appointment for preaching again at four o'clock in the evening, but as yet no help had come. Soon after dismission, Bro. P. Clingler arrived, and preached at four o'clock. While he was preaching two other Brethren reached the ground. About this time our prospects seemed to grow brighter,—two more families arrived. Bro. E. McMasters preached this evening, after which the brethren and sisters generally united in a solemn covenant to pray God to revive his work on the occasion. Brothers J. Williams, and T. Alexander, were also in attendance. Saturday passed very agreeably to many,—Bro. John Williams' labours were much blessed; at night the altar was crowded with mourners pleading for mercy. Sunday the congregation was large, considering the neighborhood, and behaved exceedingly well; and at evening there were still many who designated themselves as mourners: some found peace.—Monday was a pretty good day; this evening God was pleased to display his matchless power in convictions and conversions. Some of the most hardened and impenitent were made to tremble and constrained to cry for mercy. In short, dear Brother, least I weary your patience, I must say it was a good time. Tuesday at perhaps about 12 or 1 o'clock, duty compelled us to separate—it was certainly a solemn time—the congregation was quite full, and all that had not embraced religion (save two or three exceptions) gave us public testimony of their desire to be prayed for, and their determination to try to meet us in heaven. We parted big in expectation of soon meeting in heaven. There were *nineteen* joined society, and perhaps more than that number professed to find peace with God, through faith in our Lord and Saviour Jesus Christ. May the Lord bless all the brethren in this neighborhood, and ultimately save them, is the prayer of their unworthy servant.

This circuit numbers now one hundred, and if they are humble and faithful God will greatly increase and comfort them during the present Conference year,

Yours sincerely,

D. H. Stephens.

NO. I.

Jamestown, September 1, 1839.

Friend Springer:

In the Recorder of the 29th ultimo, I noticed the publication of my proposition to discuss the subject of Clerical Supremacy; and that is not the only thing I noticed, I saw also a very courteous introduction to your readers in the following words: "Its author, though not a member of our fellowship, we believe is a respectable man," &c. What fellowship have you separate from other churches? Take care how you use those sectarian phrases.

But, I will go on to sustain the proposition now before your readers, and shall not, at this time trouble them with the proof that all the authority to preach, baptize, &c., is derived from the commission given by Jesus Christ to his Apostles. There have been, and are now, men in the world who claim *special* authority to preach, baptize, &c. These men assume "Clerical Supremacy," and it is with them, we have to do at this time. It is self-evident, that authority can be derived only in two ways, that is, directly and indirectly. The Apostles derived it directly from Jesus Christ. He said to them, "Go teach all nations, baptizing them," &c.—The command to them was direct and special; but others who preached and baptized afterwards were taught to do so by the Apostles, in accordance with their commission, which said "teach them to observe all things whatsoever I have commanded you." And "they (the disciples) went every where, preaching the word."

It is not only presumption, but it is folly, for any man to say that he received authority directly from Jesus Christ, as the Apostles did, unless he was able to give the proofs given by the Apostles; 1st. he must have seen Jesus Christ; 2nd. he must have heard Him speak; and 3d. he must be able to *show the signs* of an Apostle. But some men will say, there are none who profess to be original Apostles—they only profess to be successors of the original ones. Well, if the claimants can decide among themselves which twelve are the true successors of the original twelve, we will trouble them no further.

Suppose the Pope to succeed Peter, then who of the ten thousand pretenders succeeds the other Apostles?

It is all a humbug,—the Apostles have no successors—there can be no successors to *witnesses*, and the business of the Apostles was to bear witness of the sayings and doings of Jesus Christ. Therefore, we take it for granted, that all authority to preach, baptize, &c., now in the world, is derived indirectly from the teaching of the Apostles as found in the New Testament. There are none who derive it directly from the Apostles, as Timothy and Titus did. All these pretenders are *now being tried* and will all be found to be liars, as were some pretenders in the life-time of John the Apostle.

And who among those who acknowledge that all authority is derived from the New Testament dare say, that the commission is directed to them exclusively?

Enough at present, as ever yours,

M. Winans.

(*To be continued.*)

THE AFRICAN CAPTIVES.

We have a full report of the final decision of Judge Thompson, delivered on Monday, announcing that the Circuit Court *could not discharge the prisoners under the writ of Habeas Corpus.* The Judge said this decision affected nothing as to the rights of either party, but left the case to take its regular course under the libels, in the District Court, from which it might afterwards come up by appeal to the Circuit Court, and then, if either party choose, to the Supreme Court of the United States. The sole question now before him, he said, was one of jurisdiction, and if the Amistad was taken on the high seas, it was properly cognizable before the District Court for Connecticut. If within a mile of the shore, it would fall within the District of New York. Measures would be taken to ascertain this point exactly. The only matter settled previously was that there had been no criminal offence cognizable by the courts of the United States, the killing having been on board the vessel of a foreign nation. The prisoners, therefore, remain in the custody of the District Court, which has adjourned to meet for the trial of the case at Hartford on the 3rd Tuesday of November. In the meantime, the Marshal is ordered to see that the negroes are suitably provided with food, medical attendance, clothing adapted to the season, and whatever is needful for their comfort.

It was said the prisoners might be discharged on giving bail; but as this required that they should be *appraised* as property, their counsel would not consent to it.

We regret that we have not room for the decision, in full, with a few remarks which we should like to hazard; but our space is full.

The counsel for the unfortunate captives, Messrs. Staples, Baldwin and Sedwick, have acquitted themselves in a manner highly honorable, both to their sensibilities as men, and their ability as lawyers. David Paul Brown, Esq., of Philadelphia, came on to offer his services in case of a jury trial, and was at Hartford two days. The trial of the great *property* question will awaken new interest and require new efforts and heavy expenses. —*Emancipator.*

THE AFRICANS OF THE AMISTAD.

[From the Transcript, of Monday.]—We learn from a postcript to the Hartford Courant, dated yesterday morning, at nine o'clock, that the Circuit Court has decided that the Africans could not be discharged on the Habeas Corpus, as the case was within the jurisdiction of the District Court, as a Court of Admiralty. In making this decision, no question on the merits was involved or determined. It turned simply on the question of jurisdiction. The merits remain to be heard and decided before the District Court.

Since the above was in type, we have received the following letter, dated Hartford, 23d, ten o'clock, a. m.

"The Circuit Court has adjourned *sine die.* Judge Thompson has decided that the District Court has jurisdiction, on the ground that the Amistad was seized on the high seas. He said if it should be proved that the seizure was actually in the District of New York, the whole case, prisoners and all, must be transferred to the District Court of New York. Judge Thompson gave no opinion on the other points raised by the counsel. The Marshal will probably take the prisoners back to New Haven, to await further proceedings in the District Court. The Court ordered comfortable clothes, &c. The whole cargo and vessel will probably be used up in expenses by the U. S. officers. We have no doubt here that the prisoners will ultimately be set free."—*Olive Branch.*

David Paul Brown, an eminent lawyer of Philadelphia, is engaged as counsel in behalf of Cinques and the other Africans implicated in the late mutiny on board the Amistad. One of the prisoners named Bootle, died in New Haven jail on Wednesday, the 11th ultimo, being the twelfth of the party that has died since leaving the port of Havana.

A great many interesting facts relative to the history, capture, etc. of Cinques and his companions, have been elicited by private examination. Cinques, (or Jingua, as it should be spelled,) states that he left in Africa, a father, mother, wife and three children. They state that they are from a part of the country called Gallinus—the place where Don Blanco pursues his trade in slaves; that they were brought down the country to the coast and chained when put on board the slaver, which was a brig. The hold of the vessel was crowded with slaves, there being on board two hundred men and three hundred women, besides a great number of children; they suffered much on the voyage, and great numbers died from ill treatment and their close and nauseous confinement. They were landed in Havana in the night, chained hand and foot, and fastened in pairs by iron rods, attached to the neck and wrist.—They were embarked from Havanna in the evening and sailed about midnight; their irons were then taken off; the captain of the schooner was very cruel to them; he beat them on the head unmercifully with any thing he could catch, and kept them almost starved. Jingua and Bowls both say they were in the hold and did not either see or participate in the fight—which was occasioned, they say, by the cook, who told them they were to be carried where they would be killed and devoured. They fought fair, and no African was killed.

The following extract is from the New York Sun, in which paper the examination was originally published:

"When Jingua entered the room his bearing was like another Othello. He told his story in an animated manner, and when Antonio was making his statement, he watched his countenance with deep interest. Occasionally he would shake hands with the interpreter, and laugh very heartily. When removed from the chamber he was allowed to visit his countrymen. They shouted for joy on seeing him, called him "massa," and every one of them immediately, of their own accord, gave into his hands all the money, &c. they had received from the visiters.

"One of the men attached to the prison was the occasion of great amusement on the part of the prisoners, as well as the spectators, by taking a large lump of ice to show these strangers from the tropics. They all handled it in turn, but each one, after holding it a moment, screamed out, as if their hands had beeen burned, and entreated the man to take it out of their hands. They would then look at their hands to see if the skin was off, examine very closely the novelty, then taste of the water on their hands, then touch the ice with their tongues, or take a small piece into their mouths. As the ice was passed around, they laughed immoderately at the momentary agony of their comrades."—*Middletown Mail.*

The "British Queen" arrived at New York on the 20th ult., bringing London and Liverpool advices to the 2d. The intelligence as regards the crops in England, is most favorable. Scarcely a doubt existed at the time of her sailing but that the harvest would be abundant in quantity, and excellent in quality. Considerable complaint is made about money matters. Several changes have taken place in the English Ministry. Mr. Poulett Thompson comes to Canada. On the 24th of August the Queen prorogued Parliament to the 24th of October.

The "British Queen" was sixteen days in making her passage, and brought two hundred and nine passengers. The Liverpool steamer is expected at New York about the 8th or 10th of the present month.

At a recent sale of lots in the new "City of Austin," the future Seat of Government of Texas, the amount received was one million seven hundred thousand dollars.

It is said that the total value of gold taken from all the mines in the United States for the last ten years, exceeds thirty millions of dollars.

Conversion of Great Numbers to Christianity.—The Missionary Herald, for September, contains a cheering report from Bengal. The villages alluded to in the extract below, are said to be "situated on the Julingha, a branch of the Hoogly river, and seventy or eighty miles north of Calcutta."

"There are no less than fifty-five villages containing among them upwards of five hundred families, who are convinced of their lost state as sinners, believe that the Gospel of Christ provides the only means of salvation, and are ready and anxious to be baptized into that faith.—These families average about six in a family; so that there are not less than three thousand souls seeking admission into the Christian fold."

Whitefields Centenary.—There was present at this sentenary a man named Richard Poulson, at the advanced age of 103 years, who had heard Whitefield preach on the same spot a century before, having been taken there by his mother.

Dignity of a Judge.—Judge McKinley, a Judge of the U. S. Supreme Court, does not meet with sympathy from the Southern press, for the indignity which was lately offered to him in Mississippi by a Sheriff. It now appears that it was for no act of official duty that the Judge suffered personal violence. While upon the bench, he so far forgot himself and his duties, and all the rules of gentlemanly deportment, as to call the acting Sheriff "a Jackass;" and it was for this that the Sheriff subsequently took revenge in the street.

A Sensible Question.—"Mamma," said a child, "my Sunday School teacher tells me that this world is only a place in which God lets us live a little while, that we may prepare for a better world. But, mother, I do not see any body preparing. I see you preparing to go into the country—and aunt Eliza is preparing to come here. But I do not see any one preparing to go to heaven. If every body wants to go there, why don't they get ready?"

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

Received pay for the first volume of the Recorder.—Of J. Dalbey, $24—for R. Moffit, J. Parks, S. Culmer, W. Morrison, C. Craig, A. Baker, W. Rinehart, J. Scott, E. Black, H. Johnson, W. Gibson and J. Best; of R. Crossman, 2;

Of Brown & Ross for E. Nichols, 2, D. Garner, 2, T. Freeman, 2, J. Tallman, 2, J. Rolston, 2, J. Sisson, 2, Geo. Hull, 2, S. Bushfield, 2, Dr. A. C. Hamilton, 2, H. Patterson, 2, D. Pierce, 2, J W. Brown, 2, J. Beall, 2, Mrs. S. Leach, 2; of J. Smith, Coshocton, 2; of J. Fordyce, 2; of J. Headly, 2; of Wm. Johnson, 2; of D. Harbaugh, New Lisbon, 2, (beginning No. 6, Vol. 1;) of G. Beaumont, 2; of M. Scott, 8—for I. Castle, J. Shunk, L. Cook and J. Hipsley; of J. Walker, Tiffin, 2; J. Niswonger, 2; of G. Hughes, 16—for J. Davis, J. Wheeler, B. Ross, J. Maxwell, J. Clancy, M. Wheeler, W. Harrison and D. McGrew; of J. Burns, 6—for A. Devenny, J. Magary and J. Keath; of I. Hastings, New Lisbon, 2; of R. Simonton, 6.50—for W. Kimble, E. Bruen, J. Baily one and J. Kenedy one fifty; of W. Reeves, 4—for H. Fenkill and J. Knox; at Warrensville, O., 10—for D. Warren, S. M. Prentice, W. Fry, W. H. Warren and W. Kernish; of H. Belknap, 2; of J. Breakiron, Morgantown, Va., 2; of E. Matthews, Cleveland, 2; of Ralph Lee, 2; J. M. Piper, 10—for S. Scritchfield, S. Freeman, Geo. Rogers, T. Shepherd and J. H. Mitchell, of Ligonier; of J. Beatty, 12—for D. Davis, J. Clark, J. Clancy, T. Gardiner, W Garner and A. Robinson; of D Y. Ostrom, 2—for F. Edwards; of W. L. Baldwin, 10—for B. Longsworth, J. Ripley, J. Edwards, A. Glenn and E. Speer; of J. Hebert, 20—for G. Ayres, H. Clouser, W. P. Willy, H. Dean, F. Scott, A. Burlingame, T. M'Illyer, J. Entz, J. Mehaffey and B. W. Wortman and C. Lukins one dollar each; G. Frazier, 2; D. H. Phillips, 2; N. Worcester, 2; G. A. Rogers, 2; E. Slagle, 2; A. Cuffle, 2; J. V. Brown, 2; T. Snyder, 2; C. Russell, 2; J. Hankins, 2; of A. Swan, 4—for himself and J. Goble; of C. G. Wilkinson, 2; of J. H. Linder, 2; of R. Lee, 2; of J. Palfreeman, 4—for J. H. Cummins and S. Johnson; of J. Cameron, 6—for R. Beed, J. Chambers and W. McPherson; of Mrs. C. A. Canfield, 2—for W. Ross.

We have received some money from Bro. Thrap for subscribers in Wellsville, but he has not yet given us their names.

Letters Received—Of J. Herbert, D. Gibbons, R. Jones, A. T. Morrison, T. W. O'Havre, S. Plank, W. Dunn, I. Hunt, M. Winans, 3, Jona. Flood, J. Hibben, A. H. Bassett, 2, C. A. Canfield, T. Addis, Publishing Committee, 2, Geo. Brown, J. Niswonger, J. V. Harbaugh, J. H. Honour, and D. H. Stephens.

Public Notice

Is hereby given, that application will be made to the Trustees of Hopewell Township, for a township road, to commence a few rods East of Mr. Coomrine's dwelling, at the line between Geo. Norman and Alexander Watson, and to run South, at, or near said line, to the South East corner of John Rodman's land, thence the best rout so as to intersect the Cooper road West of the inclosure of Wm. George.

October 5, 1839. 3t7

POETRY.

HYMN—THE ALTAR OF PRAYER.

BY THE REV. J. G. WILSON.

Tune—Home.

Once happy in Eden's primeval abode,
Encircled with pleasure, in favor with God,—
Man worshipped as angels in innocence there,
Nor needed to bow at the altar of prayer,—
Prayer, sweet prayer,
In Eden man needed no altar of prayer.

But since by transgression that Eden was lost,—
God's favor was forfeited,—happiness cross'd;
The child of mortality—misery's heir—
Man—now stands in need of an altar of prayer,
Prayer, sweet prayer,
Poor man stands in need of an altar of prayer.

Sweet Mercy beheld us in ruin involved,—
And swift to our rescue to come she resolved,
Her pathway of light broke the gloom of despair,
And here she erected an altar of prayer;—
Prayer, sweet prayer,
For man she erected an altar of prayer.

But Justice required that the sinner should die,
Unless an atonement could Mercy supply,
From guilt to redeem—and the breach to repair,
And which might avail at the altar of prayer;
Prayer, sweet prayer,
A plea to avail at the altar of prayer.

The Son of the Blessed in pity was moved,
His life to lay down for the world that he loved,—
Incarnate—our sins in his body to bear,
And give us access to the altar of prayer,—
Prayer, sweet prayer,
We now have access to the altar of prayer.

He died for our sins,—but he rose from the dead,—
Ascended on high for us, sinners, to plead,—
At the Father's right hand as an advocate there,
That we may prevail at the altar of prayer;—
Prayer, sweet prayer,
Through him we prevail at the altar of prayer.

For we to the Father are now reconciled,
He bears witness that each is a child;
Our strength he renews every trial to bear,
And comforts our hearts at the altar of prayer;—
Prayer, sweet prayer,
He comforts our hearts at the altar of prayer.

Then let us come boldly and mercy implore,
Our sins he will pardon—our Eden restore;
Till sanctified wholly, his image we bear,
For glory made meet at the altar of prayer;—
Prayer, sweet prayer,
There's no place on earth like the altar of prayer.

CINNAMON.

Cinnamon is brought chiefly from the Island of Ceylon, to India, and has now been many years in use in Europe and America, as a pleasant spice. It is the bark of a species of laurel, remarkable with some other species, possessing similar properties, for its coriaceous leaf, marked with three strong nerves. It was originally found wild only, and in small quantities, at one part of the Island; but when the Dutch obtained a settlement there, they cultivated it in large gardens or tracts. The extent of these plantations will be perceived, when it is stated that four hundred thousand pounds were obtained from them, annually, and upwards of twenty-five thousand persons were employed in the cinnamon business. The Dutch long had the monopoly of the article, and resorted to severe and even cruel measures to prevent the trade getting into other hands.

The cinnamon tree often grows to the height of twenty or thirty feet, and sends out large spreading branches The leaves are first pendent, and of a delicate rose color, afterwards they turn yellow, and then green. The flowers are borne in panicles, are small and white, partaking of the peculiar flavor of the tree. The fruit yields an oil, of which a kind of candles is made, which are used by the court, in the kingdom of Candy.

When the tree is three years old it affords a shoot fit to yield bark; but eight years of growth are needful, before it can be freely cut. At ten or twelve years of age, the tree is strongest, and the plants which grow in dry and rocky spots, produce the most pungent and aromatick bark. The shoots are cut when about an inch thick; they are barked and the epidermis scraped off. The bark is dried in the sun, when it curls, and the smaller is rolled in with the larger. *Cassia*, in its botanical character, is little different from cinnamon. In quality it is much inferior, though often sold for it. It is commonly known under the name of bastard cinnamon.

THE MERCHANT AND THE QUAKER.

A merchant in London, had a dispute with a Quaker, respecting the settlement of an account. The merchant was determined to bring the question into court, a proceeding which the Quaker earnestly deprecated; using every argument in his power to convince the merchant of his error, but the latter was inflexible. Desirous to make a last effort, the Quaker called at his house one morning, and inquired of the servant if his master was at home. The merchant hearing the inquiry, and knowing the voice called aloud from the top of the stairs, "Tell that rascal I'm not at home." The Quaker looking up towards him, calmly said, "Well friend, God put thee in a better mind." The merchant, struck with the meekness of the reply, and having more deliberately investigated the matter, became convinced that the Quaker was right and he was wrong. He requested to see him, and after acknowledging his error, he said, "I have one question to ask you—how were you able, with such patience, on various occasions, to bear my abuse?" "Friend," replied the Quaker, "I will tell thee, I was naturally as hot and violent as thou art. I knew that to indulge this temper was sin, and I found that it was imprudent. I observed that men in a passion always speak loud, and I thought if I could control my voice, I should suppress my passion. I have therefore made it a rule never to suffer my voice to rise above a certain key, and by a careful observance of this rule, I have, with the blessing of God, entirely mastered my natural temper." The Quaker reasoned philosophically, and the merchant, as every one else may do, was benefitted by his example.

BEAUTIFUL EXTRACT.

The Boston Mercantile Journal selects the following from the Foreign Review for April, 1839, as one of the finest passages in the whole range of English literature. The subject treated of, is the benefit of printing.

"When Tamerlane had finished building his pyramids of seventy thousand human skulls, and was seen standing at the gate of Damascus, glittering with steel, with his battle axe on his shoulder, till fierce hosts filled to new victories and carnage, that pale on looker might have fancied that nature was in her death throes—for havoc and despair had taken possession of the earth, and the sun of manhood seeming setting in seas of blood. Yet it might be on that very gala day of Tamerlane, a little boy was playing nine pins in the streets of Mentez, whose history was more important to them than twenty Tamerlanes! The Tartar Khan, with his shaggy demons of the wilderness, passed away like whirlwind, to be forgotten forever—and that German artizan has wrought a benefit, which is yet immeasurably expanding itself and will continue to expand through all countries and all time. What are the conquests and expeditions of the whole corporation of captains from Walter the Penniless to Napoleon Bonaparte, compared with the movable types of Johannes Faust!"

THE PIOUS STAGE DRIVER.

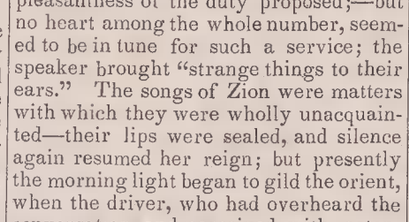
A minister of the gospel, a resident of the interior of Pennsylvania, being on a journey to Philadelphia, one morning before the dawn of day, broke the silence which prevailed among his fellow travellers, by inquiring if there were none of them, who could enliven the hour before sun rise, by raising a note of praise to the gracious and glorious Giver and Author of all their mercies and consolations—urging the reasonableness and pleasantness of the duty proposed;—but no heart among the whole number, seemed to be in tune for such a service; the speaker brought "strange things to their ears." The songs of Zion were matters with which they were wholly unacquainted—their lips were sealed, and silence again resumed her reign; but presently the morning light began to gild the orient, when the driver, who had overheard the conversation, and perceived with astonishment the result, raised his voice, and with elevated affection sang,

"Lord in the morning thou *shalt* hear
My voice ascending high;
To thee I will direct my prayer,
To thee lift up *mine* eye,"

and continued his offering of praise thro' the whole of this excellent psalm, to the astonishment and shame of his auditors. The stage soon stopped at the usual watering place, when he sprang from his seat, and opening the coach door, said, "Gentlemen, the coach will stop for a few minutes; if any of you have a word to say to a poor, sick, and dying fellow creature in the house, please follow me." Oh, ye wise, mighty, and noble of the earth, when this poor stage driver shall "come to the general assembly and church of the first born, and shall sit down with Abraham, Isaac, and Jacob, and all the spirits of the just made perfect, in the kingdom of God," where will ye appear? —*Philadelphian.*

We should imitate the virtuous actions of great and good men.

AGRICULTURAL.



For the Western Recorder.

ON THE CULTURE OF SILK.

Mr. Editor:—I noticed in the 3d No. of your valuable paper a caution against dipping too deeply in the Silk speculation. This was, perhaps, very well at the present crisis, for the Silk disease is at present powerfully contagious.—And it is true of Ohio, that she generally overdoes any branch of business which promises to be profitable—especially if it belong to the agricultural department. This arises from the fertility of our soil, the enterprise of our citizens, and the prevalent desire of becoming rich.

But while we admit it is prudent to administer caution on this subject, yet we ought by no means to discourage industry and enterprise; especially an enterprise in which we are so much interested as the manufacturing of Silk. I suppose you are aware, sir, that there is imported annually into this country from twenty to twenty-five thousand dollars worth of that article, and that this sum has mostly to be paid in the hard currency. Now, if this cash could be retained in the United State, it would greatly facilitate her commercial operations, and her system of internal improvements.

With regard to the success of the Silk enterprise there can be no reasonable doubt. We are situated in the same climate, and have a similar soil to China, which is one of the greatest Silk growing countries in the world. But actual experiment has decided the question, that our country is well adopted to the culture of the Silk worm and the Mulberry. And the Economites of Allegheny county, Pennsylvania, are now manufacturing an article of Silk, which has been pronounced, by competent judges, to be equal to any thing imported from Europe.

There can be no doubt but it will be profitable. In the first place it requires but a small capital to commence business; some 4 or 5 acres of land, and a few dollars worth of trees. will be sufficient for a beginning;—in the second place it can be mostly done by children, under the care of a superintendent, whose services would not be valuable for any thing alse. There are thousands of children throughout the United States a considerable part of their time idle, for the want of regular employment. The Silk business will call them all into requisition, and will not only add to their comfort, but saving them from idleness, will have a fine influence upon the morals of the country.

These are but a few of the many advantages arising from the culture of Silk; in view of which I think it ought to be encouraged by every lover of his country. Yours, &c. I. H.

How to perpetuate garden Sage from the effects of frost.—At the proper time for gardening in the spring prepare your ground with a good dressing of the best chip manure, from your wood-yard, set out your plants, or bunches of Sage, 18 or 20 inches apart, then dress up each hill or plant with the chip manure, to the height of several inches,—proportioning the hill to the stems as they may require, as being higher or lower. The old stems will produce a number of new shoots, on which there will be at the heel the formation of roots. In the latter part of May and the month of June these young shoots may be severed from the old stocks and planted as you would cabbage plants, and require a like watering unless you have a shower of rain. This same hilling preserves them from the deadly effects of the frost, and therefore if you are already in the possession of the article, hill it up as directed this fall, and you have it prepared for a bountiful crop next season.—[*Communicated.*

From Sinclair's Code of Agriculture.

ON DRAINING.

(*Concluded from our last.*)

2. *Covered Drains.*—As open drains take up a great deal of surface, covered drains are in many cases preferred.—Here we shall consider,—The season for executing them;— The mode of doing it;—Their size;—Whether hollow or filled;—Materials for filling;—Distance from each other;—Duration;—The expense;—The state of the ground;—and the impediments and enemies they have to encounter.

1. The summer is a good season for executing drains, because the laborers can then work with more comfort;—the materials for filling can be more easily collected and conveyed;—and more work can be done in a day. But, in winter, labor is cheaper, and men can be more easily procured.

2. Drains intended to be ultimately covered, are sometimes made by the plough, as being the least expensive mode, and perfectly practicable, where the soil has no stones in it large enough to obstruct the operation. But only small drains can be made in this way; and when they must be deeper, spades of different dimensions must be employed. The additional expense is amply repaid, as the work is done more effectually. The trench, however, is often begun by the plough, and finished by the spade.

3. The size of covered drains must be regulated by the quantity of water to be conveyed away. In point of width, there should only be room to work, unless, from the softness of the soil, a greater slope is necessary. An over-width increases the quantity of materials requisite to be used in filling, which, in many situations, is an object of no small consideration. The depth should be such, as to allow a proper quantity of earth above the drain, that the materials in it, and what covers them, may not be injured by the pressure of the horses or cattle in the act of ploughing.

4. Covered drains may be hollow where the run of water is large, or the materials good. This last is the case, when the drain is made of stones, either inserted in a triangular shape, or regularly built and covered by flags; or where common or draining bricks or pantiles are made use of. These are preferable to stone in two respects, that they can be more quickly and uniformly laid, and give less interruption to water than the ragged edges of stone. The sod, turf, or pipe drains also are not filled; nor the clay pipe drains. These, however, are better calculated for small acqueducts, for the conveyance of water than for draining land; as when finished, the water can have no access into them from without.

5. The materials for partially filling drains are numerous; as, *small stones*, which only answer for short drains, and are seldom effectual for any length of time;—*turf*, or sods, which many recommend in preference to any other substance;—*wood*, particularly old thorns cut into billets, which are well calculated for soft or peaty soils, that are unable to bear the weight or pressure of stones;—*green bushes*, not in leaf, (in some situations green willow is known to have lasted for ages;)—*black-thorn*, which is a favorite material in Essex;—*heath* or *ling*, which has been found a durable substance;—*fern*, *furze*, or *broom*;—and where the drain is small, and better materials cannot be had, even *straw*, either loose, or twisted into ropes as thick as a man's leg. The durability of the materials, at the same time is of less consequence in clayey soils, than the probability of having a sufficient opening for the water to flow through, for clay often forms an arch over these material, capable of supporting the incumbent soil and leaving a clear passage for the water below, when they decay. The materials must be covered with loose straw, fern, rushes, or turf, before the mould is thrown in. The drains should be filled up as soon as possible after they are ready for that purpose, and by the most careful of the workmen.

6. When the soil is very wet, it will be necessary to cut the small drains near each other; about sixteen or eighteen feet distant in common soil, and from eight to ten feet in the more stubborn.—But deep and large ditches must be cut around wet fields, into which the water from the smaller drains is to be conveyed.

7. When done with common skill and attention, drains will last for 20, 25, and 30 years, and in many cases they have endured much longer.

8. The expense is calculated at from 20s. to 50s. per acre; except in very wet soils, where it is sometimes higher than even 60s. but in most cases the whole of the expense is repaid by the first arable crop.

9. The best period for making these drains, is when the land is in grass, or in fallow.

Hollow drains have several enemies, as moles, field mice, the roots of trees, (in particular the poplar, and the ash,) and a plant which sometimes grow in them, intercept the course of the water by degrees weakens the current, and at last chokes up the drain.

3. *Arched Drains.*—The expense of arched drains, of stone, or brick, prevents their being adopted, unless where the ground is very loose, or where open drains are inadmissible. Where flat stones abound, drains covered by them, may in general be made large enough, for every essential purpose.

4. *Vertical or Pit Drains.*—Drains of this description may on some occasions be useful. If the spot where a confined reservoir of water exists, can be ascertained, (which sometimes may be done by boring with an auger,) sink a pit into the place of such a size, as will allow a man to work within its bounds, (or about three feet in diameter,) until it reaches the water meant to be brought up, which will rise as soon as the pit reaches it. The pit should then be filled with land stones, or pebbles, and the water be conveyed by a proper drain, to some adjoining ditch, and thence to the nearest stream or river.

Spouts or springs also, rising in the middle of a field, may on some rare occasions, be led into a pit, sunk through the clay, and the water may thus escape downwards, into a porous substratum.

4. *The instruments employed.*

The instruments employed in draining, are more numerous than is commonly imagined. The principal are,—draining ploughs;—the miner;—the mole plough;—spades, of various sorts;—the sod knife;—and the auger.

1. The *common plough* is frequently used in draining, to open the trench;—various sorts of ploughs have likewise been invented for that special purpose, and premiums given to the inventors; but from the number of horses or oxen required to work them, ploughs calculated for *effecting hollow-draining*, are more expensive than the spade, and never can come into general use.

2. In Lancashire, an instrument called the *miner*, was invented by the late Mr. Eccleston. It is a ploughshare fixed in a strong beam, without mould-boards, and is drawn by four or more horses, along the bottom of a furrow made by a common plough. Without turning the substratum, it penetrates into, and loosens the soil, eight or ten inches deeper than the plough had before gone; which operation besides draining the land, renders the subsoil open or porous for several years, and causes the water to carry with it any noxious matters in the soil. This in particular cases, is considered to be a useful practice, and the expense is inconsiderable.

3. A particular account is given, in a valuable work, of the first experiments with the *mole-plough* invented by Mr. Adam Scott. It was originally tried in the years 1795-6, under the auspices of the Society of Arts in London. The addition of wheels was then recommended, which has since been carried into effect. The accounts of the advantages resulting from this instrument are extremely contradictory. It has no doubt been very effectual, when well applied. It will succeed, where there is a regular stratum of clay or stiff marl; but not in loose, nor mixed soils. Without wheels, it requires from ten to fourteen horses, the trampling of which must be extremely injurious to wet soils: but with wheels the team may be reduced to six horses.

A mechanical apparatus has been invented by Mr. R. Lumbers, of Risington Wick, in Gloucestershire, for working the mole-plough by eight men instead of twelve horses; and Mr. Rogers of Washington, in the same county, has invented another apparatus, (the plough being moved forward by the revolution of a long lever and axle,) by which one horse, or even pony is sufficient for the purpose. The mole-plough can only become generally useful, when it can be worked by moderate power, whether with man or horses.

4. The spades used in hollow-draining, are of a peculiar construction. The upper or *top-draining spade* is narrow at the end, and the spade used for the lower part, or bottom tool, is almost pointed.—A scoop also is used for smoothing, and cleaning out the bottom of the drains, previous to the wood, straw, or other materials being put in. A breast-draining spade has also been invented, and is found useful; it is the common paring spade, with both sides turned up; and is driven forward by a man in the same manner.

5. A *sod-knife* is useful in setting out the trenches, the workmen treading it in by the side of a line, five or six inches deep. It is more expeditious and easier to the workmen than the spade.

6. *The borer*, or auger, used in draining, is very similar to that employed in searching for coal, or other subterraneous minerals.

5. *Modes of Draining applicable to different Soils, and the objects to which they are applicable.*

1. *Clays.*—The breadth of ridges in a clay soil, is a subject of great controversy. Some maintain, that all arable land may be effectually drained, by ploughing it into ridge and furrow, narrowing the ridges, as the wetness of the soil increases, and that hollow-draining is thus rendered unnecessary, except in springy soil, or peat bogs. It is on the other hand contended, that in all wet soils, ridges ought never to be less than eighteen feet: and if the soil can admit three gatherings, without baring the furrows, twenty-four feet is the preferable breadth. The great waste of land in the furrows, where the narrow-ridged plan is carried to any extreme, (perhaps 1-7th of the whole, and upwards,) is a great objection to it. In the Dutchy of Limburg they prefer having covered drains in the furrows of strong land, by which it is rendered at all times accessible to culture, and very little ground is lost. The celebrated Arbuthnot practised that system near Mitcham in Surrey; and an intelligent Scotch farmer, (Mr. James Andrew, at Tillylumb, near Perth,) has carried the same plan into effect, with the greatest success: he was formerly at the mercy of every season, and found none so dry, but that in a certain degree he sustained some injury; but since he has adopted the plan of a hollow drain in every furrow, he can plough almost at any time; the seed can be put in, if there be but a single dry day; in the ordinary course of things he can always rely upon a crop; and the soil being nearly of the same quality, and in a similar state the crop is always equal.

2. *Loams.*—When loams are allowed to rest, they sometimes acquire a degree of cohesion, little inferior to clay. They generally absorb water rather freely, and after retaining a proper quantity for vegetation, they allow the superfluity to run off, where there is a descent, but that operation is facilitated by small ditches, which collecting the water, operate like veins, and convey it to an open drain, made for carrying it off.

3. *Meadow Land.*—Along the sides of rivers or smaller streams, much valuable land is to be met with, injured by water. Sometimes land in this situation must be protected from the overflowings of the river by embankments, as requires to be done with respect to the fine meadows in Derbyshire and Staffordshire, on the banks of the Dove; but it frequently happens, that by deepening the river or stream, or, in other cases, by making a new, straight, or deeper channel, a considerable addition may be made to the land, and the object of drainage effected. Sometimes the wetness arises from springs, which issue from the bottom of an adjoining high ground. With much ingenuity, Mr. Edward Webbs of Stow, in Gloucestershire, has employed water collected by the upper drains, to drive a wheel, by which the water is raised from the lower parts, and carried away.

4. *Upland Pastures.*—The draining of upland pastures is a most important branch of the subject. From the unwholesome quality of the plants produced on such pastures, where there is a superabundance of moisture, whether stagnant on the surface, or confined under it, proceeds that hitherto incurable malady, *the rot*, and other diseases to which many thousands of valuable animals fall a sacrifice every year. In the sheep farms of the Cheviot hills, the object has in a great measure been obtained, by cutting surface-drains about one foot wide, and as much deep, in an oblique direction to the declivity of the ground. Others have been rendered dry, by the following simple process: A deep furrow is turned up by a strong plough; the sod is cleared from earth, reduced to three inches in thickness, and thence placed in the furrow whence it was taken. The grassy side being placed uppermost, there is a hollow beneath, sufficient to discharge a considerable of surface-water which readily sinks into it. The water collected from these drains, is sometimes employed in running over such parts of the ground below as are dry and covered with heath, where it has the effect of killing that plant, and encouraging luxuriant grass.

5. *Bogs.*—The successful mode of draining bogs, as practised by Elkington, and so ably described by Johnstone, cannot be minutely detailed in this place; it may be sufficient to state the general principles upon which it depends: these are, 1. Upon discovering the main-spring or source of the evil; 2. Upon taking the levels, and ascertaining their subterraneous bearings; and, 3. On making use of the auger when necessary, if the depth of the drain is not sufficient for that purpose, to reach and *tap* the springs. As an example of this it may be mentioned, that in a field near Tamworth in Staffordshire, by boring a hole thirty feet deep, through which the water issued at the rate of *three hogsheads a minute*, a great extent of wet land in that neighborhood was laid dry. Indeed in several cases, the Elkingtonian system has been attended with extraordinary consequences, not only in laying land dry, in the vicinity of the drain, but also by having a material effect on springs wells and wet ground at a considerable distance, with which there was no apparent communication.

6. *Lakes.*—The objects in the draining of lakes are threefold. 1. For the sake of the land that may be gained, when the water is removed; 2. For the marl and rich earth that may be got at the bottom; and, 3. For the purpose of obtaining a level to drain the tracts of meadow, and marshy ground adjoining, which cannot otherwise be accomplished. In this way the climate in the neighborhood may likewise be improved. In many cases such pieces of water have been either partially or entirely drained by deep cutting only, but sometimes, the aid of machinery is required.

ADVERTISEMENTS.

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The power of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice the other Churches. 4. It will pay attention to the Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press" it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers

For 50 cts.	- -	1 copy for a year
" $5	- -	- 12 copies.
" 10	- - -	25 "
" 20	- -	- 60 "
" 30	- -	100 "
" 50	- -	- 200 "

Payment must always be made in advance.

The editor desires to publish, at least, 500 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this in no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia.

To Farmers and Thrashers

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

The balance was given by the Conference Steward to the needy preachers, to enable them to reach their appointments.

Financial Report.

From an examination of the Report of the Conference Steward, your Committee finds a deficiency in money matters in the current expenses of the year, of upwards of sixteen hundred dollars. We are well convinced that such a state of things ought not to be, more especially, as most of the circuits (as there are where the deficiencies mostly, if not altogether occur) are fully able, in a pecuniary point of view, to sustain their preachers. We are decidedly in favor of the subscription system, in raising funds to meet the current expenses. We therefore, beg leave to offer the following resolutions—hoping they will, in a great measure, remove the evil complained of: Resol. that,

It shall be the duty of the Stewards, and Leaders of circuits and stations, to call personally (or have it done) on all the members, and friends of the church, within their circuits and stations, at the 1st and 4th quarterly meetings of this year, and 4th of each succeeding year to subscribe the amount they intend to give for the support of their preachers; to be paid quarterly in circuits, and weekly, monthly or quarterly in stations, as the case may be.

And further, your Committee discovers a great deficiency on the part of superintendents of circuits and stations, in raising collections in their respective charges, to meet the deficiences on the frontier circuits. In order to prompt them in future, to the discharge of their duty, we recommend the adoption of the following resolution:

Resolved, That it shall be the duty of each superintendent to see that the Stewards do their duty, as enjoined by the Discipline, in raising Conference Collections for the above purpose, and that they be particularly examined by the annual Conference in relation to this matter.

[*The above Report was drawn up by a Committee of Lay Delegates.*]

Resolved, That the resolution of last year, requiring the superintendents to present the claims of the Preachers' Aid Society to the people, and to form auxiliary societies, be adopted this year. The resolution is as follows:

"*Resolved*, That the superintendents of circuits and stations be requested, to present the claims of the Preachers' Aid Society, of the Pittsburgh Annual Conference, and do all they can to form auxiliary societies, and raise funds for the benefit thereof."

(*To be continued.*)

COMMUNICATIONS.

Charleston, S. C., 26th Sept. 1839.

Bro. Springer:—You, in the Recorder, and Bro. Stockton in the Letter-Press, have so completely put the editor of Zion's Watchman *hors du combat*, and so fully convicted him of——— (I will not use a harsh word,) *misrepresentation*, respecting the government of our church with regard to the rights and privileges of colored members, that it would seem to be a work of supereogation to say a word more on the subject; and yet there are facts relative to this class of persons, and the privileges they enjoy where they are most numerous, which neither you nor he can be acquainted with, living as you both do in what are technically termed the Free States, where there are but few, if any, members of this description, which if known will convince every unprejudiced mind that in a slave-holding State there are rights and privileges accorded to the blacks which some self-styled philanthrophists, and would-be exclusive friends to the rights of man are themselves deprived of, not excepting the editor of the Watchman himself. For proof of this let facts be submitted to a candid world.

There are in the Methodist Protestant church in this city between 5 and 600 colored members, the largest number, propably, belonging to any one society in our connexion. These are divided into 21 classes, the leaders of which are colored men, elected by the several classes. There is a leaders-meeting, and a colored quarterly Conference, separate and distinct from the white, composed exclusively of colored leaders and exhorters. They have separate love-feasts, and the Lord's supper is administered to them by themselves on a different day from the one in which it is administered to the whites, but around the same altar rail, immediately after the congregation is dismissed on the Sabbath. The leaders-meeting takes exclusive charge of the sacramental and love-feast collections, and appropriates them to the relief of the colored poor, according to their own discretion. They receive, try, censure, and exclude colored members according to the provisions of the Discipline, without any interference from the whites. The quarterly Conference licences exhortors, after being recommended by the classes of which they are members; and I would remark *en passant*, that the public exercises of some of them would do no discredit to some white men who make much higher pretensions. Thus you perceive that they have and enjoy equal rights and privileges with the whites, so far as church government is concerned, in every respect, save that of voting for delegates to the Annual Conference; yes, they have rights and enjoy privileges, which the *white* members of the Methodist Episcopal church are deprived of,—*exempli gratia.*

The *white* members in the Methodist Episcopal church are not allowed to choose their class leaders, but must submit to be led by whomsoever the caprice of the preacher may place over them.—The *colored* members in the Methodist Protestant church elect their own leaders.

The white leaders-meetings and quarterly Conferences in the Methodist Episcopal church are composed of persons either appointed or nominated by the preacher, and removable from office at his pleasure. The colored leaders-meetings and quarterly Conferences in the Methodist Protestant Church, are composed of persons elected by the colored members, and are *de facto*, their representatives.

White members in the Methodist Episcopal church are received by the preacher, and tried by a committee chosen by the preacher, who is both judge and executioner, and very frequently the accuser. Colored members in the Methodist Protestant church are received by the votes of colored men, tried by a committee partly chosen by colored men, and acquitted, censured, or excluded as the case may be, by colored men.

White exhorters cannot be licensed in the Methodist Episcopal church without the consent of the preacher in charge, though they may have received the votes of all the members of the leaders-meeting. Colored exhorters are licensed by a majority of the colored leaders-meeting, either with or without the concurence of the preacher.

Let the editor of the Watchman peruse the foregoing with an unjaundiced eye, if indeed he is able to do so, and then to his editorial chair with what appetite he may.

Affectionately yours.

Jno. H. Honour.

No. II.

Jamestown, O., Sept. 7th, 1839.

Friend Springer:—In this communication I propose to sustain the latter clause of the proposition already before your readers, that *any man* having the qualifications mentioned in the proposition, has a right to preach, &c.

All that is necessary to sustain this part of the proposition will be to show the plan laid down by the Apostles to perpetuate the proclamation, or preaching of the gospel, &c. This can be done by reference to the epistles written by the Apostles. In the Epistle to Timothy Paul directs him to commit the gospel to faithful men, who are able to teach others also, and in this way it was perpetuated. And Peter in his General Epistle gives a license to all who had obtained like precious faith with the Apostles, such as had been born again, of incorruptible seed, not of silver and gold, but of the word of God which liveth and abideth forever, which word was preached as gospel by the Holy Spirit sent down from Heaven. In this commission Peter speaks of the same thing that Paul spoke of, as having been committed to Timothy, and which he directed him to commit to faithful men who were able to teach others also. But there is one thing worthy of notice in the commission given by Peter,—it reads thus: "*If any man speak let him speak as the oracles of God,*" or to fill in the elipses. If any man speak let him speak as the oracles of God speaketh. This commission limits the speaker to the oracles of God. What then is meant by the oracles of God? This we have to learn from the scriptures or oracles themselves; let us ask Paul what he meant by the term, and he answers when answering a Jew. What advantage is there in circumcision? Answer much every way, *but chiefly that the oracles of God were entrusted to them.* Here the old scriptures are called the oracles of God. But Peter expressed his meaning when he said, "no scripture is of private interpretation (———) but holy men spake as they were moved by the Holy Spirit;" and Paul more fully expressed the meaning when he said, "all scripture (old and new) is given by inspiration of God." What for? *Why that the man of God may be thoroughly furnished for every good work.* This is in substance the same thing, as saying, "if any man speak let him speak as the oracles of God speaketh."

We have now ascertained how preaching, &c. was, and is to be perpetuated. And who will venture to say that any man dare not speak as the oracles of God speaketh, although clerical hands may never have been laid on him.

In my next, I will attempt to prove that authority to preach, baptize, &c., was never confered on any by the laying on of hands.

Enough at present, as ever yours,

M. Winans.

(*To be continued.*)

Interesting Trial.

TRIAL OF THE AFRICAN PRISONERS.

Mr. Lewis Tappan, who attended the court, at Hartford, on behalf of the committee of citizens in New York, has with the aid of a reporter, furnished the committee with the following authentic and interesting sketch of the proceedings:

Hartford, Sept. 17, 1839,
6 o'clock, P. M.

To the Committee in behalf of the Captured Africans:

Gentlemen:—The Circuit Court was opened this forenoon at 11 o'clock, by Judge Judson, Judge Thompson not having arrived. A grand jury having been impanneled, Judge Judson delivered his charge to them, embracing all subjects that will probably come before the Court, with the exception of the case of the African prisoners—the Court intimating to the jury that, on the arrival of Judge Thompson, they would probably be specially charged on that subject.

The Court then adjourned to 2 o'clock: and after re-assembling at that hour, and waiting a short time, adjourned again, to be called again by the ringing of the bell, when Judge Thompson should arrive.—On his arrival, the Court held a short session, and again adjourned to 9 o'clock to-morrow morning.

The Judges, I understand, are now in consultation, and it is thought that a charge will be delivered to the grand jury respecting the African prisoners to-morrow forenoon. Seth P. Staples, Esq., R. S. Baldwin, Esq. and Theodore Sedgwick, jr. Esq., prisoners' counsel, are on the spot; and it is said the District Attorney has procured the aid of William Hungerford, Esq., of this city, and Ralph J. Ingersoll, Esq., of New Haven. I learn that a portion of the inhabitants in this region are anxious to have the Africans surrendered without a trial! The feelings of another portion, however, are said to be in favor of legal investigation. It is said by some that the royal ordinance of the Queen of Spain has been a dead letter ever since it was issued; that the Spanish authorities of Havana have winked at the illegal importation of slaves: and that, therefore, these unfortunate prisoners should be given up.

The public hotels seem to be filled with citizens from all quarters, a large number of whom are attracted here by this novel and deeply interesting case.

Messrs. Montez and Ruez came on board the steam boat at Lyme, in company with Lieut. Meade, of the U. S. Navy, and excited considerable notice.

I have just been to the jail to see the prisoners. It is a large, neat and airy house. In the attic were eleven of the prisoners sick, under the care of a physician. The jailor, Mr. Story, and his wife, appear to be kind and attentive to their charge. The other prisoners were in a large apartment connected by a gallery with a range of cells, which was crowded with visitors, who pay 12½ cents for admission. Some of the prisoners appeared to be under some apprehension, and asked the interpreter if they were to have their throats cut, passing their hands across their necks when they made the inquiry. He replied no, and endeavored to quiet their fears. "If they don't mean to kill us, (said they,) why are so many people here to see us?" This was explained to them. We went into a room in the dwelling part of the house to see the four children. They were all sobbing aloud, and appeared to be in great agony. On inquiring the reason, I was told that Mr. Ruez was in the room; that before he came in, the children were cheerful and happy; but the moment they saw him, one of them flew to the matron, clasped around her, and all burst into tears. It was a heart-rending sight to see these poor children, 4000 miles from their parents and native land, surrounded by strangers, and no one able to converse with them, to soothe their sorrows and quiet their fears.

Another of the prisoners died at New Haven on last Sabbath, and one who is very sick remains there. Thirty-eight have been removed to this city.

[The New York Herald gives the following as the closing part of Judge Judson's charge to the grand jury. After stating the law in regard to a case of alleged theft on board an American vessel abroad, his Honor said:—]

"If any persons have anticipated your consideration of any other case, or cases, involving more important principles, and deeper interests, either to the nation or individuals, I have only to say to you now, that the honorable Judge with whom I am associated in this Court, found it impossible to be here this morning; and yet it is his wish, expressed in his note, received late last evening, that the business of the Court should proceed, until his arrival, which may be expected in the course of the day.

"Under these circumstances, a case of such magnitude cannot be disposed of in any manner satisfactorily to myself, and the duty which is due the place I hold, without the most calm, patient and thorough examination.

"The Judges of this Court have had no opportunity to confer together, or to make that investigation which is so important to the final disposition of the subject. This will be done in due time. And if on such investigation it shall be found that the public interest demand from the Court a *further charge*, your attendance will be requested for that purpose.

"If, on the contrary, the District Attorney should not have *other bills* to lay before you, then you will be discharged."

Hartford, September 18,
6 o'clock, P. M.

Gentlemen—The court, on motion of S. P. Staples, Esq., this afternoon granted a writ of habeas corpus, on the affidavit of Theodore Sedgwick. Jr., Esq., directing the Marshal to bring up the three African girls bound over by Judge Judson to appear as witness, and show cause why they are detained in custody. The writ is returnable to-morrow morning.—William Hungerford, Esquire, counsel for Messrs. Ruez and Montez, wished to make a suggestion as to the *time* of the return. He said these individuals were claimed as the property of two Spanish citizens, one of whom was sick, and would not be able to be in court at that time; and in addition to this, there was a libel on the prisoners for salvage, which was to be tried in the District Court to-morrow.

Judge Thompson said all these matters would come up probably on the return of habeas corpus. The affidavit states that these persons are imprisoned without any cause. The claimants, if sick, could acquaint their counsel with the facts; and if any reason is shown why they should not be discharged, the court will not discharge them. The probability was, he said, that the court would not be detained longer than to-morrow. If the marshal makes a return that they are in custody for a legal and proper cause, they will be detained; if not, they will be discharged.

It seemed evident that Judge Thompson did not incline to touch this matter at all. It is supposed that he intended to discharge the grand jury to-morrow afternoon, and leave the city. The case of the libel would then be tried before Judge Judson. It was thought best to make a movement on behalf of the poor Africans, and the writ of habeas corpus was applied for, on behalf of the three African girls in the first place. If they are held merely as witnesses, they can probably be bailed out; but if the claimants file affidavits that they are their property, and therefore ought not to be bailed, the prisoners' counsel will move to have two or three of the most intelligent Africans brought into court to testify on the subject. It would seem, therefore, that the great questions involved in the case must, of necessity, come up for discussion.

It is a novel sight *here* to see the marshal's notice of the libel on the court-house door, enumerating the various articles on board the schooner, and among other "effects" *the prisoners.* The marshal of the District of Connecticut posting a printed notice on the door of the State House (in which the court is held,) that certain men are libelled for salvage as the property of certain other men! What if a trial should be decided by him that the *men* as well as the *goods* are property, and a decree be issued ordering the same to be sold for the benefit of all concerned! It would be a novel sight to witness the sale on the green in front of the State House!

Hartford, September 19,
10 o'clock, P. M.

The court being occupied during the fore-part of the day with a civil case, the return of the Marshal to the writ of habeas corpus issued yesterday, was not made before the commencement of the afternoon session. The three African girls were brought into court, accompanied by the boy, and placed at the bar. The court room was crowded; among the spectators was Gov. Ellsworth. The children appeared to be in great affliction, and the girls wept exceedingly. The jailor stood by the side of them, offering them fruit, &c., to quiet them, but they put it aside, and "refused to be comforted." It was a spectacle that seemed deeply to affect Judge Thompson, the members of the bar, and the numerous spectators.

Ralph I. Ingersol, Esquire, of counsel for the Spaniards, read the answer of the marshal—to wit:

1. The warrant of the commitment of the forty-three Africans, to answer to the charge of murder, and the warrant for the commitment of the three girls for neglecting to be recognized to appear as witness.

2. The libel of Lieutenant Gedney for salvage on the vessel and cargo, *including the prisoners.*

3. The return of the marshal, stating that he took into custody the prisoners and witnesses aforesaid.

4. The writ of habeas corpus, and the Marshal's return thereon.

5. The claim of Montez, one of the Spaniards, that the three girls and the boy are his property, purchased by him in the island of Cuba, agreeably to the laws of Spain; and that agreeably to the treaties between the United States and his government, they ought to be surrendered to him.

6. The mixed claimed and libel of Wm. S. Hollibard, Esq., District Attorney, put in under the libel of Lieutenant Gedney and others, first on behalf of the United States at the instance of the Spanish minister, that the issue may be tried on said claim, demanding the restoration of the prisoners to said representative of the Queen of Spain: and secondly, in behalf of the United States, alleging that these people have been brought into this country in violation of the law prohibiting the importation of slaves from Africa; claiming that they are free persons and ought to be returned to their native country, that if this be proved to the satisfaction of the court, the necessary steps should be taken that the government of the United States may appoint an agent on the coast of Africa to whom the prisoners may be sent; and that on these two claims—that of Montez and the District Attorney—the District Court on the 18th inst. had issued process.

John P. Purroy, Esquire, a Spanish lawyer of the city of N. York, well known there, and William Hungerford, Esquire, of this city, appeared with Mr. Ingersoll as counsel for the Spaniards. Seth P. Staples, Esquire, of counsel for the prisoners, addressed the court and asked for time to consider the answer made by the Marshal, which was allowed.

The children were remanded to prison, and as they left the court room in the custody of the jailer, the girls clung to his arm with both hands. The interpreter has since made affadavit that they are, as he believes, natives of Africa, that they can speak no other language, and that they are about seven or nine years of age. They are larger than boys and girls of that age usually are in this country.—But it was a very unusual and unaccountable proceeding for Judge Judson to commit these little children to prison as witnesses, when it was plain that the Circuit Court could never admit such young and ignorant creatures to testify in a case of life and death. This confirms the suspicion, that the pretext of a capital trial was resorted to solely for the purpose of keeping the captives out of the jurisdiction of State courts. Application will be made to the Court to appoint a guardian to these children. Until matters respecting them are disposed of, it has been thought unadvisable to move respecting the other prisoners.

The grand jury is now in session, and it is understood they have the case of the African prisoners under consideration.—Antonio, the Creole lad, who was servant to the Spanish captain, and who can speak no other language than the Spanish, has been before the grand jury, and they have applied for the interpreter, and one of the most intelligent African prisoners, with a view to have them examined also. It is very evident that some of them, if not all, have an idea of a Supreme Being, and that he will punish those who do not speak the truth. I presume few, if any persons, believe that the grand jury will indict any of the prisoners; still it is rumored that they will ask the court to instruct them as to their duty, &c.—To-morrow we expect the points in the case will be fully discussed.

Hartford, September 20,
9 o'clock, P. M.

The Circuit Court have been occupied the whole of this day—nine hours—in the case of the habeas corpus on behalf of the African girls. At an early hour the court room was crowded. The governor of the State, and many aged and respectable citizens of this and the neighboring towns, and from a distance, were present. The wives of the judges, and other ladies were present in the afternoon. The matter is not yet determined, but I hasten to give you a brief abstract of the proceedings of this day.

Theodore Sedgwick, Esquire, read the answer to the return of the Marshal, which sets forth that the children were not, nor ever had been, legally, slaves to Don Pedro Montez, or any one else. It recited the facts, which are already before the public, though mixed with much that is fabulous. It contained also the affidavit of the interpreter, John Ferry, seaman, who is a native African, that, according to his belief, the girls are natives of Africa, that they can speak no other language, and that they were very recently from that country. It contained also the affidavit of Mr. Hanson, a native of Africa, who was educated in England, and who is now studying for the ministry with the Episcopal minister of this city, to the same effect. Mr. S. also read the ordinance of the King of Spain, of 1817, abolishing the slave trade, also a royal order of the Queen Regent of Spain, of November, 1838, against "the clandestine introduction of black slaves" into Cuba, and commanding the local authorities to prosecute those who are engaged in it.

Mr. Ingersoll, on behalf of the Spanish claimants, stated that the persons were libelled in the District as property—they were also libelled by the Spanish Minister, as the slave property of Spanish subjects, and as such ought to be delivered—and they were also libelled by the District Attorney, that they might be delivered up to the Executive, in order to their being sent to their native country, if it should be found they were entitled to be sent. He presumed that under this writ of habeas corpus, the Court would not take the case out of the legitimate jurisdiction of the District Court, where it was now pending, as, if the decision of that Court should not be satisfacrory, the matter could be brought before the Court by appeal.

Mr. Baldwin of New Haven, for the African children, observed that they were held in custody as *property*, as mere chattles, in a case in which they were not before the Court, and were awaiting the decision of another question.

[The grand jury here came into court, and the foreman said they were anxious to have the direction of the Judge in the case of the African prisoners who were indicted for murder and piracy, which was under their consideration. Judge

Thompson told them that this Court had jurisdiction of the crime of murder, but he could give no opinion on the case unless they would furnish a statement of facts—it would be useless for him to address them generally on the crimes of murder and piracy. The Grand Jury had a right to ask the opinion of the Court, and it would then be the duty of the Court to give an opinion as to its jurisdiction, and that is all that it could do.]

Mr. Baldwin resumed. He contended that the children who were of the ages 7, 8, and 9, were not slaves—nor ever had been—they were free born—illegally captured, and taken to Havana, where they were sold contrary to the laws of nature and humanity, and the laws and ordinances of Spain, in existence long before the birth of these children. He contended that the capture of them was illegal, felonious and piratical,—the learned counsel then read the declaration of the King of Spain, to whom these Spanish claimants owed allegience, denouncing the trade and subjecting the captain and all the officers of a slaving vessel, to a forfeiture of all their goods, and transportation to the Philipine Islands; and he maintained that the children were consequently not property, and therefore the District Court was ousted of its jurisdiction, and it was the duty of the higher Court to institute an inquiry on that point—the District Court was one of limited jurisdiction, and in this case, the service claimed to have been rendered by Lieut. Gedney, was within the jurisdiction of the admiralty of New York, and he had no right to take the property (so far as it was property,) to New London, or any where else, for the sake of selecting the place where he would prosecute his claims for salvage. At all events it could not be entertained here—it would be a violation of our treaty with Great Britain, which bound us to co-operate with her in the abolition of the slave trade so abhorent to humanity. Great Britain had paid two millions of dollars to Spain, as the price of her slave trade, and if the Court performed what the United States officer now asked it to do, it would be a violation of our faith with Britain. Did the District Judge, said the counsel, issue his warrant to take these individuals? No! He could not do so, he would not do so without first judicially finding that they were property; the warrant his Honor granted the Marshal was to take the vessel and other articles of *personal property*—these children were not personal property, and never could become so. They formed part of a number of persons who, born free, were captured and reduced to abject slavery, bound tightly together—chained hands and feet, and who struggled for, and achieved their liberty. Who would not have done the same? This case was not to be tolerated; it should be scouted from the tribunals of our free country. These people sought and found an asylum in a neighboring State, from whence they were brought here, not as slaves, but as free; and we are asked first, to make them slaves, and then give them up to the Spaniards; but we can only deliver up *property*, and before they can be delivered up, they must be proved to be *property*. The children are valued it seems, at two thousand dollars, and the whole number on which Lieut. Gadney claimed salvage, which had been assessed at one half of the total value, were considered worth twenty-five thousand dollars.

Mr. Baldwin's masterly speech was two hours and a half in length. He spoke with great severity of the conduct of Lieutenant Gedney, in claiming salvage for the "meritorious service" of aiding the Spanish gentlemen in reducing persons found free to a state of helpless bondage. "What!" said he, "do our treaties impose upon our navy and judicial officers the duty of being slave-catchers for foreign slave-holders!" What right has the Spanish minister to require that our courts shall be *actors* in the businnss of reducing men to slavery! They should be on the side of freedom." Mr. B. spoke ably and feelingly, as should the scion of an old stock, which is yet alive and vigorous.

Mr. Ingersoll spoke, in reply to Mr. Baldwin, about three quarters of an hour, and hardly sustained his reputation as a lawyer. He seemed either not to understand or to be indifferent to the case.—The court, he thought, ought not to go into the inquiry, as insisted on by the opposite counsel, while the merits of the case were pending before another tribunal—the District Court. In the course of his remarks, he stated that the District Judge had admitted yesterday that he could not decree that the African girls could be sold in this state to pay the salvage.

After Mr. B. had proceeded a short time the grand jury came into court and requested instructions. Judge Thompson told them that he could not take up time to charge them on abstract points, but if they would present a statement of facts he would inform them how far the case presented was within the jurisdiction of the court. The jury accordingly withdrew, and in the course of an hour returned, when the foreman read a statement of facts with reference to the Amistad. Judge T. informed the grand jury that at the opening of the court in the afternoon he would express the opinion of the court. Accordingly, at the commencement of the afternoon session, Judge T addressed the jury at some length, and stated distinctly that with regard to the criminal charge against the prisoners, although he would offer no opinion whether they had or had not committed any crime, he must state that neither the court nor any other court in the United States, nor the grand jury, had any jurisdiction. The Amistad, he said, had been a Spanish coasting vessel, and a crime committed on board of her was the same with regard to jurisdiction, as if the crime had been committed on the island of Cuba. In order to give a court of the United States jurisdiction, the crime alleged must be against some law of the United States, or the laws of nations. This is not a new question. The Supreme Court of the United States has determined that they have no jurisdiction over offences committed aboard foreign vessels. The courts of one country will not execute the penal laws of another country. The vessel is a part of the foreign territorial jurisdiction. The judge here referred to the case of the United States *vs.* Palmer.—Could the case in hand be considered as an offence against the laws of nations, it would be otherwise. But in this case, if it should turn out that the offence had been committed, this court has no jurisdiction. The jury therefore, cannot find an indictment. The grand and petty juries, having no other business, were therefore discharged. The bills of indictment, therefore, prepared with great care, by the District Attorney, and laid before the grand jury, charging Jingua with murder and some of his comrades with piracy, &c., are *ignored*.

Mr. Staples rose to reply to Mr. Ingersoll, and in an impassioned strain, advocated the cause of these four children, observing upon the hardihood with which Don Pedro Montez, dared to come into a court of justice in our free country, in codtravention of our treaty with Spain, to ask the delivery up of these human beings, when the very act that he desires us to countenance, would, by his own sovereign's decree, have subjected him to the forfeiture of all his goods, and to lengthened transportation to Mozambique, and he would himself become a slave.—The claim, said Mr. Staples, in this case is preposterous, and the crime we are called upon to sanction is punishable by our law with death.

The plea on which the District Attorney asks for the children, is an anomalous one—they are first to be treated as slaves in order that they may be made free—but we have no right, said the learned advocate, to detain them in durance one hour, they are as free as the atmosphere we breathe. In the close of a speech, glowing with fine sentiment, he said, this was not a question of property—yet it was, but it was the inherent property of liberty; not a question of bales and boxes; they were not dealing with such vulgar traffic, they were on higher ground, they were contending for that blessing which was next to life itself. This was a case of felony, and felony cannot confer property. "*A piratis, et latronibus capta, dominium non mutant.*" He introduced the affidavit of one of the African prisoners, named Bahoo,—called Bowle in a previous account,—in which he swears that two of the girls were natives of the same place with himself in Africa, that they were brought to Havana recently in the same vessel, &c. John Ferry, the African interpreter, was called, and said he had explained to Bahoo the nature of an oath, that he appeared to comprehend it, and that he had truly translated his testimony. Mr. Gallaudet, who was present, informed the prisoner's counsel that he had conversed with him by signs, and he appeared to have an intelligent idea of a Supreme Being, and of the penalties incurred for telling a falsehood. In answer to a question from Mr. Staples, the District Attorney said he had received an intimation from the Department of State to file the claim he made yesterday. Mr. S. concluded his speech at four o'clock, after speaking about two hours.

On motion of the counsel for Montez and Ruiz, the black Spanish lad, Antonio, was brought into court and sworn. Lieut. Meade, United States Navy, was sworn to interpret.

Antonio, (*examined through Lieutenant Meade*) was the Captain's slave, and was on board the Amistad when the female slaves came on board—which they did quite freely, and were not bound, and about a quarter of an hour afterwards, the Spanish owners came on board. The slaves walked about the deck, or went below as they liked. There were Spanish and Yankee vessels in port—there was a Yankee man-of-war—there were many vessels there after slavers. He had been with his master ever since he was a little boy, and was always treated well by his master and mistress.

The District Attorney addressed the court, and opposed the release of the prisoners on the writ of habeas corpus. He said it might appear that the Amistad was in fact an American slaver, under foreign colors, and that Montez and Ruiz were the agents. In this view of the case he contended that the prisoners ought all to be detained as witnesses.

Mr. Hungerford, for the claimants, addressed the court for about four hours and a half, in an ingenious speech, and was replied to by Mr. Staples in a speech of one hour, who also replied to the District Attorney. Mr. S's arguments to-day evinced great ability, and manifested considerable feeling. He spoke of the "matchless impudence" of the Spanish claimants coming into an American court, and making such a claim, and said if the Attorney of the United States really thought they had been accessory to the enslavement of the prisoners he ought to see that process is issued against them.

The court adjourned at half past seven o'clock, P. M., to to-morrow morning, at nine o'clock, when it is expected that Judge Thompson will pronounce the decision of the court. It is expected that not only the three female children will be liberated, but all the other prisoners. The Judge said in the course of the day that he was anxious to get light on the subject, and to know what ought to be done with the prisoners should they be liberated.—They were now in the custody of the law, though no criminal charge could be sustained against them. It would be well to consider whether the Executive of the U. States could take charge of them with a view to sending them back to Africa. One of the counsel observed that the Colonization Society would be very glad to take charge of them for that purpose. Another observed that they had never been employed in a more worthy object. Another remarked that the state of Connecticut or the overseers of the poor would be authorized to provide for them. And an intimation was made that several benevolent individuals would be glad to receive them, and educate them together, before they should be returned to Africa, or to distribute them among persons who had expressed a desire to receive them. The District Attorney, in conversation, said he should be glad to take one of the boys and rear him. All could easily be provided for.

Should the prisoners be liberated it will be a question whether the vessel and cargo should not be libelled for account of the poor Africans. A criminal charge could not be sustained against Montez and Ruiz, it is understood for similar reasons to those set forth in the arguments of counsel with reference to the African prisoners. It is probable, however, that the whole proceeds of the cargo will be consumed in expenses. The District Judge has ordered the vessel and cargo to be sold.

Montez and Ruiz were both before the Grand Jury, and made a plausible statement. In court, their Spanish counsel said in a low voice to Mr. Staples while he was speaking, that Ruiz would swear that he did not know that the prisoners had recently come from Africa when he purchased them. Mr. Staples said aloud, "he will not dare to do it, and should he do so he must be prepared to answer to the charge of perjury."

Affidavit of Bahoo.

I, Bahoo, of Bandaboo, in Africa, being duly cautioned, depose and say, that I knew Marngroo and Kenyee, two little girls, now in prison at Hartford; they were born in Bandaboo, in Mandingo, and came over in the same vessel that I did to Havana, as did Penna and the little boy Carle; that they were about two moons in coming from Africa to Havana, where they staid less than one moon. Good many in the vessel and many died—were tight together, two and two chained together by hands and feet, night and day, until near Havana, when the chains were taken off—were landed on the coast at a little place, near sun set—stayed until night, and walked into the city, put them in an old building, and fastened them in—after some time the people now in jail were put on board the same vessel they came here in, in the night, and sailed away, about the time the gun fired. I know that these children are the same that came over from Africa, and that Marngroo and Kenyee were born in the same place I was, which was Bandaboo, and further saith not.

BAHOO, his ⋈ mark.

State of Connecticut, Hartford, } September 20th, 1839. }

HARTFORD, Sept. 21, 1839.—Immediately after the opening of the Circuit Court this morning, Judge Thompson said the court was not prepared, as yet, to dispose of the case under consideration *finally*, and that any intimations he might then throw out, ought not to be taken as the ultimate view of the court. He said the case was one not free from great difficulties, and the court was embarrassed with the right disposition of it. The three girls, and all the prisoners, had been discharged altogether from any criminal accusation. It now becomes a serious question what disposition shall be made of them:—with the others, as well as the children who had been brought before the court on the writ of habeas corpus; for the embarrassment felt by the court extends to all the persons in custody.

The first question for the court to determine, is its power on this process; for the merits of the whole case, in its extended view cannot now be considered. Are these persons rightfully detained in the District Court? That is the question for consideration. If they are rightfully detained, we should take it for granted that the Circuit Court has no right by summary process, to take them out of the possession of a District Court, for that court can only interfere when the prisoners are detained by the District Court without any authority of law. Besides, great injustice might be done to the parties if the court should decide, in a summary way, provided the District Court can rightfully detain them. If the decision of the District Court should be unsatisfactory to either party, there is the right to appeal to the Circuit Court of the United States. In the judgment of the court, therefore, the case is presented simply with regard to the jurisdiction of the District Court. However abhorrent it may be to keep these persons in prison, or to view them in the light of property, and, however desirous the court might be that they should all be set at liberty, they must not permit their private feelings to govern them in deciding upon the case before them. They must discharge the duty of a court of justice, however painful it might be.

It has been argued by the counsel for the prisoners, that no court of justice can entertain the question of the right of property in human beings. But slavery, or the right of controlling the freedom of a certain class of men, is not only sanctioned by foreign powers, with whom we have treaties, but is recognized by the Supreme Court of our own country. He referred to the case of the Antelope. In that case the Supre Court did entertain the inquiry as to the right of property in human flesh. That was a question, in many respects precisely like the present one. If the court then supposed that they could not go into that inquiry, the case would have been otherwise decided. The court were equally divided, and the decision therefore was, as in all cases of the kind, that the decision of the court below was affirmed. But the court did go into the inquiry whether it was lawful to hold human beings in slavery, and the question was entertained upon whom the onus of proving the right of property developed. The court put the matter upon the ground that the right of property should be shown. However unpleasant it may be, in a moral point of view, it will not do for the court to say they will not hear the question discussed whether there is right of property in these prisoners or not.

The Supreme Court of the United States in the case referred to, said the Africans were rightfully in the jurisdiction of the court. This court has the power of deciding who has the right to this species of property. He used, he said, merely the language of the law. The only inquiry then is, whether this property is rightfully in possession of the District Court. If it comes fairly within the admiralty jurisdiction of that court, whatever my views may be as to the ultimate decision of the case, it must not be disposed of summarily. The question is not now open, whether these Spaniards can properly be here, when the laws of their own country are against the slave trade, and when Spain has made treaties, and passed edicts, for its suppression. That question must arise upon its merits. The only question now is, whether this property, to adopt the language of ths law, is within the rightful control of the District Court. We are of opinion that the prisoners cannot be taken out of the jurisdiction of the District Court on the writ of habeas corpus. The court therefore requests the counsel to furnish them with another argument as to the main question. *whether the District Court has jurisdiction in the case.*

We propose, said Judge Thompson, that the cause be kept open until afternoon, then to be argued, should the counsel for both parties agree to do so. If they cannot be prepared so soon, the court must wait until they have sufficient time.

Some conversation then took place between the counsel on each side, and with the court.

Mr. Ingersoll suggested that it might be best for the counsel on each side to furnish the court with a brief, for the court to give an opinion, at some future day, at an adjournment of the court. Mr. Staples said the counsel would confer together, and would be prepared, at the opening of the court in the afternoon, to say whether they could accede to the proposition, or proceed to argue the cause to-day.

A writ of habeas corpus was taken out in the course of the forenoon, on the petition of Erastus Smith, Esq., of this city, for all the other African prisoners, returnable before this court. The court then took a recess till two o'clock.

Afternoon.

At the afternoon sitting, Mr. Ingersoll, who was counsel for the libellants, repeated his wish that a brief should be prepared and submitted to his Honor, when all the cases on the point should be cited, and his Honor should deliver his decision at some adjourned session of the court—for, he said, there had not been sufficient time since the attention had been specially called to the point, to properly consider it.

Mr. Baldwin and Mr. Staples (for the Africans, who were now all before the court on a second writ of habeas corpus,) observed that in a case where the liberty of so many individuals was at stake, they were bound to come prepared to support their own process.

Judge Thompson said the case was a vital one; but it was desirable if possible to dispose of it.

Mr. Staples had made inquiry, and he was satified of the necessity of going on.

Judge Thompson—"Then we must go."

Mr. Baldwin then recapitulated the facts of the case, and contended that the Court of Admiralty had nothing to do with them but as property, and it was incumbent on the party applying to that court, to prove as a preliminary measure, that they were so. The marshal in this instance had exceeded his authority.—The Court of Admiralty had only jurisdiction over property; and property taken on shore is not within the jurisdiction of the Admiralty, except in certain cases, of which this is not one,) so that, had these people been property (which they were not,) the Admiralty would have had no jurisdiction as to such of them as were on shore at the time of the capture, for they were within the jurisdiction of the common law. Property taken on the high seas may be libelled in the most convenient court, but property taken in waters in any particular district must be libelled in the court of the district in which it was taken, and all legal proceedings must be prosecuted in that court. Don Pedro Montez files an Admiralty process on the 17th September, instant, against these persons as *property*, they being at the time on land, but they could only be tried before a common law court, by a jury—and the same reasoning applied to Ruiz—in support of which the learned counsel cited the case of "The Sailor." [8 Wheaton, 391.] So much for the claim as *property*.

Then as to the libel of the District Attorney at the suit of the Spanish Minister—what had the Spanish Minister to do with it? The parties claimed were neither fugitives nor criminals. But the District Attorney does not stop here, but libels them, and prays that they may be taken into custody, and so kept, in order that, should it appear sometime hereafter, (nobody could tell when,) that they had been improperly brought into this State, they might be delivered up to the President to be sent back to their own country. Mr. B. then closed in an energetic appeal, praying their discharge.—He said they would be taken care of, (as it was right they should be,) by the State of Connecticut.

Mr. Hungerford, on the other side, spoke upwards of an hour, contending that the question whether these persons are property, was one for the District Court to decide. He said the Africans had been great trespassers, if not pirates.

Mr. Ingersoll followed on the same side. He said it was now simply a case of jurisdiction. He spoke one hour.—Both these gentlemen argued very ingeniously.

The District Attorney then addressed the Court half an hour, contending, as he said, seriously, that the prisoners are free, and had been wrongfully the victims of a wicked traffic.

Mr. Staples concluded the discussion in a masterly speech of about an hour. He gave the District Attorney a severe castigation for professing that the prisoners have been the victims of the slave trade, and yet taking no measures to bring Messrs. Montez and Ruiz to punishment. He feared the Attorney himself was more under the influence of the Minister of Spain, than of the President of the United States, in this matter. He also showed the absurdity of claiming jurisdiction in this case, when the District Judge had said he had no power to decree that the prisoners should be sold as property for salvage. If the court has jurisdiction, said he, the property can be taken and sold for salvage. Why cannot we have a slave market here in Hartford, and sell these forty negroes? Because, said he, it is revolting. To be consistent, then, the District Judge should say that he cannot touch his "property." The Circuit Court had not said they were property. Mr. Staples said he was for fulfilling the laws and the treaties, but we are not to be slave-catchers for foreign potentates. If the President of the United States should set up such a claim, for one, he should be for quitting the country, and seeking an asylum in the British dominions. Mr. S. confined himself to the question of jurisdiction, and cited many authorities. He argued that if there was jurisdiction any where, it was in the Southern District of New York. At the conclusion of his argument, it seemed to be the general opinion that the Court, on Monday morning, would decide that the District Court had no jurisdiction in the case.

The Court then adjourned to 8 o'clock on Monday morning, when judgement will be given.

[☞See the decision in our last.—ED.]

Glorious uncertainty of the Law.—A Mr. Burnell, of Northampton, Mass., is the second who died of the *accident* caused by the want of a brake man on the Camden and Amboy Rail Road. On opening him, it was found that the bone in the region of the thighs was broken internally, and surgical aid would, of course, have been unavailing. The friends of Mr. Burnell consulted lawyers upon the subject of a legal remedy, but were informed that, as Mr. B. has no family, and if of age, there is no remedy; whereas, if he had lived, the remedy was good for damages. Thus, a man may be killed, and the law is silent; but if he be only maimed, it speaks in a voice of thunder.

A Fine Little Fellow.—In the Criminal Court, at Philadelphia, the other day, a small boy was objected to as a witness, on account of his extreme youth. When asked, "Do you know the nature of an oath?" "Yes," he replied. "What is it?" "That thou shalt not bear false witness against thy neighbor." Ho! all ye witnesses, learn of this boy, and be wise.

Specie Going.—The packet ship Silvie de Grasse, from New York for Havre, carried out $29,000 in specie.

Specie to the amount of more than half a million of dollars went out in the Great Western from New York on Saturday.

The National Intelligencer says that letters have been received at Washington City, bearing the information that the United States Exploring Expedition reached Valparaiso, in the Pacific ocean, about the middle of May—officers and crew generally well and in good spirits. The Intelligencer says, further, that the expedition has forced its way to a point further *south* than has ever been reached before by the enterprise of any country.

We learn from the Massillon Gazette that JOHN JAMES, the individual who murdered HENDERSON BERRY, at a camp-meeting, near Germantown, Ohio, has been arrested and committed to jail.—*Zanesville Gazette.*

THE RECORDER.

ZANESVILLE.

THURSDAY, ... OCTOBER 10, 1839.

The last New York Luminary must have been frightened by a ghost on its way to us, for when it reached our office its face was so pale we could not decipher it.

The following is from Zion's Watchman of the 5th inst.

"CAMP-MEETING AT ROXBURY, MASS.—Our brethren of the Methodist Protestant church recently attempted to hold a camp-meeting in Roxbury, Mass., about five miles from Boston. It commenced on Wednesday the 18th ult., and was to have been continued over the Sabbath, but it was given up and closed on the following Saturday. As far as we can learn, it was a complete failure, and we may add, precisely as we anticipated it would be. Indeed, we marvel at the want of (what shall we call it?) which led to the appointment of a camp-meeting in that vicinity. We have long been of the opinion that a meeting of this kind should never be held in the vicinity of large cities. The camp-meetings held this year by the Methodist Episcopal church on Long Island and at Sing Sing were failures. They were the unnecessary occasions of an indescribable amount of wickedness, and but little good was done.

"We are of opinion, that the time for camp-meetings, in New England at least, has gone by. Many, and conclusive reasons there are against continuing them in that part of the country. Some of these reasons we shall probably lay before our readers at a future time. As might have been expected, there was considerable disturbance at the Roxbury meeting.—The managers gave hucksters and others liberty to come on to the ground with their victualing tents, and some of them sold rum, and considerable disturbance followed. But the most remarkable thing about it is, we perceive that an effort is made by one of the disappointed friends of the meeting to cast the blame of the failure on the editor of Zion's Herald!!"

We had occasion in our last, to make a few remarks on the religious character of the west, by way of self-defence against the attacks of eastern writers. We then claimed no superiority for the west, but if the above be a fair representation of the religious character of the east, we shall have to claim for this section the decided pre-eminence. Camp-meetings are held in the vicinity of most of the western cities, and tho' there is too much bad behavior, we admit, yet we have not known any one broken up, or compelled to adjourn because of the wickedness of the people; and we have seen as peaceable meetings held in the vicinities of some of our large cities as we have seen any where. Perhaps if some missionaries were sent from the west to the east to convert these disturbers, things would move on better in that quarter.

KIDNAPPING.—A negro boy, 8 years of age, was recently kidnapped at Worcester, Massachusetts, and conveyed into Virginia, but was followed to Fredericksburg and recovered The agents, who were abolitionists, speak in commendable terms of the kindness with which they were treated, and the aid that was rendered them by Virginians, to enable them to accomplish their mission. "The authorities of Fredericksburg had pursued the pretended purchaser of the boy, Wilkerson, about 8 miles, to Cartersville, where they found the little fellow hid in a celler, and another lad, who said he had been taken from Lunenburg, Massachusetts. Wilkerson was brought back to Fredericksburg, with the latter boy, and left in safe keeping for further inquiry."

ILLINOIS LOANS.—The Alton Telegraph, of the 28th ult., states that the commissioners who were deputed to England to effect a loan for the benefit of the State of Illinois, returned by the "Great Western," having "negotiated the sale of Illinois State Bonds to the amount of four millions of dollars, with some of the capitalists at the west end of the British metropolis."—"They likewise completed a contract for the purchase of rail road iron, to the amount of $500,000," in London. A sale of Bonds had been effected in New York to the amount of $250,000.

TEMPERATE.—The iron steam boat launched at Pittsburg, Pennsylvania, on the 9th ult. has progressed to the completion of her hull without the use of a drop of liquor of any kind by the hands employed on her, or about the yard. Her dimensions are—

"Length on deck, 160 feet; length of keel, 140 feet; breadth of beam, 25 feet 4 inches; depth of hold, 9 feet; and draught (at launching) 9 inches. A boat of the same dimensions, built of timber, would draw 21 inches. The Pittsburg Advocate gives the following description of her properties, which, if correct, establishes the superiority of the iron over the timber steam boat most decidedly.

She will have two engines, entirely distinct, supplied by one set of boilers. To obviate the only objection usually found with double engines,—which is, that, having no couplings, the engine cannot run when the boat is still, creating a liability to have a short supply of water in the boilers—two small engines, working at right angles, are placed close to the after end of the boilers, for the purpose of working the force pump and cold water pump.—The boilers are thus supplied independent of the propelling engines—diminishing vastly the hazard of explosion. To place security against explosion beyond question altogether, the safety valve, invented by our ingenious townsman, Cadwallader Evans, Esq., have been attached to the boilers.

To guard against sinking, the hull of

the boat has been divided into three compartments, length-wise, by two staunch, water tight bulkheads of iron. Either of these divisions filling with water would not suffice to sink the boat.

To stiffen her, there is, in addition to these two bulkheads, one running fore and aft, from stem to stern.

Against fire every provision has been made in the hull, which is complete in every respect, without an inch of timber or other combustible material.

Here, then, is a boat, the product of Pittsburg enterprise and mechanical skill, the first of any considerable size built in the country, which, when finished, will afford the safest vehicle for the conveyance of persons and property which can be produced in the shape of a steam boat. She cannot be sunk, she cannot be burnt, she is proof against explosion, and she runs in almost no water at all; and what, we would ask, does the traveller or shipper want, more than these?"

ELECTION RETURNS—*Muskingum County.*

Senator.

Those marked [*] are Whigs.

The weather has, for some days, been remarkably warm; the rain having ceased the ground is beginning to get dry; rather too much so for the grain which has been lately sown to vegitate.

Wheat has fallen in Zanesville to 65 cents, and will probably go lower yet. *Flour* is $4 00.

The *Publishing Committee* of the Pittsburgh Conference will be so good as to forvard all the resolutions which were ordered to be published. We have inserted every thing that has been sent us, and yet we recollect several resolutions, designed for publication, which have not been forthcoming from the committee.

Gen. R. Y. Hayne, of South Carolina, died on the 27th ultimo, at Ashville, North Carolina, in the 49th year of his age.

BEAUTIFUL EXTRACT.—From being clothed in the garb of austere severity, Religion now steps forward in the might and majesty of Charity.—From the down-cast look of despair, as if the waves of hell were rolling at her feet, she now looks up in the beaming brightness of hope.

CARRYING WATER ON BOTH SHOULDERS.—A worthy minister of the Presbyterian Church, in one of our western Cities, was accused, by one of his members, of carrying water on both shoulders, in reference to the subject of Abolition. "I do," replied the clergyman;—"I carry water on my right shoulder to cool such men as you, when I find them heated in this way; and I carry some on my left shoulder, to cool your opponents, when I find them heated as you are."

The Branch Bank of Tennessee, at Columbia, was robbed on the night of the 22d ultimo, of twenty-five or thirty thousand dollars, by some unknown person, who entered by means of a false key. A reward of five thousand dollars is offered—one half for the apprehension of the thief—the other for the recovery of the money.

INCREASE OF BUSINESS IN ALTON, ILL.—The Telegraph of the 28th ult. in speaking of the increase of business in Alton, says:—"A considerable quantity of freight has been landed at our wharf during the present week; and, with the large amount received here since the first of this month, constitutes much the largest supply ever brought to this place during the same space of time. The stock of merchandise of every description now on hand is much heavier, and embraces a greater variety, than at any former period."

The editor of the Alton Telegraph states, that he is personally acquainted with the gentlemen who certify to the facts in Mr. Rowe's theory of "Trembles" or "Milk Sickness," and that they "are entitled to emplicit credit." He seems to be of opinion that the *cause* of that afflicting disease is at last discovered.

IRISH HONESTY.—Who would not rather have such a testimonial than to be permitted to wear the crown of all the Russias?

From the United States Gazette.

A few days since, a gentleman called on Isaac Roach, Esq., Mayor of the city, and informed him that he recently arrived from Ireland; that previous to his departure he had been requested to take care of a handsome mahogany box without fastening, and leave it and its contents with the Mayor of Philadelphia, to be retained by him until called for by the gentleman to whom it was addressed.—The Mayor, having taken cognizance of the box, received it in charge. We had occasion to be in the Mayor's room, and saw the box. It contained a splendid massive silver waiter, twenty-one inches in diameter, with highly ornamental decorations. In the centre of the magnificent piece, is the following inscription beautifully engraved:

"Presented to Michael Allan, esq., of Pittsburg, United States, formerly of Litterkinny, Ireland, by his creditors, as a testimonial of their high opinion of his upright and honorable conduct in paying in full the balance of their accounts, although previously discharged from all legal obligations.

Signed in behalf of the creditors at large. JOHN MCCLEERY.

Belfast, April, 1839."

AGRICULTURAL.

WESTERN FARMER.—This is a work, the 2d No. of which we have received, published by G. G. Moore, Cincinnati, Ohio, for the character and terms of which we refer the reader to the prospectus which may be found in our columns today. The number before us is neatly executed, and as far as we have examined, the matter is interesting.

We have been of opinion for years, that the agricultural interests of this section of country are sustaining great loss for the want of some periodical, whose experiments and investigations shall be adopted to our climate and soil. The agricultural papers which have the greatest circulation through this country, are the Genessee and New England Farmers. These are conducted with much ability. But their experimenting, to a considerable extent, is adopted to a more northern latitude, and to a somewhat different soil. It is true they have correspondents from this quarter, yet their principal writers—those which give tone to these works, are surrounded by different circumstances from the farmers in this region of country. It is to be hoped that the "Western Farmer" will receive that attention and patronage which will make it the thing that is wanted to the "Farmer" of the "West."

BADEN CORN.—The Baden corn is nearly all frost-bitten in this section. Ours is fit for nothing save hog feed. Most of the common kinds of corn are injured more or less. The season has been unusually backward. The fate of the Baden corn this year, will, we presume, entirely discredit it with the farmers in this quarter. If it were an earlier corn, it would certainly yield well; and perhaps it might not be so injured again for ten years to come.

We saw a specimen of the Chinese corn growing in a lot of Mr. Moses Sarchett, Cambridge, Ohio, which certainly will be better adopted to this climate than the Baden. It does not grow near so high, and of course will not be so likely to fall down; it has as many ears on the stalk as the Baden, and ripens sooner than the common corn. It is first rate for fodder, as there is an uncommon quantity of blades putting out of the stalks. But the reader is aware, no doubt, there has been a dozen kinds of corn vended through the country for the Chinese.

DRAINING.

We published the long article "from Sinclair's code of Agriculture," in our two last numbers, to give our agricultural readers some general ideas on the subject of draining; a subject, we are of opinion, worthy of more attention than it generally receives from the farmer. There are few farms in this section, but have many spouty wet places, which have annually to be ploughed or passed over without rendering any reward to the husbandman, which, at a small expense, by the application of the French Drain, might be made the most productive portions of his premises. We published an experiment, on this subject, in 1834, which we shall take the liberty to re-publish. It is as follows:

FRENCH DRAIN.—Having often heard of the importance of the French drain, in improving wet spouty lands, we concluded to give the subject a trial; and having a field in which a spring originated, that drowned out annually about half an acre of the crop, we had a ditch dug about 18 inches square, and filled about one foot from the bottom up, with stone—thrown in promiscuously,—covered them with straw, and threw dirt over the whole.—This affords a passage for the water underneath the surface, and permits the plough to go undisturbed above. This portion of the field has since become perfectly dry and arable, and yields at least 25 per cent. more than any other part.—Though bottomed on clay, the mould is of the vegetable cast, which makes it sooner in case for the plough after a heavy rain, than the surrounding soil.

This drain is about 20 rods in length, and the whole cost of making it $4, stone being convenient.

The following view of the subject will shew the policy of the farmer, in thus draining his wet lands. It will be recollected that this half acre, under consideration, had annually to be ploughed or past over, in cultivating the balance of the field—and that too, frequently, in mud and water over shoe mouth, so that the grain it now affords is clear profit, save the expense of gathering and marketing. Now, make your calculations for a corn crop—this piece will yield, say 20 bushels, which on an average, in this county, is worth 25 cents per bushel; take five cents from the bushel for gathering, &c. which leaves 20—this, multiply by the quantity of corn it produces, and you have $4, which is clear profit. One year, then, pays for the drain. The benefits of this drain have been enjoyed for ten years; throw off three years for the land at rest, and one for the expense of this improvement; which leaves six years—this number multiplied by the four, above, gives $24—which is the amount of the benefit enjoyed from this *little improvement*, in ten years; beside, the pleasure of cultivating dry, instead of wet muddy soil.

It is somewhat amusing to see the part the crawfish act in this process. They riddle the swampy ground, in the neighborhood of this drain, full of holes—conducting each to its bottom. If any place be found where the water is inclined to keep the surface, a way is soon made to unite it with the common mass below.—Calculating the head of the spring for a watering spring, the drain was not conducted into it by some ten feet, a way being made for the water to pass in; but by the operations of the plough, and the tramping of the stock, the head of the drain is often filled up, and the water, for the time being, has to pass on the surface; but it never fails that the next morning these little industrious laborers, have cleared the way, and opened the avenue for the water to pass into its proper place. By their industry and enterprise they have now kept this drain in successful operation for ten years. Thus, these little amphibious creatures, which give so much annoyance to mill dams, races, canals and springs, by proper management, may be employed to great advantage in the interests of the husbandman.

As the best farms are subject to spouty wet places, which, by the by, having received the benefits of irrigation for centuries, are the richest spots in our fields; if, therefore, the farmer would spend a portion of his time in thus draining his *plough lands*, when required, it could not be more beneficially employed.

Since publishing the above, we made a drain of the description here named, forty rods long, with eight days work. We first took a plough and threw out as much dirt as we could with it, then completed the ditch with a spade, after which we laid a row of stones, from two to three inches in thickness, as we could get them, on each side of the ditch, leaving a space between them, which we covered with flat stone. After we had levelled the stone to the heighth of eight or nine inches, by breaking some of them small, so as to fill up the vacancies between the larger ones, we covered them with straw, hauled a portion of dirt on with a hoe, then completed filling the ditch with a plough. The time to make drains is in the Spring, immediately after the frost leaves the ground, (where the wet will admit,) it is then soft and loose, and can easily be penetrated with a spade; but if it be permitted to become settled, and dry, the mattock will have to be used in all stiff clay soils.

HEAD DRAINS.—When there is a descent of sixty or eighty rods, there is such an accumulation of water before it reaches the foot of the slope, though it may even be a very moderate angle, that the ground is often injured by severe washings. This may be remedied, in many instances by ditches and embankments along the head lands, so as to turn the water off to one side, especially where the slope is rounding at the same time. Our attention was particularly directed to this by noticing the effects of roads, which, after wearing down, so as to prevent the water from passing over on the fields below, redeemed them from those injurious washings to which they were subject before In laying out a farm, into fields, it would be well enough to have an eye to this very subject, and to make such an arrangement of them, as to accommodate the head drains, so as to save excessive washings.

In our opinion, it would be much more profitable to the farmer, to spend a portion of his capital in draining, and enriching his land, than to lay it out for more, and tend the whole in a slovenly and negligent manner.

Conference Matters.

EPITOME OF THE TIMES.

HORRIBLE MURDER OF A DAUGHTER BY HER FATHER.

We are called upon, says the Philadelphia World, to give an account of a heart sickening tragedy which was enacted yesterday morning, in this city, at which humanity shudders. It appears that on last Thursday evening, the daughter of Mr. Wood, the confectioner, in Chesnut, near sixth street, went out without her father's knowledge or consent, and was married to a young man named Peak, who lately kept a boot and shoe store in Sixth, near Carpenter street. Mr. Wood was soon informed of what had happened, and he immediately closed his store, and went in search of his daughter. He found her, in a short time, with her husband, at his boarding house, in Minor street, persuaded her to return home, which she did on Friday, and was immediately locked up in a room by her father, and kept there for three days, not being allowed to have any communication with her husband. Yesterday morning, Mr. Peak sent a friend to Mr. Wood, in order, if possible, to settle the difficulties, but the latter returned for answer, that Mr. Peak should see his daughter by twelve o'clock. A little before 10 o'clock he procured two loaded pistols, and went to the room where his daughter was, and just as she was rising, shot her through the head, the ball entering just beneath one eye, and coming out at the back of the head. She died a few minutes before eleven o'clock.

Upon hearing this report, the neighbors rushed into the apartment and beheld the wretched man standing over the body of his murdered daughter, with the other pistol in his hand. The weapon was secured and he was carried before the Mayor. Upon the examination it appeard that he had taken three glasses of brandy, for the purpose of fortifying his nerves to a steady perforance of the tragedy he had resolved to enact. So far from denying his crime, he attempted to justify it by saying that a black leg had run off with his daughter, and he had done what every father would do under the same circumstances. He was committed for a further hearing. The girl's name was Sarah Ann, and she was about 20 years of age; Mr. Peak is 30 years old.

Great excitement was produced by this melalcholy event; and, as might be supposed, the widowed husband, and the mother and brothers of the murdered girl, are almost frantic.

Thus has a man who hitherto occupied a respectable station in society, committed an act at which the feelings of mankind revolt, and one which, in all probability, will consign him to a death upon the scaffold. His daughter was married to a man whom he supposed to be of equivocal character, and, by way of mending the matter, he commits a most diabolical murder. A melancholy instance of the maddening influence of unrestrained passion.

SUICIDE.—A young gentleman by the name of E. A. Panning, committed suicide at Cincinnati last week by shooting himself. He was possed of a thorough education, and spoke fluently the Italian, German, French and English languages, and by those who knew him was much esteemed.—*Leb. Star, 4th inst.*

Imports and Exports.—It appears from offibial tables recently published, that from the year 1815 to 1838, a period of twenty-three years, the imports to the U. States amounted to $2,489,805,135; while the exports, during the same period were $2,060,741,359. Balance of trade against the U. States, $429,063,776.

Health of Mobile.—We learn from the Mobile Chronicle of the 21st ult., that the fever is yet raging there to an alarming extent. From the 1st to the 21st of September, there were 293 deaths. One column of the Chronicle, a large paper, now before us, is filled with obituaries.

Methodists in Oregon.—By the Hudson's Bay Annual Express, the Board of Methodist Missions in New York, have received very cheering accounts from the Oregon Territory. They have held a protracted meeting, and the result has been the union of 27 converts to the class, of whom 4 are Americans, one English, and the rest natives, except two Sandwich Islanders.

Methodist Conference—Slavery.—The Annual Conference of the Methodist Episcopal Church has been several days in session, in our city, and it is expected to continue three or four days of this week.

Among the subjects agitated in the Conference, that of slavery is conspicuous, and gives a good deal of trouble.—*Cin. Gaz. Sept. 23.*

A majority of the Court of Inquiry that investigated the charges against Commodore ELLIOT have recommended that he be tried by a Naval Court Martial—Commodore STEWART dissenting.

Revival at Lawrenceburgh.—The Brookville Indiana American states that a protracted meeting, under the ministry of the Rev. J. Newland Maffit, still continued at Lawrenceburgh, in that State. According to the latest information. he had received into his church there between two and three hundred converts.

Fire at Natchez.—A fire broke out on the morning of the 6th ultimo, in Cotton Alley, leading from Pearl to Commerce streets, Natchez, (Miss.) which destroyed half a dozen of the principal warehouses, with a large portion of their contents.—The aggregate loss is estimated at 70 to 80,000 dollars.

Interesting to Emigrants.—The North American Trust Company of New York, gives notice that it has entered into an arrangement with the National Bank of Ireland, whereby moneys may be sent by emigrants and others in the United States to any part of Ireland, in the safest and most expeditious manner, and on the most reasonable terms; and also whereby remittances from any part of Ireland or from London may be made to the principal cities in the United States.

Fracas at Havre De Grace.—We learn from Havre De Grace that a fracas occurred there on Thursday evening, which was very near ending fatally to one of the parties. A domestic quarrel, the purport of which we have not learned, occurred during the day between the families of a Mr. McVey and a Mr. Vandever. This was settled at the time. In the evening, while Vandever was standing in the street, Mr. McVey approached him armed with a double barrelled gun, and when within a few paces presented it and fired. The cap fortunately exploded, without communicating to the load in the barrel. He then fired with the other barrel, but at the moment the gun was struck down by a gentleman present, and the load went through the calf of the leg of Mr. Vandever. These are the circumstances as we heard them, and if correct, the assassin, in feeling should have been arrested immediately, which we learn was not the case, but that he is yet at large.—*Chronicle.*

The right kind of Pressure.—The Germantown Telegraph says; "There is a tremendous pressure throughout Pennsylvania just now; the poor barns groan under the loads which they are obliged to bear, and some fears are entertained of their breaking."

Prince Metternich.—This famous diplomatist has been very severely indisposed. Great anxiety was felt for his recovery by the people of Vienna. Should his death ensue, a void would be made in the diplomatic corps of Europe which it would take years to fill.

More Defalcations.—The Louisville Journal says,—We understand, that the Postmaster of New Orleans and Mobile, have each poculated upon the public money to a considerable amount. It is stated that Mr. Douglass, of this city, the Post Office Agent in the West, has just returned from those cities, having secured a portion of the defalcations.

De Tocqueville, in his work on America, speaking of the western pioneer, who goes in the advance of emigration, says, 'he penetrates the woods with his axe, his bible, and a file of newspapers.'

OBITUARY.

MOSES JAMES, of Newton tp, was buried last week. He died in the 87th year of his age. His companion is still living, and is in her 81st year. Mr. James was among the first settlers in this country, and has always led a quiet and peaceable life among his neighbors. It touches our heart with the tenderest sympathies, when we look around and see how many of the old pioneers of this country, like the leaves of autumn, have fallen to the earth, within the three past years.

DIED at Warren, Ohio, on the 19th ultimo, Honorable CALVIN PEASE, long a distinguished Lawyer, Judge, and Legislator of Ohio.

The Rev. Mr. Monelly, an aged Catholic minister, in Talbot county, Md., was killed by being crushed beneath the timbers of a house he was repairing.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office, county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

WRITING FOR THE PRESS.

Every word, the sense of which is not perfectly obvious, should be so written that every letter will show for itself. This should be particularly observed in writing proper names. An observance of this rule will secure the author against the vexation of having his article incorrectly copied, and what to a conscientious man will be an equally strong inducement, it will save the compositor a great deal of time and trouble—the first of which is money to him, and of the second he has plenty without decyphering hieroglyphics.

2. Write only on one side of the paper, so that it can be divided if found necessary.

3. Punctuation ought to be either correct, or not attempted; the villainous habit some writers have of dashing their productions, is a great bore to a printer. If the writer cannot do it as it ought to be done, he had better leave it altogether to the compositor.

4. Abreviations ought to be avoided, as some compositors are very apt to "follow copy," as it is technically called. This is more particularly applicable to advertisements.

An observation of these rules will enable us all, contributors and printers, to get along more pleasantly.

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,

Corner of Vine and Gano Streets:

PUBLISHED BY G. G. MOORE,

Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half pag, *two dollars and fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

HENRY H. SMOOT,
ALANSON BILLINGS, } General Agents.

JOHN BUHOUP, Corner of Penn and O'Harra Sts., Pittsburgh, Pa.

Rome, N. Y.—J. Hathaway.
Pekin, Ill.—R. Grosvenor.
Capt. T. R. Hampton, agent for the District of Columbia, and western Virginia.

☞Postmasters generally, are respectfully requested to act as agents on the usual terms.

October 10, 1839. tf

YOUTH'S DEPARTMENT.

THE BOY THAT LEARNED TO DRINK.

Dutton was the son of a distinguished clergyman. His father and mother were in the habit of drinking their wine at dinner, and frequently on other occasions. Dutton was a bright, rosy cheeked, black eyed boy, and before he was four years old, he had been so often indulged with wine "in the bottom of the glass," that he had learned to love it. As he grew older, his father and mother took great pains to teach him how to "hold his glass," and "bow his head," and "smile," and "drink after a fashionable manner," with the ladies and gentlemen that resorted to their splendid mansion. They were pleased with the *improvement* of their son, and were often complimented for his "manly and gentleman-like appearance over a glass of wine."

If his father had read in the Bible, at the 23d chapter of Proverbs, "*look* not upon the wine when it is red, when it giveth his color in the cup—afterward it biteth like a serpent and stingeth like an adder," he had probably forgotten it; or because he *loved* his wine, or felt it was a badge of *gentility*, and saw how the use of it made himself and his son to be *noticed*, he either forgot the declaration, written in that book of truth, or satisfied himself that they would escape its denunciation.

Dutton grew rapidly. He was far more at home over his glass of wine, at his father's table, or when he occasionally "dined out" with his parents, than he was with his Latin and Greek, his mathematics or logic. He began to love brandy, and frequently would stop at the groceries and taverns, on his way to or from school, and get his much loved drink.—His father told him he drank "*too much*—and that he must learn to govern his appetite," and much more to the same effect. But he had not the wisdom of Gen. Putnam. That self-denying patriot used to say, "if you want anything to be accomplished, you must say, *come, boys*, and if you do not care how it is done, or whether done at all, say, *go, boys*."

Dutton's love "of wine and strong drink" brought him into bad company, as is generally the case. He frequented the theatre, gambling house, and other bad places, from which, but few youth who go there, escape without utter loss of character. These resorts of folly and sin, moreover, cost a great deal of money. His father had a large salary; several thousand dollars yearly. His son's companions often urged this as a reason why he could afford to treat them, and spend freely; and when his father refused him *pocket-money*, he counterfeited a draft or check. Whether he was drunk when he did this, I do not know, for he often got intoxicated, though he was now only about *seventeen* years old. But the crime was detected, and brought home to Dutton. The facts were published not only in the city papers, but generally throughout the country. He should have been sent to the State-prison, and then he might have been reformed, and come out a sober, and possibly a useful man; but his father and some others interposed and prevented the laws of the land from being impartially executed; they promised that Dutton should be sent out of the country, so as not to curse it any longer with his corrupt example and influence. If he was ever sent away, he soon returned, and was as vile a vagabond as ever.

He resorted to every means to get money to gratify his vile lusts and appetites. His disipated habits gave him an appearance of being much older than he really was, so that when he was twenty-one, he would have been thought by those who did not know his age, to be thirty.

One day a gentleman and lady came to his father's house, and the gentleman inquired for the "clergyman," and said, "we wish to get married." "I am the clergyman," said Dutton. He then took the book, and read the marriage service. This wicked trick was also soon found out. For the gentleman and lady wished a certificate of their marriage, which in the confusion, naturally occasioned by the interesting ceremonies, was forgotten. Some days after, the gentleman called for the certificate, and finding the father in, asked if he was the clergyman, Mr. ———, and being answered in the affirmative, he demanded the certificate of marriage, when the whole truth was made to appear. But Dutton's conscience is so seared, and his heart so hardened by the use of "wine and strong drink," that the "glories in his shame," and in the grog-shops and taverns, and other corrupting places, where he meets with his vile companions, he relates this among his other deeds of infamy, and gives abundant confirmation to the truth of scripture, "wine is a mocker, strong drink is raging, and whosoever is deceived thereby is not wise."

Now can you tell me who was the most to blame, Dutton or his parents?

Did you ever know a boy, or man, who used no intoxicating drinks, to frequent such bad places, and do such naughty things as he did?

What is your determination, rosy cheeked, and smilling youth? Will you use intoxicating drink, and run the risk of one in seven, of being as vile and despised as Dutton? Or will you unite your example and influence with the self-denying and virtuous, to raise up a sober generation, and drive drunkeness from the world? It is important to *decide*. Now tell me, which will you do?—*Youth's Cabinet.*

HOW PEOPLE GET INTO QUARRELS.

We often wonder how individuals and nations can get so easily by the ears; but the following anecdote of James and his father lets us into the secret. One party does, wrong, and then insists on fighting to conceal his fault and shame. Mr. Anderson, wishing to train his son to the profession of arms, had bought him a sword as a Christmas present; and the following extract from their conversation will show you what passions and purposes it excited in the boy's mind, and what is the most frequent origin of *all wars*.

"*James.* Now, Pa, I have got a sword, I will tell you what I mean to do with it.

Mr. Anderson. What?

James. I mean to make Tim Jenkins give me back my top.

Mr. A. How came he by your top?

James. We played together; and the rule is, if one boy's top knocks the other out of the ring, then he takes it for his. So we tossed up, who should spin first; and I had to spin first. And when my top was spinning, Tim Jenkins spun his top and knocked mine out—no, not QUITE out, he SAID it was out, and I said it was NOT.

Mr. A. Why could you not see?

James. No, Pa, the ring was not VERY plain. So Tim took up the top, and I tried to get it away; but he held it fast, and said he would leave it to the other boys, if it was not fairly out of the ring.

Mr. A. Well, that was fair enough; why did you not agree to it?

James. Why, because I knew they would give it against me; for every body loves Tim Jenkins, though his father is a carpenter; he is so quiet, and peaceable, and obliging.

Here James had stated the case to his father, much as grown people commonly state their own case. The top was fairly out of the ring, and he knew that all the other boys saw it plainly; but he proceeded as follows:

James. I really think that Tim would have given me back the top, if I had only asked him for it; but I felt a great bunch in my throat that would'nt let me do that. So I told him I would FIGHT him for the top, and if I beat him, he should give it to me, and if he beat me, he might keep it. But all the boys laughed at me for thinking to fight such a good natured, peaceable lad as Tim. So I came off home, and could not help crying, I was so mad, and so ashamed. Not that I cared for the top, for I have tops enough; but I cannot bear to give up my rights, and now I have got a sword, I will make him give me back my top; and if the boys laugh at me again, I will hit them with my sword, that I will.

Mr. A. Why, James, I am ashamed of you. Where did you learn such sentiments? Not at the Sabbath School, I hope.—Why, would you take advantage of Tim Jenkins, because he had no sword, and is a quiet and peaceable boy, to make him give up the top, when he was willing to leave it out to your play-fellows to say whether he ought to give it up or not? Fie, fie, I am ashamed of you.

James. Then, Pa, why do you not say fie, fie, to every body who takes the sword when the dispute can be left out to others to settle? If people always left out disputes to settle, there would be no need of a sword. Father, is not what I say about the top, just what you said the other night, when you had company to supper? Did you not say that you hoped our government would make the Spaniards give up the Floridas, because we were stronger than they, and we wanted them? And you said, you hoped, if they did not give them up peaceably, that General Jackson would take them by force. I heard you say so, father, and I shall never forget it.

Mr. A. But this is quite another case, we had justice on our side.

James. Then, Pa, did we offer to leave it out?

Mr. A. No, because we are stronger than they, and we can do justice to our selves.

James. Well, Pa, is not that just the case between me and Tim Jenkins, now I have got a sword?

Mr. A. But there is a difference between nations and individuals.

James. Father, does the Bible say so?

Mr. A. Boy, you ask more questions than I can answer.

This dialogue we have taken from the "Sword of Christmas Presents," written especially for for Sabbath schools by the "Peace Man." This little volume, and several others from the same popular pen—"Howard and Napoleon contrasted,"—"Adventures of a French Soldier," and "The Hero of Macedon, or History of Alexander the Great, reviewed in the light of the Gospel,"—all deserve to be in every Sabbath school library. We would recommend them to the young as full of interest and instruction on the great, but too much neglected, subject of "peace on earth, and good will among them."—*Youth's Cabinet.*

BROTHERLY AFFECTION.

"I remember," says a recent traveller, "that one of my young Bedouin guides told me that among the Arabs, all the sons shared equally; that the daughters took nothing; that the children lived together; that if any of the brothers got married, the property might be divided; that if any difficulty arose on the division, the man who worked the place for a share of the profits might divide it; and lastly, that the sisters must remain with the brothers until they (the sisters) are married.

"I asked him, 'if the brothers did not choose to keep a sister with them, what became of her?' but *he did not understand me!* I repeated the question, but still he did not comprehend it, and looked to his companions for an explanation. And when, at last, the meaning of my question became apparent to his mind, he answered with a look of wonder—'It is impossible; she is his own blood!'

"I pressed my questions again and again in various forms, suggesting the possibility that the brother's wife might dislike the sister, and other very supposable cases; but it was so strange an idea that, to the last, he did not fully comprehend it, and his answer was still the same—'It is impossible; she is his own blood!'"

Ought not this statement to call up a blush upon the face of thousands in a country professedly Christian? If to love our *neighbor* as ourselves be the express injunction of the Savior, what can we say of that spirit which engenders *family* quarrels, and sets brothers and sisters at enmity to each other?

Parents' Department.

PARENTAL LIES.

We believe that the slight regard in which strict truth is held, among mankind, is principally owing to the lies which are told to children by their parents during the few first years of their lives. Then is the time that permanent impressions may be as well made as at any later period. It is then, probably, that what is called the natural propensity of a child is unfolded.

Many persons who have a great abhorrence of lying, and whip their children if they detect them in it, yet make no scruple of telling and acting to them the most atrocious falsehoods. There are few parents who do not do this in a greater or less degree, though doubtless without dreaming they are guilty of criminal deception. With many the whole business of managing their children is a piece of mere artifice and trick. They are cheated in their amusements, cheated in their food, cheated in their dress.—Lies are told to persuade them to do any thing that is disagreeable. If a child is to take physic, the mother tells him she has something good for him to drink; if reluctant, she says she will send for the doctor to cut off his ears, or pull his teeth, or that she will go away and leave him, and a thousand things of the same kind, each of which may deceive once and answer the present purpose, but will invariably fail afterwards.

Parents are too apt to endeavor to pacify their children by making promises they never intend to perform. If they wish, for instance, to take away some eatable which they fear will be injurious, they reconcile them by the promise of a ride, or a walk, or something else which will please them, but without any intention of gratifying them. This is lying, downright lying.

People think nothing of breaking their promises to children, if the performance be not perfectly convenient. But they are the last persons to whom promises should be broken, because they cannot comprehend the reason, if there be one, why they are not kept. Such promises should be scrupulously redeemed, though at a great inconvenience, and even when inadvertently made. For the child's moral habits are of infinitely more consequence than any such inconvenience can be to the parents.—*Lit. Gazette.*

A FAMILY SCENE.

"Come, Charles, run out and get me the broom."

"I don't want to."

"I have got a piece of candy for a good child."

"I don't want any candy, now."

"Oh, very well, then I will give it to Susan:—Susan will fetch the broom to mother."

Susan runs to fetch the broom; but Charles has a new and efficient spring of action, and he runs also. They re-enter the parlor, both tugging at the broom, and quarrelling with each other.

"You shan't have the candy," says Charles, "I got the broom first."

"But you did not go when I told you to," replies the mother, "so I shall give the candy to Susan: here Susan, dear, take it."

It would be difficult to tell in which child the worst feelings are excited by this management. Both are led to consider kindness and obedience to their mother, as something for which they must be paid a price. Both are stimulated to obedience by the worst motives—a desire not only to secure a pleasure to themselves, but to deprive each other of it. And the reward which is offered them is of the lowest character; a selfish indulgence of the appetite. Susan feels a certain kind of pleasure; she is eating candy, her brother cannot have any; how far the feelings thus cherished, will tend to make her an amiable friend and wife, and mother, the reader can judge. Charles is unhappy: not because he has been guilty of disobedience and unkindness to his mother, but because he cannot have candy, and his sister has some. His heart is full of angry and malignant feeling, & he would gladly revenge himself both upon his mother and sister, if he dared. Let us not call these daily incidents *trifles.*

The death of a printer is thus chronicled in an English paper:—"Geo. Woodcock, the * of his profession, the *type* of honesty, the ! of all; and although the ☞ of death has put a . to his existence, every ◊ of his life was without a ‖."

MISCELLANEOUS.

THE SHAKERS.

About the year 1774, a society sprang up in America, who styled themselves Believers, and are now popularly known as Shakers. Their associations as a community, having all property in common, and under the direction of agents or trustees, is an essential part of their religion, and is rigidly adhered to, withou murmur or any attempt to violation on the part of its members; at least so long as they remain without disaffection, faithful to the society. They believe that Christ has made his second appearance, in the form of a woman, in the person of one Ann Lee or Leese who founded their order, and established on earth the true church, which shall finally bring about the end and through which shall shine the latter day glory. They imagine this personification of Christ a perfect woman capable of working miracles similar to those wrought by our Saviour, and nothing inferior in point of magnitude, wonder and power. They style her the elect lady, or familiarly Mother Ann, or Mother, believing her to be the woman spoken of in the 12th chapter of Revelation: "And there appeared a great wonder in heaven; a woman clothed with the sun, and the moon under her feet, and upon her head a crown of twelve stars, etc."—Of her parentage, life, and death, little is known or preserved, except in the exaggorated history preserved by her followers. She indeed possessed a fine education and a powerful mind. The whole number of this peculiar people cannot be less than four thousand men and women, and as marrying is religiously forbidden and believed to be the unpardonable sin, they have no children among them except those which may be brought into the society by the conversion of perents. Their opinions on the subject of marriage are founded on the recommendation of Paul, while they forget the many commandments of our Saviour on the duties of a married state, and his positive sanction and assistance in the nuptial ceremonies. Love between the sexes, they say, is a brutal, carnal and hellish propensity, unless subdued and modified by their holy religion, which crucifies and purifies the flesh of its first taint of corruption, produced in Adam by the fall. No part of our Bible is by them denied or counted unworthy; on the contrary they regard it as high and holy authority from Heaven, too deep and intricate for the "babe in Christ" to comprehend its mysteries. The heads of the church therefore have prepared a book, which is a kind of appendix to the Bible, containing the doctrines of the church, the miracles of Mother Ann, and their church rule—the whole entitled "Christ's second appearing."

What has been said above is applicable to all the Shaker churches; what is to be said hereafter will refer particularly to the society in Warren county, Ohio, with which the writer is particularly acquainted. This society was commenced about the year 1806 by some emigrants from Kentucky, who successfully preach their doctrines, and in a short time gained five hundred converts, embracing the most intelligent and wealthy families in the country. When a convert was made, (which generally included whole families) all his real and personal property was brought into the common fund and became irrevocably dedicated to the church, furnishing thereby the strongest inducement to remain in the church ever afterwards. By this means an extensive landed property was acquired, now valued at not less than three-fourths of a million of dollars. Their principal or central settlemement they call "Union Village," which contains some ten or twelve large buildings, each capable of containing families of one hundred persons, one end of which is set apart for the females, the other for the mates, who enter invariably by different doors to their respective apartments. Their farms, houses, workshops, feed, dress, in short every thing, present the appearance of the most perfect order and neatness. They rise in the morning at the sound of a matin bell, and retire at night after worship, to which the respective families are severally summoned by the solemn vesper. One mile from the village, at the four points of the compass, are located families, who have not yet reached the high state of perfection which belongs to those in the village, but who live with all the neatness and ease of their more holy brethren. It is an impressive sight to see the long train proceeding on Sabbath morning to church in silence, in single file, the men in front with regular step and uniform dress, with broad brim hats, strait coats and collars uncravated—and all united make a scene at once grand and imposing. To see them returning from exercise, in the same order, heated and excited by worship, with regular cadenced step, chanting in solemn unison the words.

"March on, march on, march on ye lovely bands,
March on, march on, to the new Jerusalem,"

give to the most sceptical an impression of their honesty and zeal, though deeply mixed with fanatacism and superstition. The church exercises are preaching, exhorting, singing, dancing and silent prayer. Formerly both men and woman seated themselves on the clean polished floor, in solid column on opposite sides of the church; now they use moveable benches which are displaced when the dancing begins, which is usually at a signal given by an aged brother. Their songs and tunes are of their own composition, and usually very solemn and affecting; their preaching is talented, argumentative, and inculcates the soundest morality. From time to time they receive "gifts," or orders from Mother Ann, directing and changing their form of worship.—Formerly these gifts were received through their elders, but latterly through the more holy members, who during the exercises of worship wheel round and round, finally swoon, are laid out on benches and covered with white garments and thus in a trance they visit Mother, and in the character of a Nuncio, bring tidings from Heaven, to the true believers on earth. While the body remains in this stupified state the immortal spirit passes to and fro from heaven to earth, at each voyage bearing only one pious message from good Mother, and that generally childish and ridiculous; such as, "Mother sends her love thus," by patting with the hand upon the breast, which is immediately spoken and performed by all present: "Mother says, little children be faithful:" "Mother says unless these spectators behave more reverently they will leave this house dead bodies:"—"Mother says we must say we are her *itty babies*, not her little babies:" "Mother says kneel upon the right knee, and when you enter a door or ascend the stairs advance the right foot," with a hundred other equally ridiculous messages. But we turn with pleasure from these superstitions in religion, to their unexceptionable deportment in society. They pay their taxes cheerfully, their debts punctually, labor on the highway, are moral, temperate, intelligent and industrious, and though they claim not the right of suffrage, hold no offices, hold little communion with the world further than 'yea" 'nay,' yet in private life, apart from religion, the same number of persons cannot be found occupying the same territory who are better or more orderly citizens.—*Blossom.*

From the Christian Advocate and Journal.

THE GENTLEMAN AT CHURCH,

MAY BE KNOWN BY THE FOLLOWING MARKS.

1. Comes in good season so as neither to interrupt the pastor or congregation by a late arrival.

2. Does not stop upon the steps or in the portico; either to gape at the ladies, salute friends, or display his colloquial powers.

3. Opens and shuts the door gently, and walks deliberately up the aisle or gallery stairs, and gets to his seat as quietly and by making as few people remove as possible.

4. Takes his seat either in the back part of the seat or steps out into the aisle when any one wishes to pass in, and never thinks of such a thing as making people crowd past him while keeping his place in the seat.

5. Is always attentive to strangers, and gives up his seat to such seeking and then seeks for himself.

6. Never think of defiling the house of God with tobacco spittle or annoying those who sit near him by chewing that pernicious weed in church.*

7. Never, unless in case of illness gets up and goes out in time of service. But if necessity compels him him to do so, goes so quietly that his very manner is an apology for the act.

8. Does not engage in conversation before commencement of services.

9. Does not whisper, or laugh, or eat fruit in the house of God, or lounge in that holy place.

10. Does not rush out of church like a tramping horse, the moment the benediction is pronounced; but retires slowly in a noiseless quiet manner.

11. Does all he can by precept and example, to promote decorum in others and is ever ready to lend his aid to discountenance all indecorum in the house of God.

*I am aware that though the inveteracy of habit some person entitled to the character of christian gentleman, may use even tobacco in church but think they do not defile the house of God, but use the spittoon or if there is none at hand retire.

THE MAGIC OF A NAME.—The Alexandria Gazette states, that the ship General Washington, Marbury, of that port, on her homeward voyage, was spoken by the steam ship Liverpool. from N. York for Liverpool, and as soon as the name *General Washington* was announced, the passengers and crew ascended the side of the steam ship and hailed it with loud and hearty cheers.—*Star.*

ADVERTISEMENTS.

O. WHITE,
BOOK BINDER,
NO. 104, MAIN-STREET,

ZANESVILLE, OHIO.

August 1, 1839. 2tf

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts.	- -	1 copy for a year.
" $5	- -	- 12 copies.
" 10	- - -	25 "
" 20	- -	- 60 "
" 30	- -	100 "
" 50	- -	- 200 "

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia.

Public Notice

IS hereby given, that application will be made to the Trustees of Hopewell Township, for a township road, to commence a few rods East of Mr. Coomrine's dwelling, at the line between Geo. Norman and Alexander Watson, and to run South, at, or near said line, to the South East corner of John Rodman's land, thence the best rout so as to intersect the Cooper road West of the inclosure of Wm. George.

October 5, 1839. 3t7

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods, and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

THE

WESTERN RECORDER

IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞ *The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

THE WESTERN RECORDER.

Volume 1. ZANESVILLE, OHIO, THURSDAY, OCTOBER 17, 1839. Number 9.

MISCELLANEOUS.

NATURAL HISTORY OF THE SPERM WHALE.

TO WHICH IS ADDED,

A Sketch of a South-Sea Whaling Voyage.

By Thomas Beal.

We proceed to the familiar life of these herds of Proteus; and the intelligent reader will rejoice to find that the schoolmaster is abroad among the whales:—

"The sperm whale is a gregarious animal, and the herds formed by it are of two kinds—the one consisting of females, the other of young males not fully grown. These herds are called by whalers 'schools,' and occasionally consist of great numbers: I have seen as many as five or six hundred. With each school of females are always from one to three large 'bulls'—they are called the 'schoolmasters.' The males are said to be extremely jealous of intrusion by strangers, and to fight fiercely to maintain their rights. The full grown males almost always go alone in search of food; and when they are seen in company they are supposed te be migrating from one 'feeding ground' to another. The large whale is generally very incautious, and if alone he is without difficulty attacked, and by expert whalers very easily killed."

The 'schools' of the weaker sex seem to be well conducted, and to consist of a very amiable society; nor can we, without effect, check our massillon against the cruel advantage taken of the good feeling of these affectionate monsters:

"They may be frequently seen urging and assisting their young to escape the danger with the most unceasing care and kindness. They are not less remarkable for their strong feeling of sociality or attachment to one another: one female of a herd being attacked and wounded, her companions will remain around her to the last moment, or until they are wounded themselves. This is called by whalers 'heaving to,' and whole 'schools' have been destroyed by dextrous management, when several ships have been in company, wholly from these whales possessing this disposition. The attachment appears to be reciprocal on the part of the young whales, which have been seen about the ship for hours after their parents have been killed."—pp. 52, 53.

These animals, male and female, appear to be highly intelligent, and to have their code of signals:

"All sperm whales, old and young, have some method of communicating, by which they become apprised of the approach of danger, and this they do, altho' the distance may be considerable, sometimes four, five, or seven miles. The mode by which this is effected remains a secret."

The scenes which occur sometimes during the chase, according to Mr. Beal, defy description; but notwithstanding this modest confession, here is one worthy of Long Tom Coffin himself:

"Let the reader suppose himself on the deck of a South-Sea-man, cruising in the North Pacific Ocean, at its Japanese confine—he may be musing over some past event, the ship may be sailing gently along over the smooth ocean, every thing around solemnly still, with the sun pouring its intense rays with dazzling brightness; suddenly the monotonous quietude is broken by an animated voice from the mast-head, exclaiming, 'There she spouts!' The captain starts on deck in an instant, and inquires, 'Where away?' But perhaps the next moment every one aloft and on deck can perceive an enormous whale lying about a quarter of a mile from the ship, on the surface of the sea, having just come up to breathe—his large 'hump' projecting three feet out of the water—when at the end of every ten seconds the spout is seen rushing from the fore part of his enormous head, followed by the cry of every one on board, who join heart and soul in the chorus of 'There again!' keeping time with the duration of the spout. But while they have been looking a few seconds have expired—they rush into the boats, which are directly lowered to receive them—and in two minutes from the time of first observing the whale three or four boats are down, and are darting through the water with their utmost speed toward their intended victim, perhaps accompanied with a song from the headsman, who urges the quick and powerful plying of the oar with the common whaling chant of

"Away my boys, away my boys! 'tis time for us to go."

"But while they are rushing along, the whale is breathing; they have yet, perhaps some distance to pull before they can get a chance of striking him with the harpoon. His 'spoutings are nearly out,' he is about to descend, or he hears the boat approaching. The few people left on board, and who are anxiously watching the whale and the gradual approach of the boats, exclaim, 'Ah, he is going down!' Yet he spouts again, but slowly; the water is again seen agitated around him; the spectators on board with breathless anxiety think they perceive his 'small' rising in preparation for his descent, 'He will be lost!' they exclaim, for the boats are not yet near enough to strike him—and the men are still bending their oars in each boat with all their strength, to claim the honor of the first blow with the harpoon. The bow boat has the advantage of being the nearest to the whale; the others, for fear of disturbing the unconscious monster, are now doomed to drop astern. One more spout is seen slowly curling forth—it is his last, this rising his 'small' is bent, his enormous tail is expected to appear every instant, but the boat shoots rapidly alongside of the gigantic creature. 'Peak your ears!' exclaimed the mate, and directly they flourish in the air; the glistening harpoon is seen above the head of the harpooner; in an instant it is darted with unerring force and aim, and is buried deeply in the side of the huge animal. It is 'socked up;' that is, it is buried in the flesh up to the socket which admits the handle or 'pole' of the harpoon. A cheer from those in the boats, and from the seamen on board, reverberates along the still deep at the same moment. The sea, which a moment before was unruffled, now becomes lashed into foam by the immense strength of the wounded whale, who with his vast tail strikes in all directions at his enemies.—Now his enormous head rises high into the air, then his flukes are seen lashing everywhere, his huge body writhes in violent contortions from the agony the 'iron' has inflicted. The water all around him is in a mass of foam, some of it darts to a considerable height—the sounds of the blows from his tail on the surface of the sea can be heard for miles!

"'Stern all!' cries the headsman; but the whale suddenly disappears; he has 'sounded;' the line is running through the grove at the head of the boat with lightning like velocity; it smokes—it ignites, from the heat produced by the friction—the headman, cool and collected, pours water upon it as it passes. But an oar is now held up in their boat; it signifies that their line is rapidly running out; two hundred fathoms are nearly exhausted: up flies one of the other boats, and 'bends on' another line, just in time to save that which was nearly lost. But still the monster descends; he is seeking to rid himself of his enemies by descending into the dark and unknown depths of the vast ocean. They next bend on the 'drougues,' to retard his career, but he does not turn; another and another have but slight influence in checking the force of his descent; two more lines are exhausted—he is six hundred fathoms deep! 'Stand ready to bend on!' cries the mate to the fourth boat (for sometimes, though not often, they take the whole four lines away with them—880 fathoms;) but it is not required, he is rising. 'Haul in the slack,' observes the headsman, while the boat steerer coils it again carefully into the tubs as it is drawn up. The whale is now seen approaching the surface; the gurgling and bubbling water which rises before also proclaims that he is near; his noise starts from the sea; the rushing spout is projected high and suddenly, from his agitation. The 'slack' of the line is now coiled in the tubs, and those in the 'fast boat' haul themselves toward the whale; the boat-steerer places the headsman close to the fin of the trembling animal, who immediately buries his long lance in the vitals of the leviathan, while, at the same moment, those in one of the other boats dart another harpoon into his opposite side, when 'Stern all!' is again vociferated, and the boats shoot rapidly away from the danger.

"Mad with the agony which he endures from these fresh attacks, the infuriated 'sea beast' rolls over and over, and coils an amazing length of line around him; he rears his enormous head, and, with wide-expanded jaws, snaps at everything around; he rushes at the boats with his head—they are propelled before him with vast swiftness, and sometimes utterly destroyed.

"He is lanced again, when his pain appears more than he can bear, he throws himself, in his agony, completely out of his element; the boats are violently jerked, by which one of the lines is snapped asunder, at the same time the other boat is upset, and the crew are swimming for their lives. The whale is now free!—He passes along the surface with remarkable swiftness, 'going head out;' but the two boats that have not yet 'fastened,' and are fresh and free, now give chase; the whale becomes exhausted, from the blood which flows from his deep and dangerous wounds, and the 200 fathoms of line belonging to the overturned boat, which he is dragging after him through the water, checks his course: his pursuers again overtake him, and another harpoon is darted and buried deeply in his flesh.

"The men who were upset now right their own boat, without assistance from the others, by merely clinging on one side, by which she is turned over, while one of them gets inside and bales out the water rapidly with his hat, by which their boat is freed, and she is soon again seen in the chase.

"The fatal lance is at length given—the blood gushes from the nostril of the unfortunate animal in a thick black stream, which stains the clear blue water of the ocean to a considerable distance around the scene of the affray. In its struggles the blood from the nostril is frequently thrown upon the men in the boats, who glory in its show!

"The immense creature may now again endeavor to 'sound,' to escape from his unrelenting pursuers; but it is powerless—it soon rises to the surface, and passes slowly along until the death pang seizes it, when its appearance is awful in the extreme.

"Suffering from suffocation, or the stoppage of some important organ, the whole strength of its enormous frame is set in motion for a few seconds, when his convulsions throw him into a hundred different contortions of the most violent description, by which the sea is beaten into foam, and the boats are sometimes crushed to atoms, with their crews.

"But this violent action being soon over, the now unconscious animal passes rapidly along, describing in his rapid course a segment of a circle. This is his 'flurry,' which ends in his sudden dissolution. And the mighty rencontre is finished by the gigantic animal rolling over on its side, and floating an inanimate mass on the surface of the crystal deep, a victim to the tyranny and selfishness, as well as a wonderful proof of the great power of the mind of man."—pp. 161-167.

This soul-stirring pursuit, in comparison to which all other sport seems child's play, has its melancholy as well as its exhilarating hours. The horrors of the night here described, deepened by the death of the 'man overboard,' and by the belief that the captain and two boats' crews had shared the same fate, must have been fearful indeed. But the whale, it seems, was the salvation of those who had been given up for lost, it is no longer a poetical fiction that—

"The pilot of some small night-founder'd skiff
Moors by his side under his lee, while night
Invests the sea; and wished morn delays."

"In the afternoon of a day which had been rather stormy, while we were fishing in the North Pacific, a 'school' of young bull-whales made their appearance close to the ship, and as the weather had cleared up a little, the captain immediately ordered the mate to lower his boat, while he did the same with his own, in order to go in pursuit of them.

"The two boats were instantly lowered, for we were unable to send more, having had two others 'stove' the day before; they soon got near the whales, but were unfortunately seen by them before they could dart the harpoon with any chance of success, and the consequence was that the 'pod' of whales separated, and went off with great swiftness in different directions. One however, after making several turns, came at length right towards the captain's boat, which he observing, waited in silence for his approach without moving an oar, so that the 'young bull' came close by his boat, and received the blow of the harpoon some distance behind his 'hump,' which I saw enter his flesh myself, as it occurred close to the ship.—The whale appeared quite terror-struck for a few seconds, and then suddenly recovering itself, darting off like the wind, and spun the boat so quickly round when the tug came upon the line, that she was within a miracle of being upset. But away they went, 'dead to windward,' at the rate of twelve or fifteen miles an hour, right against a 'head sea,' which flew against and over the bows of the boat with uncommon force, so that she at times appeared ploughing through it, making a high bank or surf on each side.

"The second mate, having observed the course of the whale and boat, managed to waylay them, and when they came near to him, which they speedily did, a 'short warp' was thrown, and both boats were soon towed at nearly the same rate at which the captain's boat had been before.

"I now saw the captain darting the lance at the whale as it almost flew along, but he did not seem to do so with any kind of effect, as the speed of the whale did not appear in the least diminished, and in a very short time they all disappeared together, being at too great a distance to be seen with the naked eye from the deck. I now ran aloft, and, with the aid of a telescope, could just discern from the mast-head the three objects, like specks upon the surface of the ocean, at an alarming distance. I could just observe the two boats, with the whale's head occasionally darting out before them, with a good deal of 'white water' or foam about them, which convinced me that the whale was still running. I watched them with a glass until I could no longer trace them, even in the most indistinct manner, and I then called to those on deck, that they might take the bearing by compass of the direction in which I had lost sight of them that we might continue to 'bear' the ship up to that quarter.

"It was now within half an hour of sunset, and there was every appearance of the coming on of an 'ugly night,' as a seaman would say: indeed the wind began to freshen every moment, and an 'awkward bubble' of a sea soon began to make. I remained aloft until I saw the sun dip, angry and red, below the troubled horizon, and was just about to descend when I was dreadfully shocked at hearing the loud cry of 'A man overboard!' from all upon deck. I looked astern, and saw one of our men, of the name of Berry, grappling with the waves and calling loudly for help. The ship was soon brought round, but in doing so she unavoidably passed a long way from the poor fellow, who still supported himself by beating the water with his hands, although he was quite unacquainted with the proper art of swimming. Several oars were thrown overboard the moment he fell, but he could not reach them, though they were near to him; and directly the ship was brought up, a Sandwich Islander who formed one of the crew, leaped overboard and swam toward him, while at the same time the people on the deck were lowering a spare boat, which is always kept for such emergencies. I could be of no service except to urge their expedition by my calls, for it was all only the work of a few minutes. The good Sandwich Islander struck out most bravely at first, but in a short time, finding he was some distance from the ship, and being unable to see Berry, on account of the agitated surface of the sea, actually turned back through fear—finding, as he said, that the 'sea caps' went over his head. The men in the boat now plied their oars with all their strength, and were making toward the drowning young man, who now and then disappeared entirely from view under the heavy seas which were beginning to roll: sickening anxiety pervaded me, as my thoughts appeared to press the boat onward to the spot where the poor fellow still grappled, but convulsively, with the yielding waters. The boat, urged by man's utmost strength, sprang over the boisterous waves with considerable speed; but they arrived half a minute too late to save our poor shipmate from his watery grave. I saw him struggle with the waves until the last, when the foam of a broken sea roared over him, and caused him to disappear for ever! The boat was rowed round and round the fatal spot, again and again, until night fell, and then she was slowly and reluctantly pulled to the ship by her melancholy crew. As they returned, the turbulent waves tossed them about, as if in sport, making the boat resound from the beating of the dashing waters which flew against her bow.

"The moment the unfortunate seaman disappeared, a large bird of the albatros kind came careering along, and alighted on the very spot in which the poor fellow was last seen. It was a curious circumstance, and only served to heighten our horror, when we saw this carnivorous bird seat itself proudly over the head of our companion; which also served to remind us of the number of sharks that we had so frequently seen of late, of the horrible propensities of which we could not dare to think.

"By the time we had hoisted in the boat it was quite dark; the winds too had increased to half a gale, with heavy squalls at times, so that we were obliged to double-reef our topsails. Our painful situation now bore most heavily upon us.—We had lost one of our men, who had sailed with us from England—the bare thought of which in our circumstances aroused a crowd of heart-rending ideas. Our captain and second mate, with ten of the crew, had also disappeared, and were by this time all lost, or were likely to be so in the stormy night which had now set in; being, too, several hundred miles away from any land. We, however, kept beating the ship to windward constantly, carrying all the sail that she could bear, making 'short boards,' or putting about every twenty minutes. We had also, since nightfall, continued to burn blue lights, and we had likewise a large vessel containing oil and unravelled rope, burning over the sternrail of the ship as a beacon for them, which threw out a great light. But although all eyes were employed in every direction searching for the boats, no vestige of them could be seen, and therefore when half-past nine P. M. came, we made up our minds that they were all lost; and as the wind howled hoarsely through the rigging, and the waves beat savagely against our ship, some of us thought we could hear the shrieks of poor Berry above the roaring of the storm: others imagined, in their melancholy, that they could occasionally hear the captain's voice, ordering the ship to 'bear up,' while the boats had been seen more than fifty times by anxious spirits, who had strained their eyes through the gloom until fancy robbed them of their true speculation and left her phantasmagoria in exchange.

"There were not many on board who did not think of home on that dreadful night—there were not many among us who did not curse the sea, and all sea-going avocations, while, with the same breath, they blessed the safe and cheerful fireside of their parents, which at that moment they would have given all they possessed but to see. But at the moment despair was firmly settling upon us, a man from aloft called out that he could see a light right ahead of the ship, just as we were 'going about,' by which we should have gone from it. We all looked in that direction, and in a few minutes we could plainly perceive it; in a short time we were close up with it, when, to our great joy, we found the captain and all the men in the boats, lying to leeward of the dead whale, which had in some measure saved them from the violence of the sea. They had only just been enabled to procure a light, having unfortunately upset all their tinder through the violent motion of the boats, by which it became wet—but which they succeeded in igniting after immense application of the flint and steel—or their lantern would have been suspended from an oar directly after sunset, which is the usual practice when boats are placed under such circumstances.

"After having secured the whale alongside, (which we expected to lose during the night, from the roughness of the weather,) they all came on board, when the misfortune of poor Berry was spoken of with sorrow from all hands, while their own deliverance served to throw a ray of light amidst the gloom."—pp. 167-173.

THE ANGEL AND HIS GUIDE.

A young angel being sent down to this world on some business, for the first time, had an old courtier's spirit assigned him as a guide: they arrived over the sea Martinico, in the midst of a long day, and in the sight of an instigate fight between the fleets of Rodney and De Grass. When, through the cloud of smoke he saw the fire of the guns, the decks covered with mangled limbs, or dead bodies, or dying, the ships sinking, burning, or blown into the air, and the quantity of pain, misery and destruction the crew, who were yet alive, were with so much eagerness, dealing around to one another, he turned angrily to his guide and said, "you undertook to conduct me to earth, and you have brought me into hell!"—"No," said the guide, "I have made no mistake; this is really earth, and these are men. Devils never treat one another in this manner; they have more sense and more of what men call humanity."—Dr. Franklin.

A HERO.

In a synopsis of the latest intelligence from La Plata, published in the Journal of Commerce, we find a sketch of the heroic death of Col. Maza, son of Don Manuel Vincente Maza, the President of the House of Representatives at Buenos Ayres, who had been assassinated before him.

In the mean time Col. Maza, who was in prison four hours after the assassination of his father, received the fatal news as well as an intimation that he himself would be immediately put to death.

"Confess your crimes, for your father has already ceased to live!"

"I have committed no crimes," replied Maza.

"Make your peace with God, for you are going to die. His Excellency has sent you his chaplain."

"I have nothing to confess to the chaplain of a Tyrant."

"You can write to your wife."

"No; give her this handkerchief; it is soaked with my tears. Let her keep it and remember that I carry to the grave the sorrow of not having been able to make her happy." Immediately after this conversation he was shot. He was 25 years of age; had been married one month, and was a brave, spirited young man.

THE LOST BOY.

The following interesting fact is related by Rev. J. H. Steward, in his account of the wreck of the Rothsay Castle:—"Amidst these almost overwhelming distresses, involving in one general calamity, men, women, children and even tender infants, it is a rest to the heart to turn for a moment to some special marks of divine mercy. I am sure, my very dear friend, the following incident, related to me by the father of the boy, will deeply affect you. He was near the helm with his child, grasping his hand, the waves rolled over the quarter deck, and taking with them several persons who were standing near them, it was no longer safe to remain there. The father took the child in his hand, and ran towards the shrouds, but the boy could not mount with him. He cried out, 'Father! father! do not leave me!' But finding that his son could not climb with him, and that his own life was in danger, he withdrew his hand. When morning came, the father was conveyed on shore with some other passengers who were preserved, and as he was landing he said within himself. 'How can I see my wife, without having our boy with me?' When, however, the child's parent let go his hand, his heavenly Father did not leave him.

He was off the deck, but happily clung to a part of the wreck on which some other of the passengers were floating.—With them he was miraculously preserved. When he was landing, not knowing of his father's safety, he said, 'It is no use to take me ashore now I have no father.' He was, however, carried, much exhausted, to the same house where his father had been sent, and actually placed in the same bed, unknown to either till clasped in each other's arms. When we read the interesting fact regarding this poor ship boy, let us remember the words of David, 'When my father and mother forsake me, then the Lord take me up.'

PROVERBS.—Not the scaffold but the crime makes the disgrace.

Do not evil to get good by it, which never yet happened to any.

WRITING FOR THE PRESS.

Every word, the sense of which is not perfectly obvious, should be so written that every letter will show for itself. This should be particularly observed in writing proper names. An observance of this rule will secure the author against the vexation of having his article incorrectly copied, and what to a conscientious man will be an equally strong inducement, it will save the compositor a great deal of time and trouble—the first of which is money to him, and of the second he has plenty without deciphering hieroglyphics.

2. Write only on one side of the paper, so that it can be divided if found necessary.

3. Punctuation ought to be either correct, or not attempted; the villainous habit some writers have of dashing their productions, is a great bore to a printer. If the writer cannot do it as it ought to be done, he had better leave it altogether to the compositor.

4. Abreviations ought to be avoided, as some compositors are very apt to "follow copy," as it is technically called. This is more particularly applicable to advertisements.

An observation of these rules will enable us all, contributors and printers, to get along more pleasantly.

TRUE RELIGION.—If St. Paul were again to appear on earth, since all the multifarious denominations of Christians would claim him, which would he choose? The Apostle himself shall answer: "Pure religion, and undefiled before God, and the Father, is this—to visit the fatherless and widow in their affliction, and to keep himself unspotted from the world."

ANECDOTE.—An American drummer having strolled from the camp, approached the English lines, and was seized by the piquet and carried before the commander, on suspicion of being a spy, disguised in a drummer's uniform. On being questioned he honestly told the truth, and declared who and what he was. This not gaining credit, a drum was sent for, and he was desired to beat a couple of marches, which he readily performed, and thus removed the commander's suspicion of his assuming a fictitious character. "But, my lad," said he, "let me now hear you beat a retreat." "*A retreat!*" replied the drummer, "there is no such beat in our service."

On Sunday, the 11th ult. while the Rev. Mr. Maffit was addressing a large congregation at Louisville, in the course of which he bore down pretty hard upon unbelievers, a Mr. E. Tallmadge, considering his remarks personal, being an unbeliever or infidel himself, rose up in the midst of the sermon, and said, "Mr. Maffit, this scurrillous abuse is pointed at and intended for me; I shall not sit here and hear myself abused by such a fellow as you," and immediately left the house.

CURIOUS PHENOMENON.—In Boston, on Tuesday afternoon, that very singular phenomenon called a mirage, was seen in the harbor. We do not recollect of hearing, but twice before, of the appearance of this curious sight in this country.—The Pilgrims saw it at Plymouth. They were expecting some supplies from England, and the vessels, three in number, with them, were at sea a long time, when one day they were all distinctly seen inverted in the horizon by several of the fore-fathers. They never arrived, however, and probably foundered at sea.—Last winter a mirage was seen on the North river. Persons alone, and out of sight of Newburg, saw a precise image of that place inverted, and hanging between heaven and earth, like Mahomet's coffin. It is of more frequent occurrence in Arabia and Italy, than in any other country. In Boston, vessels of which the sails only could be seen, were represented by a distinct image inverted above the horizon, exhibiting both sails and hull. Images were also seen apparently of vessels beyond the reach of direct vision.—*N. Y. Herald.*

A NEW SURGICAL CASE.—A short time since, a boy belonging to the British School, Tawbridge, broke a black lead pencil into his ear, and so far had it gone in, and still so short was the piece, that it bid defiance to the attempts of one eminent medical man to extract it, and a second would not make the attempt, but recommended the mother to take him to Bath, where he would, at the hospital, be sure to meet with proper attention, and be judiciously treated. Accordingly, she was preparing the boy for a jaunt, and was preparing due ablutions on his face, when the boy not behaving quite so well as his mother thought he ought, she gave him a smart box with the palm of her hand on the ear, (but not the ear that was affected,) when, strange to tell, out came the pencil! The cure was wrought as if by magic, the journey saved, and by a good box on the ear.

A convict, in the Penitentiary at Jefferson City, Mo., was shot dead by one of the keepers. He had been tried for murder, and sentenced to death on the 14th of October inst. His name is Lane.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY,.....OCTOBER 17, 1839.

FROM TEXAS.

The steam packet Columbia, Captain Windle, arrived at New Orleans from Texas in thirty-six hours. All was tranquil and healthy; the general election had passed off without the least disturbance. Galveston has established Quarantine regulations. Gen. Samuel Houston has been elected to Congress, to represent San Augustine. The Houston Telegraph says, but we think there must be some mistake in it, that flour was selling at from 60 to 75 dollars per barrel.—General Anava had arrived at Texas, to procure aid in establishing a new Republic out of a portion of the Eastern States of Mexico, in opposition to the powers of the Central government. The longer Mexico postpones recognising the independence of Texas, establishing the boundary line, and adopting a treaty of amity, the more will Mexico be exposed to the attacks on her territory. The Galveston Civilian, of Sept. 13th, says:

"We have little domestic news of importance. About 30 men left this city on Monday morning to serve against the Indians on the frontier, in case they should be needed. Several hundred men will be kept regularly in the field, until all apprehensions of further trouble from the savages have subsided.

"We understand that improvement is progressing pretty rapidly at the new seat of government, notwithstanding the great difficulties necessary to be overcome.—The next session of Congress, we suppose, will be holden there, though board is now five dollars, Texas money, per day; exactly the salary of a member.—The government offices and property have been removed from Houston."

FLORIDA.

We learn from the "South Floridan," of the 7th ultimo, that "Sam Jones is encamped somewhere near the Everglades, on New River, about six miles from Fort Lauderdale. He came to the camp in a canoe, with three hoary-headed Counsellors. His person is spare, tall and erect; he is about sixty-five years old, yet he enjoys good health, being hale and hearty. He was dressed in a plain hunting shirt, made out of an old sail, and under it wore a flannel shirt. In his hand he carried a calico hunting shirt, trimmed with red fringe; on his head he wore a colored cotton handkerchief, in cravat form; his legs were bare. He with great dignity approached Col. Tompkin's tent, where we were sitting round a table, and after being introduced by Col. Harney, took a seat. The others placed themselves on benches near by, and the squaws and girls sat themselves on the ground.

"Sam expressed himself happy to see us; he said the war he hoped, was now ended. He spoke of their great sufferings and present wants. He regretted much the murder on the Coloosa Hatchee. Those who did it, he said, were a band of Spanish Indians, that they had not fought during the war, and now wished to break the peace. They had rebelled and he would punish them. He must do so, for they had denied his authority, even before his own warriors. Chitto, it is said, must go and show himself a man, for some of them were Seminoles. If the whites would leave it to him, he would give hostages of women and children, and go punish these Indians and bring them in dead or alive. He had never lied to man, and when he did he might be distrusted. He conversed freely and with apparent honesty.

VALUABLE ACQUISITIONS.—The Milwaukie Sentinel announces the arrival, at that place, within a week, of about one hundred German and Norwegian families, all well provided with means to secure large farms and stock them well. Some of the Germans have twenty thousand dollars and upwards in gold. Five hundred more German families are expected there during the fall and coming spring.

The Africans have their own way pretty much at New Haven. Cinquez is not closely confined. Fortunately they have found interpreters in two native Africans belonging to the crew of the British brig Buzzard, now in our harbor from a cruise on the coast of Africa. They were sent to New Haven by the committee on behalf of the Africans, with the consent of their Captain, (Fitzgerald,) and were found to speak exactly the same language as the prisoners. The Journal of Commerce has the following particulars:

Professor Gibbs, in a letter communicating this intelligence, says—"It would have done your heart good to witness the joy of the Africans on finding themselves able to converse with the men." And another gentleman writes, "We called with them (the interpreters) at the prison this morning, just as the African captives were at breakfast. The Marshal objected to the entrance of the interpreters until the breakfast was over, but one of the captives coming to the door and finding a fellow-countryman who could talk in their own language, took hold of him, and literally dragged him in. Such a scene ensued as you may better conceive than I describe. Breakfast was forgotten; all crowded around the two men, and all talked as fast as possible. The children hugged one another with transport."—The captives confirm all that had been previously learned from John Ferry, the native is Kissi, who was able to converse a little with some of them.

FROM SOUTH AMERICA.—Buenos Ayres papers to the 20th of July, have been received at New York. Confidence seemed to be increasing that an arrangement of the dispute with France would be effected through the agency of the British Minister.

FROM THE MEDITERRANEAN.—The following is an extract of a letter from a distinguished American now in the Mediterrean, dated June 23, 1839:

"The Archipelago is swarming with pirates. The Austrian, French and English have vessels of war to protect their commerce, but although the crew of a vessel having an American gentleman and his wife on board have all been murdered by the pirates, there has not been an American vessel of a war up here for more than a year."

The Rev. Charles S. Adams has published a poem on chewing and spitting, from which we copy the following morceau:

"If you would know the deeds of him that chews,
Enter the house of God and see the pews.
The lady's parlor, carpet, painted floor,
The chimney piece, and pannels of the door,
Have all in turn been objects of abuse,
Besmeared and stained with tobacco juice.

The Philadelphian says, that the debt of Philadelphia City, is three millions and six hundred and fifty thousand dollars.

JAMES G. BIRNEY.—The following is the will of James G. Birney recently spoken of, which gives freedom to a number of slaves recently set free:

"*Know all Men by these Presents*, That I, James G. Birney, late of Kentucky, but now having my residence in the city of New York, believing that slave-holding is inconsistent with natural justice, with the precepts and spirit of the christian religion, and with the declaration of American independence, and wishing to testify in favor of them all, do hereby emancipate and forever set free, the following named slaves, which have come into my possession, as one of the heirs of my father, the late James Birney, of Jefferson county, Kentucky, they being all the slaves held by the said James Birney, deeeased, at the time of his death."

The names and description of the slaves follow.

MATHEW CAREY.—The following letter is said to be the last one written by this distinguished philanthropist. It was addressed to a friend, and was by him communicated to the editors of the National Intelligencer.

"Dear Sir:—I send you, by this mail, a copy complete of the Querist, as far as it has gone—1, 2, and 3.

"I am greatly below par. I am fearful that the state of the country is hopeless. Public morals are at the lowest ebb; and private share a portion of the same fate. Regard for self appears to be the predominant feeling; 'Every man for myself,' as the Dutchman said when he seized all he could lay his hands on. Prospects have heretofore been very gloomy in some points of view as at present, but we could heretofore see 'a little cherub smiling aloft,' to cheer us on our way, but no telescope can enable us to see 'a cherub smiling aloft,' at present.

"My general health is as good as usual. But the feebleness of my limbs rather increases. And my remaining eye cannot perform its functions by the light of the lamp, as it was want to do. I think much on 'Mrs. Thrale's Three Warnings.' I too have my three warnings, not, however, exactly the same as hers. I am in a great measure toothless, a cripple, and half blind. But I find no decay in my intellectual powers; on the contrary, I agree with the poet, (Pope?)

The soul's dark cottage, batter'd and decay'd,
Lets in new light through chinks which time has made.

"Yours, very respectfully,
MATAEW CAREY.

"Philadelphia, Aug. 20, 1839.

DEATH OF AN INDIAN CHIEF.—Ondayaka, head chief of the Onondagas, died on the 20th ult., near the Onedia Castle. At the time of his death as we learn from the Onedia Whig, Ondayaka, with the subordinate chiefs and principal men of his nation, were on their way to join in the ceremonies of electing a head chief of the Onedas. Within a few miles of the council house of the latter tribe, Ondayaka placed himself at the head of the deputation of the Onondagas, and commenced the performance of the ceremonies observed on such occasions, when he was suddenly seized with the bilious cholic. Calling the next chief in authority to fill his station, he withdrew to the road side, when he soon after expressed a consciousness that 'it was the will of the Great Spirit that he should live no longer upon the earth," He then sent for his people, and counselled them to cultivate and practice temperance and brotherly love in their councils and among the people of the nation, and frendship and integrity with all.—He soon after became unable to speak, and in a few hours his spirit gathered to the Great Spirit who gave it.

The Centenary of Methodism was celebrated in Washington city on the last of September. Subscriptions exceeding $2,000 were made for the Centenary Fund. One lady gave two hundred acres of land supposed to be worth $5 per acre.

The Hon. J. C. ALVORD, member of Congress elect from Massachusetts, died lately at his residence in Greenfield.

WESTERN RAILROAD.—The Directors of the Western Railroad on Friday, 27th ult., passed over the entire road from Worcester in an eight wheel car, drawn by the locomotive Hampden.

They left Springfield on Saturday morning, at 7 o'clock, and arrived at Boston at half past 1 o'clock, making six hours and an half between the two places. From this time however, is to be deducted one hour for stoppages at the different Depots, and one hour they remained at Worcester, leaving the *travelling time* four and an half hours from Springfield to Boston. The road was opened for travellers as far as Springfield, on Thursday last. The citizens of Springfield, together with many invited guests, and others who wished to join them, partook of a public dinner on Thursday last, by way of celebrating the opening of this part of the *Great Western Railroad from Boston to Albany.*

We shall in a few years *breakfast* in Springfield, *dine* in Albany, and *sup* at Buffalo.—*Evening Gazette.*

HORRID DIET.—The Jamaica Watchman gives an article, relative to unheard of atrocities committed on board one of the Slavers, of which capture was made some time ago by her majesty's ship Snake, off the coast of that Island. The narrative was obtained from two young negro girls of 12 or 13 years of age, forming part of the cargo of 250 Africans. According to their accounts, the blacks 'were at first taken tolerable care of in the slaver, but the provisions becoming short, the flesh of the negroes who had died was boiled and corned for them! and that afterwards live negroes were killed for the purpose on deck—part of their flesh being dressed and part being corned for use; that more than one or two people were killed for that special purpose; that the elder negroes. and not the young people were taken, that when selected, those who were to be killed were kept on deck, the others were sent below,—upon which the white people (the crew) felled them on the deck with sticks, (their screams were heard by all) and then cut their throats at once, when of course the process of disemboweling, cutting up, preparation for food, and pickling commenced! that the slaves did not at first understand they were eating human flesh, but afterwards when they did so, they revolted at it, and much was thrown overboard.' Such were the horrible and disgusting atrocities deposed to by these unhappy victims to a Portuguese slaver, who with the other survivors, were landed from the captured vessel at Montego Bay, and had been allotted as apprentices to the benevolent person who by dint of inquires had drawn from them the dreadful details. It is stated that he had, moreover, forwarded a relation of all the circumstances to the Secretary of the colonies.

POWDER MILLS.—The Powder Mills belonging to Foote & Gillett, in Westfield, Mass., were blown up a short time since:

"There three were distict explosions, at intervals of 20 or 30 seconds. The first was the Cylinder Mill, which was a short time before put in operation; the workmen had left about five minutes previous—and were at the time working in the Corning Mill, about five rods distant—and which blew up within twenty seconds, giving the men but barely time to leave the Mill, and throw themselves into the brush within twenty feet of it.—Strange as it may appear they escaped slightly injured—one without a mark of injury except by being blacked by the powder; the other received a billet of wood in his wood.

They had scarcely rose from their hiding place when the packing house, which contained four or five hundred barrels of powder, also exploded,—prostrating them again. and leaving not a vestige to mark the place where it stood; the ground for several feet round was swept clear of every thing. A dwelling house standing near it was unroofed—two sides were blown in, and not even a joist left standing. The plastering of the standing walls were shaken from them, the partitions broken to pieces, feather beds 'skook up,' and not a person of the six or seven in the house, injured."

HUMAN SKELETON FOUND IN A WELL.—About four years since a man by the name of Ritchie, who was employed in the furnace, disappeared under very mysterious circumstances, and every effort to discover his fate proved unavailing at the time. On Saturday last, some men while digging for the foundation of the aqueduct, discovered a well which was beneath the foundation of the furnace, and had not been used for several years. Near the bottom of the well the bones of a man were found. His shoes, wallet and several other articles belonging to the deceased, were so little decayed they could easily be identified. From a scar upon the cheek bone, and several other circumstances, it was ascertained that the bones were those of Ritchie, who had crept under the floor of the furnace, and plunged head foremost into the well for the purpose of committing suicide, which act, we learn, he had several times attempted before.—*Canajoharie Radii.*

At the last term of the Stark County Common Pleas, 3,150 dollars damages, was the verdict returned in the case of a certain Dr. Wilgohs, *versus* Judge Lynch. If every coat of tar and feathers cost as high as this, the Judge would soon be as unpopular as the quietest citizen could wish.—*Middletown Mail.*

NOBLE LIBERALITY.—There is something as touching as there is noble in the warmly gushing streams of sympathy and generosity which flow from a true Irish heart:

The Hibernian Society of New Orleans has appropriated three thousand dollars to the relief of the indigent sick, and given to each of the Philanthropic Societies of the city, (viz: the Howard, Samaritan and Philanthropic) one hundred and fifty dollars. It has also increased the number of managers in different municipalities, placing at their disposal a certain amount of funds, to be distributed as they may best see fit, and when so expended further appropriations are to be made from the funds of the Society.

The last Macon *Messenger* contains a letter from Gen. HAMILTON, under date Liverpool Aug. 20, to a gentleman in Georgia, in which he gives a doleful prospect of the Cotton market, and intimates that unless the crop can be kept back till the first of February, the banks may be driven to suspension by the disastrous effects of low price. It is pretty certain that if the crop *is* kept back till that time, they must suspend, for a drain of specie to Europe will be the inevitable consequence. The letter is rather panicky, but we have later and more favorable advices—we are not dead yet. The letter is necessarily deferred till to-morrow.

FOREIGN.—The Liverpool arrived at New York on Thursday last bringing English dates to the 21st ult. There seems to be much agitation in money matters, and drafts of the United States Bank to a large amount had been protested for non-acceptance in Paris, but subsequently the difficulty was arranged through the house of ROTHSCHILD. The bad weather greatly injured the crops and caused a rise in prices which may effect the American market. France has recogzized the independence of Texas. DON CARLOS' party in Spain is wholly defeated, and he has fled to France. It is said he was betrayed. Cotton was lower than at former advices, and falling. We have not room for details.

The Missouri and Iowa boundary war, at the latest dates, was beginning to *look red.—Middletown Mail.*

MR. JEFFERSON'S TEN RULES OF LIFE.

The following rules of life were given by Mr. Jefferson, in a letter of advice to his namesake, Thomas Jefferson Smith, in the year 1825.

1. Never put off till to-morrow what you can do to-day.
2. Never trouble others for that you can do yourself.
3. Never buy what you do not want because it is cheap.
4. Never spend your money before you have it.
5. Pride costs us more than hunger, thirst and cold.
6. We never repent of having eaten too little.
7. Nothing is troublesome that we do willingly.
8. How much pain have those evils cost us that never happened.
9. Take things always by their smooth handle.
10. When angry, count ten before you speak, and if you are very angry, count a hundred.

EMIGRANTS.—Two hundred of the Prussian emigrants, who have been congregating here, left this morning for Milwaukie in the Wayne. $1,500 was paid for their passage.—*Buffalo Advocate.*

COMMUNICATIONS.

PHILOSOPHICAL.

For the Western Recorder.

SUBSTANCE OF A LECTURE ON ATTRACTION.

Natural Philosophy should not be regarded as an abstract, uninteresting study, but as a necessary knowledge of things; as a familiar intercouse with the many curiosities of nature which rise before us. If one should make and put together a very complicated piece of machinery, when in operation he would undoubtedly understand how he gave it motion. If he would communicate this knowledge to another person, he would understand it also. It is so with the subject before us; he who understands the elementary principles of things, has in himself the power of penetrating to the agency of all the phenomena of nature, however wild, terrific, grand and awful. To attain this you must investigate the fountain and source of all philosophical knowledge, *attraction.*

The cause of this property as found in matter, remains to be unfolded to science, on which it has confered the greatest possible advantage. It operates on different substances with different effects, and as often as it is discovered to do this it is necessary to give it a distinguishing title. The divisions already made, and which claim our attention, are designated as follow, viz:—The attraction of Cohesion, Gravitation, Capillary, Chemical, Magnetic and Electrical. These six divisions, all differing in some point of view, are, nevertheless, entitled to the name attraction.

All matter of whatever size, form or shape, is composed of particles so small that it is with difficulty we distinguish them; these particles are composed of others infinitely smaller, indeed to such a degree as to be beyond our powers of perception. When a mass of these adhere together it is said to be sustained by the attraction of COHESION, and to separate them requires force; for example,—a piece of sealing wax formed according to this law, must be acted upon by some force to separate its particles under the influence of cohesion. It is further observed, that if particles of matter, intermingled with the atmosphere, were left free to arrange themselves in conformity with this principle, they, when united, would form globes; hence it appears that all bodies have centres of attraction, and that centre in the most ponderous part. The earth is an example of this, presumed by some persons to have been formed of soft substances, which in obedience to the command of nature assumed the shape of a complete globe, at this time slightly attended by her diurnal motion. This may be more clearly illustrated by forming a small globe of soft wax, holding it suspended in the air in a room after being swept, the particles will adhere equally on all sides, swelling it just so long as there is matter within the range of its attracting influence; giving latitude, it will in time form a good sized world, adapted to animated beings.

Cohesion binds bodies together, gives them figure and solidity.

GRAVITATION tends one body to another from great distances, and seems as if determined to drive all matter into a vast immovable bulk, counteracted by the wise provisions of the Creative's hand, it affords one of the most sublime subjusts presented to the human mind. "When Sir Isaac Newton was about to demonstrate that it was this principle which retained the planets in their orbits, he was so overcame with the splendor and magnitude of his discovery, that he was unable to proceed"—a friend completed his work. This quality pervades all substances, the smallest particle or mote of matter, as well as the most stupendous masses, give way to its influence.—Attraction of gravitation, in technical language, implies increase or diminution, "inversly, as the squares of the distances between two bodies—that is, as the distance increases Attraction decreases, and the contrary." This may be illustrated by the well known demonstration, that this law in regard of our earth, determines to a focus at her centre, and thence decreases simply as the distance to the surface, thence as the squares. It is admitted that Attraction exerts itself in straight lines, diverging in regular mathematical order from the centre. This is highly probable, all objection is silenced on this point, and the further we move from the imagined focus the more these lines diverge, consequently their combined power is scattered, and thereby weakened. According to this statement sixteen ounces with us, removed to the earth's centre, would not weigh any thing—because it would be attracted equally on all sides. Suppose this same weight removed half way to the surface, and it will weigh but eight ounces; at the same time suppose the upper mass of matter cleared away, the body would then weigh twelve ounces.—From this it appears that the upper attraction equals four ounces; four thousand miles above the earth's surface it would weigh four ounces, or one-fourth of its whole weight. At the distance of the Moon from us, which is two hundred and forty thousand miles, it will weigh but the thirty-sixth hundreth part of its first weight.

Observations have been made on the Moon, with such accuracy, that several volcanoes have been discovered on her surface, emitting fire and smoke, and some times like our Etna, lava and large masses of rocks. Pieces of stones that give striking evidence of having been thrown out in one of those frightful eruptions, pecular to volcanic mountains, are found in several parts of Europe; they are supposed to have received a projectile from a Lunar volcano, so powerful that the attraction of that body yielded to our attraction which brought them hither. This, if correct, fairly illustrates the theory that the greatest masses have the most attraction; hence we may infer the almost inconceivable bulk of the sun, sustaining a system of worlds, doubling in magnitude our planet, tribbling our distance from that luminary. And all this system is but an atom compared with the wonders upon wonders that fill up the universe.

While we contemplate this principle of attraction, in the earth, we may behold her subject to the same law of a more imposing greatness. Her prodigious body, thrown into space by a projectile which would drive it in a straight line eternally, meets and embraces it—takes a new direction and flies in silence harmony, at the rate of seventy-five thousand two hundred and twenty-two miles, each hour; held together, sustained and directed by the one great power. Suppose the earth, when created, had received a projectile, and moving forward in a straight line, when at a certain point it fell into the sun's attraction; if the two forces at this point were equal, it would fly with undeviating precision in an exact circle; but the unceasing exertion of *gravity*, would overcome the centrifugal, (or projectile) and gradually incline the body toward the sun; and, as a matter of course, accelerate its velocity; as it increases, the centrifugal also increases, and is finally driven round the sun, and carried off to the place from whence it started.—Inasmuch as the continuous exertion of gravity, gives the body an eliptial orbit, the argument is adduced, that equal centripetal and centrifugal forces, will not drive a body in a circle, though equally balanced at the start; the first impulse is all that creates the centrifugal, whereas the centripetal receives an impetus from the action of gravity. But waiving this part of the subject turn and behold the huge mass of a wandering comet, at a distance so immense, that the mind is scarcely able to conceive the figures which will enumerate it; riding forward, not for months or years, but centuries, to the great centre of universal nature; increasing its velocity until the sun as if conscious of his own power, sweeps it around, and sends it by the same force which brought it to him, wildly dashing through infinity of space. The magnitude of this grand and wonderful system, evinces the design of an Omnipotant hand, which alone is sufficient to teach man not only the existence of his Creator, but his dependance on His almighty power.

"Attraction, is called CAPILLARY, when it acts between a liquid and a solid." A glass tube immersed in water, will show the liquid at a greater elevation inside, than out; the smaller the tube the more striking this will be. A mere knowledge of this, one would suppose of no practical use; but not one of the many things which exist on the wide surface of the earth, but has been created for the convenience of man. In Germany, mill-stones are broken from great masses by driving a dry wedge into them and afterwards pouring on water; the pores of the wood attracts the fluid, swells it, and bursts the rock assunder.

"Attraction has received the name of CHEMICAL ATTRACTION, when it unites the atoms of two substances, called kinds of matter. These substances will not cohere indiscriminately, and form compounds, but have preferences, and dislikes. For example, sulphuric acid unites with copper, and forms a blue translucent salt; with iron it will form green; if a piece of iron be thrown into a solution of copper, the acid will drop the copper and take up the iron. In short, all compounds, are subjects of this attraction, paints, drugs, and even soap so useful in domestic life.

MAGNETIC attraction, is simply that of a certain ore, found in various parts of the world, when placed on a pivot will point continually to the north; this fact led to the discovery of the mariner's compass, the usefulness of which, we admire with wonder and astonishment. Its whole secret of action is that some metals treated in a certain manner will, if left free to arrange themselves, constantly point one way.—With the aid of the magnet, the ocean has been bridled, and her trackless path, hitherto unknown, rendered as accessable and familiar, as our national roads.

ELECTRICAL attraction, though last, not least, pervades all matter, coldly waiting some external action, to bring it into operation. This is an important branch of natural philosophy, which ability and time will not allow me to examine at length; yet, some facts connected therewith, may not prove uninteresting. If again, we take a pice of sealing-wax and rub it with a woolen cloth, it will attract light substances, and then throw them off. The excited surface is over-charged by the electricity of the entire body, rushing to the part which attracts the light substances around it, charges them with its overplus, and then they are repulsed. All bodies have correct quantities; it then follows that the substances, thus charged, would attract others, and give off until nature by an equal distribution, balanced them.

Inexplicable as this kind of attraction is, it nevertheless makes clear the origin of many thrilling, and astonishing convulsions of nature. The electric fluid in a more extended, and ample field, whose pastime seems destruction, is softened down and made subservient to man; checked in its wild course, and directed to spend its fury on the insensible earth, in splitting rocks into portable pieces, which in the first state, were too large to be moved by mechanical engines. An electrical conductor, will attract, and conduct the fluid whithersoever man choose. It is even thought, that this same electrical condutor would arrest a cloud; nay, not impossible, that the deserts of Africa, might be made fertile by such an invention. Attraction may with propriety be called the vital principle of nature, animate and inanimate. The rose, by capiliary, attracts from the earth its support, flourishes, dies, decomposes: and as earth, gives support to a vegetable, which, gives in turn, support to animated life—perhaps by assimulation becomes the constituent particles of a human body, which, when returned to dust, may be manufactured into a wall, similar to the one which surrounds us.—This wonderful power binds the earth together; gives her figure, and a place in the solar system; sustains the bodies on her surface, guides her rolling through the deep blue heavens, mingling with the throng of worlds, that have since the dawn of time, swept around the sun, supported by the same influence, held in the hollow of Deity's hand, which, when withdrawn, sun, moon, stars, earth, her mountains, and her seas, glide softly into eternal silence.

For the Western Recorder.

No. III.

(*Concluded.*)

JAMESTOWN, O., Sept. 12th, 1839.

Friend Springer:—In this communication, I am to show that authority to preach, baptize, &c., was not given or confered in the primitive age of christianity, by the laying on of hands.—The Apostles who were the first preachers of that age, had no hands laid on them, that we read of. Matthias, who was ordained in the place of Judas had no hands laid on him. The first case recorded concerning the laying on of hands, is, that of the seven men who were chosen and appointed to attend to Grecian widows, and to serve tables; preaching was not the purpose in view on this occasion; but these men were appointed that the Apostles might not be hindered from preaching, &c. The next case is, where Peter and John laid hands on the Samaritans, but this was indiscriminately done on all who had been baptized in the name of Jesus Christ, consequently, if authority to preach, &c., was conferred, it was confered on all alike.

The next case is, where Annanias laid hands on Saul, that he might receive his sight and be filled with the Holy Spirit. If this were to authorize him to preach, &c., he afterwards lost his authority, for hands were again laid on him at Antioch in conjunction with Barnabas, both of whom had been preaching before without authority, provided authority was given by the laying on of hands, or else authority was given for a limited time only, or for a special mission, and had to be renewed frequently.

We read that Barnabas, and Saul, were afterwards ordained Elders in the churches; but there is not a word said about their laying hands on any of them.

The next and last case I shall notice, is the laying of hands on Timothy. This young man had a spiritual sight confered on him according to prophecy, at the time hands were laid on him, and Paul afterwards commanded him to stir up said gift; but Timothy had travelled with Paul sometime before the laying on of hands, either as a learner, a servant, or a preacher. From all the cases recorded, I am at a loss to know where the notion that the laying on of hands gave authority to preach came from; especially, after examining all the cases where men preached before or without any such ceremony. The Disciples went every where preaching the word, when scattered by persecution. And Apollos, who was mighty in the scriptures went about preaching, and there were hundreds of Judasizing preachers going about through the churches. Were these all ordained by the laying on of hands? Surely not.

M. WINANS.

THE RECORDER.

ZANESVILLE:

THURSDAY, ... OCTOBER 17, 1839.

HORRID MURDER.—An investigation was proceeding, when our paper went to press, into the conduct of three young men by the name of Green, who were charged with the murder of a man by the name of Thompson, who resided a few miles below Zanesville, on the river. Rumor states, that the Greens went into Thompson's orchard to get apples, and that Thompson forbade them, and a quarrel ensued; the Greens fell on him, and one of them beat him so with a hammer that he died shortly after they left. It is also stated that they knocked down and abused Thompson's wife, who came to the assistance of her husband, in a shocking manner.

A correspondent at Pruntytown, Va., in a communication dated the 8th inst., states, "we at present enjoy good health in this country, and have a plentiful year of provisions; but money is scarce and business dull."

In the late fire at Natchez, a black man is said to have taken two kegs of power, with plenty of sparks and cinders upon the heads and cooly bore them off.

The schooner "Caleb Williams," owned by E. Waterman, of Georgetown, was wrecked off Sullivan's Island on the 5th inst. The crew, seven in number, and one passenger, were all saved, but every thing lost. She was ladened with hay, brick and stone, from New York to Charleston, South Carolina.

C. B. PARSONS.—We were misinformed when we stated that this gentleman still held fast to his religious integrity. He has published his letter of dismissal from the Methodist Episcopal church, and it is said has returned to the stage again. He has turned out to be a *frog*, instead of a fish.

The Banks of Philadelphia, Baltimore, and the District of Columbia, have suspended specie payments; those of New York, continue to redeem their notes. The Banks of Steubenville had a meeting on Monday last, to consider this subject, and our informant, who left before their determination, thought they would close their doors to their specie.

A destructive fire occurred on the 4th instant, in the town of Aiken, S. C. The loss is estimated at from $80,000 to 100,000.

We are requested to publish the following notice:

INFORMATION WANTED.—I have four sons from whom I have not heard for several years, viz: John, Abraham, Isaac, and Jacob. The last I heard from them, the three oldest were in the western country. Any information respecting them will be thankfully received. I was formerly from Washington, Vt., but now reside in Lowell, Mass., where letters may be directed. HANNAH NORRIS.

Lowell, Oct., 1, 1839.

DESTRUCTIVE FIRES.—A very destructive fire occurred in New York, on the night of the 5th instant,—thirty buildings with their contents were consumed. Loss, estimated at more than one million of dollars.

Another occurred in Philadelphia, on the night of the 6th instant, which consumed between thirty and forty houses, and destroyed over five hundred thousand dollars worth of property.—Several lives were lost.

Judge Buel, the Agriculturalist, of Albany, New York, died on the 6th instant, at Danbury, Connecticut.

We have received the *Intelligencer and Commercial Reporter* of the 12th instant, published by our old friend ISAAC HARRIS, at $2 50 per annum, in advance, 120 Liberty St., Pittsburgh, Pa., and shall be glad, if it be his pleasure, to exchange with him. The contents of this number are interesting to us. As we feel interested in the prosperity of Pittburgh, we are sorry to learn that such embarrassments rest upon her business as the following extract, from the number of the Intelligencer before us, shows:

"MONEY MATTERS IN PITTSBURGH.—Money was never known to be so scarce in our city and neighborhood. Our merchants, manufacturers, and mechanics, indeed the great mass of men depending on their industry for a living, are beginning to be in great distress for want of money. Many of our manufacturers and mechanics are reducing their business and discharging their hands, some a fourth, a third, a half and more, and still find it extremely difficult to obtain money to pay those retained, and frankly acknowledge that unless soon relieved they must both stop payment and work altogether, and discharge all hands; indeed some of our largest establishments have done so already. This is a most painful state of things—and as the winter is just at hand and we have a dense mass of the most useful and industrious classes, depending upon their daily labor for their daily bread, we look forward to their suffering with horror unless they and our manufacturers, mechanics, &c., are soon relieved with work and money—for we believe that in less than sixty days, more than three thousand men (most of them with families) will be idle unless there is an immediate change.

The partnership of U. Parke and U. P. Bennett, in the "Zanesville Gazette," is closed, and that paper and office is transferred to the latter, who in future will conduct the business on his own responsibility. Mr. B. is an obliging, industrious young man, and we have no doubt but he will give good satisfaction to the public.

A young man by the name of Rowland H. Noble, in Cincinnati, recently killed William McCan, aged fifty-five years. They disputed about a turkey in market. McCan ultimately walked off and left Noble in possession, of the turkey;—the other followed him to whip him, but got himself *drubed*; after which, he threw a stone at McCan, and fractured his skull, which caused his death immediately. Noble is held to bail in the sum of fifteen hundred dollars.

We acknowledge the receipt of a letter from our old friend and correspondent, Colonel R. A. Blount, of Hebron, Ga., dated the 7th instant. He states: "We are suffering here from a very severe drought; the potato, pea, and turnip crops, are all cut short, and thousands of cotton. Springs that have not failed in thirty years—perhaps never before—have gone dry."

D. E. HARBAUGH, ESQ., formerly of New-Lisbon, Ohio, now of Detroit, is in nomination for the Legislature of Michigan.

The result of the late Maryland elections is as follows: Congressional delegation, 5 Administration—3 Whigs. Legislature, 47 Administration—31 Whigs.

The last Zion's Watchman, after enumerating the causes which have tended to render the Centenary Offerings of New York city, and elsewhere, less than was calculated, states:

"These items go to show, that there is a general feeling of distrust, as it respects the present condition and future prospects of the Methodist Episcopal Church, which prevails among our ministers and people, both North and South. The course taken by some of our BISHOPS for a few years past, has set the people to *thinking*. And the POWER now in the hands of those who manage the Book Concern, and the Christian Advocate and Journal, will, probably, be watched with more diligence than heretofore."

The three Brooklyn churches, to which we refered some time since, held a meeting and passed a resolution to put off their Centenary subscription, till October, 1840.

We take the article below from the Charleston (S. C.) Mercury, of the 8th instant:

THE CROPS.

"The following communication which is extracted from the last number of the South Carolinian, is of the same melancholy character as the news which we receive from almost every part of the cotton region, in reference to the coming crop. There can be no longer a doubt that the amount of cotton will fall far below all the early estimates. It is, indeed, by no means certain that the crop will exceed that of 1838."

From the South Carolinian.

THE COTTON CROP.

Laurens C. H., September 26.

Mr. Editor—Very flattering accounts have heretofore been given of the prospects of the present crop in most of the newspapers throughout the Union, and which I have no doubt were warranted by facts up to the latter part of July last, when every species of production seemed to be prosperous and flourishing; but since that period cotton and corn, and every thing else growing has been on the decline. For the last six or seven weeks there has been a most withering and parching drought, which, together with the rust and insects, has cut the cotton crop at least one-third short in this and the adjoining districts. The corn crop, to say the most of it, will not exceed the ordinary average supply. The true state of facts, as to the present prospect of the cotton crop, should be made known from all sections of the Southern country, in order to counteract the effects which former reports may have produced on the market. The planters do not desire to deceive, but merely for the truth to be known, and to have fair play. PLANTER.

We were called on some time since, by A. H. B. to give the name of any steam boat within our acquaintance, on our Ohio waters, on which passengers could be conveyed without being shocked with exhibitions of *drinking*, *gambling*, or *profanity*. We then refered to the "Tremont and Cap. Lucas." Since, we came across the following article, from a Cincinnati paper, confirmatory of what we then said. Being personally acquainted with the captain, we can vouch for the correctness of what is here said of him:

From the Journal and Luminary.

"UNITED STATES MAIL PACKET TREMONT.

Mr. Editor:—The card published in your last paper, with reference to the Arabian and Capt. Forsyth, has reminded me of a duty I owe Capt. Lucas, master of the Tremont.

I have travelled extensively on almost all our inland waters, but have never met with the master of a boat, who was more assidious in his efforts to make his passengers comfortable and happy than Captain Lucas.

A few weeks since I was a passenger on board the Tremont, from Cincinnati to Pittsburgh. During the whole trip there was not a game of cards played in the cabin. Capt. Lucas does not allow gambling at any time on board his boat, and he will not permit games of diversion after nine o'clock in the evening. He does not furnish spirits for the table, and has probably, before this, closed his bar, and dismissed the keeper. While at the tea-table one evening during this passage the Captain gave notice that the Secretary of the Foreign Missionary Society of the valley of the Mississippi, was on board, and that he had consented, at the request of several of the passengers, to give an address on Foreign Missions; as soon as the table was cleared, the passengers, officers, and as many of the hands of the boat as could be spared, very quietly assembled to hear the address.—When it was closed, to the surprise of the speaker, at the suggestion of the Captain a collection was taken for the cause of Foreign Missions, amounting to twenty-five dollars.

All appeared deeply interested with the exercises of the evening, and happy in the opportunity of contributing to aid such a noble cause. I have never made a trip, on any other boat, in which, the passengers appeared to be better pleased with each other, and with the Captain and Clerk.

The moral man, and christian, may always be sure of a quiet, comfortable passage on board the Tremont, while it is under the command of Captain Lucas. I wish I could say as much of the Savan, in which I returned as far as Marietta. The printed rules of that boat are good, and if the Captain had enforced them our passage might have been comfortable. One of these rules requires all games of pleasure to close at ten, that the passengers may obtain the requisite rest. Instead of this, games were not only continued in the cabin till half past one in the morning, but they were accompanied with their usual concomitants, mint julips, and profaneness, and obscenity of such a boisterous character as rendered it impossible for me to sleep, although I was in a state-room. When these *gentlemen* saw fit to retire, I had become so much disturbed that is was vain for me to try to sleep. Now, I ask, Mr. Editor, is there no redress for such abuse? Take our steam boats, as many of them are now managed, and I had rather run the risk of obtaining sleep while travelling all night in a mail stage, than where a few *gentlemen black legs* are permitted to occupy the cabin during as much of the night as they please, annoying the decent orderly passengers with their boisterous infernal dialect. Suppose the three clergymen on board the Savan, had taken their place in the cabin, and had preached, sung, and prayed as loud as these gentlemen swore, till half past one in the morning, while the rest of the passengers wished to sleep, and being the enemies of religion, were pained to hear the favor of God supplicated with reverence, or his praises sung with devotion. What would have been done? The Captain, doubtless, would have interfered and stopped them, or if he had not, the ungentlemanly conduct of these ministers would have been published through the land. But, is it more ungentlemanly to disturb a whole boat's company by prayer, and praises, than by profaneness and obscenity?

I believe it is the duty of every moral, respectable man, to withdraw patronage from those boats where the Captains allow the rest of moral, sober passengers to be disturbed by a few gentlemen gamblers, or profane debauchees. For one, unless compelled by necessity, I will never take passage the second time, where I have been treated as I was on the Savan.

A TRAVELLER."

So the "Sandusky" and "Tremont" stand at the head of our list of temperate and orderly steam boats. We will be glad to add any others whom the experience of our correspondents may think worthy.

OUR CHURCH AFFAIRS.

The N. Y. Luminary says, the Methodist P. church, has two regularly organized societies in that city, and two good houses of worship.

We, as Treasuer of the Preachers' Aid Society of the Pittsburgh Annual Conference, acknowledge the receipt of $50.50, per Bro. Scott, from the Mt. Vernon circuit. This circuit had paid $45 before. We hope our superintendents and others will not forget the resolution of the last Conference, to do what they can for the benefit of the funds of the Society. In our next we will publish the charter of the Preachers' Aid Society, as obtained from the Legislature of this State.

In a late revival in Lynchburgh, Virginia, between thirty and forty have been added to the Methodist Prostestant church.

W. B. Dunlevy is employed by the President to travel Mt. Pleasant circuit.

The Letter-Press announces the arrival of Bro. Shinn in Philadelphia, to superintend the publication of his intended book.

The balance of the minutes of Conference came too late for this number—they shall appear in our next.

We particularly request the Presidents of the Western Conferences to interest themselves in behalf of our paper. We believe the preachers generally are doing what they can for us. Private members can do much also, if they but try—we need the aid of all.

Bro. Blount, of Hebron, Georgia, attended a meeting, with their circuit preacher and others, within 10 miles of Milledgeville, on the 31st of August last, at which eighteen persons were received on probation. This was at a place which had been tried by the ministers of several orders without success.

☞Seven hundred and fifty thousand francs were due Napoleon on his return from Egypt by the French Government. He never demanded the sum, although it stood credited on the war accounts. The sum, from interest, has accumulated to 15,000,000 francs. Jerome and Joseph Bonaparte brought suit for the sum.—They were cast, on the ground that by the 9th Act of the Treaty of Fontainbleau, 1814, Napoleon surrendered to the government of France his "extraordinary and *private* domains. "That," says a cotemporary, "was a contemptible quibble, unworthy of every officer of France, except Louis Phillippe, and it was exactly worthy of *him*."

AGRICULTURAL.

From the N. E. Farmer.

SILK IN THE WESTERN STATES.

The following is an extract from the report of a committee presented to the House of Representatives of the United States:

The soil and climate of the Western States has also been found to be peculiarly adapted to the silk culture; and many farmers and others are turning their attention to it. In Ohio, there are a number of companies incorporated, with large capitals, and under the direction of skilful managers. The Ohio Silk Company, at Columbus, has a large plantation on the rich bottoms of the Scioto, which is fast stocking with both kinds of the mulberry: thirty thousand Italian, four years old, and a large number of the Chinese, have been set. The company propose to extend their plantation of Italian, to at least one hundred acres, with one thousand trees to the acre, and an equal number of acres with the Chinese. It is also their intention to add about fifty acres in hedges of both kinds.

A company has also been formed at Mt. Pleasant, Jefferson county, with a capital of fifty thousand dollars. The Massillon Manufacturing Company have had their capital extended to six hundred thousand dollars, and are determined to engage largely in the culture of silk. Several other companies have been formed, and many more have petitions before the Legislature for acts of incorporation. In the vicinity of Canton, in Stark county, seventy families are said to be engaged in making silk; and in Knox, Cuyahoga, Jefferson, Belmont, Washington, Brown, Hamilton, Montgomery, Highland, and several other counties, many individuals are beginning. Several petitions are now before the Legislature, praying for public encouragement; and it is expected something liberal will be done.

In Kentucky, a Company has been incorporated under the name of the "Campbell County Silk Culture and Manufacturing Company," and has selected a favorable location opposite Cincinnati. The subject is new in this State, but it is attracting attention, as is apparent from the following extract of a letter from a gentleman near Lexington. "The first talk of silk-raising in this country, was about a year and a half since, when a friend sent me the first copy of the Silk Culturist. So great has been the increase of public sentiment, that there appear but few of the rich farmers but who are talking of it as a source of employment for their weak force. There are a great many Italian mulberries of one year's growth. I have near one hundred thousand in a nursery of five acres; and there is the produce of four pounds and a half of seed more, raised by five of my immediate neighbors; all of which will be planted out in the spring in hedge rows. I calculate there will be over one hundred acres planted. The six that are now making experiments are all rich, and can bring into the field one hundred and fifty hands of their own, and as much land as is necessary: and our whole energy will be turned to it."

In Indiana, large quantities of seed have been sown, and a spirit of inquiry has been awakened, particularly among the Quakers at Richmond. A gentleman at that place says: "There has nothing but the Italian been grown as yet, of which there is, to my knowledge, only about thirty thousand trees, which are all seedlings. There will be some of the real Chinese, and also some of the multicaulis cultivated, though to a limited extent. The business cannot flourish with us till our trees have grown, though our woods abound with the black mulberry." There is a large nursery of both kinds at Madison, and the State will gradually be furnished with trees.

In Illinois, Michigan, Missouri, and Tennessee, small beginnings have been made, and the congeniality of the soil and climate cannot, ultimately, fail of making them great silk-growing States.

In looking at the vast amount of silk annually imported and consumed in this country, and the facilities it furnishes for its production, the conviction irresistibly forces itself upon the mind, that our national interest, independence and respectability, loudly call for such legislative aid and encouragement as stimulate to activity and perseverance, the efforts which are making to introduce its culture as a common branch of rural economy. Hitherto, the work has been carried forward by individual exertions; and this is unquestionably the true method, so far as individual interest is concerned. But the nation has a great interest involved in it; and it is its duty to foster it in such a manner as will afford it protection and encouragement. The public and individuals having a common interest in the object, may, by an energetic co-operation in effort secure its benefits to both.

The efforts which have been made by individuals, and the success which has thus far attended them, seem to point out the course which should be adopted by Congress. Enough has been done already to enlighten the public, so far as its practicability and profit are concerned; and nothing more is wanting to induce thousands of the enterprising and industrious to engage in it, but a thorough knowledge of its details. Could a general diffusion of practical knowledge on the subject of cultivating the tree and rearing the worm, be effected, I have no doubt the United States would finally become one of the greatest silk-growing countries in the world. It is for the committee to recommend the measures which ought to be taken by Congress, to promote this great object; and in their hands I leave it.

I am, sir, very respectfully,
Your obedient servant,
ANDREW T. JUDSON.

Hon. J. Q. Adams,
Chairman Com. on Man.

REMEDY AGAINST ANTS.

Accident has furnished an excellent recipe for destroying ants. A merchant, whose warehouses were infested by these destructive insects, remarked on a sudden that they had deserted one particular room; and observation having convinced him that the circumstance was caused by a barrel of fish oil, which had been placed there, he tried the experiment of placing some of the oil round the plants in his garden, when he found it produced the effect of driving the ants from the place in a few hours.—*French paper.*

From the Western Farmer.

BLIGHT IN FRUIT TREES.

Mr. Editor:—I believe the object of your valuable paper is to give practical knowledge on the various branches of agriculture, horticulture, &c. Being, therefore, a practical farmer, I take the liberty of sending you, for publication, my method of curing the blight in pear trees.

I make an incision in the tree with an auger, about two inches deep, and in a slanting position, so that the bottom or farther point of the hole shall be inclined towards the roots and generally about two feet above them; the cavity is then filled with sulphur and plugged up perfectly tight: I then cut off the plug smoothly even with the bark. This operation I perform in the month of March or April, or any time when the sap is circulating in the tree.

I have tried this on pear trees that were almost entirely decayed, and have never failed of reviving them. The same method is attended with success on peach trees. J. WATERS.

Greene, Ohio, Sept. 1839.

THE MANIAC.—The wandering maniac girl, found in the woods near Catskill, according to the Messenger, is a Miss Van Horne, formerly an instructress, and latterly a seamstress in New York, and a native of Woodbridge, N. J.

HIDDEN TREASURE.—We learn that a young man named Lewis Brigham, in Northborough, Massachusetts, about ten days since, in digging for woodchucks, unearthed a metal kettle, containing near three pecks, by measure, of old coin, of various denominations, about one-third of which was gold, and the remainder silver. The vessel was so completely decomposed as to be of no strength, and barely to retain its form. We do not understand whether the exact amount of the money has been ascertained or not.

THE DISPUTED TERRITORY.—Governor Fairchild, of Maine, has addressed a letter to the Land Agent of that State, Rufus McIntyre, Esq., apprising him that very extensive preparations are being made by a set of lawless men in the province of New Brunswick for the cutting of timber the approaching season on what is called the disputed territory, and requesting him to give notice to said persons, and to all others, that no exertions of the Executive of Maine will be remitted to break up this atrocious system of plundering, and to bring those engaged in it, and their abettors, to condign punishment. He thinks a lenient course has been pursued long enough.

Agreeably to the Governor's suggestion, public notice has been given by Mr. McIntyre, cautioning all persons against cutting timber on the disputed territory, whether with or without permits from the Land Agent of Massachusetts.—*Journal of Commerce.*

We learn from the Natchez Free Trader that four gentlemen of the city of Vicksburg have subscribed *four thousand dollars* to the Methodist centenary fund—Judge Lane giving six thousand of that sum.—*National Intelligencer.*

Franklin College, at New Athens, Ohio, is in a flourishing condition, and counts 110 pupils, including those of the preparatory school.

SUICIDE.—A man by the name of Kiscadden was convicted at West Union, on Saturday last, of the murder of Bowman, and hung himself on Monday morning about the time court convened. Another person by the name of Glasscock, charged with murder in the same county, elected to be tried by the Supreme Court.—*Portsmouth Tribune.*

CIVIL WAR IN THE BRAZILS.—A Pernambucco correspondent of the New York Commercial Advertiser, gives a frightful account of a rebellion in Marahham.

LOSS OF LIFE.—It is supposed one hundred sailors perished from vessels lost in the dreadful gale at Halifax, Sept. 13.

We understand that counterfeits of the American $5 gold pieces are in circulation in this region. The counterfeits are larger than the real coin, but they are well calculated to deceive.—*Lou. Jour.*

NOVEL SCENE.—A few days since, Detroit city was filled with quails which were popped down in every quarter, by all sorts of machines, making great sport. It is considered an agury of a hard winter.

The funeral of the venerable Matthew Carey, was the largest ever seen in Philadelphia. The streets were crowded with persons of both sexes and all ages.

Two cowardly fools in Baltimore by the name of Terret and West, went to Harper's Ferry and took a shot at each other. They did not blow out each others brains for neither had any to spare, but one shot the other through the *calves* of both legs.

It is said the word Tahas, or Texas, is an Indian word, and signifies the land of happy spirits. Wonder if the leg-treasurers there are happy?

A laborer on the Beaver and Sandy canal, 11 miles east of New Lisbon, named Ward, who had been discharged for dissipation, commenced throwing stones at the shanty, when the ower picked up a stone, threw it, and hit Ward in the face, causing his death in a short time. The man who threw the stone was apprehended, examined and acquitted, on the ground that his house was his castle, and had a right to defend it.—*Canton Repository.*

HYMENEAL.

Married, on the 9th inst. by the Rev. John Burns, Rev. WILLIAM B. DUNLEVY, to Miss EVE CLANCY, all of Jefferson county, Ohio.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

RECEIPTS FOR VOL. 1.—Of J. Everett, $2; of J. Kitchen, 2; of O. White, 4, for S. Walker, and L. Lull; of D. Hodgeson, 2; of D. H. Stephens, 6, for J. Stephens, T. McKinney, and Mrs. M. McIntire; of J. Thompson, 1, for 2d vol.; of O. White, 2, for A. Getting, Jr.; of R. Jones, 6, for J. Rea, A. Hozey, and W. Monroe; A. Smith, Pruntytown, Va., 2 for W. H. Shields; of Geo. Hughs, 5, for C. Jordon, R. Cole, and 1 to be placed to Bro. Beatty's credit; of J. Burns, 2, for J. A. Dorhman; of J. A. Mills, 2 for J. Stephens, Port William.

LETTERS RECEIVED.—D. Hodgeson, Dr. A. C. Hamilton, J. Lidoff, D. H. Stephens, J. Thompson is credited for one dollar, 2d volume, R. Jones, T. Bland, G. Hughes, A. Smith, G. Clancy, we have sent a paper to Geo. Waddle, at the order of Bro. Ragan, to Henrysburgh, regularly since the issue of our first number, T. Mapel, W. M. Hamilton, J. A. Mills, and R. A. Blount.

BIOGRAPHY.

JOHN HOWARD.

John Howard, a man of singular and transcendant humanity, was the son of a reputable merchant in London, and born about the year 1725. In 1742 his father died, leaving him in affluent circumstances. In 1765 he settled in Bedfordshire. While he lived there it was his meat and drink to make his neighbors happy. Tho' polite to all, he neither sought nor admitted the company of the profligate, however distinguished by rank or fortune.

His charity had no bounds, except those of prudence; and was not more commendable for the extent of it, than for the manner in which it was exercised. He gave not his bounty to countenance vice and idleness, but to encourage virtue and industry.

He was singularly useful in furnishing employment for the laboring poor of both sexes, at those seasons when a scarcity of work rendered their situation most compassionable. And at other times, though never inattentive to the tale of woe, he was not easily imposed upon by it, but made himself acquainted with the case. His liberality extended also to adjacent places, in which, there are many who call him blessed. Nor was it confined to persons of his own religious persuasion, but comprehended the necessitous and deserving of all parties; while he was peculiarly useful in serving the interest of the Christian society to which he belonged.

But the sphere in which he had hitherto moved was too narrow for his enlarged mind. Being named in 1773 to the office of sheriff of Bedfordshire, from that time his scene of usefulness was extended.—His office as he himself observes, brought the distress of prisoners more immediately under his notice. A sense of duty induced him personally to visit the country-jails, where he observed such abuses as he had no conception of; and he soon exerted himself in order to a reform. He inspected also, prisoners in some neighboring counties, and finding in them equal room for complaint and commiseration, he determined to visit the principal prisons in England.

The farther he proceeded the more shocking were the scenes presented to his view, which induced him to resolve upon exerting himself to the utmost, in order to a general reform in these horrid places of confinement; considering it as of the highest importance, not only to the wretched objects themselves, but also to the community at large. Upon this subject he was examined in the House of Commons, in 1774, when he had the honor of their thanks. This encouraged him to proceed in his design. The great object of all was, to introduce a thorough reform of morals into the prisons, where he had found the most flagrant vices to prevail in such a degree, that they were become seminaries of wickedness and villainy, and most formidable nuisances to the community.

Solitude, labor, temperance, and moral instruction, with a scrupulous attention to cleanliness, warmth and ventilation, were his great principles of reform. To mitigate human calamity, to check vice, to subdue the refractory, and soothe the repenting, to reclaim, rather than punish, were the darling objects of his wishes; objects surely worthy the attention of every wise and human government.

In order to the attainment of these great objects, Mr. Howard spared no pains nor expense, and cheerfully exposed himself to much hazard, particularly from that malignant distemper, of which he saw many dying in the most loathsome dungeons, into which, none who were not obliged, would venture besides himself.

His laudable endeavors he had the pleasure to see, in some instances, crowned with success, particularly in regard to the healthiness of prisons, some of which were rebuilt under his inspection.

Most, if not all of his benevolent plans for the reform of prisons in Great Britain have been happily introduced, with very few exceptions, into the jails and penitentiaries of the United States.

But in order to a more general and happy reformation of criminals, he determined to visit other countries, to see the plans there adopted, in hope of collecting some information which might be useful in his country. For this purpose he travelled into France, Flanders, Holland, and Germany. He also visited the capital of Denmark, Sweeden, Russia, and Poland, and the chief cities in Portugal and Spain. In all these expensive and hazardous journeys, he denied himself the usual gratification of travellers, and declined the honors which were offered him by persons of distinction, applying himself solely to his own grand object. To him, the inspection of a jail or hospital, was more interesting than all the entertainments of a palace.

With what astonishment and gratitude he was received by the miserable inhabitants, may easily be imagined, since, while he made observations on their situation, he meditated their relief; and many distressed prisoners abroad, as well as at home, partook of his bounty, and some of them were liberated by it; for he considered all, of every nation, and people, and tongue, as brethren. Nor was he sparing of advice, or reproof, as he saw occasion, to persons of rank and influence, whereby the miseries of their countrymen might be relieved.

To his unparalled zeal for the happiness of others, he at last fell a victim, on the 20th of January, 1790, when he died of the plague at Cherson, the capital of the Crimea.

This advocate for the distressed of mankind—this ambassador of peace and compassion, was frequently admitted to an audience of crowned heads; need it be added, that the glorious task he was engaged in, rendered him greatly their superior.

He never put on a great coat in the coldest of countries, nor had been a minute before or after the time of appointment for six and twenty years. He never continued at a place, nor with a person, a single day beyond the period fixed for going, and he had not for the last sixteen years of his life, ate any fish, flesh, or fowl, but sat down to his simple cup of tea, milk and rusks. His journeys were from prison to prison—from one group of wretchedness to another, night and day, and where he could not go with a carriage, he would ride on horse-back; if that was hazardous, he would walk, but suffered no obstructions, moral or physical, to impede the progress of his philanthropy.

While absent on his first tour to Turkey, &c., his character for active benevolence had so much attracted the public attention, that a subscription was set on foot to erect a statute to his honor—and in a very short time upwards of fifteen hundred guineas were subscribed for that purpose. The language that he used when first advised of it was, "Have I not one friend in England, who would put a stop to such a proceeding?" At last, in consequence of two letters from Mr. Howard himself, the design was abandoned. It has, however, been resumed since his death, and surely of all the statutes or monuments ever erected by public gratitude to illustrate characters, either in ancient or modern times, none was ever raised in honor of worth so genuine and admirable as his, who devoted his time, his strength, his fortune, and finally sacrificed his life in the service of humanity. —*Biographical Dictionary.*

He visited all Europe and the East, not to survey the sumptuousness of palaces, or the stateliness of temples; or to make accurate measurements of the remains of ancient grandeur, nor to form a scale of the curiosities of modern art; nor to collect medals, or to collate manuscripts: but to dive into the depth of dungeons; to plunge into the infection of hospitals; to survey the mansions of sorrow and pain; to take the guage and dimensions of misery, oppression and contempt; to remember the forgotten; to attend to the neglected; to visit the forsaken, and to compare and collate the distresses of all men in all countries. His plan is as full of genious as it is of humanity. It was a voyage of discovery, a circumnavigation of charity; and already the benefit of his labor is felt more or less in every country.—*Burke.*

HOWARD.

Hail, generous Howard! thou dost bear
A name which Glory's hand sublime
Has blason'd oft, with guardian care,
In characters that fear not time;
For thee she fondly spreads her wings,
For thee from Paradise she brings,
More verdant than her laurel bough,
Such wreaths of sacred palm, are scarce till now,
The smiling seraph twin'd around a mortal brow.
Thy soul supplies new funds of health,
That fail not in the trying hour,
Above Arabia's spicy wealth,
And Pharmacy's reviving power.
The transports of a generous mind,
Feeling its bounty to mankind,
In spirit every mortal part;
And, far more potent than precarious art,
Give radiance to the eye and vigor to the heart.
Nature! on thy maternal breast
Forever be his worth engraved!
Thy bosom only can attest
How many a life his toil has saved;
Nor in thy rescu'd sons alone,
Great Parent! this thy guardian own!
His arm defends a dearer slave;
Woman, thy darling! 'tis his pride to save
From evils that surpass the horrors of the grave.
His care, exulting Britain found
Here first display'd, not here confin'd!
No single tract of earth could bound
The active virtues of his mind.
To all the lands, where'er the tear,
That mourn'd the prisoner's wrongs severe,
Sad pity's glist'ning cheek impearl'd,
Eager, he steer'd with every sail unfurl'd
A friend to every clime! a Patriot to the world!
Hayley.

—

Howard! I view thy deeds, and think how vain
The triumphs of weak man—the feeble strain
That flattery sings to Conquest's crimson car,
Amid the banner'd host and the proud tents of war!
From realm to realm the hideous War-fiend hies
Wide o'er the wasted earth—before him flies,
Affright, on pinions fleeter than the wind;
And Death and Desolation fast behind,
The havoc of his echoing march pursue.
Meantime his steps are bath'd in the warm dew
Of bloodshed and of tears;—but his dread name
Shall perish—the loud clarion of his fame
One day shall cease, and wrapt in hideous gloom,
Forgetfulness sit on his speechless tomb!
Oh, Charity! our helpless nature's pride,
Thou friend of him, who knows no friend beside,
Is ought so fair beneath the heaven's gleam,
As from thine eye the meek and pensive beam.
Thine are the ample views that unconfin'd,
Stretch to the utmost walk of human kind;
Thine is the spirit that with widest plan
Brother to Brother binds, and Man to Man.
Each act by Charity and Mercy done,
High o'er the wreck of time, shall live alone,
Immortal as the heav'ns and beauteous bloom
To other worlds, and realms beyond the tomb!
Bowles.

—

Patron of else the most despised of men,
Accept the tribute of a stranger's pen;
Verse, like the laurel, its immortal meed,
Should be the guerdon of a noble deed;
I may alarm thee, but I fear the shame
I must incur, forgetting Howard's name,
When Charity's my chosen theme and aim.
Blest with all wealth can give thee, to resign
Joys doubly sweet to feelings quick as thine.
To quit the bliss thy rural scenes bestow,
To seek a nobler amid scenes of woe;
To traverse seas, range kingdoms, and bring home
Not the proud monuments of Greece and Rome,
But knowledge, such as dungeons teach,
And only sympathy like thine could reach;
That Grief sequester'd from the public stage,
Might smooth her feathers and enjoy her cage;
Speak a divine ambition an zeal
The boldest patriot might be proud to feel.
Oh! that the voice of clamor and debate,
That pleads for peace till it disturbs the state,
Were hush'd in favor of thy gen'rous plea,
The poor thy clients, and heaven's smile thy fee.
Cowper.

YOUTH'S DEPARTMENT.

A DRUNKARD'S CHILDREN SAVED.

The Report of the House of Refuge contains the following memorandum:

1838, *January.*—A. B. and C. D., (brothers,) were received from Police, being 13 and 15 years of age, born in ——— county, of Dutch parents, who were at the time of their birth in very comfortable circumstances, but a few years afterwards the mother died. Shortly after which, the father became intemperate, removed to New York, married his second wife, and fixed his residence in the worst part of the city, and engaged in the worst sort of business, viz:—selling rum and receiving as lodgers in his house, the profane and lewd. Having become so fallen, the education of these boys was neglected, the mother did not provide their meals in season, and allowed them to go so filthy, they say—"We were ashamed to go to school."

Under these circumstances, they resolved to seek a better home, and to accomplish their object went to the Police, said they were orphans, without home, could get no work, wished to be sent to the House of Refuge. The magistrates granted their request, considering them fairly vagrants.

When the superintendent asked them why they so misrepresented their case as to say they were orphans, their reply was—"We did not wish to have it known that our parents lived in such a place.—And as they would not send us to school nor find us a place to work, we wanted to come to the House of Refuge; for we heard that the boys went to school, and learned a trade."

These lads were with us about eight months and behaved well, improved their education, had an opportunity to feel the revival of the lessons they were taught in infancy by a good mother, and the remembrance and influence of those lessons doubtless led these boys to tear themselves away from the haunt of vice in which their parents are now located.

In the month of September last, a worthy looking young man called at the Refuge gate and inquired for the superintendent;—being introduced to him, he said he had come to ascertain whether he had two brothers here or not, and giving the names of the lads whose case is before us, we told him such boys were here, at which he seemed much affected, and said he was truly thankful to find they were, for he had been looking for them some time.

"And now," said he, "I am a young man and have always done what I could to provide for my brothers and sisters; getting them work, giving them schooling, and putting them at trades, but being young, could not do as much as I would."

"Time was," said he—and here he wept—"time was when my father was as respectable as any man, but he got into bad company, and then into bad habits, and his family was neglected. I have educated my two sisters—older than these boys—and have given them trades, they are doing well' Now, sir, I am married, and in business for myself, pray tell me how to get these boys bound to *me*, that I may do what I can for them." The Superintendent readily directed him to our Indenturing Committee with a brief statement of the case, when an order was granted, and those lads were indentured to that excellent brother: and we fondly look forward to the period when having arrived to man's estate, they will cheerfully attribute to the agency of the House of Refuge the good lot that has fallen to them. They are at mechanical business in an adjoining State.—*Youth's Cabinet.*

ITEMS.

The pew-holders of the Hollis street church, have dismissed from their society, the Rev. John Pierpoint. This dismissal was brought about by the rum selling members of the church, on account of Mr. Pierpoint's opposition to intemperance.—*Dresden Chronicle.*

The Philadelphia papers announce the arrival at that port of the ship Euphrates, from Cape Mensurada, on the west coast of Africa. She is a slave vessel and was taken on the coast by a British man-of-war, and given to Gov. Buchanan, U. S. Consul at Liberia, who put a new crew on board and sent her to Philapelphia.—This vessel was fitted out at Havana under American colors.—*ib.*

Gen. Sir James Stewart died at Cheltenham on the 19th of August. He was the oldest officer in the British army, having entered as a cornet in 1776.

The Charleston papers give intelligence of the death of Col. A. Blanding, President of the Charleston and Ohio Rail Road Bank.

Advantages of Good Conduct.—The Bangor Whig relates a little incident, which has a moral to it. One of the mechanics in that city has had, during the late hard times, several handsome orders for articles of his manufacture, for shipment to the West India. They came from a capitalist in a neighboring town, and while the artisan found such orders pleasant and convenient at a time when his neighbors were lying on their oars, he could not exactly account for the preference given him.

Recently, however, the secret has come out. The gentleman to whom the mechanic has been indebted for his extra business, was in the habit of noticing our friend while the boy was not sensible that any body was taking particular notice of him, this man was noticing his good conduct and industry Without any acquaintance between them the capitalists were resolving that such an apprentice would make an industrious and careful man; and when the boy passed his minority, and commenced business for himself, he reaped the advantage above stated from the care of the interests of his old employer, and from his good conduct. We may remark that this is by no means a rare instance to effect the following cause; but it is worthy of comment, as being so directly traceable as to afford striking confirmation of a general principle.—*N. Y. Dispatch.*

Lower Canada.—The Montreal Herald of Friday, informs us that on Thursday fifty-eight of the Canadians under sentence of death, were shipped on board the steamer British America, to be reshipped on board the transport Buffalo, in which they will be transported to Botany Bay for life. They were chained in couples, and escorted to the steamer by a guard of the 24th regiment. "The Upper Canada rebels and brigands," the Herald says, "whose sentences of death were commuted to transportation for life, arrived on Thursday evening by the Lachine canal, and were shipped on board the steamer Saint George, are destined to share the fate of the other rebels. Both steam boats sailed as soon as they had received their cargoes." The editor was told that the parting scene between the convicts and their relations were distressing in the extreme, and caused tears to flow from all eyes that witnessed it. Albeit they were "unused to the melting mood." Twenty-five prisoners are to be released on giving satisfactory security that they will leave the Province in forty-eight hours after their liberation, and never return to it again. Two others, named Levesque and Prieur, are to enter into a similar engagement, with this difference, that they are to remove six hundred miles from the Province.

Origin of Tarring and Feathering.—The Duke of Brunswick and his army coming before a rich monastery, into which the country people had carried all their goods and cattle, the Duke desired the overseer of it to send out some provisions for his army, and he would give them his protection and see them repaid, but they peremptorily refused. "Well," says the Duke, "as fair means will not do other means shall;" so he fell to battery and they yielded; there was an infinite store of provisions given to the soldiers. The Duke took two of the frairs and daubed them all over with tar and pitch, and then made them tumble themselves in feathers, so that they looked like two African monsters; he next sent them home to tell their father he had sent him two fledged owls for his dinner.

There is a man in Bangor who has invented a telescope so powerful that he has discovered a wart on the face of the man in the moon. The same gentleman has since made the astonishing discovery that the moon is not made of green cheese, as Sir John Hershel and others ignorantly have supposed, but that it is nothing more nor less than a mill-stone for grinding up the small stars into materials for the Aurora Borealis.

Export of Flour to England.—Lyford's Price Current says: The ship Robert Pulsford, which sailed for Liverpool a few days since from this port, had on board four thousand barrels of flour, and the Gulnare, now nearly loaded for London, will have also four thousand barrels. This was purchased and shipped in pursuance of orders received by the Liverpool steamer, but by the arrival of the Great Western, further purchases were countermanded. Letters, however, were received intimating that probably a market might be found for some of our surplus wheat, if the prices would justify shipments, to incorporate with the English for early grinding, as it might be doubtful whether the latter, from the late harvest, would be in a proper condition for such process sooner than December.

A forged check for $2700 was presened at the counter of the Mechanic's Bank on Saturday last and paid. It was drawn to order, and the signature of the firm by which it purported to have been drawn, as well as that of the endorsement, were forged with much exactness.—*Philadelphia National Gazette.*

Fatal Accident.—On the 19th ult., Mr. John C. Poole, one of the conductors on the Baltimore and Ohio Rail Road was killed, by being pressed between two cars. He was engaged in attaching two cars together when the train of cars were backed up against him by the locomotive, and crushing him horribly. He lived till the next day at 2 P. M. when he died.

GROWTH OF WHEELING, VA.

The Wheeling Gazette gives the following items of the increase of that place since 1830. It appears that from 1830 to the present time the number of licensed merchants have increased from 59 to 114. Instead of three foundries, there are now 5 and one extensive rolling-mill. At the first mentioned time there was but one glass manufactory, the annual product of which was worth from 23 to $25,000; now there are 2 green and window, 1 crown and 1 white flint glass works, the product of which is about $140,000, without including the latter.—In 1830 we had 1 paper mill, manufacturing about $10,000 worth of paper—now we have 4, three of which make about $130,000 worth. Instead of 1 steam saw-mill then, we have 9 now, and other manufactories have increased in a similar proportion. In 1829, there were 458 steamboat arrivals and departures—in 1838 there were 1865 do. In 1830, 8 steam boats were owned in part or whole by our citizens—in 1838 there were 8 built here, and this year there will be at least 10. The sale of goods by the merchants and manufacturers was variously estimated in 1830 at from $900,000 to $1,200,000—last year the manufacturers alone amounted to upwards of $1,150,000.

The entire amount of postage received by the Department last year was very near three millions of dollars. Of this, New York paid $665,000; Pennsylvania $331,000; Massachusetts $218,000; Ohio $185,000; Virginia $138,000. New York city pays as much as all Pennsylvania.

ADVERTISEMENTS.

O. WHITE,
BOOK BINDER,
NO. 104, MAIN-STREET,

ZANESVILLE, OHIO.

August 1, 1839. 2tf

S. C. HAVER,

In the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,

Corner of Vine and Gano Streets:

PUBLISHED BY G. G. MOORE,

Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

We intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

Terms.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

Postage.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

Advertisements, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

PROSPECTUS OF

The Methodist Protestant Letter-Press.

The Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The power of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the cause of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts.	- -	1 copy for a year
" $5	- -	12 copies.
" 10	- - -	25 "
" 20	- - -	60 "
" 30	- -	100 "
" 50	- - -	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 500 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this in no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia

Public Notice

Is hereby given, that application will be made to the Trustees of Hopewell Township, for a township road, to commence a few rods East of Mr. Coomrine's dwelling, at the line between Geo. Norman and Alexander Watson, and to run South, at, or near said line, to the South East corner of John Rodman's land, thence the best rout so as to intersect the Cooper road West of the inclosure of Wm. George.

October 5, 1839. 3t7

To Farmers and Thrashers.

The subscriber respectfully informs all, who may feel interested, that he continue building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

THE

WESTERN RECORDER

IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞*The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The Western Recorder will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the Western Recorder will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The Recorder will take a firm stand against Clerical Supremacy.

THE WESTERN RECORDER.

lume 1. ZANESVILLE, OHIO, THURSDAY, OCTOBER 24, 1839. Number 10.

Ligonier Mission—This mission will include Stallstown and Knox school house, f the Union circuit, and Hopewell, of the Clearfield circuit, including all the terri- ory between the above named circuits.

Bear Creek Mission—This mission will embrace the district of country lying be- ween Union and Monongahela circuits, taking into its bounds little Kentuck and Bear creek societies.

Randolph Mission—This mission will include Randolph and other adjacent coun- ies in Western Virginia, that are not within the bounds of other circuits.

Tyler Mission—Tyler, Penington, Ohio and Wood counties, Virginia.

Alleghany, or German Mission—Embracing Alleghany and other adjacent towns n the Ohio river.

Resolved, That this Conference recom- end to each of its members in the State f Ohio, to circulate petitions, and get sign- rs thereto, to be forwarded to the next Legislature, praying that honorable body o pass such law or laws as will prevent he vending of cakes and all that kind of merchandize, which gives annoyance at camp and other meetings.

Resolved, That hereafter, (and taking effect at the present Conference so far as possible,) the members of Conference shall pay for the keeping of their horses during the session of Conference, which shall be refunded by their respective circuits and stations, as travelling expenses.

The Conference adopted the following resolution:

Whereas, Several inaccuracies have occurred in the reports of the number of the members in society on several circuits and stations, *Therefore Resolved*, That the brethren having ascertained such inaccuracies be required to report them to the publishing committee, and that said committee be required to have them published in connection with their report.

Resolved, That each superintendent be requested to read the Elementary Principles and General Rules twice in a year, at all the prominent appointments in his charge.

Resolved, That a Conference Missionary be appointed, and that we earnestly recommend to all the superintendents and delegates to use vigorous measures to obtain his support.

The following report on the subject of Slavery was adopted by the Conference, and ordered to be published in the Western Recorder:

Whereas, In the judgment of our most enlightened and entelligent citizens and statesmen, the system of Slavery, as established in this country, is a very great evil; *And whereas*, A very great evil may be expected in the issue to produce very destructive results; *And whereas*, A great solicitude is apparent in thousands of the most virtuous and conscientious men in our nation, to ascertain the best method of averting the anticipated evils of this system, that they may not destroy the happiness of our posterity; *And whereas*, Some of the measures of the Abolition societies are deemed of injurious tendency by many who are really anti-slavery men in principle, and are willing to be such in operation—Therefore

Resolved, 1*st*. That while we approve the fundamental principles of the Abolition societies, and their industry to sustain them, yet so far as any man or number of men use efforts to associate the right of sufferage with the right of personal liberty on the part of colored people, or to promote a promiscuous equality and intercourse of white and black people in domestic circles, so far they shall not have the aid of, but shall be discountenanced by this Annual Conference.

Resolved, 2*dly*. That all fair and lawful efforts consistent with our paramount obligations to serve the cause of ecclesiastical liberty, to obtain or to communicate information on the nature and tendancy of the Slave system, on the results of emancipation in the West India Islands, or on the best probable method of bringing the Slave system to a peaceful termination, shall be sanctioned and encouraged by this Conference, both in regard to its own members and to all other people.

GEO. BROWN, GEO. HUGHES, JNO. BURNS, } *Pub'ng Com.*

COMMUNICATIONS.

For the Western Recorder.

REPORT OF THE PITTSBURGH PREACHERS' AID SOCIETY.

The fifth Annual Meeting of the *Preachers' Aid Society*, of the Methodist Protestant church, of Pittsburgh, was held on Monday, September 30th, 1839. The meeting was organized by calling Charles Craig to the chair, and appointing Thomas Oliver, Secretary. After singing and prayer, the Secretary and Treasurer presented their reports to the meeting. The following is the Treasurer's report for the past year:

1838. George McClean, to the P. A. S.,		Dr.
Amount in the Treasury, at the last Annual Meeting,		$99 02
Interest on permanent fund for one year,		49 75
Interest on Distributing fund,		2 85
Total,		$151 62
P. A. Society, to George McClean,		Dr.
Paid to Joab Ragan's orphan son, as per order, to one year ending September, 1838,		$20 00
Do. 1839,		20 00
June 3, 1839, paid to John Elliott's widow and orphans, as per order.		40 00
Discount on uncurrent money,		72
Total,		$80 72
Amount of the Distributing Fund in the Treasury,		70 09
Amount of the Permanent Fund,		827 00

The following persons were elected officers of the Society for the ensuing year:

CHARLES CRAIG, *President.*
GEORGE MCCLEAN, *Treasurer.*
THOMAS OLIVER, *Recording Secretary.*
JOHN L. SANDS, *Corresponding Secretary.*

The Board of Managers, consist of twelve members of the society.

At a meeting of the Board of Managers, on Friday, October 4th, the following appropriations were made: Ten dollars to the Rev. William Armstrong; ten dollars to the orphan son of Joab Ragan. The above appropriations are for the present, until the Board receives the additional information which they have sent for.

I suppose it is generally known that this society has received a charter from the state of Pennsylvania. The object of the society, and the terms of membership, are set forth in the first and second articles of the constitution, as chartered.

Article 1. The object of the society shall be to assist the superannuated itinerant ministers and preachers, and the widows and orphans of such itinerant ministers and preachers, as shall at the time of their decease be members of the Pittsburgh Annual Conference of the Methodist Protestant church.

Article 2. Any person may become a member of this society by paying into the Treasury fifty cents annually; or by paying ten dollars within one year, shall be a member for life.

Come brethren and sisters, those of you in this section of the Conference, who do not find it convenient to contribute to the funds of the *Preachers' Aid Society*, of the Pittsburgh Conference, we invite you to become members of this society—hand over your cash to any of the preachers and they will forward it to Pittsburgh. We have no desire to retard the progress of the Conference society; both societies have the same object in view—but we want to leave the people without excuse. Will not our friends in the country, who have been accumulating their hundreds and thousands for the last few years, come up to the work and redeem their character for liberality, before it be too late? The society in Pittsburgh, with very little aid from other places, has paid in more than *one thousand dollars*.—Will the circuits see their efficient preachers go to Conference half paid, and allow themselves to be put to the blush, by the Conference Preachers' Aid Society, presenting four dollars and eighty cents, at the next annual meeting, as the proceeds of the society? It is to be hoped, such will not be the case. Let the preachers go forward in this matter. A score of resolutions are worth nothing, unless they are acted upon.—Action! action!! brethren;—we must all be coworkers together to perpetuate an efficient itinerant ministry, if we intend to sustain a FREE Methodist church. If we calculate on success, we must place more value on the welfare of the Church, and the privilege of saying to our children and others, here is a church in which you have all that is valuable in Methodism, without *clerical tyranny*, than we do on our dollars and cents. THOMAS OLIVER, *Secretary.*

Pittsburgh, Pa., Oct. 16, 1839.

The letter which contains the following extract was received just as we were leaving for Conference; but during our absence it was mislaid. As it contains matters of some interest, we will give it at this late date.—ED.

"*Deersville, Ohio, Aug.* 28, 1839.

Brother Springer—Our cause on Deersville circuit is on the advance. At some of the appointments we have had considerable improvement in the congregation, and we trust in personal piety. In Westchester, we have commenced a frame house of worship this year, and had it so far completed, that we occupied it the 17th and 18th instant, for a 'two days meeting,' which was well attended by the people of the neighborhood. A subscription was taken to liquidate the debt on the house.

We have on this circuit one good brick meeting house, two frames, one log, and another on the way. A number have obtained religion, and about forty have been added to the church.

TALLENTIRE & MAYNARD."

WRITING FOR THE PRESS.

Every word, the sense of which is not perfectly obvious, should be so written that every letter will show for itself. This should be particularly observed in writing proper names. An observance of this rule will secure the author against the vexation of having his article incorrectly copied, and what to a conscientious man will be an equally strong inducement, it will save the compositor a great deal of time and trouble—the first of which is money to him, and of the second he has plenty without deciphering hieroglyphics.

2. Write only on one side of the paper, so that it can be divided if found necessary.

3. Punctuation ought to be either correct, or not attempted; the villainous habit some writers have of dashing their productions, is a great bore to a printer. If the writer cannot do it as it ought to be done, he had better leave it altogether to the compositor.

4. Abreviations ought to be avoided, as some compositors are very apt to "follow copy," as it is technically called. This is more particularly applicable to advertisements.

An observation of these rules will enable us all, contributors and printers, to get along more pleasantly.

YOUTH'S DEPARTMENT.

From the Sabbath School Messenger.

MISCHIEVOUS THEODORE:

OR, THE REAL ROUGE UNPUNISHED.

One cold, frosty morning in the gloomy month of November, the boys who composed a village high school, had crowded into the school house before the hour for study, and were gathered in a knot round the blazing fire, listening to a story about some wicked boy who, the night before, had carried off the window-shutters from a poor widow's shop, and hid them in an enjoining field. As the particulars of this sinful act were unfolded, loud and boisterous mirth expressed the delight these idle fellows felt at such a feat. At a little distance from the rest stood two other boys named Oliver and Theodore, in close and earnest conversation.

Said Theodore, "It would be prime fun, if you would throw these crackers into the fire; how the boys would jump and run! I'd throw them in if they were mine."

"So would I," replied Oliver, "if Master wasn't in: but he'd know who did it, and I don't see the fun in getting a whipping."

"But only think," said Theodore, "how they would crack and fly. Just see what a grist of them are around the fire!—Why, they would scatter like blackbirds. Come, Oliver, do put them in."

"I've a great mind to," replied Oliver, hesitatingly; "but I am afraid of being found out. If I could do it without Master's knowing it, I would in a moment; but, Theodore, I don't love being thrashed."

"Well, I always thought you were a coward," said the wily Theodore; "see, it's almost nine, and we must go to our seats in a few moments—will you give the crackers to any body else who'll put them in the fire?"

"Yes," answered Oliver, "to be sure I will. I want to see the fun as well as you."

Theodore here went towards the fire, and touching one of the group on the shoulder, whispered—

"Aaron, I want to speak with you."

The boy followed him a little way down the room.

Said Theodore, "don't you want to see some sport this morning, Aaron?"

"Sport," said Aaron; "yes, I'm always ready for a frolic; what is it?"

"Why," replied the tempting boy, "Oliver has got a bunch of crackers, and I've been thinking what a scattering they would make among the boys if some one would put them in the fire; and Oliver says he will give them to any one who will put them in. Won't you do it?"

Aaron rubbed his hands for joy, and his bright eyes sparkled at the prospect of mischief, for he was a naughty boy and loved idle pranks, so turning to Oliver, he said—

"Here, hand over your crackers, and I'll make these fellows jump and fly like scared rats."

Taking the crackers, he softly crept up to the group, and soon succeeded in edging himself close to the fire.

"Holloa!" exclaimed he, pointing to a distant window, "what's that?"

Every head was turned towards the window, and as a dozen voices asked—"What's there?" he thrust the crackers deep into the fire.

"Don't you see what's there?" replied he to their question.

"No!" said the boys.

"Nor I either," answered he with a laugh.

The boys were promising to pay him for his joke, when bang—bang—bang. came the noisy crackers into their midst, Away they rushed—down went the chairs—some of the boys lay sprawling on the floor—some cried—some laughed—the scene was one of utter confusion.

The Master, who was mending his pens at his desk, started up.

"What's all this mean? Who put that in the fire? To your places. I'll settle for this scandalous behavior!" exclaimed he in a breath.

The boys took their seats, with many a nod and wink, except a little fellow named Andrew, who stood with his hands on his face, and crying most piteously—"Oh my eye, oh my eye!"

The crackers had struck him.

After examining Andrew's eye, and finding it but slightly hurt, the teacher put the question to the school—

"Who put those crackers in the fire?"

There was a deep silence, but no reply. The teacher continued—

"No scholar shall quit the school until I know who did this mischief."

A little boy who had observed Aaron's movements, stood up and said, "It was Aaron Hill, sir."

Aaron was called up.

"Did you put those crackers in the fire?" inquired the teacher.

"Yes sir," said Aaron, "but Oliver Naylor gave them to me."

Oliver was then called up, and the guilt of both being proved, they were severely and deservedly punished.

Theodore, from the moment that Aaron consented to burn the crackers, had been in his seat, very demurely and gravely engaged in looking at his book, and by cunning and hypocritical behavior escaped punishment, although he was the real instigator of the uproar.

But was Theodore happy because he escaped punishment? Oh no; he FELT gulity, and he KNEW he had caused the punishment of his friends. He felt ashamed to meet them afterwards, for he knew he had injured them; and he has often said to the writer, that, though grown up to be a man, he had never forgiven himself for his ungenerous conduct in leading his playmates into trouble. Be sure, my young readers, then, that although you may escape punishment by cunning and deception,, yet your consciences will trouble you, and the great God will be offended with you until you repent. The best way is, neither to do nor invent mischief, and then the Almighty—your conscience—your teachers—and your friends will be at peace with you. D. WISE.

"REMEMBER THE SABBATH DAY TO KEEP IT HOLY."

THE SUNDAY PARTY.

As I walked one Lord's day to the house of God, I saw a party of young people before me, whose volatile manners ill accorded with the sanctity of the day: and just as I was passing them, I heard one say:

"Indeed, I think we shall do wrong—my conscience condemns me—I must return."

"There can be no harm," replied another, "in taking an excursion on the water, especially as we have resolved to go to a place of worship this evening."

"I must return," rejoined a female voice, "my conscience condemns me.—What will my father say, if he hears of it?"

By this time they had reached the bridge; and one of the party was busily engaged with a waterman, whilst the rest stood in a close debate for a few minutes, when they all moved towards the water. Two of the gentlemen stepped into the boat, two more stood on the water's edge, and the females were handed one by one into the boat. It was a fine morning, though rather cold, and the tide was running at its usual rate; many were gazing on them, when a naval officer, standing near, called to them through the palustrades, and said:

"A pleasant morning to you."

One of the gentlemen suddenly arose to return the compliment, but from some cause which I could not perceive, he fell into the water. This disaster threw the whole party into the utmost consternation: and each one instead of remaining in his seat, rushed to the side of the boat over which their companion had fallen, which upset it, and were instantly plunged into the deep. The shriek which the multitude of spectators gave, when they beheld this calamity, exceeded any similar noise I ever heard;—several females fainted; boats instantly put off; and in a few minutes the waterman rescued one, and another, from a premature grave. Having picked up all they could find, the different boats rowed to the shore, where some medical gentlemen were in waiting; but when the party met together, no language can describe the horror which was depicted on every countenance, when they found that two were still missing.

"Where is my sister?" said the voice which had said, only a few minutes before, "there can be no harm in taking an excursion on the water, especially as we have resolved to go to church in the evening."

"Where is my Charles?" said a female who had appeared the most gay and sprightly when I first saw them.

At length two boats which had gone a considerable distance were seen returning. On being asked if they had picked up any, they replied, "Yes, two." This reply electrified the whole party; they embraced each other with the tenderest emotions; they wept for joy, and so did others who stood around them.

"Here's a gentleman," said the boatman—"but I believe he is dead."

"Where is the lady?" said the brother, "is she safe?"

"She is in the other boat, sir."

"Is she alive?—has she spoken?"

"No, sir, she has not spoken, I believe."

"Is she dead? oh, tell me!"

"I fear she is, sir."

The bodies were immediately removed from the boat to a house in the vicinity, and every effort was made to restore animation, and some faint hopes were entertained by the medical gentlemen, that they should succeed. In the space of little more than ten minutes, they announced the joyful news that the gentleman began to breathe, but they made no allusions to the lady. Her brother sat motionless, absorbed in the deepest melancholy, till the actual decease of his sister was announced, when he started up and became almost frantic with grief. He exclaimed, "Oh, my sister, my sister, would to God I had died for thee!" They were all overwhelmed with trouble, and knew not what to do.

"Who will bear the heavy tidings to our father?" said the brother, as he paced the room backward and forward, like a maniac broke loose from the cell of misery. "Oh, who will bear the heavy tidings to our father?" He paused—a death-like silence pervaded the whole apartment.—He again burst forth in an agony of despair: "I forced her to go, against the dictates of her conscience—I am her murderer—I ought to have perished, and not my sister. Who will bear the heavy tidings to our father?"

"I will," said a gentleman who had been unremitting in his attention to the sufferers.

"Do you know him?"

"Yes, I know him."

"Oh, how can I ever appear in his presence, after having enticed one of the best of children to an act of disobedience which has destroyed her!"

How the old man received the intelligence, or what moral effect resulted from this disaster, I never heard; but it may furnish me with a few reflections, which I press upon the attention of the reader.

As the Sunday is instituted for the purpose of promoting your moral improvement and felicity; never devote its sacred hours to the recreations of pleasure. He who has commanded you to keep it holy, will not suffer you to profane it with impunity. He may not bring down upon you the awful expression of his displeasure, while you are in the act of setting at open defiance his authority; but there is a day approaching, when you must stand before him, and it may not be far off. By a sudden visitation of Providence, you may be removed from the midst of your gay companions, to appear in his presence. Resist the first temptation to evil, or ruin may be the inevitable consequence.

MINERALS IN GREECE.—Professor Russeger, the Austrian geologist, who has been travelling for sometime in continental Greece and the Morea, returned to this city (Athens) a few days ago, having made some important discoveries—amongst others a large tract of good iron ore in Maiue, several quarries of slate which might be worked to advantage, and a large quantity of lithographic stone in the island of Negropot, which is so common on the spot that the houses of the whole adjoining village are built of it. He has also discovered several districts of coal. Whilst in continental Greece, he spent some time in examining the large inland lake now called Tobolias (the ancient Kopai) between Thebes and Livadia, with a view of draining it, and restoring it for agricultural purposes. This gigantic undertaking was commenced by the ancients, who evidently intended to drain it by means of a subterraneous channel under the surrounding mountains, and accordingly sixteen square perpendicular shafts, of five feet in diameter, were sunk at convenient distances through the solid rock. These might easily be used for the same purpose now, though partially filled up by rubbish, and the tunnel commenced in a horizontal direction from the bottom of each shelf.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY, ... OCTOBER 24, 1839.

☞ We give in this number the Act incorporating the "*Preachers' Aid Society*," as promised in our last, so that our friends may see the nature of the charter, which is designed to give directions to their donations for the fatherless, the widow, &c.

The Supreme Court will commence its session in this town on Monday next. The Court of Common Pleas, on Monday the 18th of November.

The Banks of Zanesville and Putnam still continue to redeem their notes, and unless times get worse, it is thought they will continue to redeem them.

The weather continues very warm for the season, and we have had no rain for several weeks.

The death of Gen. Hayne is much lamented in the South. A committee is appointed, in the city of Charleston, to raise collections for the purpose of erecting a monument to his memory.

The Banks of Cincinnati have suspended specie payments for thirty days; those of Charleston, S. C., have also suspended.

The Greens to whom we alluded in our last, as being charged with the murder of Thompson, were committed to jail to await their trial.

The Presbyterian Synod of Ohio, closed its session this week in our town. The ministrations of the Rev. W. H. McGuffy, President of Athens college, during the session, excited considerable interest among the citizens.

Flour.—It is estimated, by those competent to judge, that the loss sustained on this article last year, by the county of Muskingum, was *one hundred thousand dollars*. This loss does not fall upon the farmers, who got an extra price for their wheat, but upon the flour dealers.

The following is the result of the late Ohio elections:

SENATE.

Administration, 25—Whigs 11—majority 14

HOUSE.

Administration, 49—Whigs 23—majority 26

FOREIGN NEWS.

By the arrival of the steam ship *Liverpool*, eighteen days later from England, London dates have been brought to September 20th, and Liverpool to the 21st.

A great deal of uncertainty seemed still to hang over the state of the English harvest. The wet weather still continuing, threatens extensive injury to the crops. Some of the English papers speak of the prospects of a famine, without the immediate repeal of the "Corn Law."

A great deal of interest seems to be taken in the English and French papers, because of the house of Hottinguer & Co., of Paris and Havre, having dishonored the draft of the bank of the U. States, for between six and seven millions of francs. It is stated that Messrs. Rothchilds and Sons of Paris, have interfered to cover these drafts, or that they have agreed to provide for their payment when they shall have reached maturity.

"The Paris Messenger gives the following explanation of the refusal of Messrs. Hontinguer to cash bills drawn upon them from the United States. 'During the late financial crisis, several English and French bankers, either advanced money or gave their signatures to bills for the relief of certain American houses, and since that time large quantities of cotton have been consigned to London and Havre to meet these obligations. It appears, however, that fresh bills were also being drawn on account of these consignments. The cotton market being so dull that sales could not be effected without a sacrifice, and Messrs. Hottinguer, who had lent assistance to the United States, being unable therefore to realize money upon the guarantee in their possession, they have, as a measure of precaution, refused, in the present state of the market, to pay or accept the bills which have been drawn upon them."

Spain.—Don Carlos, and most of his followers, have fled from Spain and left the Queen Regent in quiet possession of her dominions. He has abandoned all further pretensions to the crown of Spain; domestic tranquility will of course be restored.

Turkey—No great progress seems to have been made toward an adjustment of the difficulties between the Pacha and the Porte. The Sultan or rather his ministers, had addressed a letter to the representatives of the meditating powers, urging an immediate settlement, and expressing a desire that conferences might be opened at Constantinople. His note was considered, by some, as a renunciation of the treaty of Unkiar Skelessi, which constituted Russia the sole protector of Turkey.

Our town seems to be affected with the scarcity of money, and check upon business that is afflicting other places. This state of things has been approaching us for some time, but, at last came upon us with a sudden shock. The change, for the worse, among our mechanics and business men, has been very great indeed. It is the opinion of some of our best calculators that the business of the country will have ultimately to come down to the hard currency standard. In doing this, property will, no doubt, go as far below par as the rage for speculation has carried it above; and to a great extent pass from one set of hands to another. In view of such prospects it is unquestionably the duty of every man to avoid going in debt, and so soon as he can to square up his business with the world. "The prudent man foreseeth the evil and hideth himself."

The Banks.—It is somewhat amusing to hear the various causes assigned for the pressure upon the Banks, which has induced them to suspend specie payments. Each leading journal of the country assigns its own reason, till as many as one dozen have been given as the true cause of the difficulty. The following remarks, taken from the Lutheran Observer, we think as much to the point as any thing we have seen:

"Last week the Banks in Philadelphia suspended specie payments; the next day the same course was pursued by the Banks in Baltimore, and we presume all the Banks in the country will soon 'follow suit.' Various causes are assigned for this measure; some attribute it to the gradual reduction of the Tariff, others to the suppression of the Opium trade in China, others to the advance of interest on money in England, and yet others to the large amount of funds borrowed from Europeans to prosecute our gigantic schemes of internal improvement. Possibly all these events may more or less have contributed *indirectly* to the production of the evil in question.

"But in our view there is no necessity to go so far in order to account for it; the *true* and *direct* cause must be sought in the fact that we are an extravagant, speculating and 'go-a-head' nation, anxious to amass fortunes in too short a time, carrying on a rousing trade with a slender capital, depending on the credit system and loans from Banks, and indulging in costly apparel, expensive furniture, &c., far beyond our means or our ability to pay. This has led to the purchase of more than we can pay for; it has occasioned immense importations from England and France; our wholesale merchants have deeply involved themselves in debt to Europe; our country merchants have done the same in reference to the city merchants, and the people in the country have purchased on credit from the country merchants. Thus all are in debt, many to an immense amount; our creditors in Europe want pay, and they have a right to it, but our Bank notes are not the kind of currency that suits them; hence the specie is carried out of the country by millions, and will continue so to be carried until they are paid, either with the precious metals or by exportations of cotton, tobacco, flour, &c. The suspension on the part of the Banks may retard the evil but cannot cure it. Ultimately the manufacturers on the other side of the water, *must* be *paid* or be *defrauded*. If paid, it must be in silver or gold, or American produce, hence the transportation of the metalic currency to Europe cannot be prevented, except in the case of fraud, until the silver is gone or the balance of trade vibrates in our favor.

"It appears to us to be the height of empiricism in political economy, to attempt to keep the precious metals in a country when the balance of trade is against it, or in other words, when its outlay is greater than its income. If a man spends more than he makes, and his notes, whether Bank or personal, will not be taken by his creditors, he must yield up all his hard money to them or else defraud them.

"So it is with nations. We have been importing more than we can pay for by our produce; our Bank bills are good for nothing in Europe, and hence, if we wish to be honest, we must send off our specie. It is therefore downright folly to ascribe the present revulsion in monetary matters, mainly to the Tariff, the Opium trade, &c. &c. However these causes may have contributed remotely and indirectly, to the production of the evil in question, the true, real, immediate and palpable cause lies in the fact that the balance of trade is and has been for some time, largely against us.

"The remedy is to curtail our expenses. Let us cease importing so extravagantly from Europe; let the Banks not encourage these tremendous speculations by circulating such immense amounts of notes, which they *promise*, but whenever it suits them, *refuse* to redeem; let the country merchants not purchase so largely when their capital is so inadequate, and let the people cease buying so much from the store-keepers on credit. In a word, let there be less extravagance in every department of business and of life, less trusting without the ability to pay when the debt becomes due, and less dependence on the Banks; and then the evil will be remedied; then our exportations will exceed our importations, our income, our disbursements, and the specie will remain in the country; thus, Tariff or no Tariff, Opium or no Opium, we shall be a prosperous people so far as money can make us so, and certainly escape those mighty monetary embarrassments, those calamitous shocks and panics, which so frequently afflict our devoted country."

Every one recollects the predictions which were abroad when the Government withdrew her patronage from the United States Bank, that scarcity of money would be the consequence; but the direct contrary was the effect. When the check, which that powerful institution imposed on the State Banks was withdrawn, they yielded to their temptations to make money, and threw out profuse issues upon the public. Bank accommodations became numerous, and the means for trade and speculation exceeding any former period.—And as man's desires always enlarge in proportion as the objects of gratification present themselves, so his appetite for speculation increases as the facilities for indulgence multiply around him. Owing to this state of things, a morbid excitement for speculation has existed throughout the country for a number of years, which has overdone every kind of business, foreign commerce among the rest. Re-action and ruin will inevitably follow this state of things—sooner or later. But whether the storm is now lowering to burst upon us, or whether it will be deferred to a future period, depends upon so many casualties, that no calculator, however well versed in the systems of finance and commerce can predict with any degree of certainty. But the system of retrenchment recommended in the foregoing extract, will no doubt, tend to protract the evil, and to mitigate it when it comes.

We extract the following from the last number of the "Letter-Press:"

"We are exceedingly anxious, for the good of all concerned, ourselves, of course, included, to ascertain the principles which should govern Christian Editors when they engage in controversy. We know very little, in relation to these proprieties; but indulge a hope, that some of our brethren will instruct us fully. For the present, we respectfully subjoin a few rules, as a beginning:

"1. Use the name of the Journal—not of the Editor.

"2. Never deal in personal reproaches.

"3. Never indulge in partizan flatteries or censures.

"4. Never descend to undignified and opprobious epithets.

"5. Be not dictatorial.

"6. Be not dogmatical.

"7. Be not contemptuous."

To this the Protestant of the 19th inst. "adds, rather by way of summing up the whole, than of giving any additional suggestion,

"8. Let your moderation be known unto all men."

These, as general rules, are all certainly very good. But some of them, like most general rules, are subject to exceptions. Instance the 7th, "Be not contemptuous;" i. e. as we understand it, never express yourself contemptuously of any "christian editor." Now suppose a christian editor should do a contemptible act, and the cause of truth required that it should be noticed, ought we to talk about it as coolly and dispassionately as if we were discussing an abstract principle of metaphysics? We think it will be found, on examination, that all human virtues lie in the neighborhood of their correspondent defects.—Here—

"Each pleasure hath its poison too,
"And every sweet a snare."

Any man who will suffer himself to look composedly on the exhibition of meanness, and to talk about it in soft, dispassionate language, we will venture to affirm, is in the neighborhood of being mean himself. If he would strengthen the moral faculties he must gather with indignation at the exhibition of dishonorable actions, and if duty requires him to say any thing on the subject he should express himself, not moderately, but with a severity bordering on rashness against them. For example, we give our Lord to the Pharisees—"Ye hypocrites"—"Ye serpents"—"Ye generation of vipers, how can you escape the damnation of hell!" And if we are to judge by the fruits there is about as much decorum with some professed christian editors as with these Pharisees.

"Let your moderation be known to *all men*"—yet there is a time when moderation ceases to be a virtue, viz: when it fails to obtain the ends of truth and justice. To illustrate this position, we will give the case of the Philanthropist in controversy with the Letter-Press. Nothing can be more conclusive, candid and gentlemanly than the arguments of the Letter-Press; they are entirely satisfactory to intelligent and candid minds, yet it is a lamentable fact, that, with a majority of readers, one portion of the Dr.'s tarter would produce a greater effect than a volume of such investigations. If therefore the cause of truth should unfortunately bring you in contact with such men, the only way you can do justice to the subject is to fight them with their own weapons. You should first use calm and candid reasonings, but if these be disregarded make them feel the keen lashes of irony.

The Lexington, Ky., Observer of the 16th inst. states:

"We learn from the Maysville Monitor of Thursday last that the Rev. J. B. Mahan, with some others, was last week tried in Georgetown, Ohio, upon an indictment charging them with the forcible rescue of a negro, who had been taken up as a runaway some two or three months since. A conviction under the indictment was the consequence, and the judgment of the court in reference to Mahan, was, that he be fined three hundred dollars and imprisoned for thirty days."

Dickinson Shearer is the name of the person who kidnapped the boy from Worcester, Mass., to which we alluded in our 8th number, and sold, or affected to have sold him to Wilkinson. The authorities of Fredericksburgh, Va., whither he had conveyed him, suspected him, and the Mayor immediately wrote a letter to the Post Master at Worcester, giving information, of which the following is an extract:

"Sir:—On the 15th inst., a man calling himself Dickinson Shearer, arrived here, and had with him a negro boy, whose name he called Franklin, and whom he called his slave. He parted with this boy last night, and, it is feared sold him to a trader. Information is sent to you, that proper inquiries may be made, and, if possible, evidence sent here to procure the boy's freedom, and to identify him. This, of course, must be some white person; and the abolitionists, if there be any among you, have now an opportunity of displaying their humane feelings.

I am, Sir, respectfully,
Your obedient servant,
Benj. Clark, Mayor."

On the reception of this notice two men were immediately dispatched; on their arrival at Fredericksburgh, they found Shearer and Wilkerson in jail,—the Mayor having sent a messenger 80 miles to Cartersville and arrested them. The boy was soon returned to his parents.

Spirit of the Times in the Methodist Episcopal church.—We do not give the following extract to either express or imply any opinion on the merits of the present abolition controversy; nor to circulate any thing invidious against bishop Hedding, whom we esteem to be a worthy man; but to show the spirit of the times in the *old fellowship*. Geo. Storrs, the author of this extract, Zion's Watchman, and bishop Hedding, are all the property of the Methodist Episcopal church. This shows that the sacredness of the Episcopal character can be *ironized* with impunity in that church.

"Bishop Hedding's Choice.—It is reported that the bishop said, in the Genesse Conference, just held at Rochester, that he had been called *a liar*, *a knave*, and *a hypocrite* in a certain newspaper, understood to be Zion's Watchman, and that he had *rather be sold into slavery* than to suffer the abuse, misrepresentation, falsehood and calumny heaped upon him by that paper.

"At the time, the bishop is said to have given utterance to this language, I was sitting so far distant from him, that I could not hear distinctly enough to tell exactly what he had said; but I presume it is reported correctly.

"I shall say nothing of the 'abuse' &c., which he says is 'heaped upon' him, only, that I heard him say, in open Conference, at Black River, that 'False stories enough had been told and published about him within the last three or four years to *send a whole nation to the DEVIL!*'—And this he repeated with emphasis.

"But in regard to his choice of being sold into slavery rather than to suffer what he has done from 'that paper,' I will, if you please, *horrify* the pro-slavery men, once more, by saying, I *wish* I could have an opportunity to give the bishop a *full* trial on the subject. Let us look at it, then, for a moment. Let us just step down to Alabama. There is the auction stand, just high enough to elevate the bishop so that the purchasers can see him fairly:—gathered around are all kinds of strange visages, some joking about what an able bodied slave he will make; others wandering if his teeth are good, if his limbs are sound;—his mouth must be opened and his limbs examined to determine these points. All faces are gazing at him, and men are judging of him, not as a man, an intellectual being, but he is to be measured by dollars and cents, as a horse or cow would be. Now comes the auctioneer with his hammer in his hand:—then he begins to describe his good points and qualities—warrants him 'sound, wind, and limb,' &c. &c. The cry begins, 'Who bids?' '$500'—'$550'—'$600'—'No more? Why, he is worth $1500—just agoing! will you say no more, gentlemen?' Another cries, '$650.' 'All done!' cries the auctioneer. 'Why, that's not half his worth!' 'Will you bid no more? Do I hear $700?'—'$700'—'thank you. $700—$700—all done?'—'$750,' cries a *rough* looking old Mississippian, 'I want him for the rice swamp.' 'Do I hear no more offered?' cries the auctioneer, 'can't wait—one—two t-h-r-e-e.' Now, I fancy I hear the bishop speak quick, '*stop*—stop, Mr. Auctioneer, I think I had a *little* rather go over again all the abuses I have had from Zion's Watchman, than to go with *that* man."

Beautiful Illustration, by the Rev. E. Peabody, of New Bedford, in a little essay on the subject of "Mystery, Reason and Faith."

"Night comes over a ship at sea, and a passenger lingers hour after hour alone on the deck. The waters plunge and welter and glide away beneath the keel.—Above, the sails tower up in the darkness, almost to the sky, and their shadow falls as it were a burden on the deck below.—In the clouded night no star is to be seen, and as the ship changes her course the passenger knows not which way is East or West or North or South. What islands, what sunken rocks may be on her course—or what that course is or where they are, he knows not. All around to him is Mystery. He bows down in the submission of utter ignorance.

"But men of science have read the laws of the sky. And the next day this passenger beholds the captain looking at a clock and taking note of the place of the sun, and with the aid of a couple of books, composed of rules and mathematical tables, making calculations. And when he has completed them, is able to point to a hand's breadth to the place at which, after unnumbered windings, he has arrived in the midst of the seas. Storms may have beat and currents drifted, but he knows where they are, and the precise point, where a hundred leagues over the water, lies his native shore. Here is *Reason*, appreciating and making use of the revelations (if we may so call them) of science.

"Night again shuts down over the waste of the waves, and the passenger beholds a single seaman stand at the wheel and watch, hour after hour, as it vibrates beneath a lamp a little needle, which points ever, as if it were a living finger, to the steady pole.

"This man knows nothing of the rules of navigation, nothing of the courses of the sky. But reason and experience gives him *Faith* in the commanding officer of the ship—faith in the laws that control her course—faith in the unerring integrity of the little guide before him. And so without a single doubt he steers his ship on, according to a prescribed direction, through night and the waves,—and that faith is not disappointed. With the morning sun, he beholds far away the summits of the gray and misty highlands, rising like a cloud on the horizon: and as he nears them, the hills appear, and the light house at the entrance of the harbor, and shining roofs among which he strives to detect his own."

AGRICULTURAL.

From the Burlington Free Press.

FOOT ROT IN SHEEP.

Mr. Editor—The present is the time to cure this destructive disorder, and if any of your readers are disposed to prevent its ravages among their own or their neighbor's sheep, they shall be instructed as to the *modus operandi*, without money or price. I have cured hundreds, and can assure the public they may rely upon its efficacy. First pare all the hoof away that covers the disorder, and probe out every crevice into which it has extended itself, removing with a knife, as far as practicable, the diseased part, being careful, however not to make the foot bleed. Then apply the composition, prepared as follows, to wit: half a pound of powder, half a pound of burnt alum finely powdered, one gill oil of vitrol, and three gills of soft water; mix the whole together, and use it immediately, on the sore and well feet. This compound forms a thick paste that adheres closely, and it is sure to do the business for that skeletonizing disorder. Many remedies, patent and common, have been before the public; but during thirteen years' experience, I never found a sure and perfect remedy but the above. If any gentleman has doubts, he can have them removed by enquiring of the Hinesburgh wool-growers. And if any seeker of patent medicines and dear-bought remedies, is disposed to slight this gratis offering, let him remove his scruples by sending me a five dollar note—rag currency—and try the remedy, for I am anxious that all should 'believe,' and have their sheep 'saved.'

Samuel H. Tagert.

Hinesburgh, July 22, 1837.

THE FRUITS OF GOOD TILLAGE.

We remember to have read somewhere, of an old gentleman who owned a large vineyard. Besides this farm, he was blessed with two daughters. On the marriage of the eldest, he portioned her off with one third of his farm, and behold! the remaining acres produced quite as much fruit and wine as before. Soon after, he married his youngest daughter, and gave her an equal dowry with the first, and still the remaining third of his soil yielded as much as his entire original plantation. Good farmers will see no mystery in this. The moral of the story is, that as his farm became smaller, he cultivated it more, and the same amount of labor upon a few acres, will make them produce the fruit of many.

There is a great difference between tillage and good tillage. Some farmers—no, some earth-scrapers, merely scratch up the soil, and after dropping their seed haphazard, trust to the chance of the season. It is not to be wondered at, that such tamperers have to scratch hard for a living. We have heard many complain that large farms did not pay the expense of their cultivation—that manure was too expensive to be used. The earth was, therefore, lazily scratched up sufficiently to destroy the face of the soil, and the seed thrown away upon it. We need not say that such farmers have but little grain to sell, and not much money, in these hard times, to put out at interest.

Take another case, however—that of the farmer who makes his farm his pride, who means to show his labor and skill upon every acre, and mark the difference! The land pays treble value upon its surface for all that has been bestowed upon it. The owner enriches the soil, and the soil in return enriches its owner.

Every farmer, to make his farm a source of profit, should make it a source of pride. Whatever portion of the soil is cultivated, should be well cultivated.—The point should be, not to have many acres, but rich acres. The means whereby husbandry is improved and facilitated, should be studied and employed. By such careful attention, a continual pleasure will be found in agricultural pursuits, which will heighten the other rewards of good tillage.—*L. I. Star.*

RURAL LIFE.

Oh! for a spot of ground that I could call my own! If there is any thing on earth that I begrudge others the possession of, it is the cultivated spot around the neat little cottage, in the still and delightful valley. The sweet carols of the birds, the perfume of the flowers, and the gurgling even of the little streamlet, as it overleaps its precipice, and throws its pearly tapestry on the genial air; are full of enchantment and delight. Talk of quitting the smiles of the country—its health and its enjoyment—its green fields and luxuriant foliage—for the pestiferous atmosphere, scrimped avenues and dusty pavement of the city—its dense population, its bustle, excitement, and distractions—ye that would do so, will find multitudes who'll "trade even or pay in the boot." Try it—"but keep a hold upon thy cot—for ere you have touched you'll run." There are pleasures, enjoyments and comforts in a city life; but in comparison with the sweets and stillness and inspiriting charms of rural felicity, they are, indeed, "few and far between."—There you can cultivate your potato patch—set out with your own hands the shrubs and flowers, to

"Waste their fragrance on the desert air."

Here you can have a puny plant stuck in an earthern pot, looking, for all the world, as if it had "no friend or kin here." There your little ones may over hill and dale, and get health their gambols—here, if they stray your door, they may have their broken by some maddened horse, or crier must jingle the music of his bell call the children home." There banks will discount vegetables, to gl every repast—but here they dis notes, and bring you up to the reck day.

It has been so often said that the er was the most independent of men most people have yielded to the po a tacit acquiescence, without reall king the pains to look at the causes make him so. He gets clear of constantly recurring hopes and which alternate like sunshine and g in the bosom of the merchant, the me ic, or the man of change. His bus is regular, inspiriting and ennobli He depends not upon the chances of or the cast of a die in some visio speculation. He sows and plants—God giveth the abundant harvest.—*timore Courier.*

GOOD ADVICE TO A FARMER.

"Many years ago," said a qu friend, who told us the following dote, "many years ago, a brother o celebrated Benjamin West, who had a cooper in this city, a man of ste sense and integrity, purchased a some miles out of the city, which been suffered to be overrun with b and bushes. He was for a short considered by his neighbor farmer very far from being as wise as Solo or even themselves; but in a few y his was the best and most productive within fifty miles around him; and fame as a farmer spread far and wid One day a man came to him who wa sirous of improving his farm, and a him how he should do. Go home, Mr. West, and make five or ten acre rich as thee wants, and come to me a will tell thee what to do next. But, the farmer, I have not manure enoug do that. Very well, then, go and pare three acres, two acres, or one a in the same way, but what thee un takes, do well. The farmer, said friend, perfectly comprehended the vice, and what is unusual, practised and benefitted by it, leaving at his d one of the best farms in the country. Go and do thou likewise.—*Philad. H*

WETTING BRICKS.

Few people, except builders, are aw of the advantage of wetting bricks be laying them. A wall twelve inches th built up of good mortar, with bricks soaked, is stronger in every respect, t one sixteen inches thick built up dry The reason of this is, that if the bri are saturated with water, they will abstract from the mortar, the moist which is necessary to its crystalizati and on the contrary, they will u chemically with the mortar, and beco almost as solid as a rock, On the ot hand, if the bricks are put up dry, t immediately take all the moisture fr the mortar, and leave it too dry to har and the consequence is, that when a bu ing of this description is taken down, tumbles down of its own accord, mortar falls from it like so much sand *N. Y. Sun.*

THE ABLEST MEN WERE MECHANICS.

BY M. M. NOAH.

There never was a doctrine more true than the now, we trust almost ab lete one, derived from the false distin tions of monarchies, that *mechanical pr fessions* are menial, and beneath the s tion of a true gentleman.—The truth they are the only professions that ha substance and reality and practical uti ty. All else seems, on reflection, to mere speculation—ideality—dreaming "leather and prunella." The greate men in the annals of the world—the m that have done most to enlighten it, a advance the prosperity and the liberti of the human race, have been mechanic It is the *directness of mind*—the pla good sense their pursuits inculcate, whic has led to those immortal discoveries th have enriched and ameliorated the cond tion of the whole human race. Nan but an Arkwright, a Fulton, a Franklin, Whitney, &c. &c. and where amongst th closet men, the academicians, the do trinairies, do you find their equal. Tru Newton, Laplace, Gay, Lussac, Davy &c., have discovered great principle but nothing that compares with the com prehensive usefulnes that has come fro the inventions of mechanic minds. Le the sickly races of a pampered nobility turn up their noses at mechanics as the do at merchants. It is to the *working me* only that the rod of empire has been gi en; and the revolutions on the globe fro mechanic inventions of steam and th press, and which are hourly advancin with a pace that excites astonishment prove incontestibly that the progress o mind, of human liberty and civilization and of mechanic labor are indissolubly wedded.

William Dunlap, extensively known as a painter and a literary man, died a few days ago in N. York. Some of his large paintings, such as the "Crucifixion" and "Christ Rejected," after West's designs, have been exhibited in different parts of the country. He wrote, among other works, a History of the American Stage, and a History of the Arts of Design in the U. States.—*Balt. American.*

THE RECORDER.

ZANESVILLE.

THURSDAY, ... OCTOBER 24, 1839.

Brother Stockton will please send the "Letter-ess" to Rev. J. Wilson, Roseville, Muskingum unty, Ohio. We have not received the fourth mber of the "Letter-Press." Will the editor so good as to forward it?

A Quarterly meeting for Zanesville circuit, ll be held at the "Springfield meeting-house," the neighborhood of this office, to commence next Saturday two weeks, under the charge Bros. Thrap and Fairchild.

Bro. J. Wilson wishes us, through the medium our paper, (as it would be difficult to find him th a letter,) to inform the presiding officer of e District, that it is out of his power to take s appointment this year, so that he may make ovision for the circuit.

A letter from Bro. Maynard, dated Lancaster, io, October 21st., states, considering the cumstances, matters are better in that place an he expected to find them.

In an interesting letter from Bro. W. Kesley, Md., in the *Protestant* of the 17th instant, he forms us of a refreshing camp-meeting, held on e 23d of August; at which, there were a num- r of conversions, and twenty-five added to the urch; also, of several protracted meetings since e camp-meeting, at all of which, there were a mber of conversions to God, and additions to e church. He describes one at Wesley Chapel the 14th of September, in the following lan- age:

"On Sabbath night, there was a mighty splay of power, and many were brought rejoice in God. On Monday, we ad- inistered the Lord's Supper, and had a ry full communion, and a very gra- ous season. In the evening the power God came down upon the assembly in unusual manner, and continued resting them for a period longer than I have er witnessed. Many of the Saints were deed filled with the Holy Ghost. I ent home with a large family of one of ir members, at whose house several ere visiting—there were perhaps, ten more—and during the ride home, and r some two hours after, they all seemed st in love and glory. The lady of the ouse, though no enthusiast in these atters, was so overwhelmed with a sense divine power and love, that while giv- g directions for supper, for us, she sev- al times stopped in the midst of her ares, to leap and shout and praise God.

"To be sure she had great cause of y, four of her children, all grown, were raising God around her, and her hus- and, though sick in bed, was praising od too!

"Some of the fruits of this meeting are en in the addition of fifty-eight mem- ers to the church in that place, in about ne week."

S. H. Miller, in the same paper, speaks of the uits of a camp-meeting held in South Carolina, the 28th of September, as follows:

"Many of the most wicked men in the eighborhood, embraced religion, and ave joined the church. I never attended more orderly meeting in my life. As ear as we could ascertain, fifty souls rofessed to have found the 'pearl of great rice,' and thirty-three whites and one olored, united with the church—making bout seventy who have joined the church n this mission since I last wrote you.

"Our society at the camp-ground was ery feeble heretofore. I think we had ut sixteen or seventeen members—we ow number about SIXTY."

AN ACT OF THE LEGISLATURE OF OHIO, TO INCORPORATE "THE PREACHERS' AID SOCIETY,"

Of the Methodist Protestant Church.

SECTION 1. Be it enacted by the General Assembly of the State of Ohio: That oseph Thrap, William Marshal, William amp, William Hamilton, John Vanden- ark, Henry Nash, Olcutt White, Cor- elius Springer and Samuel Fairbank, of he county of Muskingum, and their suc- essors, qualified and appointed as here- nafter mentioned, be and they are hereby reated a body politic and corporate, by he name and style of *The Preachers' Aid Society*, of the Methodist Protestant hurch; and are hereby fully empowered o carry into effect, the benevolent and haritable purposes in this act set forth; nd by the name aforesaid, shall be capa- le in law to sue and be sued, plead and e impleaded, defend and be defended, in ll courts of law and equity, in all manner f suits, complaints or causes whatever.

SEC. 2. That the said Trustees, and heir successors in office, by the name nd style aforesaid, shall be capable in aw to take, receive, possess and enjoy, ll manner of lands, tenements, rents and hereditaments, and any sum or sums of money, and any kind or portion of goods, given, granted or devised, unto them or their successors, by any person or per- sons, body politic or corporate, agreeably to the intention of the donors, respectively, and according to the objects and condi- tions in this act set forth: *Provided*, That the annual income of all such property, shall not exceed the sum of two thousand dollars.

SEC. 3. That in case of the death, resig- nation or expulsion of any one or more members of said corporation, or of their successors, then it shall be the duty of the remaining trustees to nominate double the number of those whose seats may have been vacated, as aforesaid, and to make a representation thereof in writing to the ensuing Pittsburgh Annual Confer- ence of the Methodist Protestant Church, (a principal part of which lies within the State of Ohio,) at their next annual as- sembly, whose duty it shall be immedi- ately to elect, by a majority of votes, a person or persons, as the case may be, out of the whole number nominated by the trustees as aforesaid, to fill up such vacancy or vacancies, in order to keep up the number of nine trustees forever; and upon every such choice, a certificate shall be issued from the said Annual Con- ference, signed by the president and sec- retary, and directed to the trustees of said corporation, containing the name or names of the person or persons so chosen, which certificate shall be registered in the books of said corporation, and the person or persons so chosen, shall be ves- ted with all the powers and immunities of a member of said corporation: *Provi- ded, however*, That no person shall be eligible as a trustee of said corporation who has not been a member of said church for at least five years next preceding his election, and shall not be at least twenty- five years of age, and a citizen of this State.

SEC 4. That the said corporation shall meet at least once in every year, for the transaction of their necessary business, at such time and place within this State as a majority of them may think proper; and when so met, they shall have the power to make such by-laws and regula- tions for their government, in the man- agement of their affairs, as a majority of them may judge necessary; and also, at every such annual meeting, they shall choose, by a majority of votes, a president and secretary out of their own body, who, if it be thought proper, may be continued in office from year to year: *Provided*, That such by-laws be not inconsistent with the laws of the United States, and of this State.

SEC. 5. That if at any time, a majority of the trustees should deem it expedient, by deed or otherwise, to sell, convey or otherwise dispose of any part or parcel of the estate, real or personal, belonging to such corporation, in such case it shall be their duty to make a representation thereof in writing to the ministers and laymen in the Pittsburgh Annual Confer- ence assembled, who shall judge of the expediency of such proposed sale; and if two-thirds of the ministers and laymen as aforesaid, shall consent thereto, a certifi- cate shall be issued by the president and secretary, declaring such approbation, and specifying the kind and amount of property to be sold or otherwise disposed of, which certificate shall be transmitted to the said trustees, who shall cause the same to be recorded in the books of the corporation: *Provided always*, That the money arising from said sale shall be vested, as soon as practicable, in such other securities and property, as in the judgment of a majority of them, will be most productive and safe: *And provided further*, That the annual interest or in- come arising from the money so vested, shall be exclusively applied in the man- ner and for the purposes in this act set forth.

SEC. 6. That the annual rents, interest and income of the estate, real and person- al, which may at any time belong to the said corporation and their successors, shall by them be held subject to the exclu- sive order and control of the ministers and laymen in the Pittsburgh Annual Conference assembled; and they are here- by vested with full powers to appropriate and point out the mode of applying the same to the objects, under the limitations, and for the uses and purposes herein mentioned and expressly declared.

SEC. 7. That the fund hereby intended to be established, is expressly for the pur- pose of relieving the distresses, and sup- plying the deficiencies of the itinerant superanuated, and worn out ministers of the Methodist Protestant Church, within the bounds of the Pittsburgh district, who remain in connection with, and continue subject to the order and discipline of said church; and also for the relief of the wid- ows and orphans of such ministers as aforesaid, and for no other use, intent or purpose whatever: *Provided*, That no sum exceeding one hundred dollars shall be appropriated to an unmarried minister, in any one year; also, that no sum exceed- ing two hundred dollars shall be applied to a married minister in any one year; and that no sum exceeding one hundred dollars in any one year, shall be applied to the use of each widow, as hereinbefore mentioned and described; and also, that no sum exceeding sixteen dollars shall be applied in any one year, to the use of each child, orphan of such ministers, as are hereinbefore particularly mentioned and described.

SEC. 8 That no sum or sums of money, under any pretence whatever, shall be drawn from the fund hereby intended to be established, other than for the purpo- ses and under the limitations and restric- tions, hereinbefore expressly mentioned and declared: *Provided, nevertheless*, That the trustees of said corporation and their successors, shall have power to draw and apply from time to time, so much money belonging to said fund, as in the judgment of a majority of them, may be wanting to defray all the necessary ex- penses of conducting the business of said corporation.

SEC. 9. That it shall be the duty of the trustees to cause regular and fair accounts to be kept, (in a book provided for that purpose) of the funds of said corporation, as well as it respects the kind and amount of the capital stock and of the annual in- terest and income thereof, as of all the moneys which shall from time to time be drawn therefrom, for the object herein- before mentioned; and further, it shall be the duty of the trustees and their succes- sors, to prepare and lay before the min- isters and laymen of the Pittsburgh An- nual Conference, at their annual meeting, a statement of the affairs and funds of said corporation, for their examination, which shall be signed by the president and secretary.

SEC. 10. That if ever the Methodist Protestant Church should abandon the principle of representation, by refusing to admit laymen into the councils of the church, by any conventional act or oth- erwise, as now provided for in the disci- pline thereof, then, and in that case, this corporation shall transfer all the moneys, lands, tenements, goods and chattels, be- longing to the said corporation, to the benefit of the Methodist Church in the United States of America, which admits and practices in its government, upon the principle of lay representation; and if there be no such Methodist Church in the United States of America, then it shall transfer the property above named to the State of Ohio, for the benefit of the gen- eral school fund, and cease any longer to be a body corporate: *Provided*, any future Legislature may alter and amend, or re- peal this act: *Provided also*, That such alteration, amendment or repeal shall not affect the title to any estate, real or per- sonal acquired or conveyed under its pro- visions, or divert the same to any other purpose than originally intended.

THE OPIUM TRADE—CHINA.—It is well known that a very lucrative contraband trade in opium has been carried on, chiefly by English and Dutch merchants, with the Chinese: so great is the demand for this article, by that nation, that the plans of the Government heretofore to suppress the trade have proved unsuccessful. The Imperial Government has, however, re- cently taken the matter rigidly in hand; and has demanded and received all the opium in the receiving ships, amounting to twenty thousand two hundred and eigh- ty-three chests; and by a proclamation, recently issued, gives liberty to all for- eigners to leave China, but all who re- main and shall engage again in the opium trade will be capitally executed and their property entirely confiscated. As the proclamation is something of a novelty, we subjoin an extract from it.—*Leb. Star.*

"China has indeed no need of Com- mercial intercourse with outer Barba- rians. But because you have come from far over the seas, it cannot bear to push you utterly away; you have enjoyed the overshadowing, the comprehensive, and deep benevolence of the Great Imperior, who has given sanction to the trade with Kwangtung. You have come to the ter- ritory of the Celestial Empire, have not only eat of herbage and trod the soil equally with the people of the land, but have also by your buying and selling acquired very rich advantages. It is naturally your duty to rest in your sta- tions, observing the laws. But for ten years past, you have on the contrary employed a thing hurtful to men, as a means of gaining and possessing your- selves of the people's wealth.

"The Great Emperor, anxiously re- gardful of the general well being, has declared his pleasure that this should be severely prohibited. And if the laws be not plainly declared, how shall the future ingress be put a stop to? While now, all your superintendents and Councils afore- said are aware that the prohibitory en- actments of the Celestial Court may not be opposed, you are yet anxious in regard to points of difficulty as relates to your own countries, and request that, at the head of the people and vessels of your several countries, you may all together take your departure to return home.

"Those of the foreigners whose names are prominent as having been habitual sellers of opium, have ere this been or- dered away. But besides Jardine and others who have gone back to their countries there are many yet lingering behind. If indeed, all leave China for ever, there will of course no opium gain entrance into the inner land, and this evil may be removed.

"After the completion of the present deliveries, let it be even as requested. It shall be left to you entirely to return to your countries. Only you will not be allowed to make pretexts for procrasti- nating and delay, And after you have thus returned, you will not be allowed to come again. Let there be no turning backwards and forwards, no inconstancy —whereby investigation, and proceedings thereon will be involved.

"Having reference to the great num- bers of the foreigners of various nations, and the openness of communication by sea in every part, and considering that the laws and enactments of the Celestial Court are extremely strict, it is requisite that the punishment attaching to the pro- hibition against the importation of opium should be plainly proclaimed. All there- fore who violate this edict will be capital- ly punished."

A TRANCE OF A WEEK'S DURATION.

A young girl residing in a house back of German street, between Fourth and fifth streets, Southwark, a member of the Methodist Church, the Academy, in Fourth street, near Arch, on the evening of Wednesday, the 25th ult. arose from her bed on religious excitement, and be- gan to pray. The religious exercises with the workings of her own imagina- tion, produced such a state of excitement in her mind as to throw her into a trance in which condition she has remained since yesterday week, insensible to every ob- ject and event around her. During that period she has partaken of no food, ex- cept such ailment as thin gruel, which her friends or attendants forced into her mouth, between her clenched teeth. Such a long period of unconsciousness and abstinence has had no apparent ef- fect upon her health, she breathes regu- larly, her respiration is similar to that of a person in a deep sleep, and her cheeks and lips have the glow and hue of health, the ruddy color of which, added to a face possessing regularity of feature, gives her an extremely interesting and beauti- ful appearance. The only motion that has been observed during this length of time, by those around her, is a movement of the head, which is turned occasionally from one side to the other, as she lies up- on her back and a rapid rolling of the eyeballs under the closed lids. She has now been eight days in this singular state, and seems no nearer a restoration to a state of consciousness than at the time of the first attack, though yesterday one of her attendants heard her whisper, indistinctly, something about her brother, which made them believe that the fit of unconsciousness was near to its termina- tion. She has been visited by five or six physicians, though it is not known to what they ascribe her present condition, whether the effect of physical or mental causes. The "true believers," many of whom have visited her daily, ascribe it, to supernatural causes, and believe that her spirit is communing with the blessed inhabitants of another world, and that she will be able to make some strange reve- lations on her recovery, a period to which many of them look forward with feelings of anxious hope. Whatever may have been the cause which produced and con- tinues this singular effect, there is one thing certain, that the facts detailed by her friends, in regard to her present con- dition, are strictly to be depended on. The name of the girl is Nany Simpson.—*Ledger.*

MISSIONARIES TO OREGON.—A large company of missionaries and assistant missionaries under the charge of the Methodist Missionary Society, embracing 6 ordained missionaries, 8 male assist- ants, (including one physician, two farm- ers, two carpenters, a blacksmith, and cabinet maker,) eighteen married and single women, and nineteen children left New York on Wednesday in the ship Lausanne, Capt. Spaulding, for Oregon Territory, via Valparaiso. The ordain- ed missionaries were Rev. Jason Lee, of New England Conference, Rev. J. Frost, of New York Conference, Rev. Gusta- vus Hines, of Genessee Conference, Rev. William H. Kone, of North Carolina Conference, Rev. Alvin F. Waller, of Genessee Conference, Rev. J. P. Rich- mond, M. D., of Illinois Conference.

TO YOUNG MEN.

A writer in the Knickerbocker, draws; in the subjoined brief sketch a revolting picture. Yet how many young men are chasing gilded butterflies, things of a day:

"How superior, thought I, is the love of this girl, unaccustomed to the world to that of the heartless and false doll of dress, whose every word is for effect, and every thought a desire for admira- tion: who can sacrifice domestic pleas- ure, and follow fashion and vice—vice of thought—who lives only in crowds and is miserable alone; who loves self supreme- ly, and takes a husband for his carriage and house, enters matrimony for the lib- erties it allows her. There are such wo- men; the idols of the ball-room, and the belles of the watering places. They en- joy a butterfly celebrity, and then decay early in mind and body, victims to fash- ion.—What thoughts must linger around the bosoms of such women on their dying beds, as they think of their neglected God? Young men know not what they follow, as they glide on in the wake of the plumed syren of the dance. They are the falselights which meteors hold out to draw the tumbling ships upon the rocks. They lure us on with music and the pat- tering of tiny feet, and jewelled finge s, and false smiles and false hearts—and when the victim is caught, like the veil- ed prophet they display their awful hide- ousness. No, no! Love is found in gentler hearts. It dwells not amid the riots of pleasure; it dies in the glare of splendor, and cannot live in a heart devo- ted to dress and weak follies; it is more matured in quietness than loud applause of the world's praise.—Give me the sharp- ly defined feeling of a young and timid girl. and I leave you to the professions of the gaudy coquette. Give me the beaming glances of a liquid eye, and I yield you the bright and flashing blaze of the proud beauty to others"

The Prussian copy right law gives to an author an exclusive property in his works during his own life, and secures to his heirs for thirty years, all the prof- its that may arise therefrom.

A duel was fought near Nachitoches, La., on the 18th ultimo, by Gen. Francis Gaienne and Gen. Bossier. They fought with rifles at forty paces, and General Gaienne fell dead at the first fire.

CHARLESTON LOOKING UP.—A regular line of packets is advertised to commence running between Charleston, S. C. and Liverpool on the first of Feb. next.

We should see an Englishman when we want to think, and a Frenchman when we want to converse.

AN OLD MAXIM.—Early to bed and early to rise, will make a man healthy, wealty and wise.

HAMILTON, OHIO.—Flour is now selling at from $4 00 to 4 25 per barrel; Corn, plenty at 31 and 37 per bushel, a few loads have been sold we un- derstand at 25, for this we do not vouch; Oats demand 30 cents occasionally, the prices may be quoted at from 25 to 28 cents; Corn meal 50 and 62 cents; Potatoes 37½ a 50, no scarcity; Ap- ples 37½ a 50 good quality scarce; Sweet potatoes 1 00 a 1 50 per bushel; Butter 25; Chickens 12½ a 15. What the article of Wheat and Whiskey demand, we have not been advised.

RICHMOND, IA.—Flour 4 37½; Wheat 60 a 64 per bushel; Oats 22 a 24; Corn 37½; Potatoes 20; Butter 15; Lard 10.

CINCINNATI, OHIO.—Flour has declined some in this city, sales are now made at 3 81 a 4 00 per barrel; Wheat dull at 68 a 70; Corn dull at 43, some sales have been made at 40; Apples plenty at 25 a 50; Butter, good 25 a 31, inferior 15 a 18; Oats plenty at 31; Whiskey uncommonly dull at 33 cents per gallon.

PHILADELPHIA.—Flour in this city has become a drug, prices declined, varying from 6 to 5 50; Wheat demands from 1 12 to 1 08 per bushel; Pork 13 00 a 14 00 per barrel, mess 11 00 for prime without inspection; Hams from 8½ to 11 cts. per lb.; sides 8 a 8½; shoulders 8½ a 9.

NEW YORK.—Wheat averaging from 1 20 to 1 21; Rye 83 a 84; Flour is worth from 6 12 to 6 87, varying as to qualities; Mess Pork 16 a 16½; Prime, 12; Ohio Mess at 15½ a 15½; Prime, 11½ a 12½; Mess Beef, 12½ a 13; Prime, 9½ a 10.—Sales of Ohio Lard, 11 a 11½ for good, and 9 a 10 for ordinary. Sales of Hams, 12; Shoulders 7 a 8½; Sides 9 a 10; Smoked Beef 12½ a 13.

NEW ORLEANS.—Pork,—there has been less demand for same weeks past, but the small par- cels disposed of have been at former prices.—There is still a large supply, and it is impossible to effect sales to any considerable extent.

FLOUR.—The demand for this article has been quite limited and the sales made have been at rather irregular prices; but still quote at 6 a 6 50 for superfine, as exhibiting the fair range of the market for old and new.—*Hamilton Intelligencer.*

ITEMS.

YELLOW FEVER.—At our latest dates the Yellow Fever had abated at New Or- leans, but at Mobile the Fever is said to rage with unabated malignity. In this place, since the month of August, when the Fever made its appearance, the num- ber of deaths has amounted to 530—383 in the month of September alone. It was extending into the country.

It still prevails at Natchez, and to some extent in most of the towns along the ri- ver.

ATTENTION—BUCKS WITH LONG HAIR.—The other day, one of the New York magistrates refused to receive as bail a man with a large crop of hair. He in- quired the reason. "Sir," said the magis- trate, "I never knew a man who covered his ears with hair, who was not a thief." The gentleman walked off, and was the next morning brought up for stealing a coat.

CURE FOR A CANCER.—Mr. T. Tyrrel, of Missouri, says he has effectually cured himself of an obstinate cancer, by the "free use of potash made from the ashes of red oak, boiled to the consistence of molasses; and, as a poultice, covering the whole with a coat of tar." Two or three applications, he says, will remove all pro- tuberances, after which it is only neces- sary to heal the wound with common salve.

SPECIE.—This "article" says the Ham- ilton Intelliger, "is fast leaving our coun- try. The packet ship 'Silvie de Grasse' from New York for Havana, took with her upwords of twenty-nine thousand dollars. The Great Western carried off more than half a million, a few weeks since.

A number of papers have stated posi- tively, that John James, the murderer of H. Berry in this county, has been appre- hended and confined in jail. This is certainly untrue, James has not yet we think been taken.—*Ham. Intelligencer.*

GAS LIGHT OF CINCINNATI.—The City Council have finally passed an ordinance creating a stock of one hundred and fifty thousand dollars, of which fifty thousand dollars are to be subscribed by the city, the whole under a board of trustees, for the purpose of thorough lighting that city with gas.

OCCUPATION.—The cure for maladies is employment. "Be not solitary; be not idle." Rely upon it, life was not given to us to be spent in dreams and reveries; but for active, usefulness—exertions that turn to some account to yourselves or to others; not laborious idleness.

POLITENESS is not always a sign of wis- dom; but the want of it always leaves room for a suspicion of folly, if folly and imprudence are the same. To offend any person is the next foolish thing to being offended.

Lord Brougham says the love of law- yers for litigation is a vulgar, gross, and every day charge, but that it is utterly groundless. Four out of every five opin- ions, he says, given by lawyers, are against the case submitted to them.

SPECIE.—The sum of $329,273 in gold and silver was received at New Orleans between the 12th and 14th instant. Of this sum, $177,350 came from Liverpool; $46,923 from Havre; and the balance from St. Louis.

Mississippi, we believe, is the only State in the Union, where Judicial officers from the highest to the lowest, are elec- ted by the people.

Postage on the Letters in the British Queen. We understand that the postage money taken for letters sent, amounted to twenty-five hundred dollars.

XENIA BANK NOTES.—One dollar notes altered to fives on the Xenia Bank are in circulation. The present Chashier, E. T. Drake, has never signed any five dollar notes of this bank.

HYMENEAL.

Married, on the 17th inst., by the Rev. John Wilson, Mr. ALBE SHOWERS to Miss MARY BASH, all of Muskingum county, Ohio.

OBITUARY.

Died, in Zanesville, on Sunday evening, 13th inst., Mr. OLIVER PARKER, in the 40th year of his age. Mr. Parker fulfilled the requirements of civil society in all its various relations to the fullest extent. And in him a wife and daughter have sustained an irreparable loss.—*Com.*

In Cincinnati, of pulmonory consumption, on the 12th inst., WILLIAM M'LEAN, Esq., of the firm of Reeves & M'Lean.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the pa- pers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for pa- pers, receipts should be taken; without these we shall consider our subscribers responsible. Ex- perience in conducting a paper, has shown us that attention to this rule is essentially neces- sary to secure justice to a publisher.

5. Our paper is $2 per annum on the recep- tion of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessa- ry to enable us to continue our paper.

Credits will be given in our paper for all mo- neys we receive.

☞All the travelling preachers are considered agents for this paper.

RECEIVED PAY FOR 1ST VOL. RECORDER.—Of J Johnson, Martinsville, 2; of M. N. Warren, 4—for W Davison and W. G Dean, (tell us if this Dean be a new subscriber, if not where he receives his paper;) of J. Myers, 2—for J. Hewit, Athens; of W. B. Snyder, 2.

LETTERS RECEIVED.—A. M'Guire, H. Rungor, James Johnson, (we received nothing from Mr. Wright,) R. Banford, J. R. Marten, D. Rowland, W Munhall, J. J. Amoss, (do what you can for us,) M. N. Warren, (we are afraid we cannot be with you,) W. Maynard, J. Myers, W. B. Sny- der, T. Snyder and J. Boyle.

MISCELLANEOUS.

THE LAST HERRING.

Hoot away despair,
Never yield to sorrow;
The blackest sky may wear
A smiling face to-morrow.

It was Sunday night, and the widow of the Pine cottage sat by her blazing faggots, with her five tattered children at her side, endeavoring by listening to the artlessness of their juvenile prattle, to dissipate the heavy gloom that pressed upon her mind. For a long year, her own hands had provided for her helpless family, for she had no supporter—she thought she had no friends in all the wide, unfriendly world around. That mysterious Providence, the wisdom of whose ways are above human compresion, had visited her with a wasting sickness, and her little means had become exhausted. It was now mid-winter, and the snow lay heavy and deep through the surrounding forests, while storms seemed gathering in the heavens, and the driving wind roared through the bending pibes that rocked her puny mansion.

The last herring smoked upon the coals before her: it was the only article of food she possessed; and no wonder if her disconsolate state brought up in her lone bosom all the anxieties of a mother when she looked upon her children; and no wonder, forlorn as she was, if she suffered the heart-swellings of despair to rise, even though she knew that He whose promise is to the widow, and to the orphan, cannot forget his word.—Providence had many years before taken from her an elder son, who went away from his forest home to try his fortune on the seas, since which she had not heard no note or tidings of him, deprived of a companion and a staff of support in her husband; yet to this hour she had been upborne; she had been not only able to provide for her little flock, but had never lost one opportunity of ministering to the wants of the miserable and destitute.

The indolent may well bear with poverty while the ability to gain a sustenance remains. The individual who has but his own wants to supply, may suffer with fortitude the winter of want; his affections are not wounded, his heart is not wrung. The most desolate and populous cities, may hope, for charity has not quite closed her hand and heart, or shut her eyes on misery. But the industrious mother of helpless and depending children, far from the reach of human charity, has none of these to console her. such a one was the widow of the Pine Cottage, but as she bent over the fire, and took up, the last scanty remnant of food to spread before her children, her spirits seemed to brighten up, as by some sudden and mysterious impulse, as Cowper's beautiful lines came uncalled across her mind—

Judge not the Lord by feeble sense—
But trust him for his grace;
Behind a frowning Providence
He hides a smiling face.

The smoking herring was scarce laid upon the table, when a gentle rap at the door, and the loud barking of the dog, attracted the attention of the family. The children flew to open it, and a weary traveller in tattered garments, and apparently indifferent health, entered, and begged a lodging and a mouthful of food; "For," said he, "it is now twenty-four hours since I tasted bread." The widow's heart bled anew, as under a fresh complication of distresses; for her sympathies lingered not round her own fireside. She hesitated not even now—and a share of all she had, she proffered for the stranger. "We shall not be forsaken," said she, "or suffer deeper for an act of charity."

The traveller drew near the board, but when he saw the scanty fare, he raised his eyes towards heaven in astonishment—"and is this all your store," said he—"and share of this do you offer to one you know not!—then never saw I charity before!—by giving part of their last mouthful to a stranger."—"Ah," said the poor widow, and the tear drops gushed into her eyes as she said it, "I have a boy, a darling son, some where on the face of the wide world unless heaven has taken him away, and I only act towards you as I would that others should act towards him. God who sent manna from heaven, can provide for us as he did for Israel—and how should I, this night offend HIM, if my son should be a wanderer, destitute as you, and he should have provided for him a home even as poor as this, were I to turn you unrelieved away."

The widow ended, and the stranger springing from his feet clasped her in his arms—"God has indeed provided just such a home for your wandering son—and has given him wealth to reward the goodness of his benefactress—My Mother—Oh my mother."

It was her lost son! returned to her bosom, from the Indies, abounding in riches. He had chosen this disguise, that he might the more completely surprise his family; and never was a surprise more perfect, or followed by a sweeter cup of joy. The humble residence in the West was exchanged for one, comfortable, and, indeed, beautiful in the valley; and the widow lived long with her dutiful son, in the enjoyment of wordly plenty, and in the delightful employments of virtue; and at this day the passer-by is often pointed to the luxuriant willow that spreads its branches broad and green above her grave, whilst he listens to the recital of this simple and homely, but not altogether worthless tale.

A WEDDING AT ALGIERS.

This evening I went to the wedding of the daughter of the Cadi, or chief judge. The bride is a lovely creature, a widow of nineteen, and has two beautiful children. Her first husband was strangled, and it has since been proved that he was perfectly innocent of the offence of which he had been accused. But whatever her feelings of regret may have been, she could not avoid entering again into the conjugal state, as singleness or widowhood is considered alike sinful and discreditable. Her family, therefore, have lost her no time in finding her another husband. I found her surrounded by a crowd of brilliantly dressed ladies; indeed, my eyes were perfectly dazzled by the splendor of the jewels by which the *salmas*, (i. e., goldan caps) and persons were covered; whole boquets of roses, jessamines, peacocks' feathers, and butturflies, were completely formed of diamonds. In short, my powers of description are baffled, for it would be useless to attempt to give an account of all the wonders on which I gazed. Nor was I less struck with the number of beautiful women among them. They are quite as fair as Europeans, and their eyes far surpassed, in brilliancy and beauty, any I had ever beheld. Nothing could exceed their courtesy and the politeness of their reception. I was placed on the same low sofa with the bride, but would willingly have exchanged my seat for a higher one, had there been such in the room, for I could not imitate my fair hostesses in their tailor manner of sitting, and the sofa was merely a bocraded matress placed on the floor. The gratification of my curiosity compensated me for such trifling inconveniences. Sortly after our entrance, we were served with coffee and sweet-meats. The coffee was served in the most delicate porcelain cups, about the size of dolls' tea cups, and, in lieu of saucers, they were inserted in golden chased cups, which enabled one to hold it without burning one's fingers, the coffee being quite boiling, but disagreeably thick, and, to my taste, over-sweetened. After we had partaken of these refreshments, a band of female musicians, playing upon a kind of guitar, and a curiously shaped drum, made of earthern-ware, and coverd at one end with a parchment, called a Tambouca. and several tambourines, began their strange music; and at the same time a hired dancer, stood up in the centre of the apartment, holding an embroidered handkerchief in each hand, which she waved and twisted about, and scarcely moving her feet, she threw herself into various attitudes. After a time, another dancer stood up, performing in the same manner, and both sung a plaintiff song, to the apparent satisfaction of the assembly, for it is inconsistent with the ideas of propriety and decorum for ladies of rank and respectability to dance. And those who do so are inferior persons, whose trade or profession is to exhibit themselves for the amusement of those who pay them for such performances.

After this exhibition had continued for some time, the bride, conducted by some of the principal ladies ascended a few steps to one of the shelves or bed places, which invariably occupy each end of all Algerine rooms; and having seated herself upon cushions, her companions proceeded to make great changes in her toilet and appearance, some of them adding ornaments to her already highly adorned *salma*, whilst others occupied themselves in actually plastering her lovely face with a profuse quantity of red paint, to which they added patches of gold leaf, so as effectually to mask and disfigure her. I was then invited, through the interpretation of the Italian lady who accompanied me, to pay a visit to the bridegroom, which I willingly agreed to, and was conducted to a room on the opposite side of the gallery. After having passed under several tiers of brocade, silk and muslin curtains, we found ourselves in the presence of the bridegroom. He was an elderly Turk, with but one eye, and equally great as was the contrast between his appearance and that of his lovely bride, was the change from the noise, show, and company of her apartment, to the quiet and sombre appearance of his, although both were handsomely hung with crimson silk damask. He had only one companion, a middle aged Turk, and they both looked very dull and stupid, until, on his asking me, if I thought his wife (whom he had never seen) handsome, and on hearing my agreeable answer, he stroked his beard with great satisfaction, and said, "*Stoa, buono, Signora, Staa buono.*" While we sat with him, his friend took his leave; and as the time approached, we also returned to her apartment, and found her additional toilet quite completed. Indeed with so many additional jewels had she been decorated, that she was quite unable to bear the weight of her *salma* without the support of her attendants, who walked on each side of her and held her head. At the moment of her leaving the room, a veil of purple crape, splendidly embroidered in gold, small pearls and precious stones, were thrown over her head.

In this array she was conducted to the door of the bridegroom's chamber, amidst the universal cry from each one present, of "*Lai, lai, lai, lalla*"—a sound of great joy, always raised at marriages by the assembled guests. The curtains were raised, but only a certain number of the company, probably the nearest relatives, entered, and conducted the veiled bride to a seat on the left of the bridegroom, who continued seated. Her veil was then removed by one of the ladies, and for the first time the old Turk beheld his wife, or rather her masked countenance. An old woman, who had taken an active part in the whole ceremony, took, from the hands of a black woman, a small ewer, containing rose water, approached the bride, whom she addressed. The bride then raised her two hands, and extending their hollowed palms, the officiating lady filled them with rose water out of the ewer. The bridegroom then, turning round, drank it out of his bride's hands. She then underwent a similar ceremony, the bride drinking out of his hands. During all this time, the shouts of "*Lăi, lăi, lai,*" continued unceasingly, from those within and those on the outside of the chamber. This ending the ceremony, we and the rest of the company took our leave of this paired, not matched, couple.—*Six years' residence in Algiers.*

THE HERMIT—A FABLE.—A pious hermit, who lived in the solitude of the forest, far from the noise of men, was once wandering through the woods in search of a few wild fruits and berries to make up his frugal meal. He heard a moaning in the grass, and looking down saw a fox, both of whose fore legs were broken, writhing like a snake on the ground, and apparently starving. The good hermit was about to seek some food for the helpless creature, when an eagle appeared soaring high overhead and suddenly let fall a fowl from its talons, directly at the feet of the fox. The starving animal seized greedily on the prize, and soon made a hearty meal on it. "Ah," exclaimed the pious enthusiast. "this is the finger of God. Why did I distrust his providential care, and wander over hill and dale to seek for daily food? He who brought food to the mouth of this helpless animal, will surely never forget his servant. Henceforth I will make no more thought for my body's sustenance, but trust to his goodness, and devote all my time to meditation." True to his resolution, he returned to his cell, and neither plucked the fruits that hung on the trees around, nor went down to the brook to quench his thrist. Three whole days he lived thus, and was wasting away to a shadow, in the vain hope of a direct interference of Heaven. On the evening of the third day, just as he sunk into a slumber, thunder rolled through the cave, he saw a form of angelic beauty, and heard a sweet but solemn voice that spoke thus: "Mortal, how feeble is thy understanding! Couldst thou thus misinterpret the lesson contained in the eagle's conduct? Thou art not lame and helpless as was the fox, but art strong and active, like the eagle that gave him food. Him thou wert to imitate, in going about and doing good to others; for know that idleness, even if accompanied by constant prayer, is odious in the sight of the Almighty.—*New York Mirror.*

THE CHEAT:

OR, THE OLD MAN OUT DONE.

"Well, Julia, suppose I ask your father—any how, his refusal cannot make things much worse than they are at present. Suspense, Julia, is the cause of the most miserable feelings."

"We must not be too hasty, Robert, our situation requires that caution—by a little management we may succeed, gloomy as the prospect appears to be. Now don't say any thing to pa about it—I had much rather you would not. The best way to accomplish wishes is not to advance too soon."

"Too soon, too soon, Julia. Have we not, waited two years, and have you not preached the doctrine of 'too soon' all the while? Too soon, indeed!"

"Well, now don't be angry—throw that frown from your countenance and look pleasant, and we'll immediately set about some plan by which to effect what you so much wish—come smile away your frown—the skies of love are sometimes clear."

Robert Moultrie had loved Julia Hallowell, and she loved him, about four years and a half—more or less—two years had passed since they had agreed, 'come weal, come wo,' they would drudge through life together. Two long, long years!—no wonder that Robert had lost his patience—the wonder is, why Julia had not lost hers. Two years would seem to be an eternity to wait upon the eve of bliss, and yet delay the happy consummation.

Julia's father was a wealthy shipper of the port of Charleston, South Carolina. Some old inhabitants may remember the firm of Hallowell and Hoddington.—He was an upright and honorable man, but withal an old aristocrat, whose *ipsi dixit* was law supreme whenever his power could be exercised.

Robert Moultrie was a clerk in his counting room, and his salary, which was his sole dependence, though far above the service of young men similarly situated, and amply sufficient in warranting him, the expenses of a family, did not elevate him to that importance in society which justified him in presuming upon the heart and hand of the daughter of a wealthy shipper.

The character of the young gentleman was unimpeachable, and he was much respected for his correct deportment—but (*but* is a wicked word) the curse of Gingankin was upon him—he was poor.

Robert had been in the counting-room of Mr. H. since he was fourteen years of age—he had grown up in his family, and by the side of his lovely heiress, who had been promised to a thing of wealth and show—was then in the Indies amassing wealth to lay at the feet of his beautiful bride—and his soul had on it the stain of dishonor, and Julia vowed before God that he should never call her wife Mr. H. knew that Robert usually attended his daughter to church; went and came with her when she visited her friends and so on—but never dreamed that the wily cupid was wielding his darts successfully in the bosom of both; and the arrows of the little god were firmly fixed, and he dealt out the silken cord until they were far out upon the love—too far to proceed or return without each other.

"Do tell me Robert, what is the matter with you? I have been a witness to your downcast looks and sorrowful appearance until I have grown melancholly myself. What's the matter, boy?"

This question was asked by Mr. H. one day when he and Robert were in the counting-room alone—and if any individual has ever passed through a fiery trial, he can have some idea of Robert's feelings, when the man whose daughter he loved—and was contriving the best plan to get her from him, addressed in such kind and affectionate language. It went too deep, however, into the secrets of Robert's bosom for him to return a quick reply. Mr. H. plainly saw that something was working on his mind that made him unhappy, and he wished if possible to remove the cause—he urged a candid revelation of all that affected his feelings and promised his assistance to relieve him to whatever amount it required.—Robert succeeded, however, in putting him off for that time, and trembled at the next meeting, when he related the matter to Julia.

"I thought," said she laughing, "you were not so anxious to ask the old gentleman as you appeared to be—now that is a stumper, Robert, why did you not? ha!"

"Julia, do you think he suspects us?"

"Not a whit more than he does the king of the French."

"Well, Julia, to tell the truth of the matter, I left you this morning with the intention of telling him our affections for each other, and if he refused, I was determined to act for myself without further advice—but when I came before him, I felt something in my throat choaking me, and I could scarcely talk about business—much less of love affairs."

The lovers often met, and a voyage to the Indies being threatened, it became necessary they should prepare for the trials that seemed to await them. In the mean time Mr. H. was endeavoring to ascertain the cause of his clerk's unhappiness—more for the good of the young man, than he cared about the important mistakes made by him in his accounts.—The next opportunity offered he repeated his former question and insisted on an immediate reply. Robert stuttered and stammered a good deal and at last he came out with it.

"I am attached to a young girl in this city, sir, and have reason to believe she is as much attached to me—but there is an obstacle in the way—"

"Ah, indeed, and does the obstacle amount to more than a thousand dollars? If it does you shall not want. I'll fill a check now; have allthe parties consented?"

"Why, sir, the cause of my—the reason—the—that is—the cause of my uneasiness, I am afraid her father will not consent."

Will not consent, who is he? refer him to me; I'll reconcile the matter."

"He is a rich man, sir, and I'm not rich."

"I think—I—yes sir."

"She says that she does; any how, does she not?"

"Why', I—yes—she—yes sir, she has said as much."

"Is the old fellow very rich?"

"I believe, sir, that he is tol—tolerably well off."

"And he won't consent? By the powers of love, he must be an old Turk—he won't then. Here give me his name, I'll soon settle the matter. But stop, has he any thing against you? Is he acquainted with your character? Does he know me?

Here the old man went over a string of questions which is not worth while here to relate. The conclusion of the conference left Robert in the possession of a check for a thousand dollars, a letter of introduction to parson Green of the Presbyterian Church, and the following advice from the lips of the father-in-law in the prospective. He was to run away with the girl, to use his (Mr. H.'s) carriage, and George, his black waiter was to drive it, &c.

Robert governed himself in strict accordance with the advice given, and before dark the parties were at parson Green's whose scruples of conscience were quieted by the introduction of the letter. They were soon pronounced man and wife, and jumped into the carriage, followed by a blessing from the parson, whose fee was but a small part of the thousand dollar check. George was directed to drive the carriage to a rich old childless uncle of Robert's who lived about five miles from the city, to whom the secret was told. He thought the joke too good to enjoy alone, and he sent out for some of the neighbors. Midnight found the jovial assembly destroying the good things the aunt had provided, and laughing over the trick so successfully played upon one of the wealthiest shippers of the south.

Early the next morning Robert and Mrs. Moultrie were attended by their uncle and aunt to the house of Mr. Hallowell—the young couple anxious for the effervescence of a father's wrath to be over, and the antiquated pair to act as modificators on the question. They were met by Mr. Hallowell, whose first words were: "You young rogue you, I didn't know my advice was to act upon me. Well, Robert, he added, laughing heartily, you caught me that time, and you deserve to be rewarded for the generalship you have displayed. Here my boy—my son I suppose I must say, here is a deed of property, worth eleven thousand dollars, and henceforth you are my partner in business.

NAPOLEON AND MUSIC.—M. Arnault, the celebrated French poet academician, says of Napoleon, that while he acknowledged the influence of music over the minds of his soldiers, and consequently, always provided them with good bands, he himself could not sing in tune. Singing was even a sign of ill-humor on his part, and when he was cross, he walked about, with his hands behind him, humming a tune as falsely as possible, and then few dare to approach him. "If you have any thing to ask the General," said Junot to M. Arnault one day, "I advise you not to go near him just now, for he is singing.—*Boston Mercantile Jour.*

BEARS! BEARS!—We saw a fine bear a short time since within a mile and a half of Detroit quietly feeding in a field. On the rattling of the cars, he leisurely took to the woods. A venerable dam and her cub were seen the other day just out of this village. The "hunters of Washnetaw" gave chase as soon as they heard of it, but did not that time succeed.

COPPER MINE IN NEW YORK.—Professor Mather writes to Gov. Steward that a vein of copper ore, a foot thick, exists in Delaware and Green counties, in New York.

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,

Corner of Vine and Gano Streets:

PUBLISHED BY G. G. MOORE,

Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts.	- -	1 copy for a year
" $5	- -	12 copies.
" 10	- - -	25 "
" 20	- - -	60 "
" 30	- -	100 "
" 50	- - -	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 500 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this in no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia

Public Notice

IS hereby given, that application will be made to the Trustees of Hopewell Township, for a township road, to commence a few rods East of Mr. Coomrine's dwelling, at the line between Geo. Norman and Alexander Watson, and to run South, at, or near said line, to the South East corner of John Rodman's land, thence the best rout so as to intersect the Cooper road West of the inclosure of Wm. George.

October 5, 1839. 3t7

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES;

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

THE

WESTERN RECORDER

IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞*The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics, Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These two latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

THE WESTERN RECORDER.

Volume 1. ZANESVILLE, OHIO, THURSDAY, OCTOBER 31, 1839. Number 11.

COMMUNICATIONS.

RUSH COUNTY, Ia., Oct. 15, 1839.

Bro. Springer:—The several numbers of your paper, with one exception, have came safely to hand, and are very satisfactory to the few who have subscribed for it here; but for the want of an agent its circulation must be limited in this quarter.

In looking over the number in which the appointments of the preachers are given for the Ohio Conference, I find this region of country and Ruddle's Mills are left unsupplied; this has caused some reflections to pass through my mind, and elicited this from my pen. I am afraid all is not right that has been adopted and introduced into our Economy. It is given in the 11th c. 5th v. of St. Matthew's gospel, as one of the divine proofs that Jesus was the promished Messiah, that the poor have the gospel preached unto them. What a difference there appears to be between Christ's testimony and the testimony our brethren have [illegible] and are trying into practice their famous and anti-scriptural report, "that they will not feel bound to send a preacher to any circuit or station" unless so and so be done. Now I would be glad to know whence they get the authority for coming to such conclusions and reducing them to practice. Are they not guilty of neglecting the poor,—thereby having respect to persons. If so St. James says 2d c. 9th v. "ye commit sin, and are convinced of the law as transgressors. Then all such shall have judgment without mercy that hath shewed no mercy." It will not do for those brethren to plead they cannot preach without support made certain by subscription. I challenge any of them to shew an instance of the kind in the New Testament scriptures. If such a practice had been adopted in the Apostles' days (from whence all authority is pretended to be taken for the itinerant scheme we have among us,) it would have put an end to their prosperity at once; or at least impeded their progress, just as it is now doing with the Ohio Conference. Can these things be remedied? I answer they can. Some may wish to know how. To all such as inquire I would say, brethren, let us carefully overlook all our Economy from the Elementary Principles down to our latest or last official acts; and let us in a christian-like spirit, freely give an interchange of our views on any and every particular act that we believe to be not in accordance with God's Holy word; in doing this we will inflict no injury upon the church, (if done under the influence and spirit of Christ) for a reform, or a system, that will not bear a strict comparison with the scriptures of eternal truth, should be banished from the world, and the sooner the better. Men should hasten to see that no act of any man, or set of men, unauthorized by divine authority can be made in America, binding on the faith or conduct of an intelligent and an independent mind. Our system admits of amendment and improvement,

J. J. AMOS.

Selected for the Western Recorder.

SHORT SERMON ON UNIVERSALISM.

BY REV. LEMUEL HAYNES, A. M.

Preached in Reply to Hozea Ballou.

TEXT—Gen. iii. 4: "And the Serpent said unto the woman, ye shall not surely die."

The Holy Scriptures are a peculiar fund of instruction. They inform us of the origin of creation; of the primitive state of man; of his fall, or apostacy from God. It appears that he was placed in the garden of Eden, with full liberty to regale himself with all the delicious fruits that were to be found, except what grew on one tree—if he ate of that he should surely die, was the declaration of the Most High. Happy were the human pair amid this delightful paradise, until a certain preacher, in his journey, came that way and disturbed their peace and tranquility, by endeavoring to reverse the prohibition of the Almighty, as in our text—"Ye shall not surely die."

She pluck'd, she ate; Earth felt the wound: nature from her seat,
Sighing through all her works, gave signs of woe,
that all was lost. *Milton.*

We may attend—1st. To the *character* of the preacher—2d. To the *doctrine* inculcated—3d. To the *hearer* addressed—4th. To the *medium* or *instrument* of the preaching.

I. As to the preacher, I would observe, he has many names given him in the sacred writings, the most common is the *Devil*. That it was he that disturbed the felicity of our first parents is evident from 2 Cor. xi. 3, and many other passages of scripture. He was once an angel of light, and knew better than to preach such doctrine; he did violence to his own reason. But to be a little more particular, let it be observed: 1st. He is an *old* preacher. He lived about one thousand seven hundred years before Abraham—about two thousand four hundred and thirty years before Moses—four thousand and four years before Christ. It is now five thousand eight hundred and nine years since he commenced preaching. By this time he must have acquired great skill in the art. 2d. He is a very *cunning*, artful preacher. When Elymas, the sorcerer, came to turn away people from the faith, he is said to be *full of all subtlety, and a child of the Devil*—not only because he was an enemy of righteousness, but on account of his carnal cunning and craftiness. 3d. He is a very *laborious*, unwearied preacher. He has been in the ministry almost six thousand years, and yet his zeal is not in the least abated. The Apostle Peter compares him to a roaring lion, *walking* about seeking whom he may devour. When God inquired of this persevering preacher, Job ii. 2: "From whence comest thou?" he "answered the Lord and said, From *going to and fro* in the earth, and from *walking up and down in it*." He is far from being circumscribed within the narrow limits of parish, state or continental lines; but his haunt and travel is very large and extensive. 4th. He is a *heterogencous* preacher, if I may so express myself. He makes use of a Bible when he holds forth, as in his sermons to our Saviour, Matt. iv. 6. He mixes truth with error, in order to make it go well, or to carry his point. 5th. He is a very *presumptuous* preacher. Notwithstanding God had declared in the most plain and positive terms, "thou shalt surely die," or "in dying thou shalt die," yet this audacious wretch had the impudence to confront Omnipotence and say, "ye shall not surely die." 6th. He is a very *successful* preacher. He draws great numbers after him; no preacher can command hearers like him. He was successful with our first parents—with the old world. Noah once preached to those spirits that are now in the prison of hell, and told them from God that they should surely die, but this preacher came along and declared the contrary, "ye shall not surely die." The greater part, it seems, believed him, and went to destruction.—So it was with Sodom and Gomorrha—Lot preached to them, the substance of which was, "Up, get ye out of this place; for the Lord will *destroy* this city."—Gen. xix. 14. But this old declaimer told them, no danger! no danger! "ye shall not surely die." To which they generally gave heed, and Lot seemed to them as one who *mocked*—they believed the Universal preacher, and were consumed, agreeably to the declaration of Jude, "Sodom and Gomorrha, and the cities about them, suffering the vengeance of eternal fire."

II. Let us attend to the doctrine inculcated by this preacher, "ye shall not surely die." Bold assertion! without a single argument to support it. The death contained in the threatening was doubtless *eternal* death, as nothing but this would express God's feelings towards sin, or render an infinite atonement necessary. To suppose it to be spiritual death is to blend crime and punishment together. To suppose temporal death to be the curse of the law, then believers are not delivered from it, according to Gal. iii. 13 What Satan meant to preach was, that there is no hell, and that the wages of sin is not death, but eternal life.

III. We shall now take notice of the hearer addressed by the preacher. And this we have in the text, "And the Serpent said unto the *woman*, ye shall not surely die." That Eve had not so much experience as Adam is evident, and so not equally able to withstand temptation. This doubtless was a reason why the tempter chose her, with whom he might hope to be successful.—Doubtless he took a time when she was separated from her husband. That this preacher has had the greatest success in the dark and ignorant parts of the earth is evident; his kingdom is a kingdom of darkness. He is a great enemy to light. St. Paul gives us some account of him in his day, 2 Tim. iii. 6, "For of this sort are they which creep into houses and lead captive silly women, laden with sins, led away with divers lusts." The same Apostle observes, Rom. xvi. 17, 18, "Now I beseech you, brethren, mark them which cause divisions, and offences contrary to the doctrine which ye have learned, and avoid them, for they that are such serve not our Lord Jesus Christ, but their own belly, and by good words and fair speeches deceive the hearts of the *simple*."

IV. The instrument or medium made use of by the preacher will now be considered. This we have in the text—"And the *Serpent* said unto the woman, ye shall not surely die." But how came the Devil to preach through the Serpent? 1st. To save his own character and the better to carry his point. Had the Devil came to our first parents personally and unmasked, they would have more easily seen the deception. The reality of a future punishment is at times so clearly impressed on the human mind, that even Satan is constrained to own that there is a hell, although at other times he denies it. He does not wish to have it known that he is a liar; therefore he conceals himself, that he can the better accomplish his designs and save his own character. 2d. The Devil is an enemy to all good, to all happiness and excellence. He is opposed to the felicity of the brutes. He took delight in tormenting the swine. The Serpent before he set up preaching universal salvation, was a cunning, beautiful and happy creature; but now his glory is departed. "And the Lord said unto the Serpent because thou hast done this thou art cursed above all cattle, and above every beast of the field; upon thy belly shalt thou go, and dust shalt thou eat all the days of thy life." There is therefore a kind of duplicate cunning in the matter—Satan gets the preacher and the hearers also:

"And is not this triumphant treachery,
And more than simple conquest in the foe?"
Young.

3d. Another reason why Satan employs instruments in his service, is, because his empire is large, and he cannot be everywhere himself. 4th. He has a large number at his command that love and approve of his work, delight in building up his kingdom, and stand ready to go at his call.—Inferences. 1st. The Devil is not dead, but still lives, and is able to preach as well as ever, "Ye shall not surely die." 2d Universal salvation is no new-fangled scheme, but can boast of great antiquity. 3d. See a reason why it ought to be rejected, because it is an ancient devilish doctrine. 4th. See one reason why it is that Satan is such a mortal enemy to the Bible, and to all who preach the gospel, because of that injunction, Mark xvi. 15, 16, "And he said unto them, Go ye into all the world and preach the gospel to every creature. He that believeth and is baptized shall be saved; but he that believed not shall be *damned*." 5th. See whence it is that Satan exerted himself so much to convince our first parents that there was no hell, because the denunciation of the Almighty was true, and he was afraid that Adam and Eve would continue in the belief of it. Was there no truth in future punishment, or was it only a temporary evil, Satan would not be so busy in trying to convince men that there is none. It is his nature and element to lie:—"When he speaketh a lie he speaketh of his own, for he is a liar and the father of it."—John viii. 44. 6th. We may infer that ministers should not be proud of their preaching. If they preach the true gospel they only in substance repeat Christ's sermons. If they preach "Ye shall not surely die," they only make use of the Devil's old notes that he delivered almost six thousand years ago. 7th. It is probable that the doctrine of universal salvation will still prevail, since this preacher is yet alive, and not in the least superannuated; and every effort against him only enrages him more and more, and excites him to new inventions and exertions to build up his cause.

To close the subject, as the author of the foregoing discourse has confined himself wholly to the character of Satan, he trusts no one will feel personally injured by this short sermon. But should any imbibe a degree of friendship for this aged divine, and think that I have not treated this Universal preacher with that respect and veneration that he justly deserves, let them be so kind as to point it out, and I will cheerfully retract; for it has ever been a maxim with me, "*Render unto all their dues.*"

Mr. Ballou closed his sermon by repeating the following lines from Pope's "Messiah:"

"The seas shall waste, the skies in smoke decay,
Rocks fall to dust, and mountains melt away;
But fixed his word, his saving power remains,
Thy realm forever lasts, thy own Messiah reigns."

Mr. Haynes made the following addition to them:

UNIVERSALISM INDEED.

"When seas shall waste, and skies in smoke decay,
Rocks fall to dust, and mountains melt away,
In adamantine chains shall death be bound,
And hell's grim tyrant feel the eternal wound."
But all his children reach fair Eden's shore,
Not e'er to see their father Satan more;
The tottering drunkards shall to glory reel,
And common strumpets endless pleasure feel;
Bless'd are the haughty who despise the poor,
For they're entitled to the heavenly store;
Bless'd all who laugh and scoff at truth divine,
For bold revilers endless comfort find;
Bless'd are the clam'rous and contentious crew,
To them eternal rest and peace are due;
Bless'd all who hunger and who thirst to find
A chance to plunder and to cheat mankind—
Such die in peace—for God to them has given
To be unjust on earth, and to go to heaven;
Bless'd is the wretch whose bowels never move
With generous pity or with tender love,
He shall find mercy from the God above;
Bless'd all who seek to wrangle and to fight—
Such mount from seas of blood to worlds of light.
Go riot, drink, and ev'ry ill persue,
For joys eternal are reserved for you;
Fear not to sin 'till death shall close your eyes,
Live as you please, for yours is th' immortal prize.
Old Serpent, hail! thou mad'st a just reply
To mother Eve, "Ye shall not surely die!"
But, reader, stop! and in God's holy fear,
With sacred truth these tenets first compare;
Our Saviour's sermon on the mount peruse—
Read with attention, and the bane refuse!

TEA.

From a recent English work, entitled "Tea; its Effects, Medical and Moral," as quoted in the London Literary Gazette:

The tea plant is evidently indigenuous in many of the provinces of China, and in various situations serves in the fields as a hedge-shrub; but there are particular localities in which neither labor, skill nor ingenuity, are spared to bring it to the state of the highest perfection of which it is capable. It exists indeed, in different parts of the Eastern hemisphere, but it is only in China that it has been extensively cultivated; for although the Javanese assert that they have within the limits of their empire a shrub which is far superior to that which is found in China, we have no evidence of the fact, nor has any exportation been made of that of which they have so loudly boasted. The plant evidently flourishes over the greater portion of the Chinese empire, and there must be varieties produced by cultivation, which are not known in Europe, but which are said to be in high estimation among those people who can afford to purchase them. That which is best known to the European, and which indeed, seems grown and prepared for the supply of our markets, is the produce of the central and maritime provinces of China, forming the richest and finest portions of the empire. For these, too, the most valuable productions, and the most highly esteemed manufactures of various articles of dress and of luxury, are obtained. The demand for exportation has necessarily increased its cultivation, and it is now successfully reared in many situations where it was formerly unknown or entirely neglected.

The provinces of Fokien, of Keang-nan, of Che-keang, of Kian-si, add Kung-soo, yield the largest proportion; and the English resident is led to believe that from them the best supply is obtained; but the provinces immediately around Pekin afford that which is preferred by the luxurious citizen; and from those which border upon the Tartarian region, the Russian and the Muscovite draw their supplies, which are of a kind and a character which are much to be prized by the amateur of tea. It is in Fokien, or in "the happy establishment," that a very large proportion of that tea which is the ordinary beverage of the tea-drinkers of this country is grown. The shrub here requires great luxuriance; is diligently watched over; its farm-yards, its drying establishments, are on a scale of magnitude, and it furnishes us with a sound black tea, of sufficient aroma, strength and taste, to gratify the palate.

* * * *

When the shrub has grown about three years the leaves are ready for picking. This is done with the greatest care: they are not picked by handsful, but each leaf separately. They are thus, although the process be somewhat tedious, enabled to collect, in the course of the day, fifteen pounds. The following account has been given of a tea farm which supplies the imperial or bloom tea: "The plantation is enclosed with hedges, and likewise surrounded with a broad ditch for futher security. The trees are planted to form regular rows with intervening walks.—Persons are appointed to superintend the place, and preserve the trees from injury or dirt,—the laborers who are to gather them, for some weeks before they begin, abstain from every kind of gross food, or whatever might endanger communicating any ill flavor; they pluck them also with no less delicacy, having on thin gloves."

During the tea harvest, it would seem, great attention is paid to the diet of the husbandman. In the common tea-plant, commencement of the leaf gathering takes place in the spring; and three different crops are obtained during the summer. Scarcely, in the first instance, has the leaf attained its growth, and whilst it is yet budding into life, then the picking commences; and the tea will be fine in proportion to the tender age of the leaf; the most agreeable aroma and the most delicious flavor are then obtained from it. A soft white down covers the first leaflets, which is called in the Chinese language, pa-ho, and hence our name pekoe, the most exquisitely flavored of those teas with which we are acquainted. Trees until they reach the sixteenth year furnish this tea. A few days longer growth supplies us with the black leaf pekoe. In the month of May, the leaves that have grown since the first gathering, have arrived at maturity, are stripped from the trees: these form the souchong; the season-choung,—"the small or scarce sort." About six weeks after this, there is a third gathering of the new crop thrown out, and from the Chinese word, koongfou, signifying labor or assiduity, springs our term congou. From this a particular part is selected, kein-poey—a selection which is known to us under the name of campoy. The tea familiar to us under the appellation of bohea should be the produce of the district from which it derives its name: it is a rough preparation of the latter grown leaves which yields beverage of little strength and of inferior flavor. Green teas undergo the same kind of harvest. From the tender leaflets is produced hyson; and a very expensive kind, loons-ting is more particularly prized, it is called yutsein, "before the rains;" whilst hyson is a corruption "flowry spring."

The gunpowder is a hyson gathered with great attention, and rolled with much nicety and great care; indeed, it would appear to be a selection of the more delicate leaves. The coarser and yellower leaves remaining after this selection are called hyson skin. The twankay is the last gathered crop and consists of an older leaf, in which less attention is paid to the manipulations. The judgment shown in collecting the leaves at the various seasons evinces a great knowledge of vegetable organization, and of the succession of phenomena which are developed during the progress of life. It is in the early spring that the sap or vegetable blood has little to convey to the leaf but the mucilaginous principle, and that aroma, peculiar to each vegetable of whose existence we are by its efforts rendered sensible, but of which our means of examination are so limited. On the first bursting into existence leaves and flowers are endured with an evanescent odour, which art has attempted to fix, and to diffuse through other bodies.—Upon this much of the flavor of the plant depends, and if we would wish to obtain all that strikingly characterises the vegetable, we must gather it as soon as this principle is at all developed. At a later period of the year, not only has the aromatic principle been exhaled, but the mucilaginous properties are exhausted. A great proportion of the earthly phospates exist in all plants in the month of May, but they are much diminished as the year advances.

* * * *

Many experienced persons believe that the green tea is altogether artificially prepared; whilst others consider that the black is the same leaf, but that it undergoes the process which gives it color, and renders it much milder in its effects. The Chinese themselves rarely drink the green tea, and then only the produce of particular farms, which have obtained a high character.

The leaves of all of them are much more liable to be changed by the action of the atmospheric air, and very speedily lose that beautiful bloom, which, among many tea-drinkers, is highly valued.—The heavier these teas weigh, the better are they imagined to be, and they are much oftener scented by some other leaf; and great is the attention of the factor given to attract his customer by the fragrance and by the appearance. He often gives an additional dryness to the leaf after damp weather; and generally, immediately before he brings it in the market for sale he again dries it, to give the crispness which should belong to it. It often happens that these teas which strike the eye at Canton, are found, on their arrival in America, where they are very much esteemed and generally preferred to the black, not to satisfy the consumer, from the changes that have occurred during the voyage. These teas are often dried over the fumes of burning indigo; and a very small quantity, mixed with powdered gypsum, is delicately sprinkled over them, which adds to the color. Different modes of flavoring the tea are likewise practised: the blossom, buds of fragrant flowers are thrown amongst the finest tea. In the loonsting pekoe these are very discernable. After torrefaction has taken place in iron pans, destined for that purpose, the dried leaves are delicately touched with a camel hair pencil, which has been dipped in spiritous solutions of resinous and aromatic gums; and for this purpose a number of children are employed. The Chinese distinguish two kinds more particularly the boui, or bou-tcha, and the soumlo, which are reserved for the invalid. They likewise make it into cakes; and of this sort there is a particular kind, called mandarin tea, which is an extract from the leaves. This is rarely imported into England. Sir Anthony Carlisle presented, however, a very fine specimen of it to the Royal Medico Botanical Society; it was in the form of a dry, solid, blackish mass, easily broken and reduced to powder. There are other varieties which occasionally find their way into this country as presents. Ning-yong, pouchong, orange, pekoe, hung-meuy, have become within a few years familiar to us, and there is little doubt other names will soon be made known to us, and their characters will be investigated and compared. Among those that are brought to the Canton markets are, quougsow, keek ke, ke cheem chunn, wa chunn, yock chunn, and other euphonous names, which may hereafter be as well know to us as any of those which from their long reputation, have become the standard teas. There is a tea, known throughout the north of Europe under the name of caravan tea, and in some places, under that of kaisar tea, or the emperor's tea, imported into Russia by way of Kiachta.

It is seldom found in this country; the leaf is remarkably large, not much dried and of a deep black color mixed with stocks of the plant, and occasionally slender twigs of the smallest dimensions. These teas are in all respects superior in point of taste and flavor to those consumed in England, France and Holland. They are not the produce of the provinces which furnish those markets, but of the centre of China. They are conveyed by land to which much of their superiority is to be attributed, as the sea voyage deteriorates all teas and causes them to loose their strength, freshness and flavor. As Mr. Crawford has observed, the difference between the teas coming sea-wise, and those brought by land through Kiachta, is so remarkable, that it is no exaggeration to say, that a pound of the last goes as far as two pounds of the first.

* * * *

There was an idea once prevalent, that the color of the green tea was to be ascribed to the drying the leaves on copper; but nothing can be more unfounded than such an opinion, as the pans, one of which was sent home by an officer of the East India Company, are of cast-iron.—That copper may be detected in tea is true; but Bucholz had shown that it exists in several vegetables; indeed there are many proofs that it enters into the composition of a great proportion of animal and vegetable matter. It is found in coffee in very striking quantities; from ten ounces of unroasted coffee there may be obtained, by the proper manipulations, a dense precipitate, which will coat two inches of metallic copper. And he who eats a sandwich has much more to fear from the poisonous effects of this metal, than the drinker of green tea; for the two slices of bread, the one and the mustard, all have been proved, by the examination of the chemist, to be capable of forming in the stomach a metallic crust; indeed the only safe food would be potatoes, for in three pounds no copper could be traced.

The lower order of people speak of spending their coppers; they never dreamed that in return they were swallowing copper; but science teaches us many new things. Another instance of it is in making black green tea.

That damaged black leaves can be manufactured into green, an anecdote related by Mr. Davis fully proves. The remission of the tea duties in the United States occasioned, in the years 1832 and 1833, a demand for green teas at Canton, which could not be supplied by the arrivals from the provinces. The Americans, however, were obliged to sail with cargoes of green teas within the favorable season; they were determined to have these teas, and the Chinese were determined they should be supplied. Certain rumors were afloat concerning the manufacture of green from old black leaves, Mr. Davis became curious to ascertain the fact, and with some difficulty pursuaded a Hong merchant to conduct him, accompanied by one of the inspectors, to the place where the operation was carried on. Upon reaching the opposite side of the river, and entering one of the laboratories of ficticious hyson, the parties were witnesses to a strange scene. In the first place, large quantities of black tea, which had been damaged in consequence of the floods of the previous autumn, were drying in baskets with seive bottoms, placed over pans of charcoal.

The dried leaves were then transferred in portions of a few pounds each to a great number of cast iron pans, imbedded in chunam or mortar, over furnaces. At each pan stood a workman, stirring the tea rapidly round with his hand, having previously added a small quantity of termeric in powder which of course, gave the leaves a yellowish or orange tinge; but they were still to be made green.—For this purpose some lumps of a fine blue were produced, together with a white substance in powder which, from the names given to them by the workmen, as well as their appearance, were known at once to be Prussian blue and gypsum. These were triturated finely together with a small pestle in such proportion as reduced the dark colours of the blue to a light shade; and a quantity equal to a small teaspoonful, of powder, being added to the yellowish leaves, these were stirred, as before, over the fire until the tea had taken the fine bloom color of hyson, with much the same scent. To prevent all possibility of error regarding the substances employed, samples of them together with the specimens of the leaves in each stage of the process, were carried away from the place. The tea was then handed in small quantities on broad shallow baskets, to a number of women and children, who carefully picked out the stalks and coarse or uncurried leaves; when this had been done, it was passed in succession through sieves of different degrees of fineness. The first sifting was sold as hyson skin, and the last bore the name of the young hyson. The Chinese seemed quite conscious of the real character of the occupation in which they were engaged; for, on attempting to enter several other places where the same process was going on, the doors were speedily closed upon the party.

DEAN SWIFT.—George Faulkner, the Dublin printer, once called on Dean Swift on his return from London, dressed in a rich coat of silk brocade and gold lace, and seeming not a little proud of the adorning of his person, the Dean determined to humble him. When he entered the room, and saluted the Dean with all the respectful familiarity of an old acquaintance, the Dean affected not to know him; in vain did he declare himself as George Faulkner, the Dublin printer; the Dean declared him an impostor, and at last abruptly bade him begone. Faulkner perceiving the error he had committed, instantly retired home, and resuming his usual dress, again went to the Dean, when he was very cordially received.—"Ah George," said he, "I am glad to see you, for here has been an impudent coxcomb, bedizened in silks and gold lace, who wanted to pass himself off for you, but I soon sent the fellow about his business; for I knew you to be always a plain dressed and honest man, just as you now ap ear before me."

FAMILY PRAYER.—In binding a family together in peace and love, there is no human influence like that of domestic prayer. Uniting them in a common object, it unites their sympathies and their desires. Raising their hearts to heaven, it brings them altogether in the presence of God. The family altar is an asylum to which they repair from the care and toils of life. Reminding them of the rest reserved in heaven, it unites them in efforts of faith and obedience for its attainment. Earth has no holier spot than a house thus sanctified by prayer; where the voice of supplication and thanksgiving consecrates every day, where the word of God is devoutly read, and young and old unite to show forth all his praise. It may be humble; but it is holy, and therefore heavenly. Poverty may be there, and sorrow; but its inmates are rich in faith and joyous in the Holy Ghost. Sickness and death may enter it; but they will come as angels of peace and mercy, and the spirits whom they release from the imprisonment of the flesh, shall be united, free and happy, to worship forever, as earth did not permit them, a family in heaven.

The celebrated and excentric John Randolph, once described Florida in the following language:—"Florida is a land covered with water, abounding in alligators, tadpoles, serpents, and all manner of obnoxious things; a land, sir, of disease and death; a land to which a man would not emigrate from purgatory."

"My dear, what shall we name our baby?"—said Mr. Smith to Mrs. Smith, the other day. "Why huz, I've settled on Peter." "Peter! Good Lord, I never knew a man with the simple name of Peter, who could earn his salt." "Well, then, we'll call him *Salt Peter*."

WESTERN RECORDER.

ZANESVILLE:

THURSDAY, ... OCTOBER 31, 1839.

MR. DRAKE AND THE TOLLS.—Since the establishment of toll-gates on the National Road, through this State, under the law exempting those from tolls attending public worship, persons have been permitted, regularly to pass *free*, in attending Synods, Conferences and Ecclesiastical assemblies, until the present superintendent issued to each gate-keeper a set of instructions, from which, the following is extracted:

Gate-Keeper, No. 6.—"You will not pass any person free of toll under the PLEA of going to or returning from meeting, except it be persons going to or returning from their regular and ordinary meetings, whether on Sundays or other days, which may be considered in your or their neighborhood. T. M. DRAKE, Sup."

The Statuary provision regulating this subject can be found in the 35th vol. O. L., page 8, sec. 2, and reads:

"Nothing in this act contained, shall authorise the collection of tolls from children, passing to or returning from school; persons passing to or returning from public worship, to or from funerals," &c.

The above instructions to the gate-keepers, limit this act in two particulars. 1st. It confines the exemption from tolls to attendance on "regular and ordinary meetings." 2d. To such meetings only, as are within the immediate "neighborhood" of the gate, &c.

The *first* restriction tends to make bigots of the different order of professors: as it will not permit a member of the Baptist church to pass a gate to attend a Presbyterian service, because it is not his "regular and ordinary meeting," without unreasonable taxation, as we shall see in the sequel, and *vice versa;*—the *second* tends to deprive some church members of enjoying the ordinary means of grace, without submitting to the same unreasonable imposition. For instance—in the Methodist economy, one charge or circuit may embrace two or more gates, and the sacraments of that church are rarely administered but on quarterly or large meeting occasions.—Suppose a Sacramental meeting should be held at one end of the circuit—on the pike—a member from the opposite, would not be permitted to attend, with his family, though it is his "regular and ordinary meeting," because, forsooth, it is not in his own "neighborhood," without paying, in tolls, from fifty cents, to one dollar and fifty cents.

It is evidently the object of the Legislature, in the above provision, to leave the citizens of this State, free and unembarrassed to attend the worship of God, going, no doubt, upon the maxim of Washington, that "religion and morality" are "indispensable" to the "political" weal,—and that he who endeavors to "subvert" or embarrass them, is no "patriot." As this law gives no limitation to the distance a man may go—toll free—to worship his God, the Quaker, who annually passes from the Miami to Mount Pleasant, to attend his yearly meeting, is as much within its purview, as he who attends his church in sight of the gate,—yet, by the present incumbent, tolls are extorted from him. If there be any merit in attending worship, which claims the lenity of the government, he who travels one hundred miles for that purpose, is more entitled to it, than he who only travels one. Besides, a great portion of the spiritual interests of the church, cannot be attended to, but at these annual and distant meetings.

How to account for these tyranical and lawless instructions, to the gate-keepers, we know not; only, on the supposition, that the superintendent, who is the author of them, has, from some cause or other, a deadly hate against religion, and wishes to use, or rather abuse, his little brief authority, to do it all the inconvenience possible. Perhaps, like Julian, he is an apostate from the faith; having merited and received the exercise of the church censures for his delinquency, he feels a vengeance against her, which he seeks to gratify in this way. However, with his motives we have little to do, as it would be impossible for us to know them certainly,—they must be referred to the Searcher of all hearts. But with the acts of the superintendent we have to do, because they interfere with our rights as citizens.

The carrying out of these instructions are extremely vexatious to the community; the public generally know they are contrary to law, and it is so aggravating to have their pockets picked and pilfered in this way, they frequently resent it, which has sometimes led to unpleasant quarrels between them and the toll-gatherers. Some of the gate-keepers admit that these instructions are contrary to law, and do not abide by them, but others live up to their letter, and often officiate a little beyond. A process at law, we have no doubt, would soon decide their character; but who will be willing to incur the expense of testing the matter?

But after all, we should have less ground for complaint, if the tolls were any way within the bounds of moderation, but they are most extravagant. From Zanesville to Bridgeport, seventy-three miles, there are eight gates. For a dearborn-waggon, which is the plainest vehicle a man can travel in, twenty-five cents are charged at each gate: which is nearly three cents per mile. Now, how comes it to pass, that companies will vest their capital to construct turnpike roads, and afterwards keep them in repair, for a less rate of toll, when our gentlemen managers having one already made to their hands, cannot keep it simply in repair, without such exorbitant taxation? Can *Mr. Drake* answer this question? Unless we are satisfied to the contrary, on this point, we shall be inclined to the opinion, that in these days of patriotism, there is rather too much *fingering* of the people's money.

TOPICS OF THE DAY.—The suspension of the banks, and the pressure upon the business of the country, are the leading topics of nearly all the public journals. What will be the end of all this is somewhat hard to determine. We are of opinion, however, that such a state of things now exists, that no favorable circumstances whatever, can redeem us, as a nation, from extensive failures and ruin. It is now ascertained that the cotton crop is something like one third less than last year; add to this the depreciated price of the article in the European market, and we may calculate on little more than one half the proceeds from the sale of this crop than was realized the preceding year.

The reader is aware, that instead of manufacturing them ourselves, we have been, heretofore, extensively dependent on Europe for the comforts of life; to pay for them, we have relied upon our agricultural products,—principally the cotton. Our importations for a number of years have exceeded our exportations, that the balance of trade, so called, is against us. A large debt, in Europe, has accumulated against the nation. As our creditors do not want the products of our soil, to the amount of this debt, nothing will answer their purpose, for the balance, but the hard currency. To pay off this, extensive shipments of specie had commenced, which was the true cause, as we conceive, of the banks suspending payments.

The effects of this state of commerce had began to be felt for several years past, but temporary expedients, such as the sale of "American Bonds" in London, &c., have protracted the evil day for a season. But the arraignments of Providence appear to be bringing us immediately to the test. The extensive failure of the cotton crops, upon which we have principally relied to pay off our foreign debt, will put it out of our power, we are afraid, to dodge the question any longer. The predicament in which we appear to be placed is this. If we close the doors upon our vaults, and keep our specie at home, it will be cheating our creditors, and they will not trust us in future; if we send off the dollars to pay our debts as honest men should do, let the consequence be as it may, a large number of the moneyed institutions of the country will be ruined, and with them a considerable portion of its citizens.

Every intelligent American will now be made to see the folly of the government, in withdrawing her protection from our domestic manufacturies. The true policy of this nation is to set one portion of her citizens to manufacturing, and the other to raising bread-stuffs for them. So long as we depend upon foreign commerce for the essentials of life, we will ever be subject to these fits of morbid prosperity, to be followed by bankruptcy and ruin. While we all till the soil for the purpose of obtaining the comforts of life, when we have fruitful seasons and abundant crops, commerce will be active and flourishing, debts will be made to supply the increasing demand; then comes the drought and the famine, for a succession of seasons,—the products of the soil will not pay our foreign accounts, and as nothing else will do abroad but our specie, away it ultimately goes and the country is ruined.—And the destination of the seasons is beyond the control of the goverument, or of the regulators of commerce.

The weather still continues dry, but there are indications of rain at present. The latter part of last week was very warm for the season, and the atmosphere so filled with smoke that you could not distinguish a man over thirty or forty rods, which was also very painful to the eyes.—On Sunday night there was a brisk wind with a mist of rain which nearly entirely dispersed the smoke, since when it has been cooler.

We see from the late report of the Comptroller of Tennessee, there has been paid out of the Treasury of that State, as a premium on Wolf scalps, $1,318, for the last two years. That sounds like back-woods.

NEW JERSEY ELECTIONS.—The United States Gazette of the 11th inst., states that New Jersey has recently elected 10 whig members of the Council and 33 of the Assembly; the administration 7 members of the Council and 20 of the Assembly.

GREAT SOUTHERN RAIL ROAD.—It was determined at a meeting of the Stockholders of the Charleston and Cincinnati Rail Road Company, held at Ashville, on the 16th September, to stop the work at Columbia, South Carolina, unless the other States interested come forward with their aid.

A gentleman, under date, New Orleans, Oct. 9, "who has travelled quite extensively over the cotton growing region during the present season, gives it as his opinion, formed upon accurate personal observation, that the crop of 1839 will be one-third shorter than the crop of 1838."—*Bul.*

THE WAY OF THE WORLD.—A person who is in the habit of oppressing, and taking every advantage of the poor, may pass for a tolerable citizen; little notice will be taken of his villanies. But let a man who has sustained an irreproachable character, who has been distinguished for his uprightness and benevolence, be suspected of an unjust or oppressive act, the public will fall on him with a malevolence that shows no mercy. His real or supposed offence will be loudly re-echoed through the neighborhood—the tale will be listened to with eagerness, and all will unite in their execrations, until the character of the supposed delinquent is blasted. Why, all this noise? It originates from envy. The community have seen with pain the moral elevation of this citizen, and this clamor is to bring him down to the common level—or, if possible, to sink him lower, by way of revenge.

LIBERALITY.—Liberality, in aiding the necessitous of human kind, is a commendable virtue. Parsimony is one extreme of this virtue, and profusion is the other. Parsimony is the man who is over exact about little savings, and niggardly in his contributions in aid of charitable calls. Profusion is he who contributes largely, but without judgment, throwing his charities around with an indiscriminating hand, *but mostly to the undeserving.* This error is pretty general in the occurrences of the world; and the principle on which it is accounted for, seems to be this,—when a man gets the ability to be liberal, he gets also with it a degree of self-importance, which renders him excessively fond of flattery. Whoever will address himself to this passion will certainly share his bounty. Now, a man of honorable feelings, and dignified character, would starve, before he would stoop to that cringing sycophancy with which the rich are generally pleased; but, as the unprincipled, who, accommodating themselves to their own interest, can crawl and fawn around the wealthy, they are mostly sure of their liberalities.

The following are the remarks of a traveller upon the character of our town:

"Zanesville is quite an old town, situated upon the eastern bank of the Muskingum river, where the National Road, mentioned in my last, crosses that river. It resembles very much an eastern city, more than any one I had seen since leaving Cincinnati. It is a place of considerable business, and possesses great natural advantages, (I refer now to its water privileges.) The buildings of the place are mostly of brick. But I think more highly of the place, than the people. As good an index as I known of, to the moral character of a people, or as good a criterion to their principles as any, is their children: for as is the moral training of the children, so generally, the moral character and principles of their parents; the former, are a kind of transcript of them, morally as well as physically. This being true, then I do not want a personal acquaintance with the mass of the people of Zanesville to set them down as exceedingly corrupt, and wanting in correct moral principle. The readiness with which they take fire with the mob spirit, is also evidence, as well as the constant annoyance to strangers, from the corrupt manners of the children; some of them large enough to be men too."

TARIFF MEETING.—At a large meeting of the 2d Ward of the city of Pittsburgh, Pa., on the 21st inst., a number of spirited resolutions were passed, favoring a "Protective Tariff," the want of which is considered as a principal reason of the present embarrassment on the general business of the country.

"THE TARIFF.—We have not seen the subject of the Tariff broached by any of our eastern papers for some years, until since the suspension. They see it now, and there is not a paper which does not discuss it as our only salvation."—*Wheeling Times.*

"A PROTECTING TARIFF.—The following short paragraph from the late letter of D. A. Smith, Esq., to Dr. Brockenbrough, is a forcible illustration of the necessity of a Tariff, as a means placing a wholesome restraint upon our consumption of the products and manufactures of other nations, and of our defenceless condition without such Tariff. Mr. Smith says, in his letter: '*It has long since been held as a well established maxim, that no nation can remain in prosperity which shall depend* upon foreign labor for articles of the first necessity: and its truth is established by the condition of these United States at the present crisis. We have now a population little short of Fifteen Millions of souls, clothed almost exclusively in British Manufactures, *while England prohibits the importation of grain or breadstuffs from the United States.*' "—*Baltimore Patriot.*

FOREIGN ITEMS.

The correspondent of the New York Express, under date, London, September 19, 1839, after alluding to the rejected draft of the United States' Bank, by its Paris agents, Hottinguer and Co., and its acceptation by the Rothchilds, through the negociation of Mr. Jaudon, the London agent for the bank, adds:

"There are reports also that a transfer of the French agency has been made to the same house, but I can state particularly that such reports are at any rate premature, as nothing has yet been decided on that head. It is not improbable that neither Mr. Allsop nor Mr. Jaudon have powers to that extent, and the question remains therefore for adjustment at Philadelphia. In like manner it has been reported that the Rothschilds will not take the Paris without the London agency, the resumption of which by the Barings has now been for some time the subject of negociation. It is scarcely probable, however, that the United States Bank will choose to place itself at the mercy of one house only for the whole of Europe; for the house of Hope & Co., of Amsterdam, would probably throw up their agency also, if Rothschild's were to displace Baring's as well as Hottingen's.

"Mr. Jaudon has concluded a contract with Hope & Co. for State Stocks to the amount of £2,000,000, against which that house will make advances by instalments of £500,000 at stated intervals, or the United States Bank will value upon them to that extent as was most convenient. The Bank of Amsterdam is a party to this arrangement, and doubtless takes the heaviest share in the operation."

SWITZERLAND.—Strasburg, Sept. 8.—The Prefect of the Lower Rhine to the Minister of the Interior. They write to me from Basle, under date the 7th. A popular movement, in which four persons were killed and seven wounded, compelled the members of the government of Zurich to resign their functions. A provisional government, composed of four members of the dissolved Council, and three new personages, took the reins, and is to continue in office until the new elections take place. All this occurred yesterday morning. In the evening tranquility was restored.

We cut the following from the Charleston, South Carolina, "Mercury:"

THE BRAZILIAN SLAVE TRADE.—From official returns of vessels engaged in the slave trade to the coast of Brazil, under the Portuguese flags, for the several months of the year 1838, it appears that during that year eighty-four vessels entered the port of Rio de Janeiro, and that by them thirty-six thousand nine hundred and seventy-four slaves were imported, and further, that an apparent reduction in the number compared with 1837 is accounted for, not by any falling off in this infamous traffic, but by the fact that several of the traders have ordered their vessels to discharge at other ports of Brazil, and fit out from thence.

The following is the draft of a note sent by Lord Palmerston to Lord Howard de Walden, the British Minister at Lisbon, to be transmitted to the Portuguese Government:

"*Foreign Office, April* 20, 1839.

"The African seas and the Atlantic swarms with vessels bearing the flag of Portugal, and loaded deep with human victims.

"In 1837, forty-eight vessels bearing the Portuguese flag, entered the port of Havana, after having landed slaves in the neighborhood; and in 1838, forty-four Portuguese followed in the same course; and reckoning upon an average four hundred and forty-three slaves for each vessel, the number of slaves landed at Cuba by these Portuguese vessels must have been at least 40,700.

"But the number of Portuguese slave vessels which carry on the trade with Brazil, is still greater. At Rio de Janeiro above ninety-three slave vessels, under the Portuguese flag, are reported as having landed in the province to which that capital belongs, the enormous number of 41,600 slaves. In the year 1818, eighty-four Portuguese vessels landed in the province 36,700 slaves.

"*Foreign Office, April* 30, 1839.

"The cruelty with which the trade is carried on, has not been lessened in these latter days. It has been stated, during the last year, that in these slave ships hundreds of negroes are, during long voyages, crammed into spaces far to small to contain them, without the greatest degree of bodily suffering; that the slave traders, when chased are in the habit of throwing overboard into the sea, those negroes whose health has broken down under the torture of their confinement; and that, in order to lighten their ship, and facilitate their escape, they actually drown such of their cargo as are not likely to be profitable for sale in the market to which they are going."

New York, October 12.

FROM CHINA.—The ship Panama, Captain Benjamin, arrived at this port yesterday afternoon from Canton, having left Whampoa on the 1st and Macao on the 3d of June. We are indebted to Captain Benjamin for the following interesting intelligence:

The Chinese Government continued to persist when the Panama left, in demanding the Bond, as it was termed, of foreigners, on securing with the Hong merchants ships entering the port; and consequently no foreign vessels were brought into the river. Under a conviction that trade could not revive till the Government should abandon the attempt to enforce the new regulations, of which it showed no intention, nearly all the foreign commercial houses had completely broken up their establishments in Canton, and retired to Macao or elsewhere; very few foreigners of any nation remained.

All the foreign Consuls were at Macao. The chief superintendent of British trade had chartered the barque Ariel, which sailed from Macao, May 29th, and passed Angier, July 6th, to carry despatches for the British Government to a port on the Red Sea, (Cossier.) She was to remain there till they could be forwarded to London, and an answer obtained from thence, which the same vessel was to take back to Macao. It was estimated that eight months would be necessary to accomplish this, and in the mean time no British ship or property of any kind was to be allowed to enter the port of Canton, unless some satisfactory guarantee could be previously obtained from the Chinese Government, that, in case it determined again to stop the trade, British subjects who were admitted to be innocent of offence against the laws, should be allowed to depart with their property without molestation, or being subjected to any unusual pecuniary exaction.

An edict published on the 1st of June by the Canton Government, gave public notice that the Imperial Commissioner had received from Pekin authority to destroy the Opium in his possession (20,283 chests) in any way he might deem proper, and it was currently reported that instead of burning it, as at first he alleged in his edict to the foreigners was the Imperial command, and sending it to Pekin by sea, for which the requested number of Junks had been subsequently chartered, he was repairing reservoirs near the river bank, in which it was intended the whole should be mixed with salt water and other substances to destroy its narcotic qualities and render it unfit for use. When wrought into a liquid state, the composition was to be allowed to flow into the sea.

Very little foreign business was doing at Canton, and commercial confidence was nearly destroyed by the violent and oppressive proceedings of the Government against natives having any connection with foreigners or the foreign trade. The large quantities of goods recently thrown into the market by parties leaving the place, who were desirous of closing their affairs, kept the price of imports very low. The sudden demand for tea to load vessels, chiefly British, which had arrived at Wampoa before the trade was interrupted, and were not subject to the new regulations, (the heavy export duty and the extraordinary charges, the payment of which was rigorously enforced to meet the already enormous and constantly increasing claims on the Consoo Fund,) prevented a decline of the price of Chinese produce, which other circumstances probably would have ensured.—*N. Y. Eve. Post.*

AGRICULTURAL.

We wrote the following article, in 1833, for the Methodist Correspondent:

PLANTING APPLE TREES.—We recently saw a notice, in the papers, proposing the fall as the best time to plant apple trees. This notice we have seen repeated in the public prints, perhaps a dozen times in the course of ten years. Without supposing that we are any wiser, on this subject, than our neighbors, we shall take the liberty to state what our experience and observation go to say is the best time and method of transplanting trees. As soon as the frost is out of the ground, in the spring, *and before the sap has time to start*, raise your trees from the nursery, and either immediately place them where you wish them to stand, or bury their roots in a trench, until you have time for that purpose. If the trees be permitted to remain, but a *few warm days*, in the nursery, the sap will start; *then*, to remove them, nature will become stagnated in her operations, and it will take the trees some time to survive the shock, if ever they do. Some 5 years ago we had a lot of trees brought from the nursery of Mr. Goldthright, Fairfield county. A convenience, *accidentally*, offered for carrying them, just at that juncture, when the frost of a rigorous winter had escaped from the ground.—On the way, the weather turned cold, and having to tarry all night upon the road, they froze in the wagon—in this frozen condition their roots were buried in the ground, and after remaining there some two or three weeks, they were set in the orchard about the ordinary time for setting trees. Another lot was set at the same time, which was brought but about two miles, and immediately removed from the nursery to the orchard; but they had stood before their removal, about three warm days, which had put the sap to flowing.—Now, the former, every one lived, and put forth buds and leaves nearly as soon as the trees which had not been disturbed, but the latter did not bud as soon by about fifteen days, and several of them died.

To raise your trees, from the nursery, any time after the sap descends in the fall, before it ascends in the spring will secure the principle aimed at in this essay; and after raising them you can either set them in the orchard, or bury them until the common time for setting trees. We would prefer the latter, because if you plant them in the fall the winter frosts will heave them out of the ground, and unless you pass round in the spring, and tramp the earth about each tree, they will not prosper well—this is apt to be neglected, but if done, we see no reason why the fall would not do as well as the spring, and the spring as well as the fall, provided, in every case the trees be raised from the nursery when the sap is down.

A very common error in setting out fruits trees, is, to let the tops remain on them. This is wrong. 1st. Because it gives the wind an opportunity to shake and disturb their roots, and thereby prevents the prosperity of the tree. 2d. It increases the quantity of wood to be supplied with sap, and the roots, being cut off, cannot throw up sufficient to keep the whole in health until the process of nature starts its growth; hence the tree becomes stunted and injured—perhaps ruined. Cut off the whole top, and the stock will remain in a healthy condition, until it begins to grow—thrifty shoots will then be thrown out, and the tree flourish with rapidity.

POTATOES.—Our observation satifies us of the correctness of the following remarks on the culture of potatoes. To what is here said, we would add, that the drought is more likely to injure the late than the early planted potatoes.

Many farmers, from an idea that potatoes if planted early will not keep through the winter, delay putting them in until late in May and the beginning of June, but from experience we can state, that the idea is without being well grounded. Last year we planted our crop of potatoes on the 4th of April, and those which we have left are as sound as they were the day they were dug. There is another notion that prevents early planting, which we think without force. We allude to the impression which prevails, that potatoes when early planted become pithy. This, so far as our experience goes, is not the case. By getting them in in good season, they have time to grow and to become mellow and ripened before the time for taking them up arrives in the fall, and will, in nine cases out of ten, yield a great many more than when their time of planting is delayed.—*Farmer and Gardener.*

From the Farmer's Cabinet.

APPLE ORCHARDS.—I have observed that the generality of orchards decline in about twenty-five or thirty years. This is owing to many causes. First, the sowing of oats, which seldom fails to kill the trees; it ought never to be done; again, in about the time specified, the tree has exhausted the land, which is too poor to support it I would recommend the following plan—the benefit I have proved. Grub round the trees and take the mould and grass away; then manure them; take off the old scruffy bark—a spade is a good implement for this. Then let your hands take a stick about two feet long (the end in each hand) and rub briskly up and down; this will, in a small degree, loosen the bark, and give room for the sap to flow freely. After this you may put round the trees, say the second year, corn cobs; those from your hog pen are best. Cut off the sprouts but no large limbs. A SUBSCRIBER.

A good Farmer is generally a true friend, an affectionate husband, an excellent parent, and an honest man; and it is an established axiom, that a well tilled farm denotes the supervision of an enlightened mind.

Parents' Department.

MAXIMS FOR MARRIED PEOPLE.

Rules for Husbands and Wives.

THE HUSBAND.

1. A good husband will aways regard his wife as his equal, treat her with kindness, respect and attention, and never address her with an air of authority, as if she were, as some husbands appear to regard their wives, a mere house-keeper.

2. He will never interfere in her domestic concerns, hiring servants, &c.

3. He will always keep her liberally supplied with money for furnishing his table in a style proportioned to his means, and for the purchase of dress suitable to her station in life.

4. He will cheerfully and promptly comply with all her reasonable requests, when it can be done without loss, or inconvenience.

5. He will never allow himself to lose his temper towards her, by indifferent cookery, or irregularity in the hours of meals, or any other mismanagement of her servants, knowing the difficulty of making them do their duty.

6. If she have prudence and good sense, he will consult her on all great operations, involving the risk of ruin, or serious injury in case of failure. Many a man has been rescued from ruin by the wise counsels of his wife. Many a foolish husband has most seriously injured himself and family, by rejecting the advice of his wife, foolishly fearing, lest if he followed it, he would be regarded as ruled by her. A husband can never procure a counsellor more deeply interested in his welfare than his wife.

7. If distressed or embarrassed in his circumstances, he will communicate his situation to her with candor, that she may bear his difficulties in mind, in her expenditures. Women sometimes, believing their husband's circumstances to be far better than they really are, expend money which cannot well be afforded, and which if they knew their real situation, they would shrink from expending.

THE WIFE.

1. A good wife will always receive her husband with smiles—leave nothing undone to render home agreeable—and gratefully reciprocate his kindness and attention.

2. She will study to discover means to gratify his inclinations, in regard to food and cookery, in the management of her family, in her dress, manners and deportment.

3. She will never attempt to rule, or appear to rule her husband. Such conduct degrades husbands—and wives always partake largely in the degradation of their husbands.

4. She will in every thing reasonable, comply with his wishes—and as far as possible anticipate them.

5. She will avoid all altercations or arguments leading to ill humor—and more especially, before company. It is difficult to conceive of any thing in ordinary life, more revolting than disputes in company between man and wife.

6. She will never interfere in his business, unless he asks her advice and counsel, and will never attempt to control him in the management of it.

Should differences arise between husband and wife, the contest ought to be, not who will display the most spirit, but who will make the first advances. There is scarcely a more prolific source of unhappiness in the married state, than this "spirit," the legitimate offspring of pride and want of feeling.

Perhaps the whole art of happiness in the married state, might be compressed in those two maxims—'Bear and forbear'—and let the husband treat his wife, and the wife treat her husband with as much respect and attention as he would a strange lady, and she would a strange gentleman.

RELIGION IN FEMALES.—There is nothing so beautiful in the character of a female as religion—no trait so endearing as a perfect reliance on Him "who spake as never man spake." The love of God and works of pure and holy benevolence cast an halo round her form which is bright and lasting, and which nought else on earth is incapable of doing. Without it, what is she? A frail and slender reed, with nought to lean upon but the changeable affections of the creature of this world—with nought to support her in the trying hour of afflictions—a tiny bark, cast abroad upon the troubled ocean of life, and left the sport of each varying gale. But if the light of holy and undefiled religion, if the vivifying and beautiful love of God, find but a home in her breast, the rough surges of the world may bear on—the deepest trials and afflictions may come—she is steadfast. Her hopes are centered where the petty cares and anxieties which beset her path can never reach them; and amid all, her character shines forth with a purer and lovelier light!

THE RECORDER.

ZANESVILLE.

THURSDAY, ... OCTOBER 31, 1839.

☞We wish our Agents who may have money on hand, to remit to us as soon as practicable, as we have a contract for paper that calls for a considerable amount of cash.

The TERMS of our paper are $2 in advance; and advance means on subscribing, or on the reception of the first number, but we will continue to take $2 until the first of December; after that, we shall not take less than $2 50 to the end of the year—beyond that $3 00. We ought to have $2 50 in advance, but we put it at the lowest rate possible, and our subscribers ought to bear this in mind.

Bro. STOCKTON will be so good as to send the Letter-Press to the Rev. F. A. Davis, Zanesville, Muskingum county, Ohio.

We will receive subscriptions at our office, for the "Olive Branch," at Boston, "Luminary," at New York, "Letter-Press," Philadelphia, and "Methodist Protestant," at Baltimore. These are all papers conducted principally under the patronage of the Methodist Protestant church. We find them all quite interesting, and deserving the patronage of the church. We should be happy to have it in our power to do something in furthering the interests of each of them.

The "Methodist Protestant" of the 26th inst., announces the death of the Rev. JOHN FRENCH, A. M. D., of Norfolk, Va. Dr. FRENCH possessed strong discriminating powers of mind, and was a thorough and unwavering friend to the cause of religious liberty. We cannot but feel afflicted at the loss of such men as him, but we must bow with submission to the will of Providence.

The correspondent of the Protestant, from Lynchburgh, Va., in a recent communication, states that the revival in that place is still moderately progressing; that since his former communication fourteen more have been added to the church—making in all, FIFTY-FOUR.

A letter from Peyton S. Graves, in the same paper, dated Salem, Alabama, October 8th, says "a gracious work is going on among all denominations. Sinners of every age are turning to the Lord."

We have been wondering, for some time past, why we did not hear a word from our friends in Illinois. We used to have a number of regular *paying* subscribers in that state, to the old CORRESPONDENT. When we first issued, we addressed a number of papers to these old friends, to let them know we had come to life again—but, we could hear nothing from a single one of them.—Their conference sat early in September, but we had no tidings from it. We were anxious to know whether they had forgotten us or not. But our solicitude was relieved on this subject, by a communication, received on the evening of the 30th instant, just as our paper was going to press, from P. J. STRONG, Superintendent of *Bureau Circuit*, from which, we extract the following:

"PRINCETON, ILL., Oct. 10, 1839.

"C. SPRINGER—Dear Sir: By a vote of our late Annual Conference, in order to extend the circulation of the *Western Recorder*, it was made the duty of each superintendent to act as agent for the same. I feel anxious that you may be well sustained, and am willing to do all I can for you, in this section of country. If I had a sample of the paper, to show the people, I think I could get a number of subscribers for it on my circuit.

"In reference to religion, the Lord is doing kind things for us on this circuit. Last year was a year of spiritual prosperity. Our camp-meeting which commenced on the 29th of August, and closed on the 9th of September, being held eleven days, was one of the most interesting meetings I ever witnessed. Such displays of Divine power in the conviction and conversion of sinners, is of rare occurrence. The rich and poor, the old and young, were alike the subjects of Divine grace. Some of the very tallest from the ranks of the enemy were made to tremble and bow at the foot of the Cross. Forty-five or fifty professed conversion, twenty-five were added to the church, and more are expected as the fruits of this meeting. We had perfect order. The work is still going on. To God, be all the glory. Pray for us.

P. J. STRONG, Sup."

WESLEY'S GENERAL RULE ON SLAVERY.—Our abolition brethren have had much affliction of mind about the article on slavery being left out of Mr. Wesley's General Rules as published in the Discipline of the Methodist Protestant church, and much paper has been destroyed in petitions and memorials to have it restored.—And scores of abolition lecturers, in their usual stile of liberality to the Methodist Protestant church, have poured infamy and disgrace upon her for this act of omission.—We recollect at the Convention which established the Discipline of the church, that, when they were about connecting Mr. Wesley's General Rules therewith, it was contended on the part of several of the ablest speakers of the Convention, among whom was the Rev. Alexander McCain, who knows more about the early history of Methodism in this country than any man in it, that the Rule on slavery was not Mr. Wesley's, but that it was added by an American hand. The investigation entirely satisfied the Convention that this was the fact, and of course that body did not publish in the Discipline the article on slavery as one of Mr. Wesley's Rules, for the plain reason they could not do so in truth. This fact is conceded by the editor of Zion's Watchman in his paper of the 19th inst., in a note on the first page; says he—"This Rule [on slavery] was not one of Wesley's. It was added by the abolitionists who organized the Methodist Episcopal church; and it shows how anxious they were to keep slavery out of the church." Yes, but how came these abolitionists to pass this article off as Mr. Wesley's, and thus deceive a whole community, or nearly so?

We think this admission on the part of the abolition press, that the "Rule on slavery" was not Mr. Wesley's, should satisfy our abolition brethren on that subject, and save them any future trouble about petitions and memorials in relation to that matter.

Items of News.

The New York Commercial Advertiser states that Gen. Hamilton has not succeeded in negotiating the Texan loan.

The Clinton Bank of Columbus has made a new issue of five dollar post notes, payable twelve months after date.

OHIO RIVER.—A Cincinnati paper remarks that there are not more than thirty inches in the channel between that port and Louisville.

A pear tree is now standing in the city of New York, which is two hundred and twenty-seven years old, and bore fruit the past season.

The Wheeling Times, says that "the millers in this vicinity are paying from 60 to 62½ cents for Wheat. The farmers part with it reluctantly at those prices."

GRANVILLE BANK.—The question of the right of this society to Bank, has been determined in the affirmative by Judges Hitchcock, Grimke, and Wood, of the Supreme Court of Ohio.

At Cincinnati, on the 13th instant, a hack-driver was killed, by falling from his seat on the carriage, while going from the Brighton House to the race course. So much for racing.

We understand, observes the Philadelphia U. States Gazette, of the 12th instant, that Mr. Van Buren has ordered Mr. Trist to return immediately from Havana. Of course the object is for him to answer some of the accusations made against him, touching his stewardship in that city.

Ten thousand barrels of flour were recently purchased in Rochester, for the Canada market. The news by the Liverpool produced an advance in wheat at Rochester, of ten cents per bushel, and in flour, of fifty cents per barrel.

Ten and a half miles of the Dayton and Covington turnpike, were let on Monday week, at an average of about two thousand seven hundred dollars per mile. So says the Journal of Tuesday last.

A Dr. Peck, of Washington, Kentucky, died in a fit of mental excitement, during the late great race over the Oakland course at Louisville, between Wagner and Grey Eagle. It is said that he had ten thousand dollars bet upon the race.

It is stated in the New York papers, that John Jacob Astor has determined to make a bequest, in his will, of three hundred and fifty thousand dollars, for the establishment of a free public library in New York.

The late disastrous fires in New York and Philadelphia, have added greatly to the existing demand for money It is said that the Insurance Companies will have to raise and pay not much less than one million of dollars.

Gen. George McDuffie has been appointed by the city of Charleston to deliver an eulogy on the life, character and public services, of the late Robert Y. Hayne.

The Governor of Pennsylvania has issued a proclamation, the object of which is to prevent the banks from putting forth a currency of shinplasters. This is at it should be.

The public land sale terminated at Chicago on the 10th ultimo. The sales amounted to ninety thousand dollars. Books are still open for private entry.

Two brothers named Samuel S. and Levi Bills, were arrested on last Tuesday evening at Fulton, above Cincinnati, for passing counterfeit money. After an examination before the Mayor, they were held to bail in the sum of six hundred dollars each, for their appearance at Court, and in default they were committed to prison.

The Florence Gazette says, that the great bridge, recently erected over the Tennessee, at Muscle Shoals, and which was nearly two miles in length, fell down, on Sunday last, with a tremendous crash. Mr. J. R. Henry, its projector, was on the bridge at the time. He was thrown off, but not seriously injured.

There have been two more fires in Norfolk, one on Thursday night, and the other on Friday morning: but little damage was done—attributed to incendiaries.

GOING WEST.—The Wabash (Ia.) Courier, of the 5th instant, states that the number of emigrants going West by the National Road, through that place is immense, far exceeding that of any previous year. That paper says, "for some weeks past this great national highway has been literally crowded with the waggons, horses, stock, and all the paraphranalia of emigration. Both the ferries across the Wabash at this point are kept going from daylight till a late hour at night, frequently passing as many as a hundred wagons per day. From a recent trip north of this place, we discover that these remarks will apply, though in a less degree, to all the main thoroughfares of the great West."

RAIN AT LAST!—The Charleston Mercury of the 19th instant, remarks, that "after the long and unprecedented drought, we have at last, clouds and rain. The rain commenced before daylight yesterday, and continued during the day. We may hope for more. It comes as a blessing—and if sufficiently plentiful and general to raise our rivers in the interior to a navigable state, so that the crops can be brought down, considerable relief will be given to the pecuniary distress of our market."

OUR RAIL ROAD.—We published yesterday an article under this head, from the Knoxville Times, which we intended to accompany with an editorial remark, by way of attracting to it that consideration which its suggestions merit. It will be seen that the intelligent editor proposes a union between our own and the Hiwassee Rail Road companies, with, of course, the privilege to the stockholders of the latter to take a proportionate amount of stock in the Bank. Our communication with the West will thus be made through Georgia, instead of North Carolina, and strike the Tennessee river, instead of the Ohio. The advantages of this new project is that it can be accomplished, nay, *is* almost perfected already, while it is but too certain that the other is an impossibility.—*Ib.*

AWFUL CALAMITY.—A fire broke out in the heart of the city of Mobile, on the night of the 7th instant, which destroyed before it was got under, eleven squares of that ill-fated city, comprising five hundred buildings. Scourged as the population is with the yellow fever, this calamity will fill the cup of their misery.

ANOTHER FIRE IN MOBILE.—The Planters Journal of the 11th inst., concludes its account of the several disastrous conflagrations that have laid waste that city within a week, by adding another item to the fearful sum.—*Charleston (S. C.) Mercury.*

"On returning from the yet burning ruins of the morning's fire, on Wednesday evening, we sat down to write the foregoing account, but before we had concluded, the frightful alarm again rung in our ears! About 7 o'clock on Wednesday evening a wooden tenement on Church-street, between Clairborne and Franklin streets, was discovered to be on fire. This fire, like the others, was the fiendish work of incendiaries; the building we are informed was vacant. The fire rapidly communicated to the adjacent houses, and swept round the square to Government-street Theatre, which, with the handsome two story dwelling of Mr. G. G. Henry, on the East, and several frame buildings on both sides, were entirely burnt to the ground The fire crossed Franklin-street, and burnt a few small tenements, fencing, &c., on the West side of that street, but extended no further. The night was calm, and the squares in that part of the city were not closely built upon, which contributed greatly to its being confined to the block in which it originated.

"The great width of Government-street rendered the houses on the North side comparatively safe; the coals and sparks, however, fell in showers for a great distance around. The number of buildings consumed by this fire were about twelve or fifteen, and the loss, probably, near twenty thousand dollars.

"All is confusion, excitement, and distress. We are beset by the most fiendish and unrelenting villains, and Heaven alone can determine whether or no our calamities are to end here. Our city is ruined."

NEW YORK CANAL TOLLS.—The amount of tolls received on the New York Canals, during the first week of October, is stated at $65,751,48. In the corresponding week of last year the amount was $71,774,47. Increase for one week about $4000.

In the Municipal Court of Boston, on Friday, in the case of Edward Raymond, broker, on an indictment for selling lottery tickets, the Jury returned a verdict of *guilty* on six counts of the indictment.

The Small Pox, in its worst forms, is raging in the vicinity of Wiscasset, Edgecombes and Boothbay, Lincoln county, Missouri.

Lewis Watkins, one of the sufferers by the New York fire, it is remarked, has been burnt out six times in that city, and not by his own fault, but by his neighbors! He is a maker of packing boxes, and already has a shop rigged up and is at work.

Tuesday last was a day of intense suffering amongst the mercantile ranks of New York, and a strong sensation felt for the want of money,—a good deal of specie drawn from the banks by depositors—3 to 3½ per month was paid for money. It is very doubtful whether the banks will not suspend specie payments in a few days.—*Pitts. Intel. Oct.* 26.

RAIN—We learn from the Merchants Transcript of the 12th inst., that it has rained in New Orleans incessantly, for the most of the week, and from the St. Louis Daily Gazette of the 11th instant, "More rains in floods last night and to day." Our turn comes next—we hope for an immediate rise—our rivers are very low and nothing but Keel Boats can now leave.

The National Intelligencer, of the 14th, says:—"A Berlin letter of the 12th ultimo mentions a report that the Pussian Minister to the United States, M. DE ROENNE, now at Berlin, will be appointed the arbitrator of the differences between the United States and Mexico, the King of Prussia having been requested by the two Governments to mediate between them."

MAIL STAGE ARRANGEMENT.—Neil, Moore, & Co. have made an important improvement to their Polot line of Coaches between Wheeling and Cincinnati, by the addition of a *Guard*, who accompanies each coach of this line. His duty, is to see to the comfort of the passengers, to insure the arrival of the coaches at the end of the route in the specified time, and the faithful performance by the drivers of their duty, both to the passengers and the proprietors.—*Col. Journal.*

A majority of the City Council of Baltimore have reported in favor of issuing small note certificates to the amount of $400,000—namely $75,000 of 50 cent bills; $75,000 of 75 cent bills; $150,000 of $1 bills; and $100,000 of $2 bills.

Gov. Porter, of Pennsylvania, has, by Proclamation, instructed the Attorney General of that State, and his deputies, to institute proceedings against all persons or corporations whatever, who shall issue any substitute for money of a less denomination than five dollars.

PROTRACTED MEETINGS IN SCOTLAND.—In a letter received from Scotland, my friend states that protracted meetings are to take place all over that country. This is indeed a "*new measure*" in that country, in connection with the ordinary services of religion. The origin of your four days services may probably be traced to Scotland, where the people for generations had continued meetings at the sacrament time, as it is called; but protracted meetings to promote revivals of religion is a new feature in the proceedings of religious people in that country. Let us hope that great good will result from such services; the Scotch are not very excitable on religious subjects. A little more heat with the orthodoxy of the north, will render it more useful and attractive.—*Evangelist.*

JEW DAY OF ATONEMENT.—Wednesday last week was set apart by the Jews throughout the world as a day of atonement to afflict their souls and humble themselves before the God of their fathers, against whom they have greatly rebelled. It is the impression of their teachers and guides with serious Jews in general, that the century upon which, they have entered (A. M.) 5600 according to their computation, and which begun last Monday will be decisive as to their hopes as a nation.—*London Paper.*

MANAGEMENT BETTER THAN BEATING.—A truckman in Boston, who had a refractory horse, that would not move forward, beat him unmercifully. A gentleman came along, who told him that he must not beat him any more. "What shall I do?" said the man; "my horse has stood here these two hours. Shall I stand here all day?" "Oh, no, the horse must go, but you must not beat him any more.—Get me a rope twice as long as the horse." The rope was brought, tied to its tail, and then passed between his legs forward; then he gave a pull upon the rope; the horse was frightened, and showed signs of kicking; he continued to pull; the horse suddenly started forward, and went off without any more beating. The gentleman had seen that method tried on jackasses in South America with full success. If you doubt it, try for yourself.

SINGULAR PHENOMENON.—We are informed, on good authority, observes the Boston Mercantile Journal, that Captain Thomas, of the brig Edward, of Alexandria, (D. C.) arrived at Trieste in May last. He states, that in passing south of Sicily, he sailed over the spot which was occupied by the volcanic island in 1833. After sailing about twenty-five miles on a due east course, he suddenly perceived the water all around him to be white, as if the bottom had been chalk or coral. It was so white, that every thing appeared bright within the reflected light, so that one might see to pick up a pin on deck, although it was then a quarter past 12 o'clock at night. Its extent was about 250 feet square. He was struck with surprise; and sprung to seize the lead, but before he could sound, he had passed over the illuminated surface.

EDUCATION CONVENTION OF COLORED PEOPLE.—On the first week in September a convention of colored persons met at Columbus, to consult on th best means of establishing Schools for the education of colored children who are debarred entrance into our common Schools. Delegates were present from Cuyahoga, Ross, Franklin, Clark, Montgomery, Muskingum and Pickaway counties. From the 2d annual report, it appears schools have been established as follows, viz:

In Cleveland with 14 scholars; at Chillicothe with 45 scholars, and a lot has been purchased to build an academy on; at Springfield with 20 scholars; at Zanesville with 68 scholars; at Circleville, number not stated.

A State Society—and a number of school societies have been formed. The members of which contribute, and collect subscriptions of others, for supporting Schools for colored children; M. M. Clark was re-appointed General Agent.

Resolutions were passed, recommending colored people to purchase Land as far as practicable, and engage in agricultural pursuits; that they abstain from intoxicating drinks; endeavor to educate their children, and let them learn mechanic trades. Thanks were returned to all who contributed towards establishing schools the past year. During the year, $320 90 cts. were collected; and 167 dollars and 29cts, expended, principally to the schools above named; leaving a balance in the treasury of 153,61.

A preacher while descanting on the impossibility of the sinner retracing his steps, after he had gone a certain length, used the following striking illustration of his position: "My brethren it is a very easy task to row a skiff over Niagra Falls, but a tremendous job to row it back again."

FRIDAY, OCT. 25th.

We have this day taken our usual walks and find business continues very dull for the season. A few wholesale Grocers are doing some business, but it is not general. We have at this season of the year been obliged to beg a drayman to stop and take a load as a special favor, for such was the press that our 200 drayman and carters could not do all the business in daylight, now they are not employed a fourth of their time, and are to be seen in clusters, mourning in common with the merchants and manufacturers the very low state of trade.

Flour—Owing to the present demand in the eastern cities for England, and the closing of our canal in a few days, has become lively and sales are making at $4 a bbl. and for choice brands and good quality $4,25 is freely paid—but all scratched is reduced 50 cents.

Grain—We have inquired at two steam mills and they only pay 65 cents a bushel for wheat, and get all they want at that price. We know of no sales higher.

Corn 50, Rye 45 to 50, Buckwheat 40, Oats 20 to 22, Barley $1 per bushel.

Bacon has declined, and we have reduced the price, hog round, dull, at 7½ a 8, and hams 9 cents a pound.

Beef Cattle—plenty—Beef on foot $5 to $6 per 100 lbs. Veal, $2 to $6.—*Pittsburgh Intelligencer.*

DENOMINATIONAL EGOTISM.—In our last we referred to the spirit of denominational self-gratulations which had been exhibited at some of our late Centenary Meetings. The following account of what one of the speakers said, at the meeting in Greene street, on the evening of the 4th inst., is from the Chris. Adv. and Jour.

"Brother ———'s *Ideality* seemed to be unwontedly active, even for him, this evening. With the exception of the prayer meeting in the morning, he though the exercises for the glorious 25th, in the UPPER SANCTUARY, might be *much the same as in the church below.* He was *almost sure of the love-feast*, and then, while in every part of our globe the Wesleyan chapels were opening wide their portals for the worshipping hosts militant, he could imagine *that on some bright plain in paradise John Wesley might gather about him a glorious company of our departed brethren, and discourse from that oft-cited text,* 'What hath God wrought?'"

In this case it will be seen, the good brother's imagination carried his *denominational* prejudices beyond the grave, even into the abodes of the blest!

We are for rendering honor to whom honor is due. We wish for every man and every church to have all the praise which may be rendered them in justice, and especially the church of our own choice, but we never can approve of this kind of egotism. We are heartily sick of it.

It should be added, perhaps, that Dr. Alder, in the course of his address, expressed his doubts of the orthodoxy of the views advanced by the speaker above referred to.

Again, the Christian Advocate and Journal, gives the following report of some remarks, of the same character, made by Rev. H. Slicer, at the Centenary Meeting in Forsyth street, October 1st.

"The speaker would not say that John Wesley was the founder of the Bible, Missionary, or Tract Societies; but who, he asked, ever heard of any similar institutions, save *Voltaire's Tract Society*, before this great revival of religion? Some historical facts, relating to several branches of the great moral machinery which is the *crowning glory* of the age, were here adduced, which made it appear no unwarrantable assumption, that Methodism was the mother of them all."

Our readers must now judge whether these questions do not most fully sustain the positions laid down by us in our last. —*Zion's Watchman.*

ANECDOTE OF WASHINGTON.—When the American troops were quartered at Newburgh, at the close of the revolutionary war, and the soldiers were stirred up to rebellion against the government, by the famous anonymous letters, which it has since been ascertained, were written by General Armstrong, then a Major in the Army, General Washington convened the officers for the purpose of addressing them on this subject, and calming the tumult which was beginning to rage in their bosom. He held a paper in his hand, on which the remarks he intended to make were written—and then it was, that finding himself unable to read without assistance—as he was drawing his spectacles from his pocket, that unpremeditated expression broke from him—one of the most pathetic that ever fell from human lips—"*Fellow-citizens*," said he, "*you see I have not only grown gray—but blind in your service.*" The effect of this remark was electrical. No bosom—no eye was proof against it.—*Boston Mer. Jour.*

ANECDOTE.—As deacon A———, on a cold morning in January, was riding by the house of his neighbor B———, the latter was chopping wood and thrashing his hands at the door. The usual salutations were exchanged, the severity of weather briefly discussed, and the horseman made demonstrations of passing on, when his neighbor detained him with—

"Don't be in a hurry, deacon. Would'nt you like a glass of good old Jamaica this cold morning?"

"Thank you kindly," said the old gentleman, at the same time beginning to dismount with all the deliberation becoming a deacon, "I don't care if I do."

"Ah, don't trouble yourself to get off, deacon," said the wag, "I merely asked for information. We hav'nt a drop of rum in the house!"—*Exeter News-Letter.*

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for all moneys we receive.

☞All the travelling preachers are considered agents for this paper.

Dr. A. W. Knight,

(Formerly of Philadelphia, but for the last six years in Muskingum county. Ohio,)

HAS removed to MT. STERLING, and now respectfully tenders his professional services to the citizens of this place and the surrounding country: he may at all times be found, when not absent on professional business, at his residence. He hopes that undivided attention to the duties of his profession, together with an experience derived from twelve years practice of the various branches of a profession, and part of that time in the Philadelphia Hospital as one of the house physicians, will enable him to merit and receive a liberal share of public patronage.

Mt. Sterling, Ohio, Oct. 31, 1839. 11tf

Glass Manufactory.

THE GLASS-WORKS recently carried on by R. P. ROBINSON, has been taken by the subscribers, and will in future be conducted by them. WINDOW GLASS, double and single, all sizes, and of superior quality, will be kept constantly on hand for sale on reasonable terms, at the works. The experience of one of the firm, in the manufacture of the article, will ensure all made to be of the best quality.

S. P. JOHNSON & CO.

Zanesville, Oct. 31, 1839. 3w11

YOUTH'S DEPARTMENT.

From the Youth's Cabinet.

LITTLE CHILDREN'S PRIDE.

"Ma'am!" said little Quincy the other day, in my hearing, "May'nt I have on my meeting clothes?"—"Ma'am! may't I have my meeting clothes on?"—"May'nt I have on my meeting clothes?" And thus he continued teasing his mother, who was busy in conversation with myself and another minister who had just called in, till she told him it was not best then, because the clothes he had on were good enough to wear at home. Then little Quincy cried out very loud, for some time, and steered off to another part of the room, covering his eyes with his hands without speaking again till his crying was over and he had gone out of the room.

Quincy was a little boy, only between three and four years old. The clothes he had on for home use, were a short calico frock with pantilets, but his meeting clothes, as I afterwards learnt, were pantaloons and a round-about. He then wanted his new clothes on, it seemed, because they were new, and because they were made up more like large boys' or men's clothes, and he wanted us all to see him in such clothes, to make us like him better and think him more like a man. Now this must have been all pride in that child. He cried hard with shame to be seen with every day clothes on such as little children wear, but would have been very happy and proud to have on such as were finer and more fashionable.

But, dear children! will you be proud like that little boy, and want the finest clothes on to keep you from crying with shame? No; you should never feel so; for pride is very wicked, and makes grown folks many times to lie, and cheat and steal, and sometimes to murder and rob, to get to buy fine things enough to keep them from being ashamed of their appearance; and makes even little children, as you see, cry long and hard only to have better clothes on.

When Jesus Christ was a little child, he had no pride, and was not ashamed to think that he had been born in a barn, and wrapped, not in a fine round-about, but in swaddling clothes, and not laid upon a rich bed, but in a manger. And thus he was meekly and lowly as long as he lived, and never got him any fine or rich things as proud people do, though every thing was his, and he could make plain food enough for thousands at a time. So should we always be meek and lowly like him, for no proud person can ever go to dwell with him in heaven, because the Bible says—"Behold the day cometh that shall burn as an oven, and *all the proud*, yea all that do wickedly, shall be stubble, and the day that cometh shall burn them up, that it shall leave them neither root nor branch, saith the Lord." (Mal. 4: 1.)—*Children's Friend.*

THE YOUNG BIBLE READER.

When in New Hampshire, I saw an active little boy cheerfully helping a farmer take care of cows. He claimed this man as his father, though he was really a fatherless child. A dear friend of the child gave me the following interesting facts, respecting him. His name is Thomas Jefferson Murdock Alden. He was born at Middleborough Mass., Feb., 2, 1831. When he was two years old his parents removed to Lyme, N. H. where his kind father died two years after. When his father was dead, he went to the house of a Christian neighbor, whom he called his father, and seemd determined to live with him. The man having no children of his own, adopted the affectionate child. He will doubtless know by experience, the full meaning of Christ's words:—"Blessed are the merciful, for they shall obtain mercy."

On the first day of January, 1837, the little boy began to read the Bible through in course. He was then not six years old. Dec. 2d, he finished it, when his age was just six years and ten months. On New year's day he commenced again, and finished Sept. 16.

He begun the third time, January 1, 1839, and finished July 12. Thus he had read the Bible through three times when his age was less than eight years and a half.

He will doubtless be glad, as long as he lives, that he spent the leisure moments of his childhood in reading God's word. The dear friend of the child who communicates these facts, concludes by saying:

"May the study of the Scriptures prove the means of his soul's salvation. Every Christian who reads this is requested to pray that this orphan boy may be blest with an interest in the Saviour."—*ib.*

From the Youth's Cabinet.

CHILDREN, BE HONEST ALWAYS.

I have just stepped into the Cabinet office to tell the children who read this paper, of the honesty of a small boy I saw this morning as I was coming up Canal street. I was walking fast, taking no notice of boys, nor any body else, when suddenly a lad came running along to me from behind, and held out to me a pocket handkerchief, saying, "This is yours, you dropped it as you passed by where I was." I saw that it was mine, and asked him how I dropped it, not having had it out for some time to my recollection. "It dropped from your pocket," he said. I felt and found a rent in my pocket, which I had not before discovered —commended him for his honesty, in restoring it so readily to the owner—gave him a piece of silver, and came on. If I had thought of it, and asked the boy his name, I would now give it, as a further testimony in favor of such honesty in children.

I mention this fact now, more freely, because I have many times before, lost things, such as my handkerchief, my over-coat, my umbrella, and the like, in country roads where few people travel, and could never hear of them again, though inquiries were made, and advertisements sometimes put up at the nearest tavern or hotel. I suppose that the persons who found them, wished to keep them as their own; and did keep them; being careful not to tell others of their finding them in the street, lest the owner should hear of it and call for them. Probably they thought that keeping them secretly after finding them, would not be the same as stealing; like a boy who once found my pocket-knife, living next door to me, and yet kept it a week or two, till another person told me he had it, and wished I might not be told of it, as he wanted it for his own.

But *my* plan has been, ever since I knew what stealing was, when finding any thing, to give it directly to the owner, when to be found, and when not, to give out word, or advertise it in writing, or both, as might seem best for the owner. So, I would recommend to every boy and girl to do, aways, when finding a piece of lost property; because this is doing as we would be done by, as Jesus bids us; and because, when such lost things are found, and kept secretly, the same as if belonging to the finder, it is the same as *stealing*, and will be so written in the Lord's book, out of which we must all be judged for eternity. That book will soon be opened to the view of angels, devils, and all mankind; when it will be forever too late, for any one to become honest, and fit for heaven, who finds things and keeps them secretly, like the thief.—*Children's Friend.*

MISCELLANEOUS.

THE MISSISSIPPI VALLEY.

1770—1775.

It was incidentally mentioned that in 1757 the English built Fort London on the Little Tennessee to check the progress of the French in that section. Around this fort a settlement was gradually formed by English colonists. In 1760 this fort was taken by the Cherokee Indians; and the garrison, together with the neighboring settlers, men, women and children to the number of three hundred were massacred. Not a single Anglo-American was left in Tennessee.

No sooner, however, had the English taken possession of their newly acquired territory on the Mississippi, than a stop was put to the incursions of the savages; and from that Pennsylvania, Virginia and Carolinas began to push their adventurous steps into the country, and to name the mountains and rivers. They gradually broadened the circle of population, until in 1770, the period at which we have arrived, they had penetrated into the interior of the present State of Tennessee.

The first settlement of Ky. was nearly cotemporaneous with that of Tennessee. The name of the famous Daniel Boone is identified with the exploration and settlement of both.—Boone was a native of Virginia: but had emigrated in early life to North Carolina. His favorite employment was hunting; and to gratify his adventurous spirit, he set out with five companions, in 1769, crossed the mountains, in quest of the region of Kentucky.—They were traversing the country on the Kentucky river, when Boone and one of his companions, John Stewart, were captured by a party of savages. They soon effected their escape; but unable to find their companions, they were returning home, when they met squire Boone a brother of Daniel, who had pursued their track from North Carolina with a fresh supply of ammunition. Stewart was soon slain by the natives, and the two brothers were left the only white men in a trackless wilderness. They spent the winter in a cabin, and after exploring the country to the Cumberland river, returned to their families with a determination of removing to Kentucky.

In 1773, Boone commenced his removal to Kentucky, with his own and five other families, and was joined on his way by forty men, who placed themselves under his guidiance. Being attacked by the Indians, six of his men were slain and the cattle belonging to the party dispersed. The survivors returned, in consequence, to the settlements on Clinch river, about forty miles from the scene of action. A company in North Carolina, stimulated by Boone's account of the country, now formed a plan for purchasing the lands on the south side of the Kentucky river from the natives, and employed Boone to make the bargain.—He performed the service, and soon after opened a road from the Holston settlements to the Kentucky river. Two years were consumed in making these preparations, before a settlement was established. At length, in 1774 Boone erected a fort near salt spring, on the southern bank of the Kentucky. It consisted of a block house and several cabins enclosed with palisides to protect the families of the settlers. This was the first permanent settlement in Kentucky, and was named Boonesborough in honor of the intrepid pioneer who established it.

Among the most conspicuous names of the hardy adventurers associated with Boone in the settlement of Kentucky were Finley, Harrod and Logan; and among the precursors in the settlement of Tennessee, Sevier, Tipton, and Blount held the same rank. Few colonies have existed, that can produce annals of deeper interest than those which record the origin and progress of the States. The patriarchal pioneers who settled them, were people of a peculiar and remarkable order, trained by circumstances to a character, which united force, hardihood and energy in an astonishing degree.—They were perhaps, as much distinguished for chivalrous notions of honor and justice, as for strength, firmness and bravery.

There is an indescribable charm in becoming acquainted with these noble founders of western republics. The interest increases as we follow their history from their first locating their families in the forest, through their conflicts with the Indians, the difficulties incident to solitude, distance from social comforts, and exposure to the dangers of a strange climate; until their cabins are replaced by houses, and their houses by splendid mansions; until their stations are converted to villages, and the villages to towns, and until a few spare settlements in the wilderness become populous and powerful States. The heroic and undaunted spirits, who put a strong and cheerful hand to the first improvements in a region possessing all the wildness of nature, and tenanted only by savages, are worthy of enduring remembrance.—*Prairie Beacon.*

HELP ONE ANOTHER.—We have too often noticed a propensity among individuals of a compact and flourishing village, to make purchases and to trade generally with strangers, in preference to fair and mutual interchange, neighbor with neighbor. This is an evil, and we can only account for it by supposing that the individual who will not encourage business in his own village, is possessed of envious feeling towards his neighbors and dislikes to see them prosper.

When such feelings are cherished between man and man, they soon render the most flourishing village desolate, and paralyze the efforts of those who sincerely wish for the prosperity of a place where they chance to dwell. "Help one another," is the motto for every country village, and when the inhabitants will throw away all little petty differences, which always exist in every community, and in defiance of personal feeling, trade in their own villages,—and let what little cash they have to spare, go to support their own folks, instead of driving off a dozen miles at the expense of a dollar, to save a cent in trade, that village will be marked by every stranger as thriving and happy; the mansion of the parson and its premises will afford ample token that his parishioners possess the means of paying him a liberal salary; the hammer of the mechanic will be heard at dawn; the buildings will rise as if by magic, and the whole village will present a prospect of industry and contentment.

But mark the village whose inhabitants suffer their own mechanics to languish, while they are spreading their money with liberality to support those of the neighboring towns; decay will have settled upon the inhabitants, and the rising sun will generally find them snoring away the best of the day in bed;—every thing will wear the livery of desolation.

The mechanics of every village must be liberally supported. There is opposition in every branch of business, and there are those who have the art of slighting work so as to do it cheap: you go to a first rate mechanic, his price will appear to be high, even if he works as reasonable as he can possibly afford to work well; you leave him and employ a cheap workman in some other place; depend upon it your money is wasted, and your mechanics, by such a course, will either be obliged to leave you, or be ruined.—*Newport Spectator.*

A THUNDER STORM.—Abstractly speaking, there are few things, if any, in all that portion of the universe which is exposed to the eyes of man, so grand, so mighty, in beauty, so magnificent in splendor, as a thunder storm. The feeble and impotent contention of man with man, even upon the grandest scale, is fain to borrow the cloudy war of the storm images to give it grandeur. We hear of the thunder of the cannon, of the lightning flash of the artillery. But what is it all to the reality, when forth from the clouds bursts the deafening voice of the storm upon the ear, and upon the eye blazes the blinding flash of the leven bolt of heaven! When shall we produce lights like that, casting their splendor from one verge of heaven to the other? Yet there are few persons who view a thunder storm with the same feelings: and, indeed, the differences of human character are tried by scarcely any thing more finally, than by the sensations produced upon the mind by that phenomenon. There are many who are terrified, and that terror may proceed from a thousand other causes than mere mental weakness. There are some actually afraid of corporeal danger.—There are some who have been taught fear irremediably in their youth. There are some scarcely afraid, but awe-struck and overpowered. There are others, again, who have neither fear, nor awe, nor admiration, the dull fabric of whose minds is incapable of any fine sensation. There are some who do more, and admire the storm, but admire it simply for its grandeur; there are others who do so likewise, but go far beyond, who combine it with visions of bright things; who hear tongues like those of angels in the voice of thunder, and who gaze upon the blaze of the lightning, lighted by its splendor, to far faint visions of Almighty power and majesty.—*J. P. R. James.*

THE BROKEN CRUTCH.

One hot day in the month of June, a poor sun-burnt sailor, with but one leg, was going along the road, when his crutch broke in halves, and he was forced to crawl on his hands and knees to the side of the road, and sit down to wait till some coach or cart came by, whose driver he could ask to take him up. The first that passed that way was a stage-coach; but the man who drove it was a surley fellow, and he would not help the sailor, as he thought he should not be paid for it.

Soon after this, the tired sailor fell fast asleep upon the ground, and though a thick shower of rain came on, yet still he slept; for sailors, when on board their ships, have to bear all sorts of weather.

When the wind blows, the waves of the sea often dash over the deck of the vessel, and wet the poor men to the skin, while they are pulling the ropes and shifting the sails.

When the lame sailor awoke, he found a boy's coat and waistcoat laid on his head and shoulders, to keep him from being wet; and the boy sat by, in his shirt sleeves, trying to mend the broken crutch, with two pieces of wood and some strong twine. "My good lad," said the sailor, "why did you pull off your clothes to keep me from being wet?" "Oh," said he, "I do not mind the rain; but I thought the large drops that fell on your face would awake you! and you must be sadly tired to sleep so sound upon the ground. See! I have almost mended your crutch, which I found broken; and if you can lean on me, and cross yonder field to my uncle's farmhouse, I am sure he will get you a new crutch. Pray, do try to go there. I wish I was tall enough to carry you on my back."

The sailor looked at him with tears in his eye, and said, "when I went to sea, five years ago, I left a boy behind me, and if I should find him such a good fellow as you seem to be, I shall be as happy as the day is long, though I have lost my leg, and must go on crutches all the rest of my life." "What is your son's name?" the boy asked.

"Tom White," said the sailor, "and my name is John White."

When the boy heard these names, he jumped up, threw his arms around the sailor's neck and said, "My dear, dear father, I am Tom White, your own little boy."

How great was the sailor's joy, thus to meet his own child, and to find him so good to those who wanted help! Tom had been taken care of by his uncle while his father was at sea, and the sun-burnt, lame sailor, found a happy home in the farm house of his brother; and though he had now a new crutch, he kept the old one as long as he lived, and showed it to all strangers who came to the farm, as a proof of the kind heart of his dear son Tom.

CHEERFULNESS AND LONG LIFE.—M. M ———, who died a few years since, attained to the age of *one hundred and three years!*

His centennial birthday was celebrated with public religious services. A large number of his descendants—embracing, with himself, representatives from five generations—assembled at the church where he had long been accustomed to worship, and there listened to a sermon and other exercises appropriate to that singularly interesting occasion. After they had returned to his dwelling, a great-grand-son-in-law, in conversation with this aged patriarch, who still retained a remarkable degree of bodily and mental vigor and activity, addressed to him the inquiry: "What is the secret of living so long?" The venerable man, with a smile playing over his countenance, replied, "*Always be cheerful.*'

This incident illustrates the remarks often made by the learned and the wise, that a cheerful, contented mind contributes much to health and length of days. Christians *ought* to be better able to judge of the correctness of this remark,—for they are commanded to "*rejoice always.*"

GAMBLING.—The following is the confession written upon the back of a one dollar bank bill. Let young men, yea and old men, follow the advice he gives, and take timely warning from the fate of this "ruined young man!!" The original, we are informed, is in the possession of Mr. W. Grenshaw, of this town.

Milledgeville, Nov. 28, 1830.

"This is the last dollar which I can call my own, out of an estate of $10,000. And what have I lost? Not only my fortune, but my character is injured and my health impaired. Now young man take warning—beware of GAMBLING!! I am this day twenty-one years old, and far from any friend or relation, and without a place to lay my head.

A RUINED YOUNG MAN."

The New York City Directory for the current year contains 38,000 names, of which 52 are John Smiths, 572 Smiths in general, 276 Browns, 192 Clarks, 155 Williams, 154 Taylors, 151 Johnsons, 148 Millers, 145 Moores, 143 Jones, 133 Thompsons, 120 Whites, 118 Woods, 12 Davis, 111 Martins, 111 Wilsons, 102 Halls, 100 Andersons, 99 Lawrences, 91 Allens, 87 Kings.

A man who gives his children habits of truth, industry and frugality, provides for them better than by giving them a stock of money.

HAPPINESS.—It is a very common error to suppose children happier than men. This is only true on the supposition that happiness means absence of care. But happiness is positive enjoyment, and we are in a condition to feel the most of it when all our faculties are most fully developed, as it is the result of action.

A man to be agreeable and good company, must think nicely and readily upon what is said—have a good fund of wit—a faithful memory, and a suitable imagination; he should also be master of his mother tongue, for, without this, the best thoughts will please.

SELF-PRAISE.—When you hear any one making a noise about himself, his merits and his good qualities, remember that the poorest wheel of a wagon always creeks the loudest.

AVARICE.—How absurd is avarice in an old man! It is like a man scraping money anxiously together to pay his turnpikers, after he has got to the end of the road.

A weekly newspaper for the use of the blind has been established at Palermo, in Sicily.

"Never aim at universal popularity, for know, that fools, like nobody but a fool, like themselves."

What is harder than earning money? Collecting it.

The happiness of this life consists in always hoping.

ADVERTISEMENTS.

S. C. HAVER,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,

Corner of Vine and Gano Streets:

PUBLISHED BY G. G. MOORE,

Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 29th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts.	-	-	1 copy for a year.
" $5	-	-	12 copies.
" 10	-	-	25 "
" 20	-	-	60 "
" 30	-	-	100 "
" 50	-	-	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,
Philadelphia.

Public Notice

IS hereby given, that application will be made to the Trustees of Hopewell Township, for a township road, to commence a few rods East of Mr. Coomrine's dwelling, at the line between Geo. Norman and Alexander Watson, and to run South, at, or near said line, to the South East corner of John Rodman's land, thence the best rout so as to intersect the Cooper road West of the inclosure of Wm. George.

October 5, 1839. 3t7

To Farmers and Thrashers.

THE subscriber respectfully informs all, who may feel interested, that he continues building

THRASHING MACHINES,

in Georgetown, Harrison county, Ohio, sixteen miles west of Wheeling, where he is now finishing twenty machines of different sizes and patterns, which will be offered on accommodating terms. He would beg leave to mention, that, having visited the *Patent Office* at different periods, and inspected specimens of perhaps all the approved grain Thrashers in the United States, being, at the same time, a practical mechanic, he has so succeeded in that distribution of weight and strength, which, combine with speed, durability and portability, as not to be surpassed, and perhaps not equaled, by any in the world.

Address the subscriber, Short Creek, Harrison county, Ohio. HENRY HEBERLING.

August 1, 1839 p2

THE

WESTERN RECORDER

IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞*The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months; $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all arrearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, if they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *post paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, and *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions;—it will give articles on Literature, Mechanics Agriculture,—an abstract of Regligious and Political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These twe latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

THE WESTERN RECORDER.

olume 1. ZANESVILLE, OHIO, THURSDAY, NOVEMBER 7, 1839. Number 12.

POETRY.

For the Western Recorder.

THE CROWD.

Say when youth fades, when life expires,
And we are sleeping with our sires,
If then will end this sanguine strife,
Those busy scenes in mortal life,
The gay parade, the pomp, the dress,
The dark design, the sly address
Which runs through ev'ry rank and name,
And vainly grasps the shade of fame.
Why is it thus that men are fooled,
And few of them get ever schooled?
That human life at ev'ry age
Portrays so much the pedant's rage?
Now how 's the cause, mankind are proud,
And asks for praises long and loud?
[illegible]
And honors tied with threads of fate;
His ev'ry thought is to aspire,
And honors gain more than his sire,
And if he could would be a god,
And reign beyond this earthy clod,
Make seraphs all bend on the knee,
And praise the great immortal "me;"
Make spirits all of ev'ry name,
Sing loud the honors of his fame:
Alas! he oft o'erleaps the mark,
And plunges deep into the dark,
And for times honors and a name,
Walks on with pride to sin and shame.
The paths are many that he tries,
Yet all of them his steps defies;
Some stoop to objects low and mean,
And some act only to be seen;
There's some who bend before the great,
And worship give to robes of state,
And some who lowly bow to priests,
As if themselves were grov'ling beasts;
There's some who bend to fashion's shrine,
As mad as others do at wine,
And some strive for the yellow gold,
As if it endless pleasures told.
Ah! there's no end unto the chain
By which mankind have found their bane,
Yet nat'ral man in ev'ry age,
Glows sanguine with the burning rage;
Some few indeed of better sense,
Have dared to leave the throng immense,
But they have had to live alone,
Their friends on earth were few or none.
'Tis wisdom's part this way to live,
That thing which pride can never give,
Nam'd Virtue here, child of the sky,
It makes us happy live and die. V.

COMMUNICATIONS.

For the Western Recorder.

New Lisbon, O., October 29, 1839.

Mr. Editor: This morning I received the 10th ber of the "Recorder," containing the con- on of the report of the publishing committee, hich I beg leave to make one or two remarks. ppears, from that document, that there are housand nine hundred and eighty-one mem- in the Pittsburgh District, near four hun- less than were reported last year. The mittee state an inaccuracy of fifty in the rt of Steubenville station, last year; also, a ake in the return of members from Haker's k circuit, but the number is not given.— , Mr. Editor, as I am in possession of facts, hich the committee were not, and as I stated n address to the last Conference, that there been considerable increase through the past , it is a duty which I owe to myself, and to orethren who have made the same statement y authority, to inform the readers of your r, that the error in the report from Haker's k, (now called Harrison and Weston cir- s,) at the Conference held in Lancaster, was hundred and six members more reported than d be found by the preachers on their arrival eir appointments. There were several other curacies to my certain knowledge, which it ot necessary to name. Indeed, I believe the is the first fair report, we have had on that ect. Some of the preachers have been care- but others of us, have been very remiss. The mittee gave no report from Union circuit, I have learned from brother Piper, who trav- d it the last year, that including the Ligon- nd Bear Creek mission, there are three hun- members,—this is to be added to the com- ee's report. There were not less than *thousand seven hundred* added to the church he District, last year. To God be all the r. After a harmonious Conference, the chers started to their appointments, with ewed determination, to preach faithfully the rine of free grace, and spread the principles ee government. May they go on and pros-

n regard to the state of matters in New on station, I will remark that we commenced e anticipated, with a very small congrega- . It has increased far beyond our expecta- . We have recently had the satisfaction of eching the word of life to a crowded audience. unpleasant excitement created by Mr. has entirely subsided, and all we know t him, is, that we learn he has been regularly nsed by the Bishop of the Diocess of Ohio, to orm service, according to the order of the estant Episcopal church in the United es, and that he occupies the Court House in place. We hope, yet to succeed, as a church, ew Lisbon. We believe we ought to suc- , and, in the language of our Philadelphia or, by the grace of God we are determined we will succeed.

Yours, in haste,

Z. Ragan.

No. IV.

AGAINST CLERICAL SUPREMACY.

Friend Springer, (I dare not say brother, because you have told the folks that I was not of your communion.)

You know that one of the main props of Clerical supremacy is the *Divine right* claimed by them to expound the Scriptures. They must, to sustain this right, first claim Divine qualification, or in other words, claim to be supernaturally qualified to make known the meaning of Scripture. This would be to claim a gift, not only supernatural, but extraordinary; for if there ever were such a gift bestowed on any body, the Apostle Paul has left us in ignorance concerning it; although he said: "Now concerning spiritual gifts, brethren, I would not have you ignorant." He has named the gift of "interpreting tongues" (or languages,) but this is very different from making the meaning known in the same language in which it was spoken or written.

The gift of tongues, and of the interpretation of tongues, were deemed sufficient to communicate the meaning or ideas to the people of all nations in the primitive age of christianity. To speak in a language, and afterwards to make known the meaning of the words spoken in the same language, *is a trick* of Clerical invention. No such thing was known in the days of the Apostles.

That some men are better qualified to teach things that they know than others, is evident; and this *difference* has been mistaken for something directly supernatural. Paul had this difference in view, when he directed Timothy to commit the Gospel to faithful men, *who were able to teach others, also.* It seems that the *ability to teach others* was something inherent, and preceded the knowledge of the thing to be taught; hence, the ability does not give the knowledge, nor does the knowledge give the ability. But if this difference of ability to teach, be claimed as something supernatural and special, then the teachers of all the arts and sciences may claim the same special supernatural qualification. For many men who understand the science of medicine, will lack the ability to lecture on that subject; while a few possess that ability in an eminent degree.

What would be said of a medical lecturer, if he were to claim a *Divine right* to teach medicine and predicate that claim on his ability to lecture? Why, he would be laughed to scorn, that is all.

This claim of a special Divine right, to expound the Scriptures, is another humbug; the wings of which have been singed, and the bug itself will be cast into the fire soon.

As ever yours,

M. Winan.

Jamestown, Ohio, Oct. 29, 1839.

The Bible.—As far as our species are concerned, we may say one sun, one bible? Shut that glorious book, blot from human memory what we have learned from its pages, and you quench the day spring. The whole world lieth in darkness! To guilty, miserable man, there remains no Saviour! no heaven! no guide in life! no support in affliction! no victory over death! The grave becomes a fathomless abyss, and eternity spreads around him like the ocean—dark, illimitable, fearful! But open now again that book, and lo, the sun of righteousness arises with healing in his wings; and all around us and above us, is love, joy, and hope.

Wilberforce.—The late Mr. Wilberforce's income, when he came of age, is stated to have been ten thousand pounds a year: one fourth of which he was in the habit of giving away in charities of various kinds. His liberality to all who stood in need, and his profuse expenditure in the promotion of the most praiseworthy objects, appear, however, to have had an effect upon his once ample fortune; so that in the decline of life he became straitened in his circumstances. A few years before his death, he sustained great loss by a milk company, into which it is suspected his family were duped.—He had, himself no personal concern in the affair, but, as having given guarantees for his sons; but his loss, it is said, was not less than forty or fifty thousand pounds, to meet which his Yorkshire estate was sold. He was obliged to live his last years with two of his sons, one of whom was presented, unsolicited, to a living by Lord Brougham, when lord chancellor.

The Deacon for Me.—"Papa," said one of his boys to the Deacon, "I had a funny dream last night."

"Well, Tommy, what was your funny dream?"

"Why I dreamed that the devil came into your store."

"The devil?"

"Yes, Pa, the devil, that he found you drawing a glass of gin for poor Ambo Jones, who has fits, and who broke a little baby's arm the other day because it cried when he came home drunk. And I thought the devil came up to the counter, and I laid the end of his long tail on the chair, and leaned over towards the barrel where you were stooping to draw it out, and asked if you warn't a Deacon. And I thought you did'nt look up, but said you was, and then he grinned and shook his tail like a cat that has a mouse, and says he to me, 'That ere's the Deacon for me!'—and ran out of the shop laughing so loud that I put my fingers in my ears and woke up."

This dream was more than the father could stand; it put an end to his delusion and to his trade in ardent spirits Of course the pig had not eaten up his conscience.—*Striped Pig.*

The Faithful Dog.—In Youatt's "Humanity to Brutes," is recorded the following anecdote of a New Foundland dog:

"A vessel was driven on the beach of Loydd, in Kent. The surf was rolling furiously—eight poor fellows were crying for help, but not a boat could be got off to their assistance. At length a gentleman came on the beach accompanied by his New Foundland dog. He directed the attention of the animal to the vessel, and put a short stick into his mouth. The intelligent and courageous fellow at once understood his meaning, and sprang into the sea, and fought his way through the waves. He could not, however, get close enough to the vessel to deliver that with which he was charged; but the crew joyfully made fast a rope to another piece of wood, and threw it towards him.—He saw the whole business in an instant; he dropped his own piece, and immediately seized that which had been cast to him, and then with a degree of strength and determination almost incredible, he dragged it through the surfs and delivered it to his master. A line of communication was thus formed, and every man on board was rescued from a watery grave."

Be Careful.—It is said that Helvetius, one day, in passing a stable door, saw an hostler standing at the heels of the horse, while he arranged the crupper.

"Young man," said Helvetius, "why do you stand so near the horse, and behind him—he may kick you."

"Because," said the boy, "I can do the work much sooner in this position, than I can when I stand at the horse's flanks."

"Perhaps so, but if the horse should kick you once, and you should even escape death, the time lost in curing your wound, would be double all that you could save in the longest life, by standing, as you do now, to crupper a horse, rather than to occupy a place of safety a little on one side his heels."

Whether the hostler obeyed or not, we cannot tell; but we have often thought of the anecdote when we have seen people attempting to save a half minute of time, and risking their life, by jumping from a steam boat before she was fastened to the wharf, or from a rail road car before it was stopped; and, indeed, every day's occurrences present illustrations of the anecdote; and half the accidents of which we receive intelligence, by land and sea, by fire and water, stage, steam boat, car, horse, and foot, come from attempting to save a second of time, by going too near the horse's heels to put on the crupper.

Brougham in Parliament.—That old gentleman in the lawn sleeves, who is upon his legs and speaking, although we cannot at this distance hear a word he utters, is the Archbishop of Canterbury. He is coming to an end at last. I see by Brougham's restlessness that he has long been impatient, and that he wants to speak himself. Hark! there he is. Now listen to the orator. He commences in a low and measured tone, and the first thing that strikes you is his broad and northern dialect; he appears for a moment to hesitate, to doubt whether he did right to get up, and whether he had not better sit down. He is now stating propositions that few people think of denying, but which certainly do not appear to have the most remote relation to the question, or to each other. Let us observe him a while as he proceeds. Mark his long and parenthetical sentences, yet how clear his enunciation makes them. Now you see what the disjointed, irrevalent, and apparently unconnected propositions with which he commenced, meant; they are now the beams of his argument; how adroitly he connects them; how easily he fills in the intervening spaces; how he surprises you by the exquisite appropriateness to the very point you had deemed the most irrevalent; he grows warm as he proceeds, carries you on with him, not because he is Lord Brougham—because he is a great orator, for that you do not feel—but because you cannot help it; because you sympathise, not with him, but with the cause. He concludes, and he resumes his seat, but not with any air of complacency, rather as though he was thoroughly unrelieved, and had that within his breast which yet struggled for a vent.

Wait one moment, most critical stranger; you have seen the lion only in his quiet mood. While you have been criticising, a prosy old nobleman in the further corner, has been declaring that Lord Brougham's measure is no better than it ought to be, and that he himself is not much better than his measure. His grace spoke so low that I could not hear one word he said, but I could read it all in Brougham's eye. Another—and another—and another; and from all sides of the house, thick and fast comes raillery at the new proposition. Like most persons who love to inflict torment upon others, Brougham is especially tender himself. That foolish looking fellow with the curls has absolutely touched him; see now, how Brougham looks when he is goaded.—Make way good people the bull is coming; chained or loose, right or wrong, he can stand it no longer; with one lashing bound he clears every obstacle, and there he is, with tail erect, and head depressed, snorting in the middle of the arena. Now you see Brougham: his eyes appear to flash—the gathering of his brows is like the gathering of thunder-clouds—his dark grey hair appears rigid with the compressed energy of his fury—his arm is raised—his voice is high! There is the commencement of the storm—his first sentence pushes into the subject. Hark at the coarse and stunning piece of contemptuous mockery with which he begins. See how the whipster peer, who was late so flippant, shrinks within himself; how horrified he looks; with what dreadful interest he appears to hang upon the lips of his castigator, or in agony of expectation as to what the next moment may bring forth. And look at the other peers who sit around; whether Brougham speaks of them as "his noble friends," or as "the noble lords," they appear marvellously uncomfortable if they find their names in his mouth; for Brougham is in full tilt—he has sarcasm on his tongue, and bile in his heart; he is *talking Greek fire*, and wherever it falls, upon friend or foe, it sinks deep and leaves a scar; he is like an elephant in Indian battle, trampling down every enemy in his path, while the arrows that are winged from its back, scatter wounds among the distant crowd.

Of all the phenomena which strike us when viewing the life of Henry Brougham perhaps the most wonderful is the intensity of his industry. The literary labors of this man, if it were possible that they could be collected, would form a mass that might put to shame the ponderous labor of Origen, or might vie with those of the most voluminous of the fathers whose works found too honorable a fate in warming the baths of Alexandria.

Brougham appears to have watched his moments as misers watch their gold, not one was suffered to escape without performing its office to the uttermost; every one has left its equivalent in knowledge gained, or in knowledge imparted—in truth vindicated or political right asserted. His investigations have extended over the whole region of politics, of jurisprudence and of science; he could not exhaust all, but he has sunk a deep shaft into each.

FOR THE LADIES.

THE DEVOTED WIFE.

BY J. G. WHITTIER.

She was a beautiful girl. When I first saw her she was standing up by the side of her lover at the marriage altar. She was slightly pale—yet ever and anon, as the ceremony proceeded, a faint tinge of crimson crossed her beautiful cheek, like the reflection of a sunset cloud upon the clear waters of a lake. Her lover, as he clasped her hand within his own, gazed on her for a moment with unmingled admiration, and the warm eloquent blood shadowed at intervals his manly forehead, and "melted into beauty on his lips."

And they gave themselves to one another in the presence of heaven, and every heart blessed them as they went their way rejoicing in their love.

Years passed on, and I again saw those lovers. They were seated together where the light of summer's sunset stole through the half closed and crimson curtain, lending a richer tint to the carpeting, and the exquisite embellishments of the rich and gorgeous apartment. Time had slightly changed them in outward appearance.—The girlish buoyancy to perfect womanhood, and her lip was somewhat paler, and a faint line of care was perceptible in her brow. Her husband's brow, too, was marked somewhat more deeply than his age might warrant; anxiety ambition and pride had grown over, and left their traces upon it; a silver hue was mingled with the darkness of his hair, which had become thin around his temples, almost to baldness. He was reclining on a splendid ottoman, with his face half hidden by his hand, as if he feared that the deep and troubled thoughts which oppressed him were visible upon his features.

"Edward, you are ill to-night," said his wife in a low, sweet, half inquiring voice, as she laid her hands upon his own.

Indifference from those we love is terrible to the sensitive bosom. It is as if the sun of heaven refused its wonted cheerfulness, and glared upon us with a cold, dim and foreboding glance. It is dreadful to feel that the only being of our love refuses to ask our sympathy—that he broods over the feelings which he scorns or fears to reveal—dreadful to watch the convulsive features and gloomy brow—the indefinable shadows of hidden motions—the involuntary sigh of sorrows in which we are forbidden to participate, whose character we cannot know.

The wife essays once more. "Edward," said she slowly, mildly and affectionately, "the time has been when you were willing to confide your secret joys and sorrows to one who has never, I trust, betrayed your confidence. Why, then, my dear Edward, is this cruel reserve? You are troubled, and refuse to tell me the cause."

Something of returning tenderness softened for an instant the cold severity of the husband's features, but it passed away and a bitter smile was his only reply.

Time passed on, and the twain were separated from each other. The husband sat gloomy and alone in the damp cell of a dungeon. He had mingled with men whom his heart loathed, he had sought the fierce and wronged spirits of his land, and had breathed into them the madness of revenge. He had drawn his sword against his country; he had fanned rebellion to a flame, and it had been quenched in human blood. He had fallen, and was doomed to die the death of a traitor.

The door of the dungeon opened, and a light form entered and threw herself into his arms. The softened light of sunset fell upon the pale brow and wasted cheek of his once beautiful wife.

"Edward—my dear Edward," said she, "I have come to save you; I have reached you after a thousand difficulties, and I thank God my purpose is nearly executed."

Misfortune had softened the proud heart of manhood, and as the husband pressed his pale wife to his bosom, a tear trembled on his eyelash. "I have not merited this kindness," he murmured in the choked tones of agony.

"Edward," said his wife, in an earnest but faint and low voice, which indicated extreme and faithful debility, "we have not a moment to lose. By an exchange of garments you will be able to pass out unnoticed. Haste, or we may be too late. Fear nothing for me. I am a woman, and they will not injure me for any efforts in behalf of a husband dearer than life itself."

"But, Margaret," said the husband, "you look sadly ill. You cannot breath the air of this dreadful cell."

"O speak not of me, my dearest Edward," said the devoted woman, "I can endure any thing for your sake. Haste, Edward, haste, and all will be well," and she aided, with trembling hand, to disguise the proud form of her husband in the female garb.

"Farewell, my love, my preserver," whispered the husband in the ear of the disguised wife, as the officer sternly reminded the supposed lady the time allotted to her visit had expired. "Farewell! we shall meet again," responded his wife—and the husband passed out unsuspected, and escaped the enemies of his life.

They did meet again—the wife and the husband; but only as the dead may meet in the awful communion of another world. Affection had borne up her exhausted spirit until the last purpose of her exertions was accomplished in the safety of her husband; and when the bell tolled on the morrow, and the prisoner's cell was opened, the guards found wrapped in the habiliments of their destined victim, the pale, but beautiful corpse of the devoted wife.

FOR PARENTS.

The Whistle.—The following anecdote is quoted in the "Parent's Friend," from Wilderspring's "Infant Education."

It shows parents and teachers the importance of being very careful to set an example of strict honesty to their children.

"Many of the children were in the habit of bringing marbles, tops, whistles, and other toys to school, which often caused much disturbance. I found it necessary to forbid the children's bringing any thing of the kind. After given notice two or three times in the school, I told them if any of them brought such things they would be taken from them. In consequence, several things fell into my hands, which I did not always think of returning: and among other things, a whistle from a little boy. The child asked me for it as he was going home, but having several visitors at the time, I put the child off, telling him not to plague me, and he went home. I had forgotten the circumstance altogether, but it appears the child had not; for, some time after, when I was lecturing the children on the necessity of telling truth, and the wickedness of stealing, the little fellow approached me and said, "*Please, sir, you stole my whistle.*"

"Stole your whistle!" said I: "did I not give it to you again?"

"No, teacher; I asked you for it, but you would not give it to me."

I stood self-convicted, being accused in the middle of my lecture, before all the children, and really at a loss to know what excuse to make; for I mislaid the whistle, and could not restore it to the child. I immediately gave the child a halfpenny, and did all I could to persuade the children it was not my intention to keep it.

This trifling mistake of mine did more harm than I was able to repair in some time; for if we wish to teach children to be honest, we should never take any thing from them without returning it again. This story shows how necessary it is to teach by example as well as precept."

FOR THE YOUNG.

MARY AND HER BIBLE.

In a small village in England, there lived a little girl whose name was Mary. She attended the Sabbath school, and there learned to read very well in the Testament; she then asked her parents to buy her a Bible, that she might read at home as well as at school. They told her they could not afford the money; besides, as they could not read, it would be only for her use.

"But," said Mary, as she continued to beg for a Bible, I could read it to you."

At length her parents complied with her request. When she received the precious book, she rejoiced over it, calling it "my own book." She showed it to some of her little companions, and every day read it by herself in her own little room. In the evening, when her father came home from his business, she would get her Bible and sit down by his side, saying, "Dear father, may I read you a chapter?" And when she had read it she would say, "That was a very nice one; should you like to hear another?"

A few months after the Bible was bought, Mary's mother was taken sick, and this little girl took care of her.—When told that she might go and play, she would say, "No, I do not want that; I like to be here, to watch you when you are well enough for me to read to you." It soon appeared that Mary not only read her Bible, but she loved it, and tried to obey what she read. Sometimes she would come running to her mother, with great delight, saying, "O, here is a verse so beautiful, I do want to read it to you!"

The mother got well; but soon afterwards Mary was taken sick herself, and died. But the thought of dying did dot make her afraid One morning she said, "Mother, I am very happy; for last night I was dreaming all about heaven, and about the angels; and soon I shall be one there."

One day she said, "The Saviour said to me, 'Come;' and so I came to him; and now I say to the Saviour, 'Come;' and he will send his angels to carry me away; he will come very soon." She referred to her favorite text, "Come unto me all ye that labor and are heavy laden, and I will give you rest." She was asked if she wanted anything. "No," said the dear child, "I only want to be carried to Jesus."

Children do you love the Saviour? Do you pray for a new heart? Do you love the precious Bible? Shall not the example of this lovely child encourage you to study it more and more?—*Infant Library.*

FOR LITTLE READERS.

From the Infant Library.

THE PARROT.

"Pretty Poll! Pretty Poll!" Every litte boy and girl has heard these words in the streets. I dare say, you have seen a pretty green bird in a cage, hanging out of a window, and heard it talking just so. This is a parrot. These birds are taught to say almost every thing, and also whistle and sing. They often repeat speeches and songs, and call people names as they go by. The parrot sits up and looks very wise, and children ask it questions, and it answers them.—Sometimes crows and jackdaws are taught to speak in the same way.

Here is a little baby, not quite two years old. It is just learning to talk. It can say *Father* and *Mother*, and some little sentences. But it cannot speak half as plain as the parrot. Perhaps you think the parrot knows the most. O, no! the parrot knows nothing at all. It talks and talks, but has no thoughts. The dear baby knows what it means; and if it lives, it will be learning more and more every day. The baby has a soul that will never die; but when the parrot dies, it is gone forever.

I know a little girl that puts me in mind of a parrot. She says her lessons, but she never thinks what they mean.—She repeats her hymns, but she does not try to understand them. She reads in the Bible, but she never attends to the words. She kneels down and prays, but she thinks about something else all the while. Is she not just like the parrot? Would it do the parrot any good to spell, and read, and say hymns and verses?—No, because it could not understand them. Then it will do this little girl no good, as long as she does not understand what she learns.

When little boys and girls get their lessons for the Sunday school, they ought to learn the meaning of them; if they do not, they are no better than parrots. If there is any thing that you do not understand, ask some elder person to explain it to you. And when you pray to God, be sure to think of the words you speak. God sees our thoughts, and he is offended with us when we ask him for things which we do not desire. Remember that you have a soul which thinks and learns, and which cannot die. Thank God for making you wiser than the brutes which have no understanding. The parrot has no account to give of the idle words it speaks, but we must give an account of every word and every moment.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY, ...NOVEMBER 7, 1839.

The Weather.—On that 5th instant we had a fine rain which cleared up with a thunder shower in the afternoon, followed by a white frost at night. The weather remains pleasant. The rains had but little effect upon the streams.

Governor Carlin, of Illinois, has issued his proclamation, calling a special meeting of the Legislature of that State, to convene on the second Monday of December next, probably for the purpose of consulting the best mode of applying the funds recently borrowed by their commissioners in London.

We call the attention of the reader to the advertisment of S. B. Johnson & Co., who have recently taken the Glass Works below town.—From the reputation of the principal member of the firm, as a workman, we think the public need not fear those impositions which have heretefore been practiced at that establishment. As our own mechanics should always have the preference when they do us equal justice, let us call and give them a trial.

At a called meeting of the American Anti-slavery Society, recently held at Cleveland, Ohio, "Mr. Holley, of New York, presented resolutions favorable to political organization, and urged the necessity of the abolitionists to lose no time, but immediately to take measures to put in nomination suitable candidates to be supported for President and Vice President of the United States at the next election, but this project was finally abandoned by a motion made by James G. Birney to lay the resolutions on the table."

An association has lately been got up, in this town, called the "Zanesville Physical Institute," which numbers between sixty and seventy members, and has procured upwards of $300 worth of aparatus. The object of this association appears to be to give mechanics, laborers and others, an opportunity of becoming acquainted with the principles of science; but more especially the youth. This enterprise has a praise-worthy object in view, and if well sustained, much good must result from it. For further information inquire of C. Moore, Esq., who is the Secretary to the society.

The Philanthopist once More.—We take the following precious article from the Philanthropist of September 17, which a friend has recently handed to us:

"The Western Recorder, a paper edited by a minister of the M. P. Church, took us to task a few weeks ago, about republishing a certain article from Zion's Watchman. He accused us of endorsing an untruth, and coarsely impeached our candor. We answered, without noticing his personalities. Next came his reply, replete with slang and vulgar abuse. Not choosing to battle with such weapons, we carefully folded up his paper and returned it. Irritated beyond all bounds, the reverend gentleman in the following number of his paper indulges more freely than ever in his taste for low and weak invective. He complains of our discontinuing the exchange, and evidently wishes to provoke us to a personal controversy.—We had neither taste, nor, as we trust, talent for such controversy. This gentleman can have no other answer from us, than the return of his paper; for we remember the proverb of Solomon:—'Answer a fool according to his folly, lest he be wise in his own conceit. Answer not a fool according to his folly, lest thou be like him.'"

The Doctor here accuses us of "coarse impeachments of his candor,"—"low and weak invective," and "vulgar abuse." What a highly cultivated relish the Doctor must have for politeness. He has certainly descended from some of the noble families of Paris, and received his training within the immediate circle of the French court, for such a fine specimen of gentility and good breeding, as the article before us exhibits, could certainly never have been the effect of American teaching.

He says we were "irritated beyond all bounds." Stop, Doctor,—don't be too fast; this is an entire mistake, and is an exemplification of what we have been suspecting for some time past, viz: that you stand far higher in your own estimation than you do in that of your neighbors. We hope you will believe us to be sincere, when we tell you, we did not think you to be a man of sufficient importance to become highly "irritated" at; and never should have noticed you at all if the cause of truth had not called for it. But you told your friend, the Rev. ——— ———, that you "intended to make us mad," &c.,—so, as a matter of course, you must report favorable to the success of your enterprise. But we guess, judging from the fruits, that some body else got a little more "irritated" than he of the Recorder. Doctor, your "intention was to make us mad;" that is, in plain English, it was your *intention* "personally" to insult us. And wherefore?—Simply because we wished you to correct in your columns what you admit to be a misrepresentation. O! what gentility!—what refinement!—how far removed this from "vulgar" "slang!"—how worthy the character of a philanthropist!

But the Doctor thinks that we are a "fool," and that he has answered us according to our "folly." Yes, indeed, that is the difficulty with the Doctor. He is the man—he knows it—he is the Solomon, and when he dies wisdom and philanthropy will perish with him. Now, when we replied to what the Doctor privately admits was *intended* as a personal insult, we proceeded exactly on this maxim of Solomon; but we thought it would be "vulgar" in us to make a "personal" application of the term "fool." But it is all right for the Doctor to do so, seeing he is a man of so many accomplishments. In virtue of his high merit and supereminent standing, but above all, his great age and experience with the world, privileges will be accorded to him which are denied to the "vulgar" mass of human kind.—Doctor, we heard of a man once who bought a fool, but was greatly bit in his purchase.

The Doctor says, "we have" "no talent for such controversy." Poor fellow! What did you begin it for, then? When a man first throws the gauntlet, then gets himself drubbed with his own weapons, it is rather pitiful to whine about it.

The Doctor accuses us of "coarsely impeaching his candor." We will venture to affirm he cannot find a single word, or sentence, in the article to which he refers, that comes within gun shot of making any allusion at all to his candor. All we accuse him of in that article is endorsing a slander on the Discipline of his own church, and publishing it without examination. And this charge we stand prepared, at any time, to sustain. We, at that time, had a better opinion of the Doctor. But our connection with him for a few months past has given us a fine opportunity to learn the features of his moral character. And now, if it will be any accommodation to him, and will not be considered too "vulgar," we can inform the Doctor that we are prepared not only to call in question his "candor," but even his moral honesty. Out of the many items which we might adduce to sustain these suspicions, we will name one or two: First, while we have done the Doctor the justice, carefully, to publish every word, and every syllable of what he had written, before we animadverted upon it, for fear we might misrepresent him to the reader, he would publish nothing for us but such garbled extracts as suited his purpose, and has misrepresented us so frequently, and under such circumstances, that we are satisfied he has done it intentionally. Secondly, while he is castigating every body who will not publish all he dictates should be published, he is at the same time delivering maxims for the press; hear a few of them,—"O for a race of free-souled editors.—The press should be like the sun pouring its penetrating light upon all subjects. Its voice should be as unfettered as the winds of heaven. What in any way can affect the interests of the people, *that*, the people should know," &c. &c. Now, while he wishes to enforce the observance of these maxims upon others, he had no intention of abiding by them himself; a thing which no honest man would be guilty of. We have proposed to him to open our columns for what he would write upon the subject of American Slavery, if he will give an equal amount of his for what we may write on the subject of Ecclesiastical Slavery. But this was such "vulgar abuse" that the Doctor says, "this gentleman can have no other answer from us than the return of his paper," or proposition. After all this vaporing about a race of free-souled editors, and a press to "shine upon all things," his press is as much muzzled as any in the land. He has not moral courage enough to commit its interests to a subject which the history of the world shows to be of as much importance as any other subject whatever.

We cannot but again express our regret that so good a cause as the Doctor advocates, should be injured by such rashness and inexperience, and that the abolitionists did not get men to conduct their public journals more worthy of public confidence.

The papers state Ruiz and Montez, of the Amistad have been arrested in New York by civil process, at the complaint of two of the captured Africans. The following from the New York American states the ground of that arrest:

The arrest and imprisonment of the two Spaniards who were on board the *Amistad*, at the suit of the blacks whom they held in slavery, naturally attracts much attention. The case was yesterday partially discussed, before Chief Justice Jones, on an order to show cause why these Spaniards should not be discharged from imprisonment. After argument, the court said it would give a decision in the course of a day or two.

It is not to be disguised, that the arrest and imprisonment of the two Spaniards startled many of those, who yet were anxious that the negro captives of the Amistad should not again fall into slavery. It looked, at first blush, like a vindictive proceeding; and of the feeling occasioned by such a view of the case, the Spaniards themselves appear to be fully aware, and not unwilling to avail themselves, by determining to go to prison, instead of remaining out of it, as they had the option and opportunity to do, on bail. It is, therefore, the most important, perhaps, to state that the true motive for instituting proceedings against Messrs. Ruiz and Montez, was to enable the counsels of the blacks to bring before a jury the question of their slavery, and generally the facts connected with this remarkable case. In no other way, as we are informed, could the inestimable privilege of trial by jury be secured to these blacks; and therefore it was, and not from any vindictive feeling, that the action for trespass, against Messrs. Ruiz and Montez, was instituted.

Viewed in this light, the proceeding ceases to be of a questionable nature; it could not, indeed, with any justice to the weaker and oppressed parties, have been omitted.

If the courts shall entertain the cause, it will then be open to the counsel of the blacks to inquire how they came into the condition of slavery, and to throw upon those who pretend to be their owners, the necessity of proving that they are legally and rightfully such.

Subsequently, Judge Inglis and Judge Oakly each discharged Montez on common bail, and reduced the sum for which Ruiz should be held, to $250. The Judges, in giving their reasons, seem to have assumed that the whole object of the plaintiffs was to try their right to freedom. But it seems to us unreasonable for the court to interfere beforehand, and take away the right of a plaintiff to full indemnity for this wrong. There is certainly nothing in the merits of the case which should deprive the plaintiffs of full redress. If they have any rights at all, their wrongs have been very great, and should call for exemplary damages.

As respect for public opinion, would seem to demand from the Banks of Philadelphia, as they were the first to suspend specie payments, an explanation of that matter, we have been looking for something upon the subject. The following from the Philadelphia American Sentinel, is, we presume, the document we have been expecting.—The editor of the Sentinel in introducing it to his readers says: "it has been prepared by a gentleman fully versed in the past and present condition of our monetory affairs," and, "embodies, we understand, the views of many of those connected with our Banking Institutions, and the causes which operated to lead to a suspension of specie payments." We omit that part which relates to the connection of the banks with the government. The common maxim, that we are not to condemn a man before we hear him, should demand for this article an attentive perusal.

"It was not these difficulties alone which had befallen the country, and against which the Banks had to contend. The impulse which had been given to enterprise, and which had produced a spirit of improvident speculation, had led to an excess of foreign imports beyond our exports the years 1835 36, making an aggregate of excess of imports over the exports in two years of $89,519,160. This created a direct demand on the metalic medium of the country, and a draft on the vaults of the banks In their operation these difficulties became so oppressive on the country, its business, and the banks, that the latter sought to give relief by a suspension of specie payments in May, 1837, which was nearly simultaneous throughout the Union, without any preconcert of action whatever.

We now pass over the interregnum between the suspension and resumption of specie payments, which took place generally, in August, 1838. That period. it is well known, most of the banks in Philadelphia believed at the time to be too early to undertake a successful resumption with benefit to the country. Events have confirmed the justice of that view. But public opinion seemed strongly in favor of the measure, and the banks acquiesed in it, though but illy prepared, and indebted in large balances to other places which had accumulated during the period of suspension, and were subject to be called for on the instant, and were so called for to a large amount on the very day of resumption in specie.

Intimately connected with the subject which has called for this exposition, are others, the most prominent of which is the system of creating state debts to a vast extent, for the purpose of prosecuteing public works. Nearly simultaneously with the great increase and accumulation of the public revenue, there arose an extensive spirit for internal improvements. This was the signal for the creation of debts by many of the states of the Union, in the adoption of the measures for which party divisions were forgotten, and all united in their advocacy. In addition, stocks to a large amount were created by several of the states to provide capital for banking purposes.—The stocks thus brought into existence found, for a time, a ready sale abroad, as an investment by foreign capitalists.

This seemed to encourage the spirit of enterprise and to augment the number of projects calling for capital to carry them out. To the encouragement thus given to the states to persevere in this policy the General Government has been a contributor, as well as foreigners and our own citizens, by the investment of several millions of dollars of trust funds held for the aboriginess; in the stocks most recently issued by the newest and least populous of the states. The policy of these extensive engagements and undertakings, it is not now our province to question or defend. That must be tested by the productiveness of the improvements, or the burthens which they may impose upon the states. One thing, however is certain, that mainly through their instrumentality the country has exchanged a national debt at home, requiring five or six millions of dollars annually to pay the interest on it, to state debts, requiring from ten to twelve millions of dollars annually, to meet the interest accruing on the portion held abroad.

Nor is this all. The temptation held out by the high wages allowed on the numerous public works in progress at the same time induced the day laborer to quit the field of agriculture for more profitable employment. And what has been the consequence? The production at home of nearly all the necessaries of life has been deficient; the prices enhanced exorbitantly, and instead of being exporters of provisions, as formerly, we have been importers of them to a large extent. The Custom House books will furnish the evidence of our having been the importers, for our own consumption, of wheat, rye, corn, oats, barley, potatoes, and many othey articles, the produce of foreign laborers, and their fields, during nearly of the whole of the two last years. The connection which this has with the subject we are considering will be manifest when the fact is stated, that all those articles purchased from foreign farmers have been paid for in the specie of the country only.

The present year has been an eventful one, and the signs of the times are not without their forebodings of additional evils to swell the catalogue of those which have already occurred.

England, the centre of the commercial world has experienced, and is now laboring under a great revulsion in her monetary affairs. The specie in the vaults of her National Bank has since the first of the year, sunk from £10,000,000 to £3,000,000, or thereabouts, the reduction in amount being, as has been stated by the Chancellor of the Exchequer, about the value of the bread stuffs which that country has been obliged to procure from the continent to supply the deficiency in the English crop of the last year. The value of money has increased there from its usual rate—about three per cent— to six per cent per annum, and prophesies have been sent from thence by every vessel for the last three months, and promulgated throughout this country, that the Bank of England was on the eve of suspending cash payments.

This state of things in England has reacted upon this country with irresistable force. The credit of our states has been completely paralized; they can no longer negotiate loans there; numerous public works have consequently been arrested in an unfinished state, and must remain unproductive, while the interest on the debt already contracted abroad must be paid.

Same of our moneyed institutions which in hours of difficulty had furnished the states with the means of discharging their obligations to the laborers on the public works, on the faith of reimbursing themselves from abroad, have found from this sudden frustration, their active means unexpectedly diminished. Anxious to fulfil their legitimate functions, they have in some cases, hypothecated the loan certificates of the States with the foreign capitalists, and applied the money received on them to facilitate the operations of our merchants and manufacturers when the present pressure commenced. But it has gone on increasing in both hemispheres, and instead of sales being affected of the stocks hypothecated, the institutions have to refund the money borrowed, or to witness degradation of credit, which would be a greater misfortune than any imaginable sacrifice of property.—Thus situated no alternative remained but to coerce payment from their debtors at home, who were already in a state of exhaustion, and whose ruin would but aggravate the extensive evils.

But we cannot even here close the detail of ills, against which the country is now struggling and will be found to struggle for some time to come. There remains to be added the vast quantity of foreign merchandise, which has been poured in upon us for a market, to swell the amount of our imports during the present year far beyond the proceeds of our exports. The amount of these imports has doubtless been much mcreased by the gradual reduction of our tariff, operating as a check upon our manfactories. The estimated proceeds of our exports will be also greatly diminished, by the decline in the price of our chief staple, cotton, in foreign markets.

The various disturbing causes above adverted to, have been operating upon the country, and gradually gaining intensity for the last three or four months.—Immense amounts of the precious metals have already been exported; within that period, it is believed that the port of New York alone, has witnessed the departure of not less than ten millions of dollars, the fruits chiefly of her collections, for the sale of foreign goods, here and elsewhere. Every packet to Havre, has carried large quantities of our silver, to increase the cumbrous amount of useless millions piled up in the Bank of France: the packets of England departing every five days, all take their quota; and the great streamers, each with her millions, vie with each other in accelerating their speed, to replenish with our means, ere it be too late, the exhausted vaults of the Bank of England, an institution which, notwithstanding its vast resources, backed by the credit of the Government, has had to seek temporary support to prevent or postpone her failure, from her great rival across the channel.

This export, enormous as it has been, we regard as but the beginning. Already has the demand became so great, either for export, or to replace in the Banks that which has been taken from them for export, that we see the specie leaving the remotest parts of the Union, by the waters of the Mississippi and various other routes, in vast sums, which no sooner reach our sea ports, than it is placed on ship board and transferred to a foreign land.

The position of Philadelphia at this crisis, is of peculiar importance, and must be especially considered in reference to the great question of a suspension of specie payments at the present time. Her banks resumed in 1838, as has already been shown in obedience to public sentiment, but against their own judgment. It was as obvious then, as it is now, that from her local position, being the great distributor to the West and South, of the products of our Eastern manufactories, and of those from abroad, imported chiefly at New York, the Banks of this city could not pay specie for all the obligations incurred by our merchants here, unless they could receive it from their debtors. Accordingly, great efforts were made to enable the Institutions of the South, which were the most enfeebled, to resume with us nearly simultaneously. Cash was advanced and credits liberally furnished by some of our Banks, to accomplish this object.

In the reduced state of business at that period, those credits were readily made available, and means thus furnished went into the coffers of the merchants, here and elsewhere, who had debts in the South and West for their liquidation.—But the country had not had time to recuperate from the prostration of 1837.—The obligations given for the means supplied by us cannot now be met; after a short struggle the Institutions of several of the States sank again; the increase of business since the resumption, in the belief by our citizens that the difficulties had been surmounted, requires the means that had been advanced for the above patriotic object, while the debt of the South, which was postponed in 1838, requires a farther posponement.

At a season, of such universal prostration it will be easily seen how this requirement operates upon this City and her Institutions. The grave question was, could they, under all the general disadvantages which have been considered in a national point of view, and under those more special, arising from their local position, continue to pay the accumulating demands of the next three months in coin, by pursuing any course of policy which could be pointed out? We reply they could not; they might, it is true, have protracted the struggle for some time longer, and by a relentless course towards their debtors have ruined our traders, arrested the income from our public works, depopulated our factories of the industrious occupants with their families; but had all this been done, it would not have been sufficient to have averted the impending catastrophe; nor could any sacrifices which the Banks had it in their power to make, have deferred it long. The community we are sure will witness that the banks have not shrunk from their duty; in striving for months past to surmont these difficulties and preserve the only true currency, coin, at the risk of sacrificing all invaluable interests.

Finding these efforts ineffectual, and satisfied that the list of preventives had been exhausted, the banks restored to the only alternative a temporary suspension of specie payments. This will give time to the people and institutions of various parts of the country to liquidate their claims on each other, and prevent, for the time being, the foreigner from furnishing us with a larger supply of his fabrics, than can be paid for by the fruits of our current industry.

As Pennsylvania Institutions, deriving their existence from the State, and owing fealty to it, the Banks feel that they have shown, on trying occasions, a readiness to sustain its credit and promote its welfare, by furnishing means when all other sources failed, for the prosecution of our internal improvements, and we think they may rely with confidence upon the liberality and protection of the people of this Commonwealth and their constituted authorities.

With a rigid adherence on the part of the Banks, to a determination not to avil themselves of the non-redemption of their notes in specie, to engage in an undue expansion of their business, and issue of their paper, we believe that the currency may be preserved in a sound condition, and the business of the country may be transacted without any of those serious difficulties some may apprehend, until the day of resumption shall again arrive. when all interests shall be fully prepared for it."

Since the above was in type we have seen an official communication from the Banks of Philadelphia, assigning their reasons for the suspension. We shall give it in our next, and then the Bank matter will be so before our readers, that it may be necessary, in future, to say little upon that subject.

AGRICULTURAL.

We wrote the following article, in 1833, for the Methodist Correspondent.

Where to set Apple Trees.—There are different opinions about the proper situation in which to plant apple trees. Some are for setting them on the bottom lands, some on the top of the hill, some on the east, and others on the north side. The opinion in favor of this latter has a number of advocates, probably, from the belief that the coldness of the situation, would keep the buds from opening so early in the Spring, as to prevent them from being destroyed with the late frosts.

On a subject like this, all theorizing must give way to experience. We know so little about the secret springs by which the vegetable kingdom is regulated, that if we would be correctly informed, we must rely more on observation, than on abstract reasoning and speculation.

Trees planted any where will produce more or less fruit, but experience shews that some situations are better adapted to its culture than others are: for instance, the bottom lands along the great water courses, such as the Ohio river, are of the first character for fruit—probably because the fogs which arise from the water, prevent the fruit from being injured by the frosts—it sometimes happens there is plenty of fruit on one side of the river, and none on the other; owing, it is likely, to the wind giving direction to the fog. But matter of fact shews, that after you pass beyond the vapors of the river to the smaller streams, their bottoms are not so well adapted to fruit.

In this county there are three orchards, which lie within the compass of three-fourths of a mile, they were planted about twenty-six years ago. The first is situated on the west side of the valley—commences at an elevation of about fifteen feet above the stream—has a gradual ascent, lying *fair* to the east—rich, white-oak clay soil; the second is on the east side, on the top of a flat ridge, at an elevation of near one hundred and fifty feet from the water—black-oak land; the third stands beside the creek, and it is situated in a rich alluvial bottom. Now the first is by far the best bearer of the three, and the last is the poorest. The former never fails to have more or less fruit. It is somewhat remarkable, when there are general and heavy crops through the country, it is apt to have but a moderate one. Within a short distance of this, is a fourth orchard, planted the same year, every way similarly situated, save the incline plane on which it is planted, leans at an angle of several degrees towards the south,—this bears well also, but equal to the other.

The *reason* why an eastern situation is best for fruit, is not so clear, as the *fact* that so. It may be owing to the influence the has upon the trees after frosty nights: for f without the aid of the sun's heat would prove destructive to fruit. Some years si when the peach trees were in full bloom, we a heavy rain, which terminated with a s storm—it cleared off and froze ice, the follow night, say near an inch thick—the branches blossoms of the trees being wet, were frozen s but all this did not do the least injury to fruit, because the following day was cold- even continued to freeze in the shade. whose hands regulates the atmosphere, let d its temperature by such imperceptible degr that the vegetable kingdom sustained no dam The same principle was exemplified in this pensation, that is in putting a frozen membe the body, into cold water, to prevent injury f the frost instead of approaching the fire with It is mostly the case, after cold frosty nigh that the sun does not recover his strength u after he reaches his meridian; his influen then, is beginning to lessen on eastern sit tions, but to be exerted with all its force southern and western. This position is cle illustrated from the fact, that on the hills wh face in these directions, the snows are soo melted away, than those lying to the east north. This accumulation of heat, which solves the snows sooner, there, than in other rections, is what may be supposed to destroy fruit.

The above principle would also apply in fa of a northern situation, but there are oth though probably not well understood, that o rate against it. Experience shews, that no hill sides, are not so good for fruit, grain, or a thing else cultivated by the farmer, save grass

The black-oak lands, situated on the high d ding ridges, are good for fruit, particularly peach, where it does far better than on the lo flat lands.

A receipe to make a cheap compositi for preserving roofs of buildings, weath boarding and fences from the weath and fire.

Take one measure of fine sand, two wood ashes well sifted, three of slack lime ground in oil, and laid on with painter's brush—first coat thin, and t second thick. The writer says:

"I painted on a board with this mixtu and it adheres so strongly to the boa that it resists an iron tool; and put thi on a shingle it resists the operation of fir

Heaves in Horses.—A corresponde of the New York Farmer states, that h horse, twenty years old, which has f the last year or two been troubled with wheezing and hard cough, was comple ly cured by the use of powdered ging He gave him daily, for a number weeks, a table spoonful, mixed in h mess of indian meal and cut straw. D ring his suffering with the disease became so poor that his life seemed ne its termination; but he has become qu fleshy, appears much younger, and is fine plight.

Science of Agriculture.—The gre bar to agricultural improvement, is t degrading idea, which too many entertai that every thing denominated science, either useless in husbandry, or beyond t reach of the farmer; whereas the truth much, very much that is useful is attai able by those advanced in life, and almo any thing by the young, who will ado the proper means to obtain it. What science? Johnson defines it, "Knowledg certainty grounded upon demonstratio art attained by precept, or built up principles." The adventurous marin will tell you, that it is science whi enables him to traverse every clime, a every sea, with facility and comparati security. Science has contributed esse tially to improve every art and branch industry which administers to the wan of man. It makes us acquainted with t nature of vegetables, of animals, mine als, mixed bodies; of the atmosphere, water, of heat and light, as connecte with agricultural implements and othe mechanical agents, and of agricultura operations and processes. Establishe practices may be imitated by the mere dolt; but unless he is instructed in t reasons upon which these practices a founded, he can seldom change or in prove them.

Intellect is the gift of the Creato talent is the fruit of culture. The certai way of obtaining knowledge in scienc is to be impressed with the necessity possessing it, in order to prosecute one business to better advantage. "All ma not acquire by the same degree of labo or study, the same degree of eminence but any man by labor may attain a know edge of most all that is already known i his particular business." Great me spring from the humble as well as fro the higher ranks of life. Franklin wa a printer, Washington a farmer, Sherma a shoemaker, the elder Adams a schoo master, Rittenhouse a plowman, Ferguso a shepherd, Herschel a musician; an these all shone as philosophers or state men. All young men who wish to becom respectable, or to excel in agricultur should be impressed with the necessity obtaining knowledge in the science agriculture, that is, of knowing ho things are best done, and why, being s done, they are the best done; should r solve to obtain this knowledge; and thes two things being premised, there is littl doubt of success, at least to a respectabl and highly gratifying extent: for "Know edge, like wealth and power, begets love of itself, and rapidly increases th thirst for accumulation." Science is n the Calypso, but the Mentor of agricultur —the stimulant to produce and industry rather than a lure to indolence and sloth

HE RECORDER.

ZANESVILLE:

URSDAY, ... NOVEMBER 7, 1839.

☞Our subscribers in Cincinnati will be so as to hand the amount of their subscriptions . Lyon, whose business, probably, will not afaim time to call on them. We shall want ise about $200 shortly, and hope our friends remember us. Who will do the best for us ising new subscribers?

☞We are thankful to those Post Masters have politely acted as agents for us, and shall ader obligations to any others who may favor this way.

o. A. Smith, Pruntytown, Virginia, Nov. 1st, that the President, Bro. Brown, is in that of the District; that he just closed a profitmeeting at Middletown, at which fourteen ers were added to the church.

o. D. H. Stephens, of Springfield, Ohio, 4th nt, says, "in reference to religion, our pros- in this station have been rather discouragbut I think they are beginning to get better."

Clearfield County, Pa., Oct. 25, 1839.

o. *Springer:*—Our circuit, at present, pre- a very favorable aspect. The cause of God, gst us, is prospering, and souls have been erted to God. In our meetings, since erence, truly we have refreshing seasons from resence of the Lord. We have organized class of twelve members, and commenced ing a meeting house at the Diamond Mills, 40, in which we expect to hold our first terly meeting, which commences on the 23d ovember. Bro. Brown's meeting will be at t Zion meeting house, near Bro. M'Gee's.

Yours, &c. Thomas J. Addis.

From the Methodist Protestant.

o. William Rice, Hanesville, Alabama, gives y encouraging account of the condition of hurch in that section. He writes, "I have ttended two protracted meetings, that, tor lasted seventeen days. About thirty were d to the church."

e learn from several sources that the brethren eorgetown, D. C., have been greatly encourrecently. Bro. Remick writes, "Ten have d with the church, and a large number are ng the pearl of great price."

o. J. J. Dupree, writing upon business, men- that a few days before he wrote, he received er from Rev. W. P. Lowry, in Ohio county, ucky, who says, "the prospect on this circuit couraging." He furthers mentions, "that members have been received this year, and e is well sustained by the church."

o. Mandred Stimson gives an encouraging nt of Hampton circuit, Virginia.

o. A Melvin, of Newton, Maryland, writes excellent camp-meeting in that section at seventy whites and eighteen colored perwere converted.

adds "since the camp-meeting fifty white ers have joined the church."

o. Cottingham, of Coolspring, Maryland, a favorable account of the things in that n of the church's interest. He says a good is going on throughout the circuit. Some y or thirty have been added to our numbers, e brethren are united as one man.

Items of News.

. John Swift has been unanimously elected r of the city of Philadelphia by the Council, ntered upon the discharge of the duties of ice.

ere was a death, say the papers, in Philaa, on the 14th October, by starvation—a woman of forty years, with a family of infant children.

LE College.—The present number of stuin the different departments of Yale Colis about six hundred and fifty—a greater er than at any former period.

E Pork Prospect.—The La Fayette (In-) Free Press of the 10th ultimo, states here are more fat hogs in that section of na, than have ever before been fed in one n.

ENDIARISM.—An attempt was made on the lt. at Little Rock, (Arkansas,) to set fire to Western Exchange Hotel.

e Gazette states that there are in that city, hordes of vagrants and desperadoes.

CIE.—The Louisville Journal, of a late date, —"On Thursday, about $50,000 in specie rawn from the Louisville Savings Institution wo Treasury drafts. This specie was yesshipped up the river, and is no doubt desfor the vaults of the New York Banks."

Old Table Cloth.—The white damask cloth, used in the church of St. Cuthbert, city of York, (England,) for the communble, is said to bear the date 1721, and is quently 118 years old. It is figured; and h worn in some places, is on the whole, retbly sound.

e Globe says, we understand that orders been given to prepare a sloop of war, and a er, with all possible despatch for cruising e coast of Africa in execution of the laws United States against the unlawful traffic ves, and for the protection of our commerce t quarter.

Discovery.—About sixteen years since, silver plate was stolen from a house in Alria, D. C. A few days since, as some men employed digging in the lower part of the they dug up the identical plate uninjured, been buried there no doubt at the time stolen, and laid unmolested until the of its discovery.

Injustice is done by most of our distant papers in stating generally that "the Banks of Charleston have suspended"—as if *all* our Banks had done so. The Charleston Bank and the Bank of the State of South Carolina have NOT suspended nor do they intend it—and will, we are informed, be able to sustain themselves.—*Charleston (S. C.) Mercury.*

Charleston, (S. C.) October 25, 1839.

Death of Judge Lee.—The present year has been marked by a fatality to our public men. In the decease of the Hon. Thomas Lee, we are called on to add another to the melancholy list. He died yesterday at 4 o'clook, P. M., at a very advanced age—being we believe past seventy.—Judge Lee has been long in public life and filled many stations that call for superior talents. At the time of his death he was Judge of the District Court of the United States, and President of one of the city Banks, retaining to the last that capacity for business and soundess of judgment that marked his earlier years.—*Mercury.*

Seven years fighting, says Jeremy Bentham, sets a whole kingdom back in learning and virtue to which they were creeping, it may be a whole age.

Hops.—The quantity of hops used in England in the manufacture of beer is enormous. It is computed that in 1838, the hop plantations covered an area of 56,323 acres!

The Way the Money Goes.—It is computed that at least fifty thousand pounds sterling worth of gold and silver are annually employed at Birmingham for gilding and plating, and therefore forever lost to the world as bullion.

The Thames Tunnel.—There was an elegant and costly banquet in the Thames Tunnel, lately, given to the persons employed in that undertaking, to celebrate their having reached low water mark. About two hundred and eighty persons were seated at the table.

W. L. McKinzie, the Canadian Agitator, who is now confined in Jail at Rochester, on a charge of attempting to excite citizens of the United States to invade the Canadas, was, a day or two since looking out of the window of his apartment, when a bullet came whistling through one of the panes of glass, narrowly escaping his head, and lodging in the wall opposite.

After all the great fires which have occurred in our country for some years past, and lately, we have been beaten by the Turks. The great fire in Constantinople is said to have destroyed five thousand buildings, and property to the amount of twenty millions of dollars,—proof of the asphaltine qualities of wood in buildings.

Homicide.—A pedlar was met on last Thursday, in the vicinity of Syracuse, N. Y., by a footpad, who demanded his money. The pedlar handed out his pocket book. "Is this all?" asked the robber. "No," said the pedlar. "Well, fork up and be quick." The pedlar put his hand in his bosom, drew out a pistol and shot the robber through the heart. The body was recognized as that of a convict just discharged from the Auburn prison.

We are gratified to perceive that the same disposition that existed when the Banks suspended in 1837, to withdraw the specie from circulation, does not exist to any thing like the same extent now. For all business purposes there appears to be ample supply of small change in the community. No one feels any regret in paying out specie; but it passes freely from one to another. This is as it should be, and if the same spirit continues, we shall have no difficulty upon the subject of small change.—*Lexington, Ky. Rep.*

The West is vastly rich in minerals. Almost every day brings to light some new discovery of its wealth. We observe that in St. Francois county, ochre has been discovered of four different colors, viz: yellow, black, and two shades of red. There is also found in the same deposite white, black, and Spanish brown. All the colors, except the white, combine readily with oil, and have been pronounced by competent judges as every way equal to the imported article, and can be offered at a much lower price.—*Eastern paper.*

Pittsburgh Market.—*Friday Nov.* 1.—Flour has been active and quick sales during the week at a slight advance.—About 2000 bbls. have been sold for the east at 4,37½ to 4,50. Dealers are now paying 4,25 to 4,37½, and 4,50 for small choice lots, and from stores sales at 4,50 to 4,75 per bbl—but it is generally believed that the moment the canal closes it will fall.

Barley is down—only one brewer is buying at 75—others refuse to buy or will give but 62½ per bushel.

Prices of Produce, Cincinnati, Oct. 24.

Flour from boats,	$4 12½
Wheat, per bushel,	60c a 70
Corn meal,	50
Corn in ear.	25 a 31

Destructive Epidemic.—The ill-fated Colony of the Cape of Good Hope, (a misnomer by the way) will soon be depopulated, if many more misfortunes attend it. It is much to be regretted that a part of the world possessing so fine a climate as this, should be subject to so much misery from war and pestilence.—An English paper says, that the epidemic which swept round the Southern hemisphere this year, carried off at the Cape of Good Hope, 5000 people. The horses also suffered, 75,000 having perished from inflammatory attacks. Farms which last year had 300 horses have now but one. Besides all this, 4000 more of the farmers are emigrating towards the wilderness from this ill-fated Colony.

Yankee.—Americans ought to be proud of this name; there is a charm in it, and its power is acknowledged over the whole world. Yet there are some foolish persons, who were born in this country, and whose parents and grand parents were among the first settlers, who take umbrage at being called a Yankee; and why is it? With this title is associated every thing that is noble and brave, spirited and enterprising. It tells at once to foreigners that the Yankee is a child of the greatest and most glorious republic on the face of the earth. Let no American, then, under any circumstances, disavow this right to the proud title of Yankee.—It will push you into every clime, and obtain privileges for you which persons of no other nation can enjoy. The American flag, and a true born son of America by its side, knows no bounds, and can never be insulted.—*Exchange.*

An Exchange.—A carriage containing two ladies, who represented themselves as mother and daughter, stopped at the outer gate of the Alms House, over the Schuylkill, on Thursday last, when the youngest informed the keeper that her mother was anxious to obtain a white child, an infant if possible, to adopt as her own, she having lately lost one. She was shown several, and at last made a selection that pleased her, and requested permission to show it to her mother who was in the carriage, and if it suited her, they would obtain an order from the Guardians of the Poor, and call in a day or two for it. The child was wrapped up in its cradle clothes, and taken by herself to the carriage, and after a few minutes delay, she returned and placed the babe where she found it, stating that they would call the next day and take it away. The carriage was then driven off, and nothing further was thought of the transaction, until it became necessary to remove the child for some cause, when it was discovered that the white child had been taken by the persons in the carriage, and a *black one left in its place!—Philadelphia paper.*

Home Manufactures.—An Anecdote.—In order to show how much our population begin to *think* about our home manufactures, to *talk* about the matter, and to *act* upon it, we have been struck with the conversation and remarks of our most sensible, observing and practical men, and it begins to be the subject of conversation of all ranks and classes, who begin to see and feel the solemn changes produced by over-importations of foreign goods. One day this week an intelligent English gentleman in our office showed us his coat of English manufacture, stating that if he lived a thousand years in this country he would buy nothing but American made, and that he had just bought a piece of American Cassinet at less than a dollar a yard which was cheaper and better than any British at the price, and that his family should all be clothed with it. Soon after he left us five handsome and intelligent little girls of 8 or 10 years of age and of most respectable parents, called to ask advice about the manufactures of our city, the extent, variety, &c. stating that it was given them as a subject of composition in their school. We shewed our young misses a parcel of home made silk goods, &c. &c. afforded them all the information in our power, and they left us much gratified and pleased, and returned to complete their new but interesting task. One of our stores will in a few days have domestic manufactured silk goods for the accommodation of the public.—*Pittsburgh Intelligencer.*

The Burners Burnt.—The following laughable occurrence, which took place yesterday morning in the vicinity of Catharine market, was related to us by officer Davis, of the Lower Police. About three weeks since, a man named Ackworth came down to this city from Bridgeport, Conn., and was scientifically done out of $15 in a watch trade by a gang of burners. On Tuesday he again arrived in town, and before he could leave the steam boat deck was accosted by a black fellow, whom he immediately knew to be a burner; but, being "up to trap," he told the chap to go about his business. It afterwards struck him that by the assistance of a third person, in case of need, he might fix the burners, provided he could come across them again. He therefore applied to officer Davis, who in company with a friend and Mr. Ackworth—the latter disguised as a Shaking Quaker—proceeded early in the morning to the steam boat landing. Ackworth soon espied the burner who had accosted him, while Davis and his friend kept in the back ground. The burner—a diminutive, fierce looking, copper colored negro—accosted the supposed Quaker:—"I say, friend, can you give me a five dollar bill for five dollars in specie!"

Ackworth opened his wallet, and looking over the money, said, "No; I have no bills less than $10—I can change thee ten in silver," (handing out a 10 dollar broken bank bill.)

Just at this moment a second burner came up and asked if the gentleman would be so kind as to step across the street and decide a bet,—if so, he might get $3 for his trouble. Ackworth accordingly went across into an alley, and after deciding the bet and receiving his $3, was importuned to make a bet himself upon some cards, which he agreed to do to the amount of $10. The bet was accordingly made—Ackworth by consent, holding the stakes, which included his $10 broken bank bill and $10 silver, which the burners had previously given him for it. On turning up the cards it was found Ackworth had won, when the fierce little negro, first mentioned, immediately seized his hand with the intention of snatching away the stakes; (as usual;) but Ackworth was prepared for this surprise, and suddenly pocketing the money, and seizing the little negro by the collar, he drew a cowhide from his bosom, and commenced giving the black rogue a good dressing. Just at this moment Officer Davis and his friend came up, when the other burners fled, leaving their unfortunate companion in the uncomfortable situation described.

Ackworth, who is a very stout built man, after giving the fellow as decent a thrashing as he ever had in the course of his life, sent him off with a caution.—On overhauling the spoils in his breeches pocket, he found he had $13 in silver of the burner's money, within two dollars of the amount of which he was fleeced on the first mentioned occasion.—*New York Express.*

FOREIGN ITEMS.

New York, October 22, 1839.

Later from Europe.—By the arrival of the packet ship Duchesse D'Orleans, advices one day later than those by the Liverpool have been received.

The general intelligence relative to the United States Bank, the Hottinguers, and the Rothschilds, is entirely undecisive, and we find the following to be the most important item on the subject, which is likely to pull the stock of the United States Bank a little lower.

Havre letters of the twenty-first speak of the honor of the bills rejected by Hottinguer & Co., as a question yet undetermined. One of them reads thus:

Havre, September 21, 1839.

Up to last evening, the bills had not been accepted, and it is now ascertained that nothing will be done until the return of one of the partners of Messrs. Rothschilds & Co., who is absent from Paris.

Relative to the refusal of Hottingeurs, the Paris Messenger, says it arose from the circumstance of the bills of lading of the cotton which was to serve as guarantee for the bills drawn by the Bank of the United States, not having been sent with the letters of advice, which stated simply that the cotton which was to be consigned to Messrs. Hottinguer was purchased, and would be sent by the first vessels. By the arrangement which has taken place, the cotton which was expected in London and Havre, will be consigned to Messrs. Rothschild.

In Mans and other towns in France serious riots had occurred in consequence of the monopoly of grain. In some instances the military had been called out, but acted but once, and then with a degree of indecision which only made the people worse. A quantity of wheat was seized, and the mob were allowed to distribute it among themselves, the owners being indemnified by the authorities.

The Moniteur states that before the French Government could come to any definite resolution as to the reform in the prison system, it has waited for the reports of intelligent persons who have been despatched to Italy, Germany, Switzerland, Belgium, Holland, England, and the United States, for the purpose of studying the prison discipline in those countries.

A meeting of the geologists of France and England is held at Boulogne sur-mer, where the philosophers are exploring the coal and iron fields of the neighboring districts. Among the English geologists present, are Dr. Buckland and Mr. Murcheson.

A paper of St. Petersburgh gives an account of a village called Fedcorowaka, at the foot of a mountain on the banks of the Wolga, the inhabitants of which on the night of the 15th of June, were awakened by a noise resembling that of an earthquake; and on rushing out found that a great part of the village had become detached from the mountain, and was moving towards the river. The motion was similar to that of an immense raft floating on an agitated sea. The undulations continued for three successive days and then subsided; no more than seven houses were destroyed or rendered uninhabitable. Many ponds and other pieces of water were covered with mounds of earth, and where no water had been small ponds were formed. No lives were lost. The circumstance is accounted for by the village having been built upon an alluvial soil, and the river having undermined the soft earth, had, it is supposed, at length rendered it partially hollow, so as to give way under its own weight.

Fifteen Days Later from China.—By the ship Horatio, Capt. Howland, from Canton, on the 14th of June, we have information thence up to that date. The British merchants left in May, and it is probable that there is not a single American or European now in Canton. Trade was entirely suspended; nor was there any prospect of its revival while the Imperial Commissioner remained. The Hong merchants seemed indisposed to take any measures for the renewal of foreign traffic. Its cessation had created great excitement among the natives. The general supposition was that the trade in opium would be continued, *mauger* the mandate of the government. Captain Elliott had applied to H. E. Imperial Commissioner for an edict to permit the British merchants to conduct their business at Macao. In reference to this edict the "Register" of the 11th of June says:—"It is singular that this edict, which relates only to the British affairs and British interests, should have been forwarded by the Hong merchants only to the American merchants in Canton. Not a British merchant nor a British subject has received a copy. This cavalier treatment of the British by the Hong merchants requires explanation and satisfaction.—*N. Y. Times.*

BIOGRAPHY.

From the Methodist Protestant.

Chuckatuck, Oct. 20, 1839.

Dear Doctor: You have no doubt before this heard the painful intelligence of Dr. French's death. I had thought of preparing an obituary notice for publication in the Protestant, but it occurred to me that it would probably be better to furnish you with an account of his last illness, and leave it for you to perform this last tribute of friendship. You have known him long and intimately, and can do full justice to his character.

He was attacked with intermittent fever early in September, and during the whole of that month, was in bad health; though it was nothing to excite much apprehension. Late in September, though very feeble, he seemed free from disease and supposed himself to be recovering rapidly. Unfortunately, he overrated his strength, and on a warm and sultry day mounted his horse and rode over his farm. He became very much fatigued, returned to the house and was taken ill of billious remittent fever. He continued so, with some few flattering, though deceptive intervals, until he died. He did not suffer very much until the day of his death, when for a few hours, he suffered a great deal. He submitted with exemplary patience to his affliction; and as all who really knew him, expected, met death undaunted. He frequently said he had nothing to loose by death; and not many hours before he died, he said he wished it distinctly and clearly understood, that his only hope in death was founded upon the death and atoning merits of the Redeemer. I have no doubt of his having happily ended all his sufferings.

He died on Sunday evening, the 13th of October, at nine o'clock. He evinced all possible affection and solicitude for his son. Indeed, I never witnessed anything more affecting than the dying charge he gave him. It might have been heard with profit by all the youths of the country.

As to the general character and habits of the Doctor, you need no information from me. He lived an upright life, and died a christian's death.

Yours, truly,

C. Finney.

To S. K. Jennings.

October 24, 1839.

I have been intimately acquainted with Doctor French, more than forty years. He became a convert to the christian faith and to Methodism, whilst a student with me, about the year 1800. He was a zealous advocate for religion and very soon after finishing his preparatory course of madical studies, he began to preach the gospel with great success.—He had a discriminating mind, studied human nature with attention and carefully analysed his own character. He duly appreciated the admonition of the old Grecian Philosopher, "Know thyself," and obediently regarded the declaration of the Great and Mighty Saviour of men, "Ye are not your own—ye are bought with a price." He had grown up under the influence of Calvinistic opinion. But when he became a Methodist, he was so entirely devoted to the interest of that church, as almost to merit the appellation of a Bigot. He labored as a Local Preacher, of course without salary; and altho' in early life he was poor, yet he extended his labors very widely, carefully redeeming time and exerting himself in a manner bordering on excess, for the furtherance of the cause of God and Methodism. I notice this last association the more carefully because he was the first bold advocate of my acquaintance for reform in the government of the Methodist Episcopal Church, and as early as 1820, came on from Virginia to Baltimore, expressly for the purpose of sending in to the General Conference of that year his memorial urging the necessity of reform. Four years previous to that event, a proposed attempt for reform had been submitted to me, by brethren in the vicinity of Norfolk, which I opposed and perhaps suppressed; at hearing of which he heartily commended my opinion and procedure, and expressed himself as if he could as soon oppose religion itself, as to attempt any change in the rules and usages of the church. The following two years, however, furnished examples of the administration in the Norfolk Station, which opened his eyes, and he became a most zealous friend to the cause of reform—Offended only with the government of the church, he was the same faithful and devout advocate for christianity, as held and taught by the great founder of the Methodism, and for the last ten years he has labored for the promotion of the Methodist Protestant Church.

He was a man of great worth. Steadfast in the faith of the gospel, diligent in the performance of duty. Benevolently attentive to the sufferings of afflicted humanity; affable in his manners; unchanging in his friendships; very affectionate to his family and relations; in a becoming degree concerned for the public welfare, and greatly solicitous for the spread of religion and the reformation of sinners His death has therefore brought a very serious loss to the church, and particularly to the district of country which was the field of his labors. But blessed be the God and Saviour of the children of men, we sorrow not as those who have no hope. He had lived and labored for the promotion of truth, and was enabled to die in the faith, exercising and enjoying the good hope which respects the resurrection of the dead and life everlasting; the highest attainment within the reach of man, and until we shall be admitted into our Saviour's presence, the greatest blessing in the gift of God.

Business Department.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office, county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Letters Received.—Dr. W. Evans, S. Langdon, 2, H. Heberling, (we have no account against you,) J. Mercer, A. Affoth, V. J. Powelson, P. T. Strong, G. Lowther, (we have been sending Mr. Richardson's paper to Deersville,) Z. Ragan, M. Winan, 2, A. Smith, (you will find the receipts in our next paper for those names,) E. Spencer, M. Lyon, T. J. Addis and J. Myers.

☞For want of room we have omitted the receipts this week; they will be attended to in our next.

POETRY.

THE WARRIOR'S RETURN.

He came from the wars, from the red field of fight—
He came, cold and wearied, through the darkness of night,
With helmet and sword, his buckler and bow,
And crimsoned his cloak, from the blood of the foe:
He flew to her chamber; 'twas cheerless and drear,
For the one that he lov'd no longer was there;
He spoke not, for sullen and dark was his brow,
As he sought for the pledge of his earliest vow;
He lean'd on his sword, in silence he wept;
The lov'd one he cherish'd, in death's pilgrimage slept.
She came not to meet him, as once she had done
In the young days of pleasure, when she lov'd him alone:
She breath'd not a prayer when her warrior came,
She drop'd not a tear as he faultered her name—
No, she lay like a flower cut off in its pride,
For lifeless and cold was the warrior's bride.

[*Published by Request.*]

ON SLANDER.

'Tis wond'rous strange and yet 'tis true,
That some folks take delight,
The deeds of other men to view,
As if their own were right.

And if a piece of news comes out,
They'll eagerly pursue it,
Then hand the charming dish about,
And add a little to it.

Each little fault they'll magnify,
Yet seeming to bemoan
The mote within a brother's eye,
Are blinded to their own.

And if a brother chance to stray,
Or fortune on him frown,
Tho' humbled in the dust he'd lay,
The text is keep him down.

They'll preach up penance with a sigh,
To cure or nothing can—
Sufferings are good I'll not deny,
But not when sent by man.

Each worthy deed is now forgot,
As if not worth retaining,
But oh! let failings fill the pot,
And Slander sucks the draining.

Unto the dregs she draws it out,
Delighted with her labor,
Then bears the charming swill about
To treat her thirsty neighbor.

'Neath friendship's mask she sometimes lurks,
And smiling fawns around you—
Conceal'd she more securely works,
And kisses but to wound you.

Detested pest of social joy,
Thou spoiler of life's pleasure,
Like Sampson's foxes would'st destroy
What's more than all our treasure.

VARIETY.

A poor woman once upon a time, had a daughter married off. Being asked shortly afterwards what kind of a husband her daughter had got, she replied, "Oh I rather guess he's a tolerable sort of a body, for he's got a long tailed coat and a ruffled shirt."

A WARRIOR'S OPINION OF WAR.—The celebrated Prince Eugene of Savoy, one of the bravest and most successful warriors of the 18th century, though naturally eager for military renown, and the most ardent of combatants in early life, seems to have formed an enlightened opinion of the evils of war, in the latter part of his life—an opinion dictated by his cooler judgement and experience.—He said:

"The thirst of renown sometimes insinuates itself into our councils under the garb of *national honor*. It dwells in imaginary insults—it suggests harsh and abusive language—and people go on from one thing to another, till they put an end to the lives of half a million of men. A military man becomes so sick of bloody scenes of war, that in peace he is averse to re-commence them. I wish that the first minister, who is called to decide on peace and war, had only seen actual service. What pains would he not take to seek in mediation and compromise, the means of avoiding the effusion of so much blood."

FROM LIBERIA.

The following Proclamation of Governor Buchanan appears in Africa's Luminary, for June last:

PROCLAMATION:

By his Excellency, Thomas Buchanan, Governor of Liberia.

Whereas, the Laws and Constitution of this Commonwealth forbid all intercourse of every kind and nature whatsoever, between the citizens and persons engaged in the slave trade; and whereas every act of aiding and all intercourse tending to countenance the traffic in slaves, is made felony by the Laws: Therefore be it known, that all laws and enactments and ordinances of the Commonwealth, in relation to the slave trade, will be most rigidly enforced upon every person who may be found guilty of violating them.

All persons therefore are admonished to abstain from aiding or abetting the slave trade, and from all intercourse with persons engaged in that traffic. The officers of the Commonwealth, civil and military, and all good citizens, are expected and called upon to support the dignity and authority of the laws, and to assist in enforcing a prompt obedience to them.

Given at Monrovia this fifth day of June, in the year of our Lord one thousand eight hundred and thirty-nine.

(Signed) THOMAS BUCHANAN,
Governor.

CHEERFULNESS OF JOHN WESLEY.—He was a great reader from his very youth. Hence, his mind was richly stored with vast treasures of useful and entertaining knowledge. He had an almost inexhaustible fund of stories and anecdotes, adapted to all kinds of people, and to every occurrence in life. These he related with a propriety peculiar to himself.—Few men had a greater share of vivacity when in company with those he loved, especially on his journeys. If the weather or the roads happened to be disagreeable, or if any little accident befel any of his fellow-travellers, without their being hurt, with what inimitable turns of wit would he strive to keep up their spirits, feeling himself happy in endeavoring to please; so that it was almost impossible to be dull or dissatisfied in his company. * * * I never saw him low-spirited in my life, nor could he endure to be with a melancholy person.—When speaking of any who imagined religion would make people morose or gloomy, I have heard him say in the pulpit, "that sour godliness is the devil's religion." In his answer to a letter I had written to him, (in a time of strong temptation,) he has these words: "That melancholy turn is directly opposite to a Christian spirit. Every believer ought to enjoy life."

He never suffered himself to be carried away by extreme grief. I heard him say, "I dare no more fret than curse and swear."

That placid serenity which so fully and constantly possessed his soul, shone with ineffable sweetness through his expressive countenance, and communicated its benign influences to the large circles of his friends, who crowded together wherever he went, to enjoy the benefit of his coversation. On such occasions, he kindly condescended to a familiar equality, and concealed the great philosopher and divine in the social companion.

He was a truly well-bred man. Had he lived in a court all his days, his address could not have been more easy and polite; yet he could be quite content among the most homely tradesmen or peasants, and suit his discourse to the meanest capacity. His courtesy to every one was very engaging, especially to young people.—*Sketch of Mr. Wesley's Character, by Samuel Bradburn.*

From the Cincinnati Weekly Whig.

MR. DAVID DALE OWEN.

We published in yesterday's paper an account of the death of Mr. Owen, U. S. Geologist, who has been engaged in surveying the mineral lands in Iowa. The information came from the Burlington Gazette of the 5th October, and we are now disposed to think the rumor unfounded. A friend has placed in our hands the following letter from Professor Locke, who is engaged also in the survey, and is of date two days later than the Burlington paper.

Camp 20 Miles South of Dubuque, Iowa Ter'y,
October 7th, 1839.

Dear Sir:—I am "out of sight of land," but with plenty of prairie and rocks in view—am sitting on the ground in my tent, with my barometer on my back, just ready to start again to the "far west:" for we have been once to the Indian country, where we saw the Aborigines pursuing the Elk. As you may be curious to know something of the survey, I will give you a sketch. The corps consists of one hundred and twenty men, divided into twenty-four parties, each of which takes a range of townships, beginning at the south end, and proceeding northwardly, and reporting occasionally to the principal Geologist. The principal Geologist and myself range obliquely, so as to cross the several routes, and meeting the parties at predetermined reporting stations. To me has been assigned the physical department, including meteorology, magnetism, altitudes, &c. I have a separate tent, a baggage wagon, and four men.—My tent master is an Indian trader from St. Louis, who has spent fourteen years in the Rocky Mountain expeditions, and is, of course, perfectly at home in the wilds. Every thing "goes on finely," and I shall be enabled to report a complete magnetical survey of Iowa.

The general geology of Iowa is very interesting, and I am suprised to find that the rock, including the lead ore, is identical with a formation in Ohio, which I examined last summer, and reported to the State, under the name of Cliff Limestone. We have found abundance of iron ore, which occupies the same geological situation as the ore in Adams county, Ohio.

My health and spirits are remarkably good. I sometimes make detours alone, on horseback, over the illimitable prairies, and start the prairie grouse, the wolf and the deer; all of which are so common as scarcely to excite remark. Sometimes inhaling the pure autumnal air, and with a heart swelling with the grandeur of the scene, and muscles well braced, mounted on a spirited steed, I pursue the fleet deer over the grassy plain—not with intent to kill—for the joy is in the chase; but simply to realize the excitement so lately enjoyed by the noble Indian on the same theatre. Much poetry has been written about Iowa, from which the reader is inclined to make the usual subtraction or equation for poetical license; but after all, in plain truth, it is a wonderful country.

I shall not return to Cincinnati so soon as I expected; but shall not become so enraptured with wild life as quite to desert the city, to live with "those who dwell in tents." I am much pleased with the manner in which Dr. Owen conducts the survey, and the intimacy which subsists between us renders my part in the expedition very agreeable.

Affectionately yours,
JOHN LOCKE.

STATISTICS OF LUXURIES.—Under this caption we find some elaborate tables and calculations in the last number of Dr. Alcott's "Library of Health."

His list of luxuries will be dissented from. These are not only tea, coffee, spirits, wine, beer, but also sugar, molasses and *salt*.—We then have this table of the proportion consumed by each million of these countries. We leave out the French column:

	Great Britain.	United States.
Tea,	1,137,000	1,000,000
Coffee,	405,000	6,000,000
Tobacco,	845,000	1,000,000
Spirits and Beer,	21,000,000	2,700,000
Wine,	301,000	334,000
Sugar,	22,400,000	13,334,000
Molasses,	1,167,000	1,667,000
Salt,	750,000	800,000

In tea it will be seen the disparity is not very great between the two countries, though the price with the English is much higher—say, a dollar a pound on an average. In Great Britain, tea is not drank at all by the great mass of the population, as it is here. It is too dear for them.—It is a *luxury*. In France they have other tastes. The whole consumption of that great country is rated of 6,500 lbs. to a million of inhabitants.

Of coffee, the share of the United States is immensely out of proportion, showing again the greater ability of the population to consult their comfort. Six pounds are allowed to each of us, while in Great Britain it is less than half a pound, and even in France not three-quarters. France brings up the arrears in *wine*, to a strange degree, being allowed *twenty-three* gallons a head, to a third of a gallon for us Americans, and a little less for the population of Great Britain. In sugar, and of spirits and beer, the British take a long lead; but more especially in beer alone, in the use of which their population to the French is as 420 to 2. In spirts separately *we* are ahead in the ratio of 50 to 28 as compared with the British, and of 50 to 8 with the French.

Of molasses and salt alone among these articles it would seem the three nations take about equal. It has been lately stated that *we* use much less salt than the English, but by these tables we use more—more, that is, than the *British* population at large. This however, is human consumption. Immense quantities are given to stock there—it is said fifteen millions of bushels yearly, while the *whole* consumption of the United States is not more than twelve.

The Doctor makes it out that his nine luxuries, in the three countries, cost over eight hundred millions of dollars a year; and we suspect that he has not exaggerated, for coffee he puts down at less than fifteen millions of dollars in all, whereas the North American Review allows twenty to our country alone. This grand total is equal to an average of $12.62 for each individual of the sixty-five millions allowed for the three countries, or of $62 for each family of five. The Doctor knows, he says, that some use less, but others use much more. Of these eight hundred millions, about one hundred and sixty-three are allowed for sugar, molasses and salt. On the other hand no mention is made of some smaller articles, accounted luxuries by many. The yearly cost of the spices used in the United States, to those who consume them, cannot be less, the writer thinks, than $1,500,000; fruits, $1,500,000; chocolate and cocoa, $750,000; making a total of nearly $4,000,000. These, too, are 'luxuries' with *him;* the reader may call them what he pleases. The calculation of *cider* is given up in despair.—*Bost. Transcript.*

ADDRESS ON EDUCATION.

DELIVERED AT NEW YORK, BY GEORGE COMBE, ESQ.

Training.

The proper training of the mind means the proper training of the organs. Without the brain, the mind cannot act; and without a healthy brain, it cannot act energetically. The first element, then, in education, is to have the brain in a state of vigorous activity; and in my last lecture I pointed out the intimate dependence of this condition, on good and sufficient food, good air, the excretion of waste matter from the body, cleanliness of the skin, and on the quantity of clothing being adequate to the season, but not too great. I showed that when the food consists of mere slops or vegetable diet, when the air is vitiated, and the clothing inadequate or excessive, the tone of the whole system is lowered.

I revert to ventilation, for the purpose of remarking, that in this country, one-third of all who die, die of consumption; and when I see the neglect of ventilation which is here so common, I do not wonder at it. I have not the least doubt, that by proper attention to ventilation and proper attention to the skin, this number might be reduced three-fourths. I state this from the experience of the best-informed physicians.

The great importance of understanding whether the brain be a single organ or a congeries of organs, cannot be too clearly set forth. If the mind be a single organ, then mental exercise, of whatever kind, should be beneficial to its whole powers. If it be a congeries, we have to attend to the particular exercise of each. Suppose a trumpet to be improvable by practising on it, every note would be improved by improving the tone of one; but if it were a piano-forte, in which each note depends on a separate chord, it would be absurd to hope for the improvement of all the chords by improving a few merely. Some might produce the correct notes when struck, while others might produce nothing but discords; and others, being broken, might emit no sound at all.

From the fact of the brain being the organ of mind, flow many important results; one of which is, that being weak and immature in childhood, like the legs and arms, it cannot bear much exercise; that it strengthens with age, and that the exercise or labor should be proportioned to the strength. You cannot impose excessive labor on the brain, any more than on the rest of the body, without doing great injury. Hence we see the great folly of that constant mental application which it has been, and still is, to a great degree, the endeavor of parents and teachers to keep up. In Scotland, at the public schools, we used to be in attendance seven hours a day—from nine to one, and from two to five; and the result was this: for an hour in the morning we were able to attend assiduously to our lessons, but then the brain became exhausted, and the scholars restless; they were poking each other with their fingers, pinching each other, flirting peas, and scratching the desks. Some became noisy, and some listless; then came the birch, for the purpose of infusing new stimulus into an exhausted brain; the scholars were rendered miserable, and induced to look on the school with disgust, and the teacher was harrassed and discouraged. Now, when the effect of these things is better understood, many of the schools of Edinburgh have reduced the time of tuition to *four* hours a day—two hours at a time; and it is acknowledged that more Greek and Latin is learned in that time, than previously in seven hours; the scholars attend the school with pleasure, and the teacher passes his time with satisfaction. Nay, one teacher has reduced the time of attending to Greek and Latin to two hours a day, and still challenges comparison with the rest of the schools.

Mr. Fisher's School.

Mr. Fisher, a gentleman who takes scholars of from five to eight, has found the greatest advantage in the changes which he has produced. Instead of keeping them constantly at work, by rewards and force, for three or four hours in succession, he takes this plan: For the first hour he can obtain their attention without any difficulty; at the end of that time, he sends them out to run around St. Andrew's Square for a quarter of an hour. While they are running about, he keeps the windows open, and thus ventilates the room. In this way the children learn more, and enjoy such pleasure, that the parents complain that they would rather be at school than at home; and the teachers' task has become an agreeable instead of a painful one. I have been to the public schools of this city, and would advise you to go and judge for yourselves how far the laws of physiology are observed. The children go in at nine, and come out at three, having all the time but half an hour's intermission. Mature as our brains are, we take care to impose less on them than on the weak brains of the young. If I should lecture to you six hours together, you would say, "God preserve us!" It is of importance, when children are at school, that their position should be easy. In my own country, children have to support themselves on forms without backs. We have produced a reform, however, in a number of schools; and I am pleased to see that in your country no complaint is necessary.

Temperaments.

In educating children, it is of the utmost importance to take into consideration the influence of temperament. If the nervous temperament predominates, the child will be delighted to learn; it will be continually at its book; it is intelligent, and shows such an intensity of feeling that it twines itself round the affections of its parents, who are in raptures at the astonishing progress of their child, and urge him on his career, ignorant of the almost inevitable result. The nervous energy being drawn to the brain, the digestive system suffers most materially; and while by this premature developement, he stands conspicuous above children of his own age, the blaze of excitement in which he is kept by continued thinking and feeling soon undermines his health, and if not arrested throws him into a premature grave. In such cases add not to, but keep down the excitement. See that such children take much exercise in the open air, and rather urge them to lay down than to take up a book. To do otherwise is to break the law of Nature, or of Nature's God; and long life is promised, not to those who break, but to those who obey his law; and the promise is fulfilled. The life is long and happy, which is spent in obeying the laws which are made manifest by observing and reasoning upon the nature of man and external things.

When the lungs predominate in a child, and the sanguine temperament, there is a fondness for exercise; the food is heartily eaten, and the sleep is sound. Suppose a child of this temperament to be sent to school after a sound sleep and comfortable breakfast: for a short time he may be still, but in a while the craving for muscular exercise will be too strong; he may be put up, but cannot be kept quiet. He begins to be fidgety; he may receive blows for it, but still he fidgets; the blows may be repeated, but without effect; he continues fidgeting, poking with his elbows, nudging and flirting, striking his neighbors with his feet, and striving in every way to expend this energy. Such children are generally said to be very clever, but to have no liking for their books. The usual plan has been to scold such children well; and if not quieted by this, as is very unlikely, the scolding is followed up by a flogging, which is generally inefficacious. The object should be to remove the evil. Let us attend to Nature, and such children will be found sufficiently fond of learning. Give them an opportunity of first expending their muscular energy, and then they will be delighted with mental activity.—Mr. Howe, of Boston, related to me an anecdote which finely illustrates this position. He had a boy who was the most mischievous that he ever met with; he would break the benches and boxes, wrench the doors off their hinges, and play all sorts of pranks. He could not be controlled. Mr. Howe thought of sending him away from the school; but knowing there must be a cause for this disposition, he reflected upon the subject and hit upon an admirable remedy. He sent him into the celler every morning, to saw and split wood for three hours together. The boy was delighted with this, but he had soon sawn and split all the wood up; he then set him to running, leaping, climbing poles, and disporting himself in a variety of ways. In this way he got rid of his excessive muscular energy, and afterwards proceeded with his studies in a proper manner. After this plan was adopted, the doors and benches were perfectly safe.—*Reported for the New Yorker.*

ADVERTISEMENTS.

O. WHITE,
BOOK BINDER,
NO. 104, MAIN-STREET,
ZANESVILLE, OHIO.
August 1, 1839. 2tf

Glass Manufactory.

THE GLASS-WORKS recently carried on by R. P. ROBINSON, has been taken by the subscribers, and will in future be conducted by them. WINDOW GLASS, double and single, all sizes, and of superior quality, will be kept constantly on hand for sale on reasonable terms, at the works. The experience of one of the firm, in the manufacture of the article, will ensure all made to be of the best quality.
S. B. JOHNSON & CO.
Zanesville, Oct. 31, 1839. 3w11

Dr. A. W. Knight,
(Formerly of Philadelphia, but for the last six years in Muskingum county, Ohio,)

HAS removed to MT. STERLING, and now respectfully tenders his professional services to the citizens of this place and the surrounding country: he may at all times be found, when not absent on professional business, at his residence. He hopes that undivided attention to the duties of his profession, together with an experience derived from twelve years' practice of the various branches of a profession, and part of that time in the Philadelphia Hospital as one of the house physicians, will enable him to merit and receive a liberal share of public patronage.

The Western Farmer,
DEVOTED TO
Agriculture, Horticulture, and Rural Economy.
CINCINNATI,
Corner of Vine and Gano Streets:
PUBLISHED BY G. G. MOORE,
Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

Public Notice

IS hereby given, that application will b to the Trustees of Hopewell Township township road, to commence a few rods Mr. Coomrine's dwelling, at the line b Geo. Norman and Alexander Watson, run South, at, or near said line, to the East corner of John Rodman's land, the best rout so as to intersect the Coop West of the inclosure of Wm. George.
October 5, 1839.

S. C. Haver,

IN the flourishing town of Putnam has 40 or 50 SADDLES ready for sale, o ent qualities, comprising nearly all the v in fashion in our Buckeye State: a good ment of Bridles and Martingales: ridi driving whips: between 80 and 100 carri heavy draft Collars, which will compare a with any others made here or elsewhere. fine York, Dearborn, heavy team and c fancy Harness. A lot of Bear skins just ed. Trunks, vallises, saddle-bags, and covered wagon whips, varying in quality a to suit purchasers.

The only recommendation he now offer work, is the testimony and long experienc old customers and friends. He is still to please and accommodate those who n on him, and hopes to share so much of the patronage as his attention to his busine merit.

Putnam, August 15, 1839. 3tf

PROSPECTUS OF

The Methodist Protest Letter-Press.

THE Methodist Protestant Church is guished by its union of the princ spiritual and ecclesiastical liberty. On count, it is deemed worthy the approbati support of Christians and Freemen, thro the land and the world. And there is no to doubt, that, wherever its character s justly appreciated, and suitable efforts m its establishment and prosperity, it will be one of the most honorable and succes struments, employed in promotion of the objects of our holy religion.

This Church is of recent institution. stitution and Discipline were formed in Since then, it has become favorably kn some extent, in most parts of the United and in Foreign countries. Still it is ne well, nor as widely, known, as it deserve Various reasons might be assigned for th only three will be here submitted. The of the Pulpit, the School, and the Press, h been exerted with adequate efficiency statement cannot be amplified, according demands of the subjects it embraces, in document as this. It is intended to furn a development in the progress of our worl it suffice, for the present, to say, that the of the alleged deficiences, in these respec be found, whenever exhibited, not so m culated to cast discredit on the past ope of the Church, as to prompt it to immedi energetic improvement of present and pros advantages.

The editor of "The Methodist Protesta ter-Press" proposes to render a little ass in improvement of *this* power. His pla publish a paper according to the descripti unto annexed.

Its character may be intimated by the ing briefly stated particulars. 1. It will secrated to Christianity. 2. It will make the history, condition, and prospects of t thodist Protestant Church. 3. It will n other Churches. 4. It will pay attention Benevolent Institutions. 5. It will be ant of Philosophy, Science, Art and Lite It is not expected, of course, that each will contain articles on all these subjec they are mentioned to indicate the ra contemplate, and so give assurance to th as well as the Church, of as great a va matter as shall be consistent with our m jects and compatible with our narrow li Whatever it may treat, shall be treated t fully, charitably, freely. The editor ack ges no higher obligations than those of Tr Love.

It is believed that the extensive circul a paper is of more importance than its siz quent appearance. Where it is impra to secure all these points, therefore, t should be preferred. Our Chuch has severa ly journals, with limited circulation. I to obtain a wider scope for the "Letter- it will be published once a month. To the more worthy preservation, it will be in very neat style. The terms are as foll

For 50 cts.	1 copy for
" $5	12 copies.
" 10	25 "
" 20	60 "
" 30	100 "
" 50	200 "

Payment must always be made in advanc

The editor desires to publish, at leas copies, regularly; and, occasionally, to dis a number, specially prepared for the purp the extent of 20,000. But all his efforts upon public support. He can solicit th other way, than by sending a copy of the If, therefore, any to whom it shall be sent may see this Prospectus, wish the "Letter- to flourish, they may confer a favor by the sonal exertions to sustain it. Address,
THS. H. STOCKT
Phila

THE
WESTERN RECORD
IS PUBLISHED EVERY THURSDAY.
C. SPRINGER, EDITOR & PUBLI
JOHN W. WHITE, PRINTER.

☞*The office of the Recorder is fi a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be pu weekly, on an imperial sheet, at $2 per in advance: $2.50 at the end of three m $3 at the end of the year.
2. No discontinuances will be allowed, at the discretion of the publisher, until rearages are paid.
3. To all ministers having regular pastora ges, who do any thing at all for the pa they will direct us where, a copy shall b gratis; any other who forwards to us $ *paid*, for new subscribers, shall have six sent to any address he may give.
4. All letters designed for the paper, m directed to the Editor, Zanesville, Ohi *post paid*, except such as contain subs names, or $10 in money.
5. A failure to notify a discontinuance the expiration of the subscription year, considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER w open to discussion on all moral questio will give articles on Literature, Mec Agriculture,—an abstract of Regligious a litical intelligence, and whatever may be esting and instructive to families in g A portion of its columns will be open vertisements and prices current,—anoth tion to sustain the interests of the Me Protestant Church in the West. The latter objects will not likely occupy mo one page.

The RECORDER will take a firm stand a Clerical Supremacy.

THE WESTERN RECORDER.

Volume 1. ZANESVILLE, OHIO, THURSDAY, NOVEMBER 14, 1839. Number 13

POETRY.

For the Western Recorder.

THE CONVINCED BACKSLIDER TO HIMSELF.

So here I am sunk down in sin,
My soul's degraded and unclean,
With conscious guilt I cannot tell,
Deserving of the pains of hell.
I tasted once thy heavenly grace,
And with thy saints I had a place;
I learned to taste the sweets of sin,
Then down in shame sin pulled me in;
Lord I could hide these things from men,
Beyond the reach of visual ken,
But well I knew thy piercing eye
Sees all the deeds beneath the sky;
My nature thou didst make it right,
But sin has put that right to flight.
I gave all up to sweets of sin,
This is the fix that I am in;
Like hills on hills forever pil'd,
So seem'd my sins erst thou first smil'd,
Relieved from that amazing pile,
I felt an ever during smile;
That smile smiles on it makes my woe,
And makes me feel that I'm a foe:
Like mountains upon mountains built,
Feels my enormous load of guilt.
When 'ere I think I think of hell,
Dark loathsome thoughts I cannot tell:
Woe to me now for I've denied him,
Woe to the wicked they defied him,
Eternal justice whets the steel,
And inly makes my soul to feel,
Justice is woe, to the wicked woe,
Woe unto me for I'm a foe,
Hell opes her jaws like raging seas,
I tremble like Belshazar's knees,
Eternal death is standing by,
I feel a worm that cannot die.

November 12. V****.

COMMUNICATIONS.

LAWRENCEBURGH, Ia., Oct. 15, 1839.

Bro. Springer: I wrote a communication, from ntucky, which was published in the first num- of your paper. The work of religion I then ntioned continued to the end of the year.—ere were sixty-two who professed conversion hin the bounds of the circuit, and I believe circuit improved seventy-five per cent. in zeal l piety.

My lot is cast this year on Lawrenceburgh cir- t. So far I am pleased with my situation.— r first quarterly meeting closed last Sabbath ht. We were favored with the labors of Bros. rry, Clarke, Bassett and Croll. We had a time eriousness and much interest. I have recent- rganized a class near Allensville, Switzerland nty, Indiana, of some promise.

Yours in the bonds of Christ,
JOSEPH SIMPSON, Sup't.

BRAXTON C. H., VIRGINIA, Oct. 29, 1839.

Mr. Editor: I have now reached the south of the Pittsburgh District, and am holding eeting in the town of Sutton, a new town, new county; it is the county seat of Brax- , Virginia, situated on the Elk river, about enty-five miles from its junction with the at Kenhawa, at Charlestown. In this region mountains and valleys lies the Suttonville uit, a little beyond, as you say, "where the rs live." Indeed, I am told by these people, t bears, wolves, deer, panthers and other d animals are to be found in abundance in s region. Here, I met with brother Henry Lawson, the superintendent of this circuit, we have commenced a two days' meeting in Court House. The people here seem favorable our cause, but we have no society in this ce, nor have any other denomination of istians, that I can hear of. My hope is, that meeting will eventuate in good to these kind ple.

Since I left home, I visited Washington—had od meeting—was much encouraged—congre- ions were better than common. But, so far, ve failed to get a preacher for that place; the I had in view, has engaged as a teacher in academy, for a few months,—perhaps he may be had. Meantime, the preachers of Ohio uit, will do well to pay some attention to our shington brethren; and if Wheeling can re- ve the like attention from the superintendent he Georgetown circuit, I shall be glad. I gest this arrangement for the present, but if brethren know any better way, I shall be fectly satisfied for that better way to be adop- , and will sanction it officially, so soon as rmation reaches me.

On Monongahela circuit we had a pleasant eting, in Waynesburgh—a good love-feast and ament—large congregations, but no special ival. Only two members were received into church. So far as I could learn, the circuit ising finely in its religious interests.

On Middletown circuit, at Middletown, the eting I attended was continued from Friday ning until Monday night, and was good oughout,—about twelve were added to the rch. My hope is, that a revival will follow, extend round the circuit. I left that, for place, and had to rest, riding about ninety es.

In order that the way of brother James M. er, our Conference missionary, may be prop- opened up before him, I have deemed it my y to make through the Recorder, a public call all the superintendents, to report to brother er, through your paper, such places, as they their judgment, confidently believe will afford a favorable prospect for usefulness and sup- t. Many such places cannot be embraced in circuit. Let our Conference missionary go re, organize churches if practicable, and measures will be taken to have them supplied with preaching, until Conference arrangements will take them in.

My health is good—my soul is joyful in the God of my salvation. I write from the hill country of Israel, and feel like shouting from the tops of the mountains, and giving glory to the Lord our God, who liveth and reigneth for ever and ever. Yours, truly,

GEORGE BROWN.

MISCELLANEOUS.

LONDON.—The Great Metropolis contains six hundred churches, and five thousand licensed dram-shops—rather an undue proportion.

IF, AND HIS PROGENY.—If students would read less and study more, there would be a greater number of really great men in our country.

If there were fewer novels in the world there would be fewer numsculls.

A GOOD REPUTATION.—An honest man is believed without an oath; for his reputation swears for him. Xenocrates was a man of so much truth and fidelity, that the Athenians gave him alone the privilege that his evidence should be lawful without swearing. And it is said of Fabricus, that a man might as well attempt to turn the sun out of his course, as bring him to do a base or a dishonest action. —*Rule of Life.*

WE MUST OBEY GOD, RATHER THAN MAN. When the Rev. Mr. Baird was pleading the cause of France, a few days since in the Centre Church, in this city, he related the following, which he received from the lips of one of the Evangelist employed by the Missionary Society in Paris. This Evangelist was preaching in one of the towns of France, and a lady, the wife of one of the wealthiest citizens, attended at the chapel, and became deeply interested in the subject of her soul's salvation. Her husband who was an infidel, opposed her violently, and at length when she became a decided Christian, he told her if she went, to the chapel again, *he would take her life.* Knowing well the character of the man, and firmly believing that he would execute his threat, she called upon the minister to ask his advice. I know not, said he, what to give, but we will pray to God for wisdom. They kneeled and prayed together. She arose from her knees and without saying a word returned home.—The next Sabbath she was found in the house of God, listening as if for the last time on this side of the eternal world. At the close of the service she returned, and upon entering her house her husband met her, when the following conversation ensued:

"Have you been to the chapel?"

"Yes."

"Did I not tell you that I would kill you if you went again? How dared you to go?"

"Yes, but we must obey God, rather than man."

Perceiving that he hesitated, she embraced the opportunity of expostulating with him. "Why," said she, "do you intend to kill me? Have I been a worse wife to you—a worse mother to your children, since I became a Christian?"

"No," replied he, letting his weapon fall from his hand, "no, and I promise never to oppose you any more. And now," continued he, "I wish you to pray for me." They bowed before the mercy seat, and she poured out her soul in prayer for him. He is now one of the most active members of the church.—*N. H. Record.*

THE SHAKERS.—The following is Capt. Maryatt's description of that singular sect, the Shakers. He visited their settlement, situated near Troy, New York.

I went out to see the Shakers at Niskayuna. So much has already been said about their tenets that I shall not repeat them, farther than to observe, that all their goods are in common, and that, although the sexes mix together, they profess the vows of celibacy and chastity. Their lands are in excellent order, and they are said to be very rich.*

We were admitted into a long room on the ground floor, where the Shakers were seated on forms, the men opposite the women, and apart from each other. The men were in their waist-coats and shirt-sleeves, twiddling their thumbs, and looking awfully puritanical. The women were attired in dresses of very light striped cotton, which hung about them like full dressing gowns, and concealed all shape and proportions. A plain mob cap on their heads, and a thick muslin handkerchief in many folds over their shoulders, completed their attire. They each held in their hands a pocket handkerchief as large as a towel, and of almost the same substance. But the appearance of the women was melancholy and unnatural; I say unnatural, because it required to be accounted for. They had all the advantages of exercise and labor in the open air, good food, and good clothing; they were not overworked, for they are not required to work more than they please; and yet there was something so pallid, so unearthly in their complexions, that it gave you the idea that they had been taken up from their coffins a few hours after their decease; not a hue of health, not a vestige of color in any cheek or lip;—one cadaverous yellow tinge prevailed. And yet there was to be seen many faces very beautiful, so far as regarded outline, but they were the features of the beautiful in death. The men, on the contrary, were ruddy, strong, and vigorous. Why, then, this difference between the sexes, where they each performed the same duties, where none were taxed beyond their strength, and all were fed and clothed?

After a silence of ten minutes, one of the men of the community, evidently a coarse and illiterate person, rose and addressed a few words to the spectators, requesting them not to laugh at what they saw, but to behave themselves properly, &c. and then he sat down.

One of the leaders then burst out into a hymn, to a jigging sort of tune, and all the others joined chorus. After the hymn was sung they all rose, put away the forms on which they had been seated, and stood in lines, eight in a row, men and women separate, facing each other, and about ten feet apart—the ranks of men being flanked by the boys, and those of the women by the girl. They commenced their dancing by advancing in rows, just about as far as profane people do in *L'ete* when they dance quadrilles, and then retreated the same distance, all keeping regular time, and turning back to back after every third advance. The movement was rather quick, and they danced to their own singing, of the following beautiful composition:

Law, law, de lawdel law,
Law, law, de law,
Law, law, de lawdel law,
Lawdel, lawdel, law—

keeping time also with the hands as well as feet, the former raised up to the chest, and hanging down like the fore paws of a dancing bear. After a quarter of an hour they sat down again, and the women made use of their large towel pocket handkerchiefs to wipe off the perspiration. Another hymn was sung, and then the same person addressed the spectators, requesting them not to laugh, and inquiring if any of them felt a wish to be saved—adding, "Not one of you, I don't think." He looked round at all of us with the most ineffable contempt, and then they sang another hymn, and the burden of which was:

"Our soul is saved, and we are free
From vice and all in-i-quity;"

which was a very comfortable delusion, at all events.

They then arose again, put away the forms as before, and danced in another fashion. Instead of *L'ete* it was *Grande Ronde.* About ten men and women stood in two lines in the centre of the room, as a vocal band of music, while all the others two and two, women first and men following, promenaded round, with a short quick step, to the tune chanted in the centre. As they went round and round, shaking their paws up and down before them, the scene was very absurd, and I could have laughed had I not felt disgusted at such a degradation of rational and immortal beings. This dance lasted a long while, until the music turned to croaking, and the perspiration was abundant; they stopped at last, and then announced that their exercise was finished. I waited a little while after the main body had dispersed, to speak with one of the elders. "I will be with you directly," replied he, walking hastily away; but he never came back.

I never heard the principle upon which they dance. David danced before the ark; but it is to be presumed that David danced as well as he sung. At least he thought so; for when his wife Michael laughed at him, he made her conduct a ground of divorce.

Every community which works in common, and is provided for in the mass, must become rich, especially when it has no children to maintain. It is like receiving a person's labor in exchange for victuals and clothing only, and this is all I can perceive that can be said in favor of these people. Suffice it to say, I have a very bad opinion of them: and were I disposed to dilate on the subject, I should feel no inclination to treat them with the lenity shown to them by other travellers.

*I should be very sorry to take away the character of any community, but, as I was little sceptical as to the possibility of the vow of chastity being observed under circumstances above alluded to, I made some inquiries, and having met with one who had seceded from the fraternity, I discovered that my opinion of human nature was correct, and the conduct of the shakers not altogether so. I must not enter into details, as they would be unfit for publication.

From the Philadelphia Saturday Chronicle.

RED JACKET.

It was in the period of my youth that I became acquainted with the history of that celebrated Indian Chief, *Red Jacket.* I had listened with deep interest to descriptions given of his eloquence, long before I saw the Chieftain. Even among the school-boys, nothing was more common than to hear tales of wonder told of this memorable warrior, denominated the "Orator of the Woods." His person was described as tall and straight,—possessing that noble port, so characteristic of the sons of the forest. The gloom of solitude appeared to have stamped upon his features the insignia of command; his nervous arm had bent a bow that oft sped the arrow of death. But when moved by the impulse of strong emotions, this monarch, in some of his speeches to his tribe, would electrify his audience. The hardiest natives, as if rivited to the spot, would watch his motions, and shrink in terror, apparently dreading his vengeance.

His eye was described, as like that of a being that had no rest among his species.—Aye, 'twas said by some, "a demon lurk'd within." And when directed to an object of his scorn, its glance was withering! His voice as terrible as "the deep in storms," or as the moaning spirit of the winds that sweep the shores of Huron. Of all nature's orators, Red Jacket stood pre-eminent. His control over the warriors of his tribe was compared to the wizzard's wand: rousing into anger,—soothing to silence and submission.

At that time I had not heard an oration though 'tis true, I oft had listened to public speakers, whose frigid and monotonous dullness benumbed my moral powers, or like the stroke of the torpedo, lulled me into the lassitude of a lethargy, that nothing but the fire of an orator could resuscitate.

Judge of the pleasure I should have felt, could I have heard this renowned savage, pouring forth his spirit-stirring story, even beneath the shades of Seneca's hoary elms; in one of the stormy careers of that eloquence that triumphs over the soul, and leads us captive at its will. Years rolled away; till some few winters since, the aged Chief visited our city. A general notice being given, the citizens were invited to hear the man.

The circumstances, however, under which he addressed us, were most unfavorable. A stormy night,—the audience thin,—the interpreter dull, unintelligible, and utterly incapable of translating his burning thoughts. Still there was something that told of "greatness in ruins"—a master spirit in labor—a Leviathan wanting sea-room. I retired deeply pensive, as if I had been listening to Ossian's harp, tuned to songs of other times. But the fires of the Indian orator were smothered; the embers only remained.

The peculiar interest taken by the old chieftain in the following sketch, called "The Prophet of the Allegheny," induces me to send it to you for publication. If you take the same pleasure in reading it as it affords me, you will not refuse it a place in your columns. W. M.

The Prophet of the Allegheny.—In the year 1798, one of the missionaries to the North West, was on his way from the Tuscarora settlements to the Seneca;—journeying through the forests, a majestic Indian darted from its recesses and arrested his progress. His hair was somewhat changed with age, and his face marked with the deep furrows of time; but his eye expressed all the fiery vivacity of youthful passion, and his step was that of a warrior in the vigor of manhood. "White man of the ocean, whither wanderest thou?" said the Indian. "I am travelling," replied the meek disciple of peace, "towards the dwellings of thy brethren, to teach them the knowledge of the only true God, and to lead them to peace and happiness." "To peace and happiness," answered the tall chief, while his eye flashed fire. "Behold the blessings that follow the footsteps of the white man wherever he comes—the nations of the woodlands fade from the eye like the mists of the morning. Once over the wide forests of the surrounding world our people roamed in peace and freedom, nor ever dreamed of greater happiness than to hunt the beaver, the bear and the wild deer. From the farthest extremity of the great deep, came the white man, armed with thunder and lightning, and weapons still more pernicious. In war he hunted us like wild beasts; in peace he destroyed us by deadly liquors, or yet more deadly frauds. Yet a few moons had passed away and whole nations of invincible warriors and hunters that fearlessly swept the forest and the mountain, perished vainly opposing their triumphant invaders; or quietly dwindled into slaves and drunkards, and their names withered from the earth. Retire, dangerous man, leave us all we have yet left—our savage virtues and our Gods; and do not in the vain pretence to cultivate a rude and barren soil, pluck up the fair thrifty plants of native growth that have survived the fostering cares of thy people and weathered the stormy career of this pertinacious friendship." The tall chief darted into the wood, and the good missionary pursued his way with pious resolution. He preached the only true divinity, and placed before the eyes of the wandering savages the beauty of holiness, the sufferings of the Redeemer and the sublime glories of the Christian's heaven. He allured them with the hope of everlasting bliss, and alarmed them with the denunciations of an eternity of misery and despair. The awe struck Indians, roused by these accumulated motives, many of them adopted the precepts of the missionary, as far as they could comprehend them; and in the course of eighteen months their devotion became rational, regular and apparently permanent. All at once, however, the little church in which he was wont to pen his fold, became deserted—no votaries came as usual, to listen with decent reverence to the pure doctrines which they were accustomed to hear; and only a few solitary idlers were seen of a Sunday morning, lounging about and casting a wishful yet fearful look at their little peaceful and now silent mission. The missionary sought them out—inquired into the cause of this mysterious desertion, and told them of the bitterness hereafter, to those who having once known, and abandoned the religion of the only true God. The poor Indians shook their heads and informed him that the Great Spirit was angry at their apostacy, and had sent a prophet from a summit of the Allegheny mountains to warn them against the admission of new doctrines, that there was to be a meeting of the old men soon and that the prophet would then deliver to the people the message with which he was instructed. The zealous missionary determined to be present and to confront the impostor, who was known by the appellation of the Prophet of the Allegheny. He accordingly obtained permission from the chiefs to apply at the council, and to reply to the charges that might be brought forward.

The 12th day of June, 1802, was the time fixed for the decision of this solemn question, whether the belief of their forefathers or that of the white men was the true religion.

The usual council house not being large enough to contain so large an assemblage of people, they met in a vale about eight miles to the westward of the Seneca lake. This valley was then embowered under lofty trees, it is surrounded on almost every side with rugged hills, and through it meanders a small river. It was a scene to call forth every energy of the human heart. On a smooth level near the bank of the slow stream, under the shade of a large elm tree sat the chief men of the tribes; around the circle which they formed was gathered a crowd of wondering savages, with eager looks, seeming to demand the true God at the hands of wise men. In the middle of the circle, sat the aged and travel-worn missionary—a few grey hairs wandered over his brow—his hands were crossed on his breast, and as he cast his hope beaming eye to heaven, he seemed to be calling with pious fervor upon the God of truth to vindicate his own eternal word by the mouth of his servant. For more than half an hour there was silence in the valley—save the whispering of the trees in the south wind and the indistinct murmuring of the river—then all at once a sound of astonishment passed through the crowd, and the Prophet of the Allegheny was seen descending one of the high hills; with furious and savage step he entered the circle and waving his hand in token of silence, the missionary saw with wonder the same tall chief who four years before had crossed him in the Tuscarora forest—the same panther skin hung over his shoulder, the same tomahawk quivered in his hand, and the same fiery undaunted spirit burned in his red eye. He addressed the awe struck Indians, and the valley rung with his iron voice.

"Red men of the woods, hark what the Great Spirit says to his children who have forsaken him. Through the wide regions that were once the inheritance of my people, and where for ages they roved as free as the wild winds—resounds the axe of the white man. The paths of your forefathers are polluted by their steps, and your hunting fields are every day wrested from you by their arts. Once on the shores of the mighty ocean your fathers were wont to enjoy all the luxuriant delights of the deep. Now you are exiles in the swamps or on the barren hills—and these wretched possessions you enjoy by the precarious tenure of the white man's will. The shrill cry of revelry or war no more is heard on the majestic shores of the Hudson, or the sweet banks of the silver Mohawk. There where the Indian lived and died as free as the air he breathed, and chased the panther and the deer from morn till evening—even there the Christian slave cultivates the soil in undisturbed possession, and as he whistles behind his plough, turns up the sacred remains of your buried ancestors. Have you not heard at evening, and sometimes in the dead of night, those mournfully melodious sounds that steal through the deep valleys or along the mountain sides like the sound of echo. These are wailings of those spirits whose bones have been turned up by the sacreligious labors of the white man and left to the mercy of the rain and tempest. They adjure you by every motive that can rouse the hearts of the brave, to wake from your long sleep, and by returning to these invaders of the grave the long arrears of vengeance, restore again the tired and wondering spirits to their blissful paradise far beyond the blue hills. These are the blessings you owe to the Christians. They have driven your fathers from their ancient inheritance; they have destroyed them with the sword and poisonous liquors." [The answering voices heard from the caves and hollows, which the Latins call echo, they, the Indians, supposed to be the wailings of souls wandering through these places.] "They have dug up their bones and left them to bleach in the wind; and now they aim at completing your wrongs and insuring your destruction by cheating you into the belief of that divinity whose very precepts they plead in justification of all the miseries they heaped upon your race. Hear me, oh deluded people, for the last time, if you persist in deserting my altars—if still you are determined to listen with fatal credulity to the strange and pernicious doctrine of these Christian usurpers—if you are unalterably devoted to your new gods and new customs—if you will be the friend of the white man and follower of his God, my wrath shall follow you. I will dart my arrows of forked lightning among your towns, and send the warring tempests of winter to devour you. Ye shall become bloated with intemperance; your numbers shall dwindle away, until but a few wretched slaves survive, and these shall be driven deeper and deeper into the wild, there to associate with dastard beasts of the forest who once fled before the mighty hunters of our tribe. The spirit of your fathers shall curse you from the shores of that happy island in the great lake, where they enjoy an everlasting season of hunting, and chase the wild deer with dogs swifter than the wind. Lastly, I swear by the lightning, the thunder, and the tempest, that in the space of sixty moons, of all the Senecas not one of yourselves or your posterity shall remain on the face of the earth."

The prophet ended his message, which was delivered with the wild eloquence of valor and fancied inspiration, and all at once the crowd seemed to be agitated with a savage sentiment of indignation against the good missionary, one of the fiercest broke through the circle of old men to despatch him but was restrained by their authority. When this sudden feeling had somewhat subsided, the mild, benevolent apostle obtained permission to speak in behalf of him who had sent him. Never had I seen a more touching, pathetic figure than this good man. He seemed past sixty; his figure tall yet bending—his face mild, pale and highly intellectual, and over his forehead which yet displayed its blue veins, were scattered at solitary distance a few grey hairs; though his voice was clear and his action vigorous, yet there was that in his look which seemed to say his pilgrimage was soon to close forever. With pious fervor he described to his audience the glory, power and beneficence of the Creator of the whole universe; he told them of the pure delights of the Christian heaven, and of the never ending tortures of those who rejected the precepts of the gospel. He painted in glowing and vivid colors the filial piety—the patience—the sufferings of the Redeemer; and how he perished on the cross for the sins of the whole human race;—and finally, he touched with energetic brevity on the unbounded mercies of the Great Being, who thus only gave his only begotten son a sacrifice for the redemption of mankind. When he had concluded this part of the subject, he proceeded to place before his now attentive auditors the advantages of civilization, of learning, science and the regular sytem of laws and morality. He contrasted the wild Indian roaming the desert in savage independence, now revelling in the blood of enemies, and in his turn the victim of their insatiable vengeance, with the peaceful citizen, enjoying all the comforts of cultivated life in this happy land, and only bounded in his indulgences by those salutary restraints which contribute as well to his own happiness as that of society at large. He described the husbandman enjoying in the bosom of his family, a peaceful independence, undisturbed by apprehensions of midnight surprise, plunder and assassination; and he finished by a solemn appeal to heaven that his sole motive for coming among them was the love of his Creator and of his creatures. As the good missionary closed his appeal, Red Jacket, a Seneca chief of great authority, and the most eloquent of all his nation, rose and enforced the exhortation of the venerable preacher. He repeated his leading arguments, and with an eloquence truly astonishing for one like him, pleaded the cause of religion and humanity.

The ancient council then deliberated for the space of two hours, after which the oldest man arose and solemnly pronounced the result of their conference, "That the Christian God was more wise, just, beneficent and powerful, than the Great Spirit, and that the missionary who delivered his precepts ought to be cherished as their best benefactor—their guide to human happiness."

When this decision was pronounced by the venerable old man, and acquiesced in by the people, the rage of the Prophet of the Allegheny became terrible: he started from the ground, seized his tomahawk, and denouncing the speedy vengeance of the Great Spirit on their whole recreant race, darted from the circle with wild impetuosity and disappeared in the shades of the forest.

WESTERN RECORDER.

LANESVILLE:

THURSDAY, ...NOVEMBER 14, 1839.

☞The Post Master General has decided that Post Masters may enclose money in a letter to the publisher of a newspaper, to pay the subscription of a third person, and frank the letter, if it be written by himself. Could not our friends procure the agency of a number of Post Masters who would cheerfully render us their assistance in remitting moneys?

We consider the present post office law to be an unjust taxation upon the knowledge and business of the country, and ought to be modified.—An English merchant can now send a letter to any part of the kingdom for one penny, while in this country, to all the distant points, the cost is twenty-five cents for a single letter, and if you only add a one dollar bank bill fifty cents is charged. This system of taxation is particularly hard on the press. The postage of some publishers amounts to several hundred dollars per year.

We direct the attention of the reader to the proclamation of Governor Shannon, in our columns to-day, appointing the 14th December as a day of Thanksgiving and Prayer. When public functionaries shew a disposition to respect the institution of religion or the worship of the Supreme Being, their proclamations and acts should be responded to by all orders of christians. The churches, or congregations, should have preaching or prayer meeting appointed at their several places of worship, on that day, and spend it in devotional duties.

We acknowledge the reception, in exchange for our paper, the Ohio Confederate, published at Columbus. It has reached its 31st number.—The Statesman, of that place, is the organ of the Administration party;—the State Journal of the Whigs. But the Confederate, if we understand the matter, is designed to sustain the political opinions of the State Right party. The editor of the Confederate finds himself situated where two seas meet, and appears to be contending, with much ability, against the violence of the waves. If he only manages his bark successfully he will not ultimately be chided for the want of skill.

Another of the Africans of the Amistad has deceased. Montez, so soon as he was liberated from his arrest, departed for Cuba.

The Massillon Gazette of the 1st inst. says, the amount of Wheat purchased in that place the preceding week, was over 35,000 bushels, the largest amount ever purchased in one week before. The price had advanced a little—it was then selling at sixty-five cents.

The South Western Christian Advocate of the 2d inst. says, that the Saturday week preceding a centenary subscription had been taken up in Nashville, Tennessee, to the amount of $4,400 for the benefit of the institutions of the Methodist Episcopal church.

Politicians more Liberal than Professors.—Since we have commenced our paper we have solicited exchanges with a number of religious newsapers, but few have been liberal enough to favor us on this subject, while political editors generally have acted with great liberality towards us. Why is it that political editors are more liberal than "christian editors?"

We think on the whole that the news from Europe will justify the conclusion that there will be a demand for a supply of bread stuff, from this country, for the benefit of both France and England. The latest advices from England it is true, are more favorable, but the crops, if former accounts be correct, were too far gone to be essentially benefitted by the return of good weather. There is such a probability that wheat will advance, with reference to the supply of Europe, that we would recommend the farmer to hold on for a while before he lets it go for fifty cents, and a few weeks will determine the matter.

What Folks say of Us Abroad.—It is rather amusing than otherwise, to read the following article. We admit there is a falling off in political virtue, in all the parties, in our republic.—As we increase as a nation, in wealth and political power, we become, as human nature generally does under such circumstances, less virtuous and patriotic. But, that we are so far gone in political depravity as to be prepared for the measures meted out to us by a foreigner, who, probably predicts rather what he wishes than what he has right to expect, is really a compliment upon us, indeed. However, a wise people will always listen to what their enemies have to say about them, and will examine whether there be not some truth mixed with their reproaches. As saith the poet:

"In order your defects to know,
Make use of every friend and every foe."

"The people of England may now learn a lesson of Republicanism from its most brilliant specimen, the Government of the United States. It has proved a splendid failure. Van Buren, who learned many useful tactics in this country will bring the democrats round to a *rational system of Monarchical expedience*. Democracy is the most powerful lever in the world, if pressed judiciously. Monarchies have been upset by it; but a great many more have been established by it. Van Buren is said to be a non-talented man, but he knows human nature; he knows his countrymen too, and has laid the finest train that ever was conceived. He has prevailed upon the popular old President to set an example of absoluteism and independence, which perhaps no other man in that country would have attempted. He will ultimately, mildly and cautiously, but having the support of Democracy, he will undoubtedly succeed in bringing the whole Union under the sway of a few enlarged and cultivated minds, which are the source of stability and order in every country. The people cannot govern themselves any more than a public school can govern itself without the superintendence of a master. It must be merely an increased round of clamor and contention. We have now more hope for America, than ever we had since the Declaration of Independence. Mr. Van Buren has succeeded in running down a National Bank, which was the formidable obstacle to the Executive control, and has collected in his hands the reins of a good team of State Institutions, which will draw well together and bear him upwards like the steeds of Pegasus. The Republic of the United States, like that of Venice, will become an oligarchy; and will be, unless we are mistaken, a more enduring one. It will not, like Venice, become a splendid ruin of palaces; for it has arterial springs of commercial prosperity which nothing can paralyze, and which do not depend upon the diseased stomachs of Europe for a healthful action. For fifty years or more, it will be a clever oligarchy, and then the people will wisely and cheerfully consent to its being a monarchy. Van Buren, we believe, has a son or two, and he will probably establish a sound and useful dynasty for that great continent.—*London St. James Chronicle.*

The two following extracts are taken from "Sketches of the Life and Travels of the Rev. Thomas Ware," written by himself, who has been a Methodist preacher for more than fifty years, and is still alive.

"Patriotism and Eloquence of the early Methodist Preachers.—Soon after I joined the Methodist society, Messrs. Pedicord and Cromwell were removed from our circuit, and Dudley and Ivy appointed in their places. In one part of the circuit there were sacred families who had received the preachers from the beginning. Some of these were the most wealthy and respectable in the vicinity, only they were suspected of being unfriendly to the cause of their country.—They had joined the Methodists before the war commenced; and though they had committed no act by which they could be justly accused of opposition to the declaration of independence, yet as they refused to bear arms they were considered hostile to it, and the preachers suspected of disaffection on account of continuing to preach at their houses.

"Learning that a company of soldiers, quartered near one of these appointments, had resolved to arrest the first preacher who should come there, and carry him to head quarters, I determined to accompany him, hoping, as I was acquainted with some of the officers, to convince them that he was no enemy to his country. The preacher was Richard Ivy, who was at that time quite young. The rumor of what was about to be done having gone abroad, many of the most respectable inhabitants of the neighborhood were collected at that place. Soon after the congregation were convened, a file of soldiers were marched into the yard and halted near the door; and two officers came in, drew their swords and crossed them on the table, and seated themselves, one at each side of it, but so as to look the preacher full in the face. I watched his eye with great anxiety, and soon saw that he was not influenced by fear. His text was, "Fear not little flock, for it is your Father's good pleasure to give you the kingdom." When he came to enforce the exhortation, 'Fear not,' he paused and said, 'Christians sometimes fear when there is no cause of fear.' And so, he added, he presumed it was the case with some then present. Those men who were engaged in the defence of their country's rights meant them no harm.—He spoke fluently and forcibly in commendation of the cause of freedom from foreign and domestic tyranny, looking at the same time first on the swords and then in the faces of the officers, as tho' he would say, 'this looks a little too much like domestic oppression;' and in conclusion, bowing to each of the officers and opening his bosom, said, 'Sirs, I would fain show you my heart; if it beats not high for legitimate liberty, may it ever cease to beat!' This he said in such a tone of voice, and with such a look, as thrilled the whole audience, and gave him command of their feelings. The countenances of the officers at first wore a contemptuous frown; then a significant smile; and then they were completely disarmed, hung down their heads, and, before the conclusion of this masterly address, shook like the leaves of an aspen. Many of the people sobbed aloud, and others cried out, Amen! while the soldiers without, (the doors and windows being open) swung their hats and shouted, Huzza for the Methodist parson! On leaving, the officers shook hands with the preacher, and wished him well; and afterward said, they would share their last shilling with him."

"Next to him, (Mr. Asbury,) in the estimation of many, stood the placid Tunnell, the philosophical Gill, and the pathetic Pedicord. It would be difficult to determine to which of these primitive missionaries, as men of eminent talents and usefulness, the preference should be given. Tunnell and Gill were both defective in physical strength. Pedicord was a man of much refined sensibility. They were all the children of nature, not of art: but especially Tunnell and Pedicord. A sailor was one day passing where Tunnell was preaching. He stopped to listen, and was observed to be much affected; and on meeting with his companions after he left, he said, 'I have been listening to a man who has been dead, and in heaven; but he has returned, and is telling the people all about that.' And he declared to them that he had never been so much affected by any thing he had ever seen or heard before. True it was, that Tunnell's appearance very much resembled that of a dead man; and when with his strong musical voice, he poured forth a flood of heavenly eloquence, as he frequently did. he appeared, indeed, as a messenger from the invisible world.

"Gill was eagle-eyed, and, by those whose powers of vision were strong like his, he was deemed one of a thousand; but by the less penetrating, his talents could not be fully appreciated, as he often soared beyond them. On this account, Gill was not a favorite preacher of mine. But, in conversation, which afforded an opportunity for asking questions and receiving explanations on deep and interesting subjects, I have seldom known his equal. Jonathan and David were not more tenderly attached to each other than were Tunnell and Gill.

"Pedicord was a man of a fine manly form, and his countenance indicated intelligence and much tender sensibility. His voice was soft and remarkably plaintive; and he possessed the rare talent to touch and move his audience at once. I have seen the tear start, and the head fall, before he had uttered three sentences, which were generally sententious. Nor did he raise expectations to disappoint them.—Like Tunnell, he arose as he advanced in his subject; if he could not, with him, bind his audience with chains, he could draw them after him with a silken cord. Never was a man more tenderly beloved in our part of the country than he; and if the decision of their relative claims devolved on me, I should say there was none like Pedicord. But he was my spiritual father."

ITEMS.

New York.—In New York Beef Cattle are down to 7 50 per hundred. Flour, western, 5 81. Wheat is sold at 1 20 a 1 25, but no sales. Rye dull at 75 cents. Corn, southern, 75 cents.

Effects of the Late News.—The news by the Great Western has had a most desirable effect upon the Money and Stock Markets of New York, Philadelphia and Baltimore, and almost all kinds of Stocks have risen considerably, especially United States Bank.

Two thousand barrels of Flour was sold in New York on Monday at $5 62½. Sales in Philadelphia at 6 25 a 6 26. Baltimore at 6 00 a 6 25.—*Pittsburgh Intelligencer.*

Review of the Pittsburgh Market—Friday, November 8.—We took our usual walks and found business very dull and the sales generally small and limited.

The money market continues tight and discouraging, making it unpleasant to reflect upon the great change with the mass of our active business community. There are few changes in the market as to prices.

Flour is dull and falling—small sales were made for currency, at 4 37½, 4 25 and 4 dollars per barrel.

Wheat cannot be sold higher than sixty-five cents per bushel.—*Ib.*

Cincinnati is found, by the census just taken, to have a population of 40,000. It has increased forty per cent since 1835.

It is said that a large quantity of British Dry Goods were sent back in the packet ship South America which sailed on Sunday for Liverpool.

There was subscribed in New Orleans, up to the 13th ult. the sum of $2,811,75, for the relief of the Mobile sufferers. At Montgomery, Alabama, $550 were raised.

A Calais paper says that twenty chests of gold, containing three millions sterling, have lately passed, coming from England, and addressed to M. Rothschild.

Counterfeit half dollars are in circulation here. They are heavy, and very much like silver, but their slippery *feel* and the *sound* may detect them at once. Beware of them.—*Philadelphia Gazette.*

Mobile.—Repeated deaths by the most violent character of black vomit, continue to be announced by the Mobile papers. To add to the terrible affliction, incendiarism is still dreadfully prevalent.

Colonel Mudge and Mr. Featherstonhaugh have finished their exploration of the disputed Maine Boundary. It is said no "highlands" could be found except at the sources of Penobscot.

It is estimated that since the beginning of the present month, property has been destroyed by fire in the United States, to the amount of four millions of dollars.

Wheat.—The Cleveland Herald states that there was received at that place, from the 1st of October to the 29th at noon, 356,746 bushels.

The treaty with Texas was signed at Paris on the 25th of September, but would not be published until ratified by the Senate of the republic.

A correspondent of the Iowa Patriot, in some very interesting sketches of Iowa, says, "the snake, the type of the red man, is fast disappearing before the type of the white man, the Hog!"

The last Columbus Journal says that counterfeit ten dollar notes on the bank of Lake Erie are in circulation. They are nothing like the originals, the vignette being the Genius of Liberty, reclining on the arms of Ohio.

Two men were taken up a few days ago at Cincinnati for counterfeiting half eagles, and Mexican and Spanish mill'd dollars. They were caught in the very act by the United States Marshall with all their tools and implements. They confessed their guilt.

A man called on for subscription to evening lectures at the church—declined paying—cause why—his wife gave him evening lectures at home, every night—gratuitously.

Miss Julia Webster, daughter of Daniel Webster, was married at the fashionable St. George's, Hanover Square, London, on the 24th of September, to Samuel Appleton, Esq. of Boston.

Movement of Specie.—The Mobile *Register* of the 28th ult. states that the brig *Mobile* for New York, takes out $71,000, of which $58,000 is shipped by the State Bank, and the balance by a mercantile house.—*Charleston [S. C.] Mer.*

A vein of *Black Lead*, it is said, has been discovered on the farm of Mr. Whitehead, in Coshocton county, which, on examination, proves to be of an excellent quality. This, if true, is of greater value than a gold mine.—*Mas. Gaz.*

The New Orleans Picayune says that every thing in that city is so dull, it is impossible to find a razor sharp enough to cut off a man's beard. Here they shave people without razors.—*New York Whig.*

A Good Caution.—A druggist in Boston has lately had some labels printed for his use, which read as follows:

RUM,
Prepared for External Use.

☞If by accident any should be swallowed, administer an emetic immediately.

"My dear Madam," said a doctor to his patient, "I am truly gratified to see you yet in life. At my last visit yesterday, you know I told you, you had but six hours to live." "Yes, doctor, you did, but I did'nt take the dose you left."

Lewis Wilbur, who was last fall apprehended at Cleveland, on suspicion of having murdered a Mr. Barber, in Madison county, N. Y., and was tried and convicted of the offence on circumstantial evidence, but whose execution was postponed by the Governor, has lately confessed his guilt, and is to be hung.

A Russian Heir.—"The hereditary settlement of the property of the late Countess Branicki," says the Constitutionel, "is concluded." Although in her life-time this lady had richly endowed her three daughters, her son, Count Ladislas Branicki, becomes the inheritor of 2,400,000 acres, with 100,000 male, and as many female serfs, besides 60,000,000 rubles, and personal property estimated at 4,000,000.

Intelligence from Buenos Ayres and Montevideo, has been received on the 28th of August, and from Rio to the 14th of September. The invading army of 2500 men, under General Echagne, was at Rolin, on its march to Montevideo.—President Rivera was at Porenga, with 1000 men, and occupied all the passes at Rio Negroe. It is supposed that public opinion was in favor of the invaders.

Interesting to Knitters.—Among the queer things exhibited at the Mechanics' Fair at Rochester, New York, were *two stockings*, knit at the same time, by Miss Robinson. It is said that she uses but four needles, knits one stocking within the other, the same as if knitting but one; and yet when she "narrows off" "*one* at the toe," *both* are finished!

Infant Schools in France.—They number about 350, with 30,000 pupils.—A multitude more are thought to be desirable. It will ever be borne in mind, that these 'sailes d'asyle' are almost exclusively devoted to the physical and moral care of very young children, and partake far less of the nature of schools than in this country and England. Similar institutions are found in Belgium, Italy, Prussia, Austria and Denmark.

It is stated that there have been more deaths in Lynnfield, Mass., during the last three months, than had occurred for the three years preceding; and that many are now sick.—Among those that have fallen victims to the disease, were many of the most promising young men of the town. The same ratio of deaths in this city, would make a fearful inroad upon the population.

A petition was presented to the Common Council of London, on the 26th September, from the "Oberlin Institution in aid of the abolition of slavery in the United States," asking pecuniary assistance. This institution is established in Ohio; and receives white and colored pupils without distinction. The petition was referred to a committee. The Rev. Mr. Knapp, an agent of this institution, had been successful in collecting donations for it.—*Eng. paper.*

New Orleans.—We state, for the information of our absent friends, says the New Orleans True American, October 24th, that the weather here is at present cold, and the health of the city is perfectly restored. Our citizens are returning by scores, and we see many new faces. Vessels are coming in, and every thing begins to look brisk and business-like.

Old Prices Returning.—The Dayton Journal states that a contract to deliver one thousand barrels of Flour at $3 62½ has been made by a miller of that vicinity. The Middletown, Ohio, Mail states that a lot of corn was sold in Hamilton last week at twenty-five cents per bushel, and that another lot could not find a purchaser at that price. In the rich corn district of Missouri, twelve and a half cents per bushel is now the standing price.—*Cleveland Herald.*

Swallowing a Farm.—A farmer in Connecticut, who has occupied the same farm, on lease, for about 30 years past, was complaining that he had been able to lay up nothing from his thirty years labor. A neighboring store-keeper offered to explain to him the *reason*, and proceeded as follows: "During the last thirty years that you have been on that farm, I have been trading in this store; and the distilled spirits I have sold you, with the interest of the money, would have made you the *owner* of the farm you now *hire*.—*Journal of Humanity.*

The Irish Linen Trade.—The Belfast papers state that an Irish company have recently established a large manufactory in France, and are sending from that town a great number of girls who have been employed in the spinning mills of Ulster, to instruct the French peasantry. The cheapness of labor in France is the chief inducement in carrying out the speculation. The Belfast Vindicator says, "If the project be found to succeed, as it is not unlikely, we shall see it followed up by similar speculations elsewhere, and the remnant of our staple manufacture may fall a victim to the accursed Corn Laws."

A French physician says that there are unquestionably, in that country, many hundred cases every year, in which the body is interred before life is extinct, and adds, that the only sure test of death is the commencement of putrefaction. The late celebrated Dr. Physic, of Philadelphia, who died a year or two ago, appears to have been of the same opinion. He left a positive direction, that he should not be taken from his bed for some time, but wrapt up in it warmly, and the room to be kept well warmed till putrefaction had commenced. These directions were followed, and the warmth of his chamber acting upon his remains predisposed by disease to ready putrefaction, speedily brought about the evidence of death.

We were yesterday shown, at the Washington Market, amongst many other rare productions, a monster of a bear; not one of your Wall street gentry, but a specimen of the "real critter," says a New York paper. He was killed in the town of Durham, in the county of Greene, and was recognized by a gentleman from that place as one of the oldest settlers upon the Catskill Mountains.—For many long years he escaped the traps that were set for him, and the rifles that were levelled at him; but at length, like many of his kindred in Wall street, he fell a prey to the fatal spirit of speculation. Having ventured too deep into the *corn trade*, he was overtaken by a revulsion, and soon found his huge frame "suspended" by the heels in the market, a caution to all speculators.

The Learned Blacksmith.—Mr. Elisha Burrett, the learned Blacksmith, illustrates fully what a man can accomplish under almost any circumstances, if he possesses only application. Mr. B. has worked for many years as a blacksmith, and continues now to labor two thirds of the day at the anvil in Worcester. The other portion of time he devotes to his studies, and already has acquired a knowledge of *fifty different languages*.—Last year he addressed a letter to the President of the Royal Society of Antiquities in France, written in Celto Breton, one of the provinces in that kingdom, but now an obsolete language. The President of the Academy replied to his letter, and the correspondent has been published in a volume just issued by the Society in Paris, a copy of which has been sent to Mr. Burrett of Worcester. He certainly has made great acquisition as a linguist, and discovers most commendable application if not mental power.—*Northampton Courier.*

Increase of Incendiaries.—In addition to the other calamities of the afflicted south, at a time of general suffering and distress from the scarcity of money, and the prevalence of a fatal malady, which had spread a universal gloom over the whole valley of the Mississippi, it seems that the awful work of the guilty plunderer, and midnight incendiary, is now preying with desolating fury upon the homes and property of its inhabitants.—Appalling disclosures are daily making of the horrid conflagration of cities and towns, and the general ruin and distress that mark the fate of the innocent sufferer. The city of Natchez, as well as the doomed city of Mobile, as our latest accounts represent, has been attempted to be fired some eight or ten times within the last six weeks; and about the first of the last month, the town of Grand Gulf, a considerable place on the Mississippi, was nearly reduced to ashes by the secret arm of some guilty, mercenary wretch, who infested the place, insatiate for profit and plunder. When will such heart-rending calamities be arrested, and the guilty march of the envenomed destroyer, thus prowling upon the peace of society, be overtaken in his career of wickedness and crime? 'Tis frightful to contemplate the awful havoc and misery which a single demon of darkness has it in his power to occasion.—*Ohio State Bulletin.*

Paternal Training.—Few parents are aware fully of the importance of beginning early to train up a child in the way he should go. They do not seem to understand that the business of *unlearning* bad habits is a very tedious business and often a very expensive one. They often suffer a present deficiency, perhaps a manifest impropriety, to pass unnoticed to save themselves the inconvenience of a "crying spell," without reflecting that these "crying spells" propagate themselves to an indefinite—almost an indefinite extent, unless they are freely met and overcome in the outset.

It is always very dangerous to sacrifice duty to present convenience and ease but in no instance is it more so than in the government of children. The child who gains one single advantage is much more difficult to manage afterward than before, because he feels some encouragement to manœuvre for another. Let the parent be mild but firm. Let the rules be simple and few, but let them be insisted on. Without being thorough but little can be gained; for what seems to be attained at one time will be lost at another, if the parent is variable in his exactions of duty and obedience. Our simple advice to all who are tried in this particular would be, "always be *consistent and thorough.*"

Gratitude for Liberty.—A lady who was brought up in Danville, Kentucky (the birth place of Mr. Birney, and where he resided in 1834, when he became an abolitionist,) but who now lives in the vicinity of Louisville, stepping in to a shop in that city to purchase some little article of domestic furniture, was accosted familiarly, though respectfully by a good looking colored man, who seemed also just to have come in. On recognizing him, she asked him how and where it was that he knew her. "I belonged," said he, "to the Misses C——— [these were several maiden sisters of the most respectable character, who lived together in the vicinity of Danville, and were the holders of some five or six slaves but I am now free. Ah, that Mr. Birney is a blessed man; he started the thing at Danville; my mistresses would never have thought of it, if it had not been for him; but they got it into their minds, and they never stopped till they set us free. And what is more, madam, I can tell you that Mr. Birney is going, this day, to emancipate all the slaves of his father's estate."

"But," said the lady, "why did you leave your mistresses, since they were so kind to you?"

"I stayed with them as long as they desired it. Two of them died—the remaining ones concluded that they would not require more than two, (mentioning their names,) to remain with them; they advised me to seek some other place where I could make more for myself than with them; and this is the reason I am here."—*Phil.*

Proclamation for a Day of Thanksgiving and Prayer.—The earth has brought forth her fruits in abundance during the year which is now drawing to a close; the abundant crops of the husbandman have been gathered; peace, plenty & happiness abound throughout the State; and we have been, as a people, highly favored by Him from whom cometh all good. It is therefore not only proper, but a duty which we owe to Him to whom we are indebted for our existence, and the many blessings which we enjoy, to return our most sincere thanks and grateful acknowledgments for the numerous favors which He has in his great goodness, bestowed upon us.

Therefore, in conformity to a venerated custom which has long prevailed in christian countries, and in pursuance of a resolution of the General Assembly of the State of Ohio, passed March the 11th 1839.

I, *Wilson Shannon*, Governor of the State of Ohio, do hereby set apart and appoint Saturday the 14th of December next, as a day of public thanksgiving and prayer to Almighty God, for the many blessings which we have enjoyed and do continue to enjoy; And I do especially recommend that the day be kept as a day of solemn religious observance,—that christian benevolence and charity be cultivated—that brotherly love and kindness towards all men be cherished,—and that our Heavenly Father be implored to continue His favors to us in all time to come, and to watch over and guard, in a special manner, the liberties of his people, and our free and prosperous institutions.

Given under my hand, and the Great Seal of the State of Ohio, at Columbus, [L. S.] the first day of November, in the year of our Lord one thousand eight hundred and thirty-nine.

By the Governor,
Wilson Shannon.
Charles B. Harlan, Sec. of State.

It is proposed at New Orleans to offer the large reward of twenty thousand dollars for any of the late incendiaries Mobile, &c. to turn State's evidence.

HE RECORDER.

ZANESVILLE:

RSDAY, ... NOVEMBER 14, 1839.

C. C. Chapman, in a letter dated the 30th sys, he has been necessarily detained from ssion, but that he expects to start to it a- he 15th inst.

uarterly meeting will be held in Lancaster, ion the 23d and 24th inst. under the super- lence of Bros. Myers, Israel Thrap and May-

We noticed with much plea- mongst the large and crowded audience, la- nd gentlemen from the Catholic, Covenan- eceder, and, indeed almost all the various minations and churches in the city."

he Mechanics' Fair at Boston, was ded by more than seventy thousand ons.

WFUL FIRES.—The Chicago Demo- of the 30th ult. gives an account of wful fire, which commenced about two ck on Sunday morning in that city, consumed nineteen houses, most of h were stores, lawyers' office, &c.— altogether about $100,000; insured rious offices to the amount of about 000. The fire is supposed to be the of incendiaries.

NTENCE OF "GENERAL VAN RENSSEL- ."—We learn from the Albany Daily rtiser, that Rensselaer Van Rens- r, convicted of setting on foot a mili- expedition in the United States a- st a foreign power, was sentenced to months imprisonment in the county and to pay a fine of $250.—*Sun.*

We here give the official communica- as we promised in our last, of the Banks hiladelphia, assigning their reasons for uspension. We will give no opinion upon erits of these reasons, leaving our readers to ciate them as they may think right.

ADDRESS OF THE BANKS.

t an adjourned meeting of the Dele- s from the Banks in the city of Phila- hia and adjoining districts, held on dnesday evening, October 23d, 1839, committee appointed at a previous ting to prepare and report an address ie citizens of Pennsylvania, present- he following, which was read, and nimously adopted, and directed to be ed by the Chairman and Secretaries, published in all the daily papers:

O THE CITIZENS OF PENNSYLVANIA:—

Banks of Pennsylvania having deci- to suspend for a time the payment of r notes in specie, deem it their duty to lain to the citizens of Pennsylvania, reasons of that measure. This they do frankly and briefly.

n May, 1837, the Banks in New York pended payments in specie, and the of the Union followed their example. s just and necessary measure was re- ed by the commercial relations be- en this country and Europe; and all Banks of the United States immediate- directed their efforts to assist the coun- in the honorable discharge of its for- n debts, and to prepare for the resump- of specie payments. These opera- s were proceeding in a manner easy the country and satisfactory to its for- n creditors, when their progress was urbed by a premature effort for a gen- l resumption of specie payments.— e Banks of New York were unfortu- ely constrained by law to resume on a en day, whatever might be the state of country; and they naturally endeav- d to induce all the other Banks to do ntarily what they were compelled to

This purpose was effected, aided as as by the impatience of the public, by competition of political parties anx- to appropriate to their respective s the popularity expected from has- ng the resumption, and by feelings of l pride which prevented many from ining to do what in reality they dis- approved, and accordingly a day of resumption was named. The Banks of Philadelphia were quite as ready to resume as those who were most anxious to begin, for they had greatly reduced their liabilities, and one of their number had no less than $7,357,000 in its vaults. But they believed that the country at large had not yet sufficiently recovered from that violent shock to be ready for resumption.—They recollected that under similar circumstances the Bank of England had continued her suspension for upwards of twenty years, and they avowed their apprehension that a resumption in the unprepared state of the country must be followed by a relapse. Over-ruled in this judgment, and obliged at the hazard of greater evils to unite in the resumption, they sincerely co-operated in it; and, being satisfied that the measure in order to be useful or permanent must be general, they made great efforts and large advances to the southern and south-western States, who were thus enabled, almost exclusively by the assistance of the Philadelphia Banks to unite in the resumption But the inefficacy of the measure soon became obvious. The southern and south-western States, placed by the resumption too much in advance of the crops, which alone could sustain them, gave way at the earliest demand for specie, thus breaking the general line of resumption and weakening the Atlantic Banks by the amount of advances made to support them. Nor was this all. The delusive appearance of the resumption worked injuriously on both sides the Atlantic. In this country it caused the belief that all danger was over, and individuals rushed into new enterprises, and States undertook new improvements, relying on the enjoyment of the old facilities of credit. Abroad the extraordinary and honorable efforts made to discharge its debts, exalted the character of the country; and merchants hastened to sell on credit, and capitalists to lend on the public securities of a people who had been thus faithful to their engagements.

It was then that the anticipations, under which the Philadelphia Banks gave their reluctant assent to the measure, were realized. And now, after a little more than a year of a nominal resumption, the southern and south western States are more embarrassed than ever. The Atlantic Banks are weakened by their fruitless endeavors to aid those States—the commercial debt to Europe is larger than at the resumption—the debts of the States in Europe much larger, and the specie means of the country very much diminished. The premature resumption of specie payments therefore has left the country in a state of exhaustion, which has prevented its being able to stand the new shock which forms the more recent and direct cause of the present suspension, the drain of specie to England.

In our relations with England, she is largely and habitually a creditor. Like all other creditors, she is willing to buy more and to lend more while her situation is perfectly easy—but when she is herself pressed, she ceases to lend, ceases buy, and proceeds at once to exact payment. Thus in ordinary times she receives payment for her goods in our own produce, or in our own funds, and rarely requires because she rarely needs, specie. But a sudden trouble has come upon England, which reverses the whole of our relations. Her crops have failed, and she is forced to protect her people against famine by purchasing food, and this not from our own country, which might furnish a market for our crops, but from her neighbors who can furnish it cheaper than we can—and as these are comparatively small consumers of her products, she must pay with specie for her food. Accordingly the Bank of England alone has been obliged to furnish more than thirty-five millions of dollars in specie to be shipped abroad—a drain that has threatened that institution with suspension. By the latest statement of her affairs, it appears that with immediate demands for which she is liable, of £23,742,000, her whole stock of specie is only £2,800,000, and this after borrowing from the Bank of France £2,000,000—so that without this extraordinary aid, her position would have been extremely critical. The consequence is that money has risen to twice or three times its extraordinary value—that the staples of this country are unsaleable except at ruinous sacrifices—that the stocks of this country sent by the States, or by individuals are wholly inconvertible, leaving as the safest and the favorite mode of payment, the exportation of specie. The demand for this article is still further increased by the efforts made in England to produce relief at home. The manufacturer, pressed by some urgent want, empties his warehouses into the packets, and selling his goods at a small sacrifice, for notes which are discounted at a second sacrifice, he ships the specie, which reaches England in time to relieve him, leaving this country flooded with goods without any regard to its wants or its consumption. The result is, that the coin of this country is wanted in England to send to the continent for food—that a very large portion of it has already gone, and the rest will probably follow. The Banks of Philadelphia have already contributed many millions—one single Bank of their number having since the resumption in August, 1838, paid out no less than $8,712,000, in this city alone, and the demand seems to increase, instead of subsiding.

Under these circumstances, they have had to adopt one of two alternatives—either to force the community by sacrifices of its property to pay its debts to the Banks, in gold and silver, to be shipped forthwith to England, or else to resort to a temporary suspension until the community as well as the Banks could have time to recover from the effects of these foreign troubles. They have not hesitated to prefer the latter, as being most conducive to the true interests of the State; and they confidently rely that their motives will be duly appreciated by the public authorities of the Commonwealth. To that Commonwealth they owe their existence, and they regard her prosperity as a paramount consideration to which they have always sacrificed their own merely pecuniary interests. Every loan wanted for the service of the State, every great improvement for the development of its resources has always found a constant and liberal contributor in the Banks, nor is it an exaggerated estimate that four-fifths of the funds for the internal improvements of the State, have been contributed by the Banks.

On the whole the views which the Banks of Philadelphia wish to present are these:

That they were relunctantly obliged to unite in the resumption last year, declaring if it were postponed for further preparation it would be general and permanent.

That events have proved the resumption to have been premature, weakening the Banks and the country.

That in this exhausted condition they have to encounter a fresh demand for specie to buy food for the people of England, which threatens them to drain the last dollar from their vaults.

That every motive of prudence which caused the suspension in 1837, applies with much greater influence at the present moment; and that the Banks of Philadelphia have thought themselves justified in resorting to it, as the only remaining protection for the interest intrusted to their care.

In adopting it however, the Banks would not cast the remotest censure on those institutions which pursue a different course. They desire only to explain themselves, not to criminate others. They think that it was impracticable for them to continue specie payments without sacrificing the community around them.

Their own proceedings they thus submit to the people of Pennsylvania, who are the best judges of their correctness; but the Banks confidently pledge themselves for the sincerity of their views in adopting it, their honest anxiety to protect the interests of the State, and to husband its resources from being swept away by this current to England, and they now respectfully but anxiously wait the opinion of the Legislature of Pennsylvania.

FOREIGN NEWS.

New York, October 30.

EIGHT DAYS LATER FROM LONDON.—At an early hour this morning we received our files of papers by the packet ship Independence, Captain Nye, which vessel sailed on the 29th of September. Our London and Liverpool papers are to the evening of the 28th inclusive.

GREAT BRITAIN.—*The Harvest.*—The accounts of the harvest, although at considerable variance in different parts of the country, on the whole leave scarcely a doubt that a large portion of the wheat crop has been irretrievably damaged, and that the oat and barley crops were in serious jeopardy. Large orders had been sent to the continent; and the necessity of parting with heavy amounts of gold in payment for foreign grain, could no longer be questioned.

FRANCE.—Renewed disturbances had taken place in various parts of France, occasioned by the high price of bread, and the apprehension of a scarcity.

The harvest in France was not below an average, but prices were high and a deficiency was seriously feared. In Paris and other large cities the people were demanding a free importation of foreign grain.

LONDON, September 28.—The public mind in France is almost wholly absorbed by the fear of the approaching famine, and the Government is not without apprehension of serious disturbances, should the rumor of an absolute scarcity of grain come to be generally credited. The Moniteur, of Thursday, proves, by official tables, that during the month of August the imports of grain exceeded the exports by eighty thousand quintals; and adds that a similar result may be looked forward to by the people during the autumnal season. Still, as there was but eight thousand sacks of flour in the depot in Paris on Thursday, and as the corn dealers in the vicinity of the capital were doing all in their power to keep up the price of bread, the poor derived very little consolation from the assurances of the Moniteur.

The Government, it is said, looks to America for relief, as there the harvest has been good; and the French will find it more profitable to encourage the importation of flour than to cram their warehouses with cotton, for which there is at present no demand in the French market.

From Bicknell's Reporter.

TWENTY-ONE DAYS LATER FROM LIVERPOOL.—*A loan of four millions of the United States Bank. Canton about to be blockaded. The English harvest better.*

By the arrival at New York, of the steam packet Great Western, in thirteen days and twenty hours from Europe, we have highly important intelligence.

We have our regular files to the day of sailing, October 19th, from Bristol, and to the 18th from London and Liverpool. For these we are indebted to the vigilance of our attentive European correspondent, Mr. Willmer. We also acknowledge the receipt of an *extra* from the New York Morning Herald. The news, we rejoice to say, so far as relates to money matters is of a highly favorable character. We proceed to give the details.

THE LONDON MONEY MARKET,—MR. JAUDON AND THE LOAN OF FOUR MILLIONS.—The London Morning Chronicle of the 14th of October, announces the final arrangement of the loan made by Mr. Jaudon, which gave him the command of eight hundred thousand pounds at that time. For this loan, he had issued bonds at eighteen and thirty-six months, secured by deposits of Pennsylvania State Stocks, placed in the hands of trustees. We learn from the same source that on the 11th ultimo, two thousand shares of United States Bank Stock had changed hands at twenty pounds per share. The Morning Chronicle of the 10th ultimo, says that the Agency of the United States Bank is placed on a footing of independence; that Mr. Jaudon had been anxious to retire from business, but that he was prevented solely by a desire to sacrifice his personal views to the interests of his principals, "while under circumstances of peculiar difficulty." He had struggled with success, through obstacles of the most trying nature, and despite of the opposition of enemies, who were not scrupulous as to the means they employed.

We find by the London Morning Chronicle of the 16th ultimo, that Mr. Jaudon had deposited £100,000 on that day, for interest on United States Bank Shares. The Bonds for the loan of eight hundred thousand pounds, were selling in the London market on that day, at one and one and a half premium!

We are glad to be enabled to state that Mr. Jaudon has made arrangements to meet all the engagements of the United States Bank, and that Messrs. Barings will be the agents for that establishment. We may also mention that that gentleman has succeeded in getting his list filled for a new loan of £800,000 sterling for three years, secured on Pennsylvania Six per Cent Stock at 94.

Taking all the news in connexion, we think we may state with entire confidence, that Mr. Jaudon had fully succeeded in triumphing over all the difficulties by which he had been surrounded—difficulties that could not have been anticipated by any human foresight, and which, it is probable will never occur again.

LONDON, October 18, 3 o'clock.—Money continues easy in the house at from five to five and a half per cent. for a short period; among the bankers at six per cent.

Consols continue steady at 90¼ for the account; Money 90¼, 3-8; same as in the early part of the morning; Exchequer Bills, 2 4 discount; India Bonds, 1 premium; Bank stock, 179; for account, 180½.

LATEST LONDON MONEY MARKET.—The report which prevailed that the directors of the Bank of England had refused to discount certain bills sent up from the country, does not agree with what took place on Tuesday. It is stated that the bank directors, in the course of that day, discounted bills of every class, and having every kind of endorsement.

THE GREAT WESTERN AND HER PASSENGERS.—The Great Western brought out one hundred and twenty-seven passengers, and among them a number of persons of distiction.

THE BRITISH QUEEN left England, November 1st. She had two hundred berths engaged when the Western left. The Siddons, which left October 15th, has twenty on board.

AFFAIRS OF THE EAST.—The harvest had generally failed throughout the Ottoman empire, of the fine wheat in particular. The price of grain was increasing in the markets of the Black Sea. The Government had contracted for a supply of wheat at Tagonrog, at 244, the killogramme.

The Curds continued to interrupt the communications between Trebisond and Tauris, so that intercourse with Persia was at a stand. No money consequently arrived from that country, and of course no purchases were made in the Turkish market for it.

Discord on the subject of armed intervention between the Porte and Mehemet Ali prevailed among the Ambassadors of the Five Powers.

TURKEY AND EGYPT.—The Augsburgh Gazette of the 9th instant contains a letter from Alexandria, dated the 16th ult., in which Mehemet Ali is represented as more than ever resolved not to abate one jot of his pretentions. The letter states that one of the Pacha's couriers arrived on the 14th at Alexandria from Constantinople, bringing letters to the Viceroy from the Sultan, the Sultana Valide, the Grand Vizier Chosrew, and Halil Pacha. The two Ministers in their letters earnestly entreat the Viceroy to restore the fleet and overwhelm him with titles and compliments.

They style him the father of the Turkish empire, faithful servant of Allah and the Prophet, sword of Islamism, defender of the Caliphate, whose patriotism will never permit the dismemberment of the empire, which would infallibly take place were he to persist in detaining the Ottoman fleet at Alexandria. The writer further states that the letters of the Sultan and his mother satisfied Mehemet Ali, that they both detested Chosrew, his old enemy, and convinced at last the whole Turkish empire was in his favor, he sent off couriers on the 16th, with orders to Ibrahim to march at once upon Constantinople. Ibrahim, it was said, had issued proclamations setting forth that he fought under the banners of the Prophet to restore the glory of Islamism, and that all Europe was consequently against him.

IRELAND.—The accounts received since our last regarding the harvest, are generally favorable, and altogether the prospects are much less gloomy than they were a week or two ago. Up to Wednesday night the weather continued very fine, and great progress had been made in securing the outstanding crops. Yesterday morning, however, the rain again began to descend, and has since continued to fall, with little intermission. A considerable breadth of oats still remains out, especially in mountain districts, but that grain suffers less from bad weather than any other crop. The bulk of the potatoes are still in the ground, and many fine days will be necessary before they be securely placed in the pits. But, above all, the saving of turf will require dry weather during the remainder of the present month; and it is certainly a source of deep regret that little or nothing has yet been done towards obtaining a supply of this fuel for the coming winter. However, the glass is again rising, and we may indulge the hope of a speedy return of sunshine.—*Dublin Evening Post.*

ANTICIPATED BLOCKADE OF CANTON.—A Bristol paper states that it was the intention of the British Government to blockage Canton. It will be remembered that the opium seized, was chiefly on board the British ships at the time, and that the whole of it was afterwards destroyed.—It is possible that payment will be demanded for the opium, and that a blockade will only take place in the event of a positive refusal.

The latest advices from Bombay, (East Indies,) state that the cholera is making dreadful ravages in that quarter.

THE HARVEST IN ENGLAND.—The intelligence on this point, may also be said to be of a cheering character, inasmuch as the harvest being much more favorable than at the last dates, there will be the less necessity for a further drain of bullion from the moneyed institutions of England.

OBITUARY.

Departed this life on the 12th of October last, at her residence, near Bournsville, Ross county, Ohio, in the 70th year of her age, after a lingering confinement of nearly nine years, MRS. MARY KERAN, wife of the venerable Wm. Keran, V. D. M.

The subject of this memoir was a professor of religion half a century, or upwards. During which time, she sustained an unblemished character, and an upright walk. She attached herself to the Methodist Episcopal church at an early period of her life, and continued a devoted admirer of the same, until the controversy in that church on the subject of "lay representation" became a matter of notoriety; and having an opportunity of reading the arguments on both sides of the question, her discriminating mind conducted her to the settled conclusion, that the principles contended for by the "Reformers"—as they were then called—were right, and a short time after the organization under the Conventional Article took place, she united herself with the advocates of a representative form of church government, and continued a member of the Methodist Protestant church, until called to realize the sacred truth, that her "light afflictions, which are but for a moment, worketh out a far more exceeding and eternal weight of glory."

The writer of this sketch often visited her, during her long confinement, and always found her mind calm and serene, having an unshaken confidence in God her Saviour; which confidence she retained till her last moment and then sweetly fell asleep in the arms of Jesus.

Her holy example, of infinite price,
Brought up in the Gospel a stranger to vice,
Her cross from the first she did faithfully bear,
And finished her course in her seventieth year;
Her heaven-born spirit to angels akin,
Not stained with the flesh nor polluted with sin,
Has now got release from the sorrows of earth,
And shares the full joys of the heavenly birth.

November 9, 1839. W. H———y.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for the moneys we have received.

☞All the travelling preachers are considered agents for this paper.

RECEIVED PAY FOR 1ST VOL. RECORDER.—Of O. White, $4—for A. Getting, sr. and J. Bailey; of S. Brown, 1; of M. Winan, 2; of Z. Ragan, 5—for H. Springer, D. J. Garwood and M. Britenstine one; of D. H. Stephens, 2—for T. Mills; of A. Smith, Pruntytown, 2; of J. H. Thomas, 2—for R. M. Dalbay; of O. White, 2—for J. Stoner: of S. Langdon, 2—for J. Matthews; of L. Grey, 2; of J. Clarke, 12—we will credit this to the proper persons when we get information how; of J. W. Johnson, 2; of I. Thrap, 8—for T. Hamilton, K. Wells, J. L. Diselms and A. Myers.

Of M. Lyon, $93.73—sixty-four for A. H. Bassett, as credited—four per A. McGuire, for J. Johnson and T. Ship,—J. Beall, J. Tipton, T. J. Finch, J. G. Evans, E. Hall, Wm. Jones, I. Garrison, F. A Harris, J. Hargy, A. Higby and W. Cones, leaving three dollars and seventy-five cents in L.'s favor.

Of Kinney and Williams, $36—for W. Dunnington, N. Warder, W. Hamilton, W. Donaldson, J. Nuzum, J. Baker, W Smith, J. Bly, J. T. Hickle, J. Wells, F. Chisler, W. Powel, E Grayham, F. Mitchell, F. Peil, B. Shaw, C. F. Waldern and W. Holland, (this was received at Conference but not acknowledged till now.)

LETTERS RECEIVED.—J. H. Thomas, L. S. Delaplain, C. Hubbs, C. C. Chapman, S. Langdon, J. Simpson, G. Brown, J. Clarke, (we cannot understand your letter; there must be some mistake in it that escaped your notice; be so good as to forward the account again. You request us to send the paper to "Mr. Ellis, Harrison, Ohio,"—as there are several "Harrisons" in "Ohio," it would be no use to send, as perhaps not one in ten would reach the person unless the county were named in the address. You say again, send a paper to "Mr. Harris, Allensville, Ripley, Indiana;" there is no Allensville that we know of in Ripley, but there is one in Switzerland. Let us know about this also.) I. Hunt, E. Collins.

November 14, 1839. 13

Dr. A. W. Knight,

(Formerly of Philadelphia, but for the last six years in Muskingum county, Ohio,)

HAS removed to MT. STERLING, and now respectfully tenders his professional services to the citizens of this place and the surrounding country: he may at all times be found, when not absent on professional business, at his residence. He hopes that undivided attention to the duties of his profession, together with an experience derived from twelve years' practice of the various branches of a profession, and part of that time in the Philadelphia Hospital as one of the house physicians, will enable him to merit and receive a liberal share of public patronage.

Mt. Sterling, Ohio, Oct. 31, 1839. 11tf

VARIETY.

LIFE IN NEW ORLEANS.—If in winter we are the gayest people on the continent, with more variety of life and manners than any other city presents; in the summer, we are the dullest. The monotony of existence caused by the very general absentees, is only varied by the fever and the exciting scenes it creates. We proceed to mention one, the relation of which, caused a chill through our hearts, and struck the "electric chain" by which we are strongly bound. It surely must have thrilled the heart of the beholder with sudden horror.

Dr. Lambert, an excellent as well as eminent French physician in this city, relates that through his frequent rides thro' the different streets, his attention had almost always been attracted as he passed a house where a poor family lived. The family consisted of a man and his wife, both rather young, the latter good looking, with a little infant smiling in beauty, and about ten months old. He was led to notice them from the appearance of content that lived there, and their being frequently on the parquette before the house. After the fever set in, he still saw them for some days, happy as usual, but at length he "missed them from the accustomed place." This he did for two days, until on the third, feeling uneasy for them, he stopped the gig before the house, alighted—rapped at the door. No one answered, silence was in the mansion. He pushed open the door and went in. There lay the husband & wife on the floor—both dead of the fever, and the former decaying. The child was alive and with its little arms around the dead mother's neck, vainly trying to draw the sustaining fluid from the breast. Dr. L. says that familiar as he is with scenes of death, nothing before has ever shocked his feelings to half the extent. With a praise-worthy benevolence he has taken measures to have the infant protected. Such is life in New Orleans.—*New Orleans Times.*

ETHIOPIAN WISACRES.—Sam Jonsing and Pete Gumbo were walking up street last evening; on passing the old Camp street theatre their eyes were suddenly arrested by the hand-bill of the new grand lottery stuck up in front of the theatre.—As reading and writing were branches not taught in the school where they got their "educate," the darkies at once concluded that the old place was about to open.

"Whooh! look dar Sam Jonsing," said Pete, "I declare if dey haint opened de Camp agin."

"Well so dey has, Pete—dats a fack. I wonder wat dey plays to-night, kase I's a notion ob gowin?"

"Dat's mor'n I can say. I radder 'speck, howeber, dars a good deel ob scenery and decoration about him, kase, I see so much small print in de bill. If dey'd only print him wid larger letters I could cotch de hang ob de piece a good deal better. You sees dey neber larn us de use ob de small print war I went to school."

"Ya, ya, ya! no guess not or de big letters eider, need'nt try to fool dis child wid your larnin. But, I say, I'd like to find out wat de performances is dis ebening. Dar's Stebe Banjo; hes got de adwantage ob an illiberal edification.—P'rhaps he gib us some items.

"Well, so he can, he's jes de child," said Pete.

"Look heea, Stebe, I say, can't you jis explaify to us wat de play is to-night?"

"Wat de play is dis ebenin?" said Stebe.

"Ezactly," returned Pete.

"To night you has reference to?" continued Stebe, working his capacious mouth, and trying to spell some of the large letters which adorned the head of the bill and looking very sagacious all the while.

"In course to night," returned Pete,

"Well, I guess it is," said Stebe trying to gain more time.

"Is wat?" said said Sam Jonsing, who now began to grow inquisitive.

"Wy, wy—yes, dat's it—it's de farce ob de Lottery Ticket, wib seberal ober smaller pieces too tedious to mention.—Wen I sees de smaller bills I'll let you know more about him."

Perfectly satisfied all parties now turned their steps homeward.—*New Orleans Picayune.*

LUCKY TOM.

A SECRET WORTH KNOWING.

Tom Spooner was the luckiest dog in he world, at least so said his old cronies. "He began like a good-for-nothing mechanic," they say, "without a cent in the world—without a whole shirt to his back, or half a shoe to his feet, and with nothing but his hands to work with. And yet Tom Spooner is one of the most wealthy, and influencial men among us."

"What a lucky dog that Tom Spooner has been!"

He went, among those who commenced life with him, but who are now the frequenters of grog-shops, idle and dissolute, by the name of lucky Tom. It puzzled his old friends not a little to account for his good luck. He had no rich relations, and though not extravagant, he was liberal. He was no skin-flint. He paid no attention to the words of fortune-tellers, and gold-finders, he merely staid at home, and yet his course has been, year after year, and week after week, with a wonderful share of good fortune—good luck. He must be in possession of some secret of which others are ignorant. What on earth can it be? If Tom had a lot of pork to dispose of, people were always willing to pay him a couple of cents more on a pound than any other person. And he was always lucky enough to pay his debts! He was never unlucky enough to feel the grip of the Sheriff, or hear the creak of the jail door.

Tom married. "Why! This poor mechanic has taken the sweetest and the most beautiful girl in the place. Who would have thought it? What a confounded lucky dog Tom Spooner is! He has got the girl by magic!"

And then Tom's garden was a picture of neatness; the fences were never known to blow over as did his neighbor's. His land was rich, while that of his next neighbor's would produce hardly any thing but weeds. What does Tom put into his land?

How he rises one step above another! If there was an important station to be fulfilled, why, Tom Spooner was the man. He could get a note discounted at any bank without security. If any dispute was to be settled, why, Tom—lucky Tom, was always sure to be called in as an umpire!

"And now I think of it," says one, "I never knew Tom to speak an ill word against his neighbor, which shows plainly enough that there are many in his secret, and therefore, that he dare not utter a word to their prejudice."

He never drinks; because, if intoxicated, some one will snatch his secret from him. He has taught his wife the way too. They both have the secret. He says nothing hard of his acquaintances. He goes to church regularly He pores over books when he can find them. He must be learning something more of his art of getting rich. He is laying up treasures. And then he always has a lamp in his work-room late, and he is always the first one up in the house, which furthermore shows that Tom's mind is always bent upon his secret. He can't find time even to take a glass with old cronies at the grog-shop. It occupies his thoughts so much that he minds nobody's business. And yet it does not weigh heavy on his mind—he is always good natured, contented and happy—he has no quarrelling in his family. All is pleasant and agreeable.—Nothing is out of place. "Strange! strange!" said these wiseacres "that Tom Spooner—that poor mechanic—who begun with nothing, of whom all prophesied that he would come out at the little end of the horn—and who believed nothing of it, but stuck to his work, should be so fortunate—so lucky in life! Up early, late to bed, ever at work with hands or head! He must surely have a secret worth knowing!"—Ah, lucky dog—lucky Tom! What can his secret be?—Who will set himself to work to discover the foundation of this important secret?

VALLEY OF WYOMING.

THE LOST SISTER.

After the battle and massacre, described in my last, most of the settlers fled.—But here and there a straggler returned from the mountain of wilderness, and, in the course of three or four months, cabins were going up over the ashes of their former homes, and quite a little neighborhood was collected. But the Indians kept prowling around the mountains, now descending here and there, killing this family, scalping that, or making it captive. At a little distance from the present court house at Wilkesbarre, lived a family by the name of Slocum, upon whom the visitations of the Indians' cruelties were awfully severe. The men were one day in the fields, and in an instant the house was surrounded by Indians. There was in it, the mother, a daughter about nine years of age, a son aged thirteen, another daughter aged five, and a little boy aged two and a half. A young man and a boy by the name of Kingsley were present grinding a knife. The first thing the Indians did was to shoot down the young man, and scalp him with the knife he had in his hand. The nine-year-old sister took the little boy two years and a half old, and ran out of the back door to get to the fort. The Indians chased her just enough to see her fright and have a hearty laugh, as she ran and clung to and lifted her chubby little brother. They then took the Kingsley boy and young Slocum, aged thirteen, and little Frances, aged five, and prepared to depart. But finding young Slocum lame, at the earnest entreaties of the mother, they set him down and left him. Their captives then young Kingsley and the little girl. The mother's heart swelled unutterably, and for years she could not describe the scene without tears. She saw the Indian throw her child over his shoulder, and as her hair fell over her face, with one hand she brushed it aside, while the tears fell from her distended eyes, and stretching out her other hand towards her mother, she called for *her* aid. The Indian turned into the bushes, and this was the last seen of little Frances. This image, probably, was carried by her mother to her grave. About a month after this they came again, and, with the most awful cruelties, murdered the aged grand-father, and shot a ball in the leg of the lame boy. This he carried with him in his leg nearly sixty years to his grave. The last child was born a few months after these tragedies! What were the conversations, what were the conjectures, what were the hopes and fears respecting the fate of little Frances, I will not attempt to describe. Probably the children saw that, in all after life, the heart of the stricken mother was yearning for the little one whose fate was so uncertain, and whose face she could never see again.

As the boys grew up and became men, they were very anxious to know the fate of their little fair-haired sister. They wrote letters, they sent inquiries, they made journeys through all the west, and into the Canadas, if peradventure they might learn any thing respecting her fate. Four of these long journeys were made in vain. A silence, deep as the deepest forest through which they wandered, hung over her fate, and that for sixty years.

My readers will now pass over fifty-eight years from the time of this captivity, and suppose himself far in the wilderness in the fartherest part of Indiana.—A very respectable agent of the United States is travelling there, and, weary and belated, with a tired horse, he stops at an Indian wigwam for the night. He can speak the Indian language. The family are rich for Indians, and have horses and skins in abundance. In the course of the evening, he notices that the hair of the woman is light, and her skin, under her dress, is also white. This led to a conversation. She told him she was a white child, but had been carried away when a very small girl!

She could only remember that her name was Slocum, that she lived in a little house on the Susquehanna, and how many there were in her father's family, and the order of their ages! But the name of the town she could not remember. On reaching his home, the agent mentioned the story to his mother. She urged and pressed him to write and print the account. Accordingly he wrote it and sent it to Lancaster, Pennsylvania, requesting that it might be published. By some, to me, unaccountable blunder, it lay in the office *two years* before it was printed. But last summer it was published.—In a few days it fell into the hands of Mr. Slocum, of Wilkesbarre, who was the little two-and-a-half-year-old boy, when Frances was taken. In a few days he was off to seek his sister, taking with him his oldest sister, (the one who aided him to escape,) and writing to a brother who now lives in Ohio, and who, I believe, was born after the captivity, to meet and go with him.

The two brothers and sister are now (1838) on their way to seek little Frances, just *sixty years* after her captivity. After travelling more than three hundred miles through the wilderness, they reached the Indian country, the home of the Miami Indian. Nine miles from the nearest white, they find the little wigwam. "I shall know my sister," said the civilized sister, "because she has lost the nail of her first finger. You, brother, hammered it off in the blacksmith shop when she was four years old." They go into the cabin and find an Indian woman having the appearance of seventy-five. She is painted and jewelled off, and dressed like an Indian in all respects. Nothing but her hair and covered skin would indicate her origin. They get an interpreter and begin to converse. She tells them where she was born, her name, &c., with the order of her father's family. "How came your nail gone?" said the oldest sister. "My younger brother pounded it off when I was a little child in the shop."

In a word, they were satisfied that this was Frances, their long-lost sister! They asked her what her christian name was. She could not remember. "Was it Frances?" She smiled and said, "Yes." It was the first time she had heard it pronounced for sixty years! Here, then, they were met—two brothers and two sisters! They were all satisfied they were brothers and sisters. But what a contrast! The brothers were walking the cabin, unable to speak; the oldest sister was weeping, but the poor Indian sister sat motionless and passionless, as indifferent as a spectator. There was no throbbing, no fine chord in her bosom to be touched.

When Mr. Slocum was giving me this history, I said to him—"But could she not speak English?" "Not a word."—"Did she know her age?" "No—had no idea of it." "But was she entirely ignorant?" "*Sir, she did'nt know when Sunday comes!*" This was, indeed, the consumation of ignorance in a descendent of the Puritans!

But what a picture for a painter would the inside of that cabin have afforded!—Here were the children of civilization, respectable, temperate, intelligent and wealthy, able to overcome mountains to recover their sister. There was the child of the forest, not able to tell the day of the week, whose views and feelings were all confined to that cabin. Her whole history might be told in a word. She lived with the Delawares, who carried her off, till grown up, and then married a Delaware. He either died or ran away, and she then married a Miami Indian, a chief, as I believe. She has two daughters, both of whom are married, and who live in all the glory of an Indian cabin, deer-skin clothes, and cow-skin head-dresses. No one of the family can speak a word of English. They have horses in abundance, and when the Indian sister wanted to accompany her new relatives, she whipped out, bridled her horse, and then, *a la Turk*, mounted astride and was off. At night she could throw a blanket around her, lie down upon the floor, and at once be asleep.

The brothers and sister tried to persuade their lost sister to return with them, and, if she desired it, bring her children. They would transplant her again to the banks of the Susquehanna. But no—she had always lived with the Indians—they had always been kind to her, and she had promised her late husband, on his death-bed, that she would never leave the Indians. And there they left her and hers, wild and darkened heathens, though sprung from a pious race. You can hardly imagine how much this brother is interested for her. He says he intends this Autumn to go again that long journey to see his tawny sister—to carry her some presents; will go and petition Congress that, if ever these Miamis are driven off, there may be a tract of land reserved for his sister and her descendents. His heart yearns with an indescribable tenderness for the poor helpless one, who, sixty-one years ago, was torn from the arms of her mother. Mysterious Providence! How wonderful the tie which can thus bind a family together with a chain so strong that nothing can break its links!

I will only add that nothing has ever been heard of the boy Kingsley. The probability certainly is that he is not living. This account, hastily and imperfectly given, I had from the lips of Mr. Slocum, the brother, and the same who was two and a half years old when little Frances was carried away. I believe that I have altered nothing, though I have omitted enough to make the good part of an interesting volume.

"Now, Sam, if you don't stop licking that lasses, I'll tell the man." "By chalks, you tell the man and I'll lick you and the lasses too."

ADVERTISEMENTS.

Session Paper.

THE OHIO CONFEDERATE and OLD SCHOOL REPUBLICAN will be published twice a week during the approaching session of the General Assembly.

We will furnish it four months, from the 1st of December, for one dollar and fifty cents.

The assistance of our friends who are already in the reception of the paper, and acquianted with its character, is respectfully solicited, in procuring and sending us the names of any who may wish to receive it.

JOHN G. MILLER, Ed. & Pro.
Columbus, November 14, 1839. 13

Ohio State Journal.

FOR THE SESSION.

IN consonance with previous usages, the proprietor of the Ohio State Journal submits the following prospectus to the consideration of the people of Ohio. The political character of the Journal is so well known, that no new comments are necessary to explain it. It is unequivocally opposed to the administration of Martin Van Buren, and of all the mad schemes of himself and his advisers. The Journal will continue steadily in the path of its long avowed and long cherished principles. Success cannot corrupt it, nor defeat intimidate it. As a faithful sentinel on the watch-tower of American liberty, it will always be found awake on its post.

During the winter, abundance of interesting matter may be expected from the halls of our State Legislature. The work of BANK REFORM is to be finished, by the majority who now rule triumphant, and we, in common with the whole State, feel anxious to investigate its operation and its progress. Our attention will be given to the subject most amply and unreservedly.

In every other respect, the Ohio State Journal will adhere to its original plan and character.—It will be, emphatically, a NEWSPAPER, in whose columns may be found all the interesting events of the day. Congressional reports, Foreign and Domestic intelligence, together with the opinions of our cotemporories of the Press, and occasional dranghts from the pens of our literati, will form an agreeable variety. A generous support is requested.

TERMS.—Daily Ohio State Journal, $3 00
Tri-weekly " " 2 00
Semi-weekly " " 1 50
Weekly, " " 1 00

☞All payments must be invariably in advance. CHARLES SCOTT, Pub'r.
Columbus, November 14, 1839. 13

The Ohio Statesman.

SESSION PAPER.

ACCORDING to custom, we again present to the people of Ohio our prospectus for a paper during the session of the Legislature. Many persons who do not find it convenient to subscribe for a paper printed at this place for a whole year, do so during the sitting of the Legislature, being desirous of seeing what is done by those in whose keeping they have entrusted the affairs of the State. To accommodate this just desire in the people to be thoroughly acquainted with every thing appertaining to their happiness and welfare, we have in this prospectus extended facilities and favors beyond what has been customary. We shall issue during the session a weekly paper (free of advertisements,) at fifty cents—a semi-weekly at one dollar—a tri-weekly at two dollars, and a daily at three dollars. By this arrangement, we will be able to accommodate every portion of the State by all the mails, and we hope our friends will not be remiss in availing themselves of these means of information. It is all important that every freeman should be fully acquainted with every question touching the welfare of the State and nation.

The approaching session of the Ohio Legislature will be a most important one. No previous one has ever had the same number of delicate and exciting questions to meet and act upon—questions which cannot be avoided, nor disposed of in a moment. Among these are our Internal Improvements, and the expenditures under them. The condition of our Banks, and the banking system under the second suspension. The revision of the laws, as collated under an act of the last Legislature. The apportionment of the State into Senatorial and Representative districts, and an equitable taxation by a re-valuation of property, will be discussed. All these questions have been confided, by the overwhelming voice of intelligent freemen to the care and keeping of the democratic party, and it is important that that party should meet them in sober earnestness, and in that spirit of candor and patriotism which they will bring together, for the public good.

We shall also give such sketches of the doings of Congress as we conceive of immediate interest to the State, by the earliest aid of correspondents.

By the aid of a daily and tri-weekly paper, we shall be able to throw out the earliest Eastern news, Foreign and Domestic, which we hope will not be overlooked by those desiring such information, and with the aid of a power press, on a new and improved model, we expect to add greatly to the facility of preparing our papers for the mails, without the loss even of an hour. We ask only such support as corresponds with our exertions to make our paper useful to the public.

TERMS OF THE SESSION PAPER.—☞Persons receiving this paper will consider themselves agents—and for five subscribers one gratis will be sent.

Weekly Ohio Statesman, $0 50
Semi-weekly " 1 00
Tri-weekly " 2 00
Daily " 3 00

☞All payments must be in advance or reference to a member of the Legislature.

Glass Manufactory.

THE GLASS-WORKS recently carried on by R. P. ROBINSON, has been taken by the subscribers, and will in future be conducted by them. WINDOW GLASS, double and single, all sizes, and of superior quality, will be kept constantly on hand for sale on reasonable terms, at the works. The experience of one of the firm, in the manufacture of the article, will ensure all made to be of the best quality.

S. B. JOHNSON & CO.
Zanesville, Oct. 31, 1839. 3w11

Brother Jonathan.

THE LARGEST PAPER IN THE WORLD.

THE proprietors of this sheet—the "Great Western" among the newspapers, have the pleasure of spreading before the reading public a weekly periodical containing a greater variety and amount of useful and entertaining miscellany, than is to be found in any similar publication in the world.

Each number of the paper contains as large an amount of reading matter as is found in volumes of ordinary duodecimo, which cost two dollars—and more than is contained in a volume of Irving's Columbus, or Bancroft's History of America, which cost three dollars a volume—and all for SIX CENTS a number, or *Three Dollars* a year.

BROTHER JONATHAN being a genuine Yankee, and thinking that some things can be done as well as others, is determined to present his readers a MEDLEY hitherto unrivalled by any other paper of Anecdotes, Amusements, Allegories, Accidents, Biography, Bon Mots, Conversation, Crimes, Dramatics, Drolleries, Erratics, Essays, Eloquence, Facetia, Geography, History, Jests, Learning, Morality, Marvels, Music, News, Novelties, Oratory, Poetry, Philosophy, Quiddities, Religion, Romance, Sports, Spectacles, Sorrows, Sufferings, Tales, Trials, Truths, Teachings, Wisdom, Wonders, Wit, &c. &c.

As a family newspaper, BROTHER JONATHAN will be found to present attractions beyond any other.

——"He comes the herald of a noisy world, *News from all nations* lumbering at his back."

The earliest intelligence, Foreign and Domestic, and the latest novelties of the Literary World, will be promptly served up for the gratification of the reader.

Strictly neutral in politics, it will contain nothing in favor or against any party, and will as seduously avoid any of the controversies which agitate the religious community. Strict morality, temperance, industry and good order, benevolence, and usefulness to our common country and our fellow men, will be advocated and in every page of Brother Jonathan.

TERMS OF BROTHER JONATHAN—*Three Dollars a year in advance.*

For five dollars two copies will be sent one year, or one copy two years.

The EVENING TATTLER is published every day at the same office, and is put to press at meridian, in season for the great Northern, Eastern and Southern mails, which all close about two o'clock, P. M.

☞All country papers who give this prospectus three insertions, will be entitled to an exchange, on sending a number of their paper to this office containing the advertisement.

☞All communications and letters should be addressed *postage paid* to

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,
Corner of Vine and Gano Streets:
PUBLISHED BY G. G. MOORE,
Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

S. C. Haver,

IN the flourishing town of Putnam has on h 40 or 50 SADDLES ready for sale, of dif ent qualities, comprising nearly all the varie in fashion in our Buckeye State: a good ass ment of Bridles and Martingales: riding driving whips: between 80 and 100 carriage heavy draft Collars, which will compare and w with any others made here or elsewhere. A fine York, Dearborn, heavy team and comm fancy Harness. A lot of Bear skins just rec ed. Trunks, vallises, saddle-bags, and do covered wagon whips, varying in quality and p to suit purchasers.

The only recommendation he now offers for work, is the testimony and long experience of old customers and friends. He is still anxi to please and accommodate those who may on him, and hopes to share so much of the pu patronage as his attention to his business s merit.

Putnam, August 15, 1839. 3tf

PROSPECTUS OF

The Methodist Protestan Letter-Press.

THE Methodist Protestant Church is dis guished by its union of the principle spiritual and ecclesiastical liberty. On this count, it is deemed worthy the approbation support of Christians and Freemen, through the land and the world. And there is no rea to doubt, that, wherever its character shall justly appreciated, and suitable efforts made its establishment and prosperity, it will prov be one of the most honorable and successful struments, employed in promotion of the glor objects of our holy religion.

This Church is of recent institution. Its C stitution and Discipline were formed in 183 Since then, it has become favorably known some extent, in most parts of the United Sta and in Foreign countries. Still it is neithe well, nor as widely, known, as it deserves to Various reasons might be assigned for this; only three will be here submitted. The po of the Pulpit, the School, and the Press, have been exerted with adequate efficiency. statement cannot be amplified, according to demands of the subjects it embraces, in su document as this. It is intended to furnish a development in the progress of our work. it suffice, for the present, to say, that the ca of the alleged deficiences, in these respects, be found, whenever exhibited, not so much culated to cast discredit on the past operat of the Church, as to prompt it to immediate energetic improvement of present and prospec advantages.

The editor of "The Methodist Protestant ter-Press" proposes to render a little assist in improvement of *this* power. His plan i publish a paper according to the description unto annexed.

Its character may be intimated by the fol ing briefly stated particulars. 1. It will be secrated to Christianity. 2. It will make kn the history, condition, and prospects of the thodist Protestant Church. 3. It will notic other Churches. 4. It will pay attention t Benevolent Institutions. 5. It will be ob ant of Philosophy, Science, Art and Literat It is not expected, of course, that each nu will contain articles on all these subjects; they are mentioned to indicate the range contemplate, and so give assurance to the p as well as the Church, of as great a varie matter as shall be consistent with our main jects and compatible with our narrow limi Whatever it may treat, shall be treated thou fully, charitably, freely. The editor acknow ges no higher obligations than those of Truth Love.

It is believed that the extensive circulati a paper is of more importance than its size o quent appearance. Where it is impracti to secure all these points, therefore, the should be preferred. Our Church has several w ly journals, with limited circulation. In to obtain a wider scope for the "Letter-Pr it will be published once a month. To ma the more worthy preservation, it will be pri in very neat style. The terms are as follow

For 50 cts. - - 1 copy for a
" $5 - - - 12 copies.
" 10 - - - - 25 "
" 20 - - - - 60 "
" 30 - - 100 "
" 50 - - - 200 "

Payment must always be made in advance.

The editor desires to publish, at least, copies, regularly; and, occasionally, to distri a number, specially prepared for the purpos the extent of 20,000. But all his efforts de upon public support. He can solicit this other way, than by sending a copy of the p If, therefore, any to whom it shall be sent, o may see this Prospectus, wish the "Letter-P to flourish, they may confer a favor by their sonal exertions to sustain it. THE

WESTERN RECORDE

IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISH

JOHN W. WHITE, PRINTER.

☞*The office of the Recorder is five a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be publi weekly, on an imperial sheet, at $2 per an in advance: $2.50 at the end of three mo $3 at the end of the year.
2. No discontinuances will be allowed, ex at the discretion of the publisher, until al rearages are paid.
3. To all ministers having regular pastoral g ges, who do any thing at all for the pape they will direct us where, a copy shall be gratis; any other who forwards to us $10. *paid*, for new subscribers, shall have six c sent to any address he may give.
4. All letters designed for the paper, mu directed to the Editor, Zanesville, Ohio, *post paid*, except such as contain subscr names, or $10 in money.
5. A failure to notify a discontinuance b the expiration of the subscription year, wi considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER wi open to discussion on all moral questions will give articles on Literature, Mecha Agriculture,—an abstract of Regligious an litical intelligence, and whatever may be i esting and instructive to families in gen A portion of its columns will be open to vertisements and prices current,—another tion to sustain the interests of the Meth Protestant Church in the West. These latter objects will not likely occupy more one page.

The RECORDER will take a firm stand ag Clerical Supremacy.

THE WESTERN RECORDER.

Volume 1. ZANESVILLE, OHIO, THURSDAY, NOVEMBER 21, 1839. Number 14.

FOR THE YOUNG.

From the Sabbath School Messenger.

THE FATAL SHIP LAUNCH, OR THE UNCERTAINTY OF LIFE.—One morning in my boyays, entering the spacious school where I received my early educa- few moments before school-time, rved a group of boys gathered in iddle of the room, listening with looks and sparkling eyes to a rolooking urchin, who seemed to be unicating something which excited usual degree of interest in his juveudience. Catching the interest so tly felt by the group, I squeezed in them, eagerly inquiring, 'What's atter? What's the matter?'

speaker had just finished his re-, and in reply to my question a voices responded, 'A ship launch week! A ship lauch next week! h!'

hat ship, what ship, George?' said e of my class-mates.

e Princess Charlotte,' answeared ys, as they rubbed their hands in glee.

onsultation was now held as to the ode of obtaining a holiday, and considerable discussion, it was deed to get up a petition in Latin, to ed by the whole school, and pre- to our teacher, Mr. Naylor. It so mutually agreed that every one do his best to please the teacher gence and good order.

petition was accordingly prepared e of us in the first class, signed first class, and formaly presented or two before the time appointed launch. Mr. Naylor, who had our preparations, and observed corum, kindly promised us a holiith a hint that he hoped our good or would be continued.

hing was now talked of by the fifty our school but the launch; and it ith great difficulty that they were d to keep their promise of good and industry. So many funny ts would come into their minds, it impossible not to communicate and once or twice the teacher ned to revoke his promise of a y,—a thought which operated as fully upon them for a time, as ever did, according to foolish story upon the enchanted.

ength the desired day arrived; and since the day in which the earth er dress newly made from her r's wardrobe, did nature look more ul or calm than on that morn.— reigned over the resting elements, l was still as heaven's own air. hat the brightness of such a morn- ould be obscured by the brief histo- ch saddened many a heart before se of that eventful day.

e Princess Charlotte,' the name of p to be launched, was the largest er built by the British Admiralty; gether with the fact that she was named after a lovely princess, precious memory was embalmed ation's sympathies, had excited a egree of interest among the people vicinity of the Dock Yard. As a uence, the country poured in its nds of spectators, and there was a house in the town that did not orth nealy all its inhabitants to s the imposing spectacle. At an hour, therefore, every avenue to ck yard was thronged, and the were literally alive. The harbor, s crowded with vessels of every tion,—from the proud line-of-bat- p, with her hundred guns, down to le fragile skiff. Thousands were shore, and thousands were on the

Every thing looked gaily, light er sat on every face, and brightness from every eye. The people l absorbed in high anticipation of unch.

's ways are not our ways, and He urns the lightness of morning into and heaviness before evening. so on that day.

nearest route to the place where ip was lying, led across a foot- which was attached to a pair of ates at the mouth of a large basin dock. To increase the bulk of water harbor, this basin had been left

The bridge which crossed its was flowed by an inundation of gers, who thronged it on their way launch. It was a spring tide. The ous vessels in the harbor raised it gher, until the water pressed hea- against the flood gates upon which tal bridge was suspended. The were old, but no one feared. About n hour before the launch, they d. The pressure of the water burst pen, and the bridge, with its tho'tnough precious load, was thrown e yawning basin below. Upwards y persons, of all ages and both were thrown into the angry and g waters. It was a fearful moment. a rushed in with dreadful violence, g its victims against the stony f the dock. Then it withdrew, as in fresh strength for the encounrrying with it some of the unfors, whose bodies were never found. nowever, were left in the basin, re seen by the spectators struggling at the bottom, as their shriek—their piercing shriek of 'help! help!' rang on the ear of friendship and humanity. They were seen, however, but for a moment. The waves returned and hid them from sight. Then one noble souled sailor leaped in and rescued a mother and her babe, together with a youth, and one or two more. These were all who were rescued from the gulf alive. About fifty-eight perished.

It need not be said that the news of this sad catastrophe spread with an arrow's speed and power, for wherever it reached, it wounded. It turned the brightness of the morning into sadness and gloom. It destroyed all pleasure, and the launch of 'The Princess Charlotte' was attended with mourning like to that which filled the nation when the lady whose name she bore, received the death call of the Prince of Princes.

That afternoon, beheld a town in mourning. Every one's face looked pale, anxious and sad. Now was to be seen the solemn bier, bearing to its former home the dripping body of a father, a husband, a brother, a sister, a child. And now a mother with straining eyes, stood at the corner of a street, looking for her boy who had gone to the launch; and as the passer-by, with hurried tread, reached her, she asked, 'Have you seen my son?' Oh! there were sad spectacles on that gloomy day.

The next morning, there were many inquiries at school, to ascertain if any of our class-mates were among the drowned. There were none. Though nearly all attended, none perished. Our teacher improved this event by an affectionate address on the dangers and disappointments of life; and I have never since witnessed a day of public excitement or rejoicing, without remembering the fatal launch of 'The Princess Charlotte.' And when I think, a cold chill runs over my frame, and I tremble lest the vivacity of the morning should be superceded by the deep shadows of evening sorrows.

Learn, young reader, that life abounds with danger. There is often poison in pleasure's sweetest cup, and Death loves to hide beneath the beauty and fragrance of the rose. He loves to strike when his blow is unexpected; he glories in destruction when men are triumphing in the midst of prosperity and rejoicing in the idea of safety. The poet speaks truly when he says:

"How vain are all things here below,
How false, and yet how fair!
Each pleasure hath its poison too,
And every sweet a snare.

The brightest things below the sky,
Give but a flattering light;
We should suspect some danger nigh
Where we possess delight."

FOR LITTLE READERS.

THE LAME DOVE.—O, what a pity it is to kill a gentle dove! But the man with the gun has not quite killed it. The shot has hit it, and broken its wing and its leg. How it flutters, and limps, and tries to get away!

Charles has picked up the poor bird, and wrapped it up in his pocket handkerchief. See how the blood runs! I wonder how anybody can take delight in shooting innocent birds.

Beside those that are killed at once, many are wounded, so that they pine away in great misery before they die. It is a cruel sport, and helps to harden the hearts of young people.

Perhaps you would like to hear something more about this dove. It was the mother of several little ones, which were in a nest in a hedge. She could not get back to her young. Her mate waited and waited, and looked out for several hours. You might have heard his mournful voice around the nest every day. It sounded as if he was complaining and lamenting about his loss. The young ones also suffered for want of their tender mother.

Charles took the dove home, and put it in a warm box. His mother did all she could to make it well, and it was soon able to hop about the box. Charles fed it, and gave it clean water every day, and the dove became quite tame. It would run about the house, and come when it was called, and even take its food out of Charles' mouth. He made a cage for it; but he often left the door open, and let it come out. And as soon as it was quite well, so as to be able to fly, he opened the window and allowed it to fly away. Charles was very happy when he saw it swiftly flying towards its nest. I never heard whether the dove found her mate and young ones, but I hope she did.

There is no creature in the world more harmless than the dove. It is the emblem of innocence. I have known even bad boys who would never hurt this bird.—Doves make a mournful noise, which is called cooing, because they seem to say, coo, coo.

At the time of the flood, when Noah was in the ark, he twice sent out a dove. The first time she could not find any dry spot, and so she came back into the ark. But the second time, she returned in the evening, with an olive in her mouth.—Noah knew by this that the water was beginning to go away.

When the Lord Jesus was baptized, the heavens were opened, and the Spirit of God came down like a dove, and lighted upon him. Whenever you see a dove, you should think of this. Our Saviour has taught us to be harmless as doves.—O, how delightful it would be if all little children were as gentle and peaceful as this innocent bird!—*Infant Library.*

POETRY.

For the Western Recorder.

THE FATE OF AUTHORS.

——Production was the world
In many things, but most in books.
Course of Time.

Some beauteous authors of the day,
Will live out life and fade away,
For sacrifice of lovely truth,
To please the notions of our youth,
Or when we gain the age of man,
To please the notions of our clan,
Quick as the dew of early morn,
They'll pass away and die forlorn,
Their hopes immortal once so bright,
Will dwell in gloom of sullen night;
The works of true immortal worth,
Are all of bright and lasting birth,
No flimsy creatures—lamplight ray,
But endless truth from brightest day,
To guide our youth, support our age,
And keep us from the dreadful rage
Of gulphing lies, the sanguine foe
That aims to sink us all in woe,
It aims to hook-wink all mankind,
And keep them ever always blind;
Purblind who're led themselves more blind,
They gain the ditch for them assigned.

Nov. 18, 1839. V.

FUNERAL DIRGE.

Solemn strikes the funeral chime,
Notes of our departing time,
As we journey here below,
Through a pilgrimage of woe.

Mortals now indulge a tear,
For mortality is here:
See how wide her trophies wave,
O'er the victims of the grave.

Lo! another guest we bring;
Seraphs of celestial wing,
To our funeral altar come,
Waft a friend, a brother home.

Lord of all below, above,
Fill our souls with truth and love,
As dissolve our earthly tie,
Take us to thy lodge on high.

NEWS.

An official report on the state of public schools in the State of Massachusetts, states that all the boys of Boston, thirty-three only excepted, are members of public schools. The whole number is 16,880. There is, says the Evening Star, no parallel to this in any quarter of the world.—*Middletown Mail.*

The following letter, creditable to the authority from which it emanates, is copied from the official paper of Saturday last.—*National Intelligencer.*

War Department, Oct. 21, 1839.

SIR: Information has been received at this Department that an attempt is about to be made by some persons, associated for that purpose in New York, to carry out to England, on speculation, a number of Indians of the tribes of Sacs and Foxes. The object is understood to be to exhibit these people in England, and, as the legal guardian of the red men, the President feels bound to protect them from this degradation.

This Department, therefore, in conformity with his orders, has taken all the precautions in his power to prevent their abduction from the United States. As the measures adopted to prevent their being removed from the Indian country may prove fruitless when opposed to the love of adventure of the Indians and the cupidity of speculators, I have to request that the Collectors of the ports of New Orleans and Mobile may be instructed to inform the District Attorneys if any attempt be made to embark these Indians at either of these ports, in order that proper legal measures may be taken to restore them to their homes in the west, and to punish the offenders.

I have the honor to be, very respectfully, your obedient servant,

J. R. POINSETT.

Hon. Secretary of the Treasury.

YOUNG IOWA.—The following account of the vigorous growth of the youngest territory of the Union, and its flattering prospects as regards the future, is copied from the paper published at Burlington (Iowa) by the original title of "The Hawk Eye," under date of October 17:

"OUR TERRITORY.—All who feel interested in the prosperity of the infant territory cannot be otherwise than gratified to see the great number of emigrants who are rushing into it from all quarters.—Every steam boat that stems the Great Father of Waters to this and the points above us comes laden with this kind of produce from other countries, and from other States. They are pouring in upon us, by the way of northern and eastern Illinois, in such numbers that the shore opposite this place almost continually presents the appearance of a large army with its prancing steeds and heavy baggage wagons, notwithstanding the steam ferry boat is continually thinning its ranks. We are informed by travellers that the leading roads from Ohio and Indiana are crowded with emigrants, all bound for Iowa. Had we no other than selfish feelings, we should bid them welcome, for their coming will add not only to the numerical strength, but to the wealth of the territory. But we welcome them on another account. We sincerely believe that their condition, and the condition of their families, will be bettered. There is land enough and to spare.

"The whole territory is full of strangers. Our city has become a perfect Gotham, emigrants from every State, and, in fact, from every civilized country on the globe, are flocking in clouds to our place."

PORK.—Large droves of hogs are daily driven through this place, into the interior, from Kentucky. The drought in that state has cut short the corn crop, that but few farmers are able to fatten the hogs they have on hand, and have therefore to drive them here, pay twenty-five cents per bushel, or $10 per acre for corn; which will, in all probability, raise the price of corn in this country.—And we think, the owners of the hogs will be but little benefitted by the arrangement, as they are generally very small and poor, and will scarcely pay the expenses of driving and fatting.—*Greensburgh Repository.*

We understand, also, that large droves of hogs from Kentucky, have been driven to this county to fatten. The corn crop in Kentucky is very poor this year, owing to the long-continued drought. Perhaps, it may cause corn to keep up in price, and also increase the price of pork.—*Indiana Democrat.*

We apprehend that our farmers must this year submit to a very considerable reduction on the price of hogs, since the stock is large and money scarce. The pork-packers last year made a losing business; Cincinnati it is said probably lost $1,000,000, and there is little sign of a disposition on the part of purchasers to enter upon the speculations, which have gone to such an extent heretofore, and which have put an artificial value on pork and produce generally. The Hannibal Advertiser speaks of an expectation that from fifteen to twenty thousand hogs would be driven thither this season; but believes that such a number will exceed the demand, and must go off at prices not in any case above $3 a hundred. With that paper we are of opinion, that except in some instances, where the demand may be active, the price just mentioned will be quite as high as the farmers can reasonable expect, as the state of the money market abroad will not justify purchasers at a higher rate.—*St. Louis Gaz.*

UNITED STATES CIRCUIT COURT.

New York, Nov. 1.

Before Judge Betts.

IN THE CASE OF THE UNITED STATES V. ISAAC MORRIS.—Judge Betts, in giving his decision on the matter, said that the accused had been arrested for serving on board a vessel engaged in the slave trade, within the interdiction of the Act of Congress of the 10th May, 1800.

The schooner Butterfly is American built and sailed from New Orleans in May last to Havana, regularly documented as an American vessel with an American crew. In June she changed her master, (the prisoner taking the command, and shipped a new crew entirely Spanish and Portuguese, seven in number.) The master entered into a charter party with a Spaniard to carry a cargo to Principe Island or St. Thomas, and sailed with fourteen other persons denominated passengers. The cargo consisted of articles adapted to the African trade, and such as would be taken in lawful trading voyages, and the same also as would be necessary in trafficking for slaves; it was also all on the Spanish manifest, and all but the materials for the water tanks on the English copy. The vessel was arrested by the British brig Dolphin, and was sent to this port for trial.

She had on board planks and timber enough to lay a slave deck, and in a situation for putting up immediately; also, a large boiler of fifty or fifty-five gallons capacity, just fitted to the coppers on removing the two small ones in ordinary use, and she had up six large water tanks, and staves and materials in readiness for constructing eighteen more; being thus prepared in the manner usual to vessels employed in the slave trade.

The Butterfly is about 180 tons burthen, and would carry 250 slaves. The charter party is produced, and the charterer who went out in the vessel was examined for the prisoner. The cargo was to be carried to the port of destination, and discharged for $3000, and the charterer had the privilege of detaining the vessel not exceeding thirty days, at a demurrage of $20 per day. No provision was made for return freight, nor does it seem that the master had funds or credit to purchase a cargo, so that any other employment of the vessel was not contemplated than fulfilling the charter contract.—The charterer testified that the cargo was worth $30,000 in Havana, and was composed of articles expressly adapted to the African trade; that one of the passengers was a native of the island of Principe, and another was a merchant there, who went out to go into that business; but no account is furnished of the other passengers, or the cause of their being on board.

Under this state of facts, said his honor, the evidence prima facia, would raise a strong presumption that the vessel went out for the purpose of bringing back a cargo of slaves, and it is sufficient to call on the prisoner for the proof of his command, showing that she was not to be engaged in that employment. He does not furnish such proof. The vessel is to be rejected as American, in the event of the United States having offered evidence to show that she was Spanish property, and, accordingly, if the prisoner is criminally amenable for his conduct, it is under the second section of the act, which is as follows:

"That it shall be unlawful for any citizen of the United States, or other persons residing therein, to serve on board any vessel of the United States employed or made use of in the transportation or carrying of slaves from any foreign country to another, and any such citizen or other persons voluntarily serving as aforesaid, shall be liable to be fined not exceeding $2000, and be imprisoned not exceeding two years."

His honor claimed that the terms of the section seem to point to the act of carrying or transporting slaves, as the offence specially prohibited, and to be punished, and he might feel a good deal of difficulty in extending it by applying its constructions to vessels going out in pursuit of slaves, not having yet been concerned in carrying them from one place to another, if he was now called upon to give the first explanation of the section. But finding that the Circuit Court had deliberately adjudged that the sentence embraced the case of a person on board a vessel on a slavery voyage at every point of that voyage, before taking the slaves on board as well as after, [3 Mason R. 175; the brig Alexander,] he should on this examination be governed by that decision, and hold that the prisoner should be detained under this charge for trial.

His honor therefore directed that Isaac Morris be detained until the further order of the Circuit Court, or until he find bail in the sum of $3000.—*N. Y. Herald.*

VARIETY.

"Stop my paper," as the man said, ven the vind blew it avay.

Strawberries were plenty in Philadelphia a few days since, from the *Jarsies.*

If you wish your sons to become tipplers, make it a point to use ardent spirits in the morning, before dinner, when cold, wet, heated or fatigued, and occasionally recommend its use in their presence.

AN IMPORTANT GEOLOGICAL FACT.—It is stated by a pilot on the Mississippi, who has lived 19 years at the Balize, that the river at that time pushed its Delta into the Gulf of Mexico 2¼ miles, or, in other words, gained that much upon the sea. The bar has also advanced two miles and deepened two feet at the same time.

A MARRIAGE AT FIRST SIGHT.—The Milledgeville Journal states that a marriage took place recently in that city under the following circumstances: "A lady from an adjoining county made her appearance in the morning in our city, for the purpose of selling chickens, butter and eggs, when she was accosted by a 'jolly swain,' 'brim full of love,' with the pleasing interrogatory, 'Dear madam, will you marry me?' Astonished, but not *displeased*, the fair lady blushingly answered in the affirmative. A license was immediately procured, a parson or justice employed, and the happy couple were buckled together for life."

SLAVE TRADE.—Among the many slave vessels captured by English vessels of war, a late English paper mentions one, the Sierra del Pina, which was recently run ashore by the captain, and was captured after having been closely pursued by the schooner Pickle, for six hours.—A part of the negroes were pitched into the sea and escaped into the woods with the crew of the vessel. On taking possession, 180 negroes were found on board, several in the most emaciated condition. She started from Africa with 225, and had been ninety-eight days on her passage. Death, and those who escaped into the woods, had reduced the number to one hundred and eighty.

AMERICAN LAKES.—Lake Superior is 400 miles long, 80 miles wide, 900 feet deep. It is 596 feet above the level of the sea.

Lake Michigan is 220 miles long, 70 miles wide, 100 feet deep, and is 578 feet above the level of the sea.

Lake Erie is 240 miles long, 40 miles mide, 480 feet deep, and is 565 feet above the level of the sea.

Lake Huron is 240 miles long, 80 wide, 100 feet deep, and 578 feet above the level of the sea.

Lake Ontario is 180 miles long, 35 miles wide 500 feet deep, and 230 feet above the level of the sea.

Lake St. Clair is 20 miles long, 14 miles wide, 20 feet deep, and 570 feet above the level of the sea.—*U. S. Gazette.*

MURDER WILL OUT.—About forty years ago a family apparently well off, and who seemed to possess an abundance, and were proud, overbearing and suspicous in their character and way of living, resided in Peters Township, Washington county, about twenty miles from Pittsburgh. A middle sized boy lived with them, who they treated harshly and severely, insomuch that his case excited the notice and sympathy of the neighbors. All at once he was missing, and the family reported he had ran off. Suspicions were excited, but as nothing ever leaked out, it gradually died away. The family it was generally remarked, became poor and unhappy, and finally they were sold out for debts and moved away. The farm and property passed into other hands. A few day ago the house was torn down, and on moving the hearth, the bones of a middle sized human being were found under it, and supicions are now strong again, that these are the bones of the boy who it is believed was at that time murdered and buried there.—*Pittsburgh Intelligencer.*

At a recent meeting of a negro debating society, in Alabama, the following subject was brought up for discussion: "Wich is de mose profable to de human famly, de Hos or de Ox?" We have not room for the ingenious and interesting debate which followed on both sides of the question but annex a part of the arguments of two of the speakers, together with the decision of the chairman:

1st Speaker:—"Mister honable gemman, I'm restonished at de gemman wat war up dar talken 'bout de Hos—yes, I'm restonished, and I speak werry cam.—Whar do you go for your beef? Do you go to de Hos? No, you to de Ox. But I speak gin and tell you more—jist tink 'bout eaten Hos, honable gemmen."

2d Speaker:—"Well, I makes my pearance fore dis bord agin for de Hos, kos I likes de Hos, and so does you, honable gemman. Wy if dey karried de mail wid de Ox, you neber git yer letter. Wy, I'm restonished at dat repolent talken 'bout goin to de Ox for beef. War I cum frum we go to de butcher. But I wont say no more, for I'm sartin de Hos goes de caper."

Chairman:—"I'm werry much restonished at dat gemman talken 'bout karrien de mail wid de Hos or de Ox. Whar de Locomotion? Go way, de Ox get de subjec'."—*N. O. Picayune.*

EXAMPLE OF TRUE CHARITY.—When a case of suffering is presented to Mrs. Henderson, she loses not a moment in inquiring into the circumstances. Let the weather and the distance be what they may, through heat and cold, storm and sunhine, hunger and thirst, she seeks out the supplicant for relief. She climbs up to the garret, or gropes her way into the cellar, that she may see and know for herself the whole matter. By this means, she is enabled to detect deceivers, to secure confidence, to give counsel and consolation, to adapt the relief to the circumstances of each case, and thus make her charity seasonable and sufficient.

If a beggar comes to the door hungry or thirsty, she always feeds him and gives him drink, but never money, unless she is fully satisfied that he will spend it prudently and properly. If he is sick and unable to labor, she tries to get him a place in the hospital or alms-house; and if he is without employment, she seeks it for him, if she cannot furnish it herself. If he has a family within her reach, she visits them and inquires into their circumstances; obtains work for the wife; provides a place for the children who are old enough to go out, and schooling through the week and on the Sabbath for such as are of suitable age to attend.

With all this inquiries and labors she mingles kind instruction; and when she comes to relieve their present wants and the diseases of the body, she urges them to think of the more important concerns of eternity, and their need of a divine Physician to heal the diseases of the soul. At the same time she furnishes, as far as practicable, the necessary means of instruction.

Her work is not finished by one visit: she oftener pays ten. Her labor of love ceases only when she has done all that her time and means will allow her to do for the good of her fellow creatures.—This method of dispensing her charity, often calls for the most painful sacrifice to feeling and personal ease. If by subscribing or by giving to some agent or missionary twice, or even ten times the amount of her charity, she could be relieved from these toils and trials, it would be a great gain in point of comfort; but she feels that her sympathy, and counsel, and personal interest in their welfare, does far more for the poor than all the money she gives them.—*The Gift, just published by the American Sunday School Union.*

WESTERN RECORDER.

ZANESVILLE:

THURSDAY, ... NOVEMBER 21, 1839.

The Cincinnati Banks which recently suspended, have resumed specie payments, except the Miami Exporting Company.

Result of the late New York elections; members of the General Assembly—Whigs, 70—Administration, 58. Last year there were 82 Whigs and 46 Administration.

The Hamilton Intelligencer says the interests of a periodical may be as well subserved by good selections as by attempting to write a great deal therefor. So say we.

At a recent Annual Conference of the Methodist Episcopal church, for the Kentucky District, held at Russelville, a thousand dollars was raised by collection for missionary purposes.

Forty-two members of the Methodist Episcopal church in Salem, Massachusetts, have recently seceded and formed themselves into an independent Methodist church. The Rev. H. P. Tracy, of the same church, has became their pastor. Oppressive measures of government is said to be the cause.

The Post Master General has decided that Post Masters may enclose money in a letter to the publisher of a newspaper, to pay the subscription of a third person, and frank the letter, if it be written by himself. Could not our friends procure the agency of a number of Post Masters who would cheerfully render us their assistance in remitting moneys?

Mr. John Yontz, of Brownsville, Licking county, Ohio, we understand, has taken the contract for carrying the mail from Wheeling to Zanesville. He also has under consideration the subject of establishing accommodation coaches on the same line, but as yet has come to no determination in relation to this matter. We hope he may see his way clear to do so, and in that event he shall have our best wishes for his success.

Neal & Moore have heretofore monopolized the public conveyance on that road, and have shaved the travelling community in a most oppressive and unrighteous manner. When others have put stages upon this route, and offered to convey travellers for a reasonable compensation, they have put the fare down to a rate which was ruinous to these new and weaker companies, and by sacrificing some twenty or thirty thousand dollars have run their competitors off the road, and have then returned to their heartless and unfeeling manner of skinning their fellow men. Such oppressive conduct is worse than highway robbery. When the *loafer* attacks you for your money, he leaves you an opportunity to defend yourself, but when assailed by such moneyed tyrants as these you have no chance of escape.

The public are greatly to blame for forsaking the men who have offered to serve them on reasonable terms, and being made the tools of these moneyed despots, for the paltry consideration of saving a few cents, which have all been filtched back again with fifty times as much more. If Mr. Yontz gets into operation with his stages, we hope the public will have spirit enough to sustain him.

"Applause.—When I was a boy, I once went to the Theatre. The tragedy of Hamlet was performed; a play possessing some noble thoughts, and much subtle morality. The audience listened with admiration and applause. I said to myself,'it must be a glorious thing to obtain this empire over man's intellects and emotions.' But now an Italian mountebank appeared on the stage—a man of extraordinary strength and slight of hand, he performed a variety of juggling tricks, and distorted his body into a thousand surprising and unnatural positions. The audience were transported beyond themselves; if they had felt delight in Hamlet, they glowed with rapture at the mountebank. They had listened with attention to the lofty, though they were snatched away from themselves by the marvel of the strange posture. 'Enough,' said I in correcting my former notion, 'where is the glory of gaining applause, or ruling men's minds, when a greater enthusiasm is excited by mere bodily agility than was kindled by the most wonderful emanations of a transcendent genius.' I have never forgotten the lessons of that evening."—*Bulwer.*

The above remarks may be applied with as much force to the pulpit as to the stage. How frequently is it the case that the man of the choicest eloquence will be listened to with but indifferent attention, while he who resorts to the "quip or merry turn," and indulges in a great many bodily distortions and strong gesticulations, will run off in triumph with the popular favor.

Colored American.—This is the title of a weekly super-royal sheet, published in New York, at two dollars per annum in advance, by Charles B. Ray & Co. The editors are colored men, and the design of the paper is to improve the condition of the Africans in America. The editors are men of considerable ability, and their sheet is quite interesting. They sometimes go with abolitionists, and sometimes run a little across their path; they appear to possess independence of mind. The following is from their paper of the 9th instant; but we hope for the credit of the abolition brethren there is some mistake in these statements.

"The way Abolitionists patronize Colored Men.—A few weeks since a notice was put up in the office of the American Anti-slavery Society, that a colored lad was wanted as clerk in an office where certain business connected with the Anti-slavery operations was conducted. A colored young man, eminently qualified, (with the exception that he did not understand that particular business, although it might be learned in a few weeks,) applied for the situation; he received for answer, that he would not suit because he did not understand the business. He then inquired how much the salary was, and was told that if he were *very well* acquainted with the business they might give five or six dollars per week, on condition that he would agree to stay two or three years.

Another colored man inquired of them what kind of person was wanted, and how much they would give: the answer was, they wanted a boy, and would give about three dollars and fifty cents per week.—The same week they employed a white young man, to whom they gave nine dollars per week.

We do not find fault with our friends for employing whom they prefer, neither do we object to the amount of salary they choose to give; but they should not make exceptions between colored and white persons. 'Tis true, the person they employed perfectly understands the business, but any one else of common capacity, could acquire a full knowledge of the same in a short time; or, if any person would not answer except one who did understand the business, they should have mentioned how much they would give without such prevarication."

AGRICULTURAL.

Large Rails.—We know several farmers in the early settlement of this country who made very large rails for their fences—such as would have made three common sized rails, and which took two men to lay them on the fence. These fences soon began to rot and break down with their own weight, and have long since disappeared, leaving not a vestige behind, while the middling sized rail is still in being. Rails should not be too small otherwise they will warp and make a worthless fence.

"A lady has caused to be published in the Chronicle, that hog's lard rubbed on a bedstead with a piece of woollen cloth, will prevent the beg-bug from infesting the bedstead."—*American Farmer.*

Our "lady" says it is the "rubbing," and not the "lard," which destroys the bugs.

Pumpkin Sugar.—It is said that an important revolution is about occurring in France, in regard to the manufacture of sugar; and that a large capitalist intends to erect an extensive establishment for the manufacture of sugar from pumpkins, experiments having shown conclusively that it may be obtained from this vegetable in abundance, and of a superior quality. There is no doubt that sugar of good quality may be made from the pumpkin. We have never seen such an article; but the manufacture of pumpkin molasses was not an uncommon thing in New England, fifty years ago. When the price of this article took a rise, in consequence of the insurrection in Hispaniola, and the embarrassments resulting therefrom to the trade between that island and the United States, many families, within our knowledge, supplied themselves with molasses from the products of their own grounds. Large quantities were made from sweet apples, from corn-stalks, and from pumpkins.—That made from apples was considered the best. The pumpkin molasses had what was called the *punkiny* taste, and the produce of the corn-stalk was always tinctured with a *sickish* flavor, not altogether unlike the taste of licorice.

From the Genessee Farmer.

Wintering Bees.—Agreeably to your request, I called on Mr. Eggleston, and obtained from him the following statement of his method of wintering bees, and the success attending it.

In the fall of 1837, he buried thirty or more hives, and the following spring they were taken out without the loss of any. In 1838, he buried ten hives, with the same success, but lost seven or eight hives of bees that stood in his bee-house through the winter. He says that he finds very few, or no dead bees under his hives that are buried, and that they winter on much less honey than when left in the house; some small swarms have lost but three pounds in weight in wintering, and the largest but ten pounds. He has buried his bees, or some of them, each year, for four years past, and has not lost a swarm that was buried, and shall hereafter bury all that he intends to winter; he has now about forty swarms.—Another fact—those that are buried do much better, and swarm much earlier in the spring.

Mr. Eggleston's method of burying his bees, is to dig a shallow trench in the ground, long enough to set the number of hives he wishes to bury, with a gentle slope in the trench, to carry off the water if there should any collect, and then place the hives in the trench, raised a little from the ground by a small stone under each corner of each hive, then covers them with straw and lastly with dirt, to use his expression, as you would a pile of potatoes, so deep as not to freeze under the hives.

As to the success of Mr. Eggleston, in preserving bees, as described above, there can be no doubt, as it is known to all his neighbors, who (if necessary) will certify to the facts as stated.

Yours, respectfully,

A. Andrews.

Reading, August 20, 1839.

Advice to Housewives.—Those who make candles will find it a great improvement to steep the wicks in lime water and saltpetre, and dry them. The flame will be clear and the tallow will not "run."

Britannia ware should be first rubbed gently with a woollen cloth and sweet oil; then washed in warm suds and rubbed with soft leather and whiting. Thus treated, it will retain its beauty to the last.

New iron should be very gradually heated at first; after it has become inured to the heat, it is not likely to crack.

It is a good plan to put new earthern ware into cold water, and let it heat gradually until it boils, then cool again.—Brown earthern ware, particularly, may be strengthened in this way. A handful of rye or wheat bran thrown in while it is boiling, will preserve the glazing, so that it will not be destroyed by acid or salt.

Clean a brass kettle before using it for cooking, with salt and vinegar.

The oftener carpets are shaken, the longer they will wear; the dirt that collects under them grinds out the threads.

If you wish to preserve your teeth, always clean them thoroughly after you have eaten your last meal at night.

Woolens should be washed in very hot suds, and not rinsed. Lukewarm water shrinks them.

Do not wrap knives and forks in woollens—wrap them in good strong paper.—Steel is injured by lying in woollens.

Barley straw is the best for beds; dry corn husks slit into shreds are better than straw.

Brass andirons should be cleansed, done up in papers, and put in a dry place during the summer.

When molasses is used in cooking, it is a prodigious improvement to boil and skim it before you use it. It takes out the unpleasant raw taste, and makes it almost as good as sugar. Where molasses is used much for cooking, it is well to prepare one or two gallons at once in this way at a time.

Never allow ashes to be taken up in wood, or put into wood.* Always have your lamp and tinder box ready to use in case of sudden alarm. Have your important papers altogether where you can lay your hands on them at once, in case of fire.

Use hard soap to wash your clothes, and soft to wash your floors. Soft soap is so slippery that it wastes a good deal in washing clothes.

It is easy to have a supply of horseradish all winter. Have a quantity grated while the root is in perfection, put it in bottles, fill it with vinegar, and keep it corked tight.

*A good caution, for we have known several fine houses consumed by setting the ash-box carelessly in a situation to communicate the fire.—*Editor Recorder.*

The Ruling Passion.—Among the spectators at Mons. Adrien's exhibition on Saturday evening last, was a broker, who, during part of the performance, fell asleep. After he had been asleep for a short time, Adrien announced a feat with twenty-five half dollars, and commenced counting them on a plate. The broker hearing the sound of money, sung out in his sleep, "I'll give ten per cent. for that!"—*Alexander's Weekly Messenger.*

Vocabulary.—A Turkish vocabulary would be a very convenient thing for the reader of newspapers, and particularly at the present time, when Turkish affairs are brought into special notice. Many are confused by the various terms which they find in the papers, they read of the Ottoman Porte—the Sublime Porte—the Divan, &c., without gaining any very distinct ideas, and they either omit the oriental news as unintelligible, or content themselves with a very superficial acquaintance with it. Some of our readers may perhaps be gratified with an explanation of several of the terms in question, although others may need no such information. We therefore turn hastily to several works of reference, and give the following:

Sultan is the title of the Turkish despot. It is a word of Arabic origin, signifying mighty. The power of the Sultan is hereditary, and knows no limit except the precepts of the Koran, and no restraint except the fear of assassination.—The whole administration, civil, military and religious, is at his disposal. Grand Seignor is another title by which he is known. The title Padishah also belongs to him, and is regarded in Turkey as highly honorable.

Ottoman, the appellation given to the Turkish empire, is derived from the name of its founder, Othman, Ottoman, or Osman.

Ottoman Porte, or Sublime Porte, is the name of the Turkish government.—The word Porte, (Latin porta, a gate) was applied because this was the name given to the gate of the Sultan's palace.

Divan, the name of the supreme council of State. Its original signification is—a board, or low level. Its use therefore corresponds nearly with our use of Board for council.

Grand Vizier, the prime minister of State. On him devolves the actual authority. He appoints to all civil and military offices, and puts to death whom he pleases. The word vizier probably comes from the Latin viado, to see.

Reis Effendi, the Secretary of State. The word effendi, is of modern introduction, and is a corruption of a Greek word signifying lord or master. It is often used as a term of respect.

Pashaw or Bashaw, or Pacha, the first being the most current. This is a governor of a Turkish province. He is appointed by the Sultan and exercises great power. "The most distinguished have three horse-tails carried before them; the inferior only two." The Capadan (captain) Pashaw is the high admiral.

Musselman or Moslem, signifies, in the Turkish language, a true believer.—*Philadelphia North American.*

HOTTENTOTS.

"Mild, melancholy, and sedate, he stands,
Tending another's flock upon the fields,
His father's once, where now the white man builds
His home, and issues forth his proud commands.
His dark eye flashes not; his listless hands
Lean on the shepherd's staff; no more he wields
The Lybian bow—but to the oppressor yields
Submissively his freedom and his lands,
Has he no courage? once he had—but, lo!
Hard servitude has worn him to the bone.
No enterprise! Alas! the brand, the blow,
Have humbled him to dust—even hope is gone.
'He's a base-hearted hound—not worth his food,'
His master cries—'he has no *gratitude!*'"

When the Dutch invaded South Africa, the Hottentots, known among each other by the name of *Quaiquæ*, were a numerous people. They were divided into many separate tribes, governed by chiefs, after the manner of the North American Indians. In a climate so mild and serene, they needed no other dwelling than huts made of boughs, and covered with rush-mats. Sheep-skin, rendered soft by friction, and sewed with sinews, answered for clothing and for blankets. Their principal riches consisted in flocks and herds; and the habits acquired by the necessity of protecting these from the depredations of wild beasts, rendered them very daring and expert huntsmen.—Though gentle, and somewhat indolent, in character, they were not wanting in courage when circumstances required it. "Almedia, the first Portuguese Viceroy, was defeated and killed by them, after a desperate battle, at the Salt River, near Cape Town; and their Dutch invaders have recorded of them extraordinary acts of bravery and self-devotion."

But they gradually yielded to the superior strength and intelligence of the white settlers. Emigrants flocked thither in great numbers; and each one had a right to receive as large a farm as the *Veld-wagtmeester* could *stride* across in one hour. No doubt they took care to choose a tall man, who could take long strides. Whether "the white man's stride" was with, or without, the nominal consent of the natives, is not very particularly specified. The farms were in all probability obtained much after the same manner as a large share of our Indian lands. At the end of a hundred and fifty years, the helpless natives were entirely dispossessed of their soil, and compelled to serve their invaders. A few fierce tribes were driven to the barren deserts on the North of the Colony, and there remained in savage freedom. These hordes, of whom the principal are the Bojesmen, or Bushmen, are very much dreaded by the Colonists. They lead a wandering life, subsisting on wild roots, locusts, ant-eggs, toads, lizards, mice, and such other food as can be obtained amid the sterility of the desert. "They use the ancient arms of the Hottentot race; namely, a javelin, or assagai, and a bow and arrow. These arrows are very slight; but being tipped with poison extracted from a venomous serpent, they are certain death to the most powerful animal."

The Colonial Hottentots were reduced to a most deplorable situation. It had all the horrors of slavery, except that the Dutch law did not allow them to be sold from one estate to another. But they were compelled to labor without compensation, and received such food and clothing as it pleased their avaricious masters to bestow. They were beaten, and kicked, and chained, and mangled with whips of the sea cow's hide—"horrid instruments, tough, pliant and exceeding heavy." With a strange refinement in tyranny, their masters were accustomed to have the strokes administered, not by numbers, but while they were smoking out one, two, three, or four pipes, with all the luxurious laziness of a Dutch boor.

Sometimes, by way of variety in torture, the poor Hottentots were chained to a post, while shot was fired into their legs and thighs.

Under this treatment, the wretched creatures became what any human being would be—brutal, servile, and degraded to the last degree. Stripped of their possessions, emaciated by extreme poverty, dejected by the utter hopelessness of their situation, how could they be otherwise? By a most unrighteous law, any white peasant had a right to claim as his *property*, till the age of five and twenty, any Hottentot child, to whom he had ever given a morsal of meat. And do you believe the poor, ignorant, debased wretch, incapable of asserting his own rights, and without friends to protect him, was emancipated, when he arrived at that age?

Le Vaillant says, "The Hottentots are the best, the kindest and the most hospitable of people. Whoever travels among them, will be sure of sharing food and lodging; and though they will receive presents, they will never ask for anything."

There is a universal idea that this oppressed race, are naturally the very ugliest and most loathsome of all human beings; and such they were no doubt made by years of hard labor, hunger, abuse, and despair; but Mr. Barrow, in his "Travels in South Africa," assures us that they are not so at an early age. He says: "The person of a young Hottentot is by no means devoid of symmetry.—They are clean-limbed, well proportioned, and erect. Their hands, their feet, and all their joints, are remarkably small. Their nose is in some very flat, in others considerably raised. The color of the eye is a deep chesnut; and the eyelids, at the extremity next the nose, instead of forming an angle, as in Europeans, are rounded into each other, exactly like those of the Chinese; to whom, indeed, in many other points they bear a physical resemblance sufficiently striking.—Their teeth are beautifully white. The color of the skin is that of a yellowish brown, or a faded leaf; very different from the sickly hue of a person in the jaundice, which it has been described to resemble. Many are nearly as white as Europeans. Some of the women, when young, are so well-formed, that they might serve as perfect models of the human figure. Their hands and feet are small and delicately turned; and their gate is not insufficient in ease and gracefulness. Their charms, however, are very fleeting."

"A deep gloom constantly overspreads the countenance of a Hottentot. The muscles of his face are rarely seen to relax into a smile. Low as they are really sunk in the scale of humanity, their character has been much traduced and misrepresented. It is true there are not many prepossessing features in the appearance of a Hottentot, but many good amiable qualities have been obscured by the false and ridiculous accounts with which the world has been abused. They are a mild, quiet, and timid people; perfectly harmless, honest and faithful; though extremely phlegmatic, they are nevertheless kind and affectionate to each other, and by no means incapable of strong attachments. A Hottentot will, at any time, share his last morsal with a companion. They seldom quarrel among themselves, or use provoking language. They are by no means deficient in talent, but they possess little exertion to bring it into action."

Yet we find that these indolent and listless beings become very different men, when cheered by the same hopes that stimulate the European. Those among them who were under the protection and encouraging influence of the missionaries,* were energetic, skilful and industrious. "In 1824, there were nearly two thousand Hottentots on the books of the Missionary Institution. They had acquired about two thousand head of cattle, one hundred and seventy-seven horses, two hundred and forty-seven sheep and goats, and sixty wagons; the latter article is expensive and valuable in South Africa. Three hundred children attend the Sunday school, and there was about sixty communicants. Few sheep-skin coverings were to be seen in the premises; nearly all the men were dressed in English broadcloth, and the women in English chintzes. They competed successfully with the English and Dutch farmers for the conveyance of government stores from Algoa Bay to Graham's Town, and during the year expended twenty thousand rix dollars† in the purchase of British manufactures; they had likewise contributed five hundred rix dollars to the Missionary Society, chiefly by small weekly subscriptions."

Cape Colony was taken by the British in 1806; but the same inhabitants and the same customs remained, and the change of government made little or no alteration in the miserable condition of the Hottentots. With the exception of the small number under missionary protection, they were sinking lower and lower in degradation, and fast dwindling away from the face of the earth, in consequence of suffering and privation.

But when the great question of West Indian emancipation was brought before the notice of the British people, the lamentable situation of the Hottentots received a share of attention. The Colonists, both Dutch and English, loudly protested against any change. They said the Hottentots were fit for their condition, and entirely unfit for any other. That they were stupid, sensual, brutal, vicious, and totally incapable of taking care of themselves. The British government wished to alter all this, by means of that great restorative, *freedom;* but the masters said any measure tending to this would produce disastrous effects—there would be no security to life or property, the vineyard would be torn down, the flocks pilfered, their houses burned, and their throats cut.

Perhaps a consciousness of what they *deserved* helped to give the picture this high coloring. But, at all events, their representations did not prevent the intended experiment. "In July, 1828, the Hottentot Helots of the Cape, thirty thousand in number, were emancipated from their long and grevious thraldom, and admitted by law to all the rights and priviledges, civil and political, of the white colonists."

The flocks were not pillaged, or throats cut. No increase of crime took place.—All went on peaceably; and the emancipated slaves have ever since been improving in religion, morality, and industry. A friend of mine observed, "Hottentots as they were, they worked much better for *cash*, than they had ever done for *lash*."—*Mrs. Child.*

*It is worthy of remark that the Colonists favored Mahometism and Paganism among their slaves, because they were afraid of Christianity.

†The rix dollar is a silver coin of Germany, Denmark and Sweden, of different value in different places. In Hamburg and some other parts of Germany, its value is the same as the American dollar, or 4*s.* 6*d.* sterling.

From the Cincinnati Daily Gazette.

A BEAR HUNT ON THE PRAIRIE

AN OCTOBER MORNING'S SPORT.

Lake C. H., Indiana, October 2, 1839.

Dear Sir—The appearance of a bear in an open prairie country, like the north west part of Indiana, is of such rare occurrence, that I may be excused for penning an article upon "the first appearance of bruin on this stage." Since the first settlement of this country, in the fall of 1834, the like has not been known. Early this morning, one of the mail-carriers started out across the prairie, which extends for several miles to the eastward of this place; and in the course of an hour after, came galloping back and rode up to my house "in hot haste," and asserted that he had encountered a bear about three miles off on the prairie, and had 'driven him up' to the outside of some fields near by, and wanted assistance to bring him in; for, although he was good at bear driving, he could not succeed also so well as the revolutionary soldier did, in "surrounding" him, as when he surrounded and brought into camp five red coats.

Feeling entirely credulous, I took my own time to digest my breakfast and the "bear story" at the same time. He however succeeded in convincing a couple of my neighbors that the bear was no wolf, which latter are no wise scarce. Having their horses ready, one of them borrowed a gun, and the three started in pursuit, not however with full confidence of meeting a veritable bear in such close proximity to civilization. But these doubts were soon dispelled, for a short ride brought them in sight of his lordship, beating a hasty retreat from the neighborhood that no doubt had undergone some important, and to him most unaccountable changes since he had travelled that way before. Seeing a reinforcement approaching he made show of "tall walking," that would have done honor to bipeds on their road to Texas. But a smooth prairie, and fleet horses were too much for him, and he soon found himself in the rear of his pursurers. The horse, however, of him with the gun showed no disposition for a close acquaintance with so strange a neighbor, and the rider was obliged to dismount and take a shot. But now, just fancy how excessively provoking to an old hunter, with all his coaxing the gun would not go off, and the bear soon discovered that his enemies, although rather troublesome to his freedom, were compelled to keep at a safe distance, and therefore he tried another run for life. But at every tact a turn he encountered a horse and rider in his path which kind of manœuvring, though very exciting and amusing to the riders, was very tiresome to the horse and quite perplexing to bruin. While this operation was going on, "I went up on the house top," and soon discovered that there was trouble on the prairie. Not having a horse at hand, I seized my rifle and started on foot determined to have a "fight or a foot-race."

After a run of about a mile, I discovered two of the horsemen starting off in different houses at the top of their speed, and I soon divined that further help was needed, as I soon saw the other horseman about half a mile further off quietly watching his now tired and quiet game. The bear it appears, had merely stopped at one of nature's coffee houses, to refresh himself, which as soon as done he was ready for further action. Rising, therefore, to reconnoitre, he found his watchful sentinel still watching, and therefore turned himself the other way a safe path to find, when behold he was again beset on every side, but I was the less object, he supposed of course there would be the less danger in a near approach. And he was nearly right, for my foot race had so broken my wind that I was in bad plight for a fight, and no wonder my friend on the opposite side of the bear, was anxious to know if I intended 'shoot where I looked,' because he found himself more in danger than the bear. My first shot was just sufficient to inform bruin that there was now some action, danger, and the severe rap that the ball gave him over the nose, only served to quicken his endeavors to escape. Hold less effort; for while I was reloading one of the other horsemen returned, and he was soon brought to a stand, and having recovered my wind, I was able to time to shoot where I looked, directly his heart. After a run of about four rods, the cheering cry of "he's down, he's down," rung merrily upon the clear morning air. He proved to be a very old he bear, of a most uncommon large size, and it was supposed by several hunters, that if he had been fat, he would have weighed four hundred pounds. His head was most remarkably large, his nose was brown, but every other part of him a glossy coal black. The legs were like those of an ox, with feet as large as a large man—and you are aware that I am full six feet, yet when stretched upon the ground, side by side, his body proved much the longest.

Whether he was an old settler in these parts, or an emigrant from the Rocky Mountains, remains among the unknown things. At all events, his capture proceed a greater excitement than an arrival from beyond those mountains will do a few years hence.

If you are inclined to think that I have inflicted a tedious account upon you, I beg you to reccollect that killing a bear is not an every day occurrence now days, and consequently it is not often that you get a real genuine "bear story," particularly from your old friend,

Solon Robinson

HE RECORDER.

ZANESVILLE:

SDAY, ... NOVEMBER 21, 1839.

e are three communications in the last ant of the most cheering character to those fond of revival intelligence; and were er not so near closed as to exclude us the e would give large extracts from them.— t is from D. Rosser, which describes a most l display of divine grace at a protracted g which commenced at Barboursville, Al- the 26th ult. Suffice it to say that in ys forty-five were added to the church as it of this meeting, and the work was still ding. A second letter from I. C. Wallace, Newton circuit, Georgia, November 2, n equally interesting account of a ten meeting held at Island Shoals, in that cir- t which there was fifty-seven added to the , principally heads of families, with some ing young men. The third is written by l, Ball, and dated Petersburg circuit, Vir- November 1st, gives various items of reli- prosperity, but particularly at a camp-meet- ld on the 8th ult. at Spring church, at one hundred and two were added to the .

ERICAN WESLEYAN OBSERVER is the name w paper which is proposed to be published Revs. Horton & Scott, at Lowell, Massa- ts, for six months from the first of January at one dollar. It will probably be dedica- ainly to the cause of Abolition. The Gen- nference of the Methodist E. church, which meet in Baltimore in May next, will be t with importance to its abolition mem- Of this they appear to be apprized and are ing for the storm. Ah! brethren, you are ting with a power machine which can grind powder.

He died at the resi- nce of his father-in-law, near Shelby- lle, October 29th, in the twenty-eighth ear of his age. He was a native of New ampshire, and graduated at Waterville ollege, Maine, in 1833.—*ib.*

OHIO EDUCATIONAL CONVENTION.—The urth annual Convention of "Profession- Teachers, and other friends of Educa- on," will be held in Columbus, Ohio, on hursday, December 26. Addresses are expected from Mr. Samuel Lewis, Presi- dent McGuffey, Warren Jenkins, Esq., Drs. Hoge, Pierce and Stow, &c.—*ib.*

By the latest news from Mexico, that republic was in a state of tranquility.— The Federalists having been completely put down, the Central Government was more firmly established than ever.

Elisha Smith has been convicted, in the King's county Oyer and Terminer, of exposing licentious books for sale, and sentenced to twelve months' imprisonment and a fine of $250.

CHINESE CORN.—Col. Jewett produced on a single acre, the present season, one hundred and thirty bushels of shelled corn, of the above variety, on his farm near Columbus.

THE CINCINNATI AND LEBANON TURN- PIKE will be completed and ready for tra- vel a few miles beyond Waynesville early in December, and during the course of 1840 will reach Xenia.—*Lebanon Star.*

The School Fund of Kentucky amounts to one million of dollars, besides the ap- propriations which have been made to the Transylvania University at different times, to the sum of one hundred and seventy thousand dollars.

PARLIAMENT PAPERS.—By a return laid before the British House of Commons, it appears that there has been expended for printing parliamentary papers, within the last eight years, the enormous sum of £373,116 5*s*. 2*d*.

The officers of the 1st U. S. Artillery at Plattsburg, have had repaired the dilapi- dated monument erected to Commodore Downie, who fell in the action with Mc- Donough. The monument was erected by the sister-in-law of Commodore Dow- nie, in Scotland.

RHUBARB.—The rhubarb plant is a na- tive of Turkey, in Asia, where it rises to the height of six or eight feet; the part useful in medicine is the root, which is chiefly brought from Turkey in roundish pieces of a lively yellow color, variegated with streaks of bright red: the leaf and stalks make pleasant tarts.

The State of Ohio contains a surface of 40,000 square miles. It is therefore nearly as large as England. This State has been settled but half a century, and it now probably contains not far from 1,500,000 souls. Rapid as the progress of Ohio has been, the development of her resources has just begun.

AMERICAN VESSEL SEIZED.—The Ameri- can brig Two Friends, Captain Dunkee, has been seized by the American Consul and Spanish authorities at Santa Cruiz, Teneriffe, on suspicion of being a slaver. So reports the brig Retrieve, arrived at Norfolk. If so, it's a very different course from that alleged to be in practice at Ha- vana.

The library of the Harvard University contains fifty thousand seven hundred volumes, and by the treasurer's report, the funds amount to $679,659 34, exclu- sive of all buildings and lands appropri- ated to the use of the University, library, pictures, apparatus, furniture, etc., $228,- 392 71 of which is left for the unreser- ved use of the college.

THE DAYTON AND LEBANON TURNPIKE. This work is nearly finished—only about a half mile remaining unfinished. The whole, however, will be ready for travel by the 1st of December. The turnpike from Dayton to Springfield is also com- pleted; so that travellers now will have a continuous turnpike road from Cincinnati to Baltimore.—*Lebanon Star.*

BOA CONSTRICTOR.—On Friday, the large boa constrictor at the Surry Zoolo- gical Gardens, cast his skin for the first time since his arrival in this country. It measured twenty-two feet in length, and twenty-seven inches in circumference, and was thrown off almost in one entire piece. He fed immediately afterwards, and swallowed four rabits and a small pig for his meal! He had not previously eat- en any thing for five months.

LONG DAYS.—We have a letter from St. Petersburgh, Russia, under date of 13th June, the writer of which states that such was the length of the days in that latitude, at that time, that he could dis- tinctly see to read during the whole night, at windows facing the setting and rising of the sun. The longest day in Russia is, we believe, nineteen hours from sun to sun; while, on the contrary, the shortest only about six hours—the sun rising about three!—*Germantown Telegraph.*

THE PENNSYLVANIA AND OHIO CANAL.— The Western Reserve Chronicle states, on the authority of a letter from Judge King, that a boat loaded with flour, will leave Akron for Pittsburgh by this canal in two or three weeks, if the weather is favorable. It is stated that it is expected the entire line will be completed, and rea- dy for use on the opening of navigation next spring. The boats of the Beaver and Lake Erie line, were expected to re- sume their regular trips from Warren to Beaver on Monday last.—*Ashtabula Sen- tinel, November* 9.

PORK.—We wish it was in our power to give the reader some information as to the prospect of the pork market this sea- son. As yet, we have heard of no ar- rangements being made in this place to pack, to any considerable extent. The Cincinnati papers are also silent as to the prospect in that city.—*Lawrenceburg (Ia.) Beacon.*

The papers of this city are "silent," because no contracts have been made, and buyers and sellers shy. Set down, Mr. Beacon, $3 to $3 50 per hundred pounds as the *possible* paying price.—*Cincinnati News.*

WHETTING A RAZOR.—A young fop who had just begun to shave for a beard, stepped into a barber's shop, and after a grand swagger, desired to be shaved.— The barber went through the usual move- ment, and the sprig jumped up with a flourish, exclaiming—

"My foine fellow, what's your chawge?"

"Oh, no charge," was the reply.

"No chawge! haw's that?"

"Why we are always thankful when we can get a soft calf-skin to whet our razors on!"

Extract of a letter dated

MARION, (Ala.) Oct. 24.

"We have the driest times here that I ever knew in my life. Water is selling in the canebrake at one dollar per gallon, and scarce at that; but we have plenty about Marion yet. We have had a great many camp meetings about here of late, and there has been a vast num- ber of conversions in this county. We occasionally hear from churches where from fifty to one hundred persons have joined at a time."—*Charleston Mercury.*

The Ohio State Bulletin has the fol- lowing:

TRUE RELIGION.—If St. Paul were again to appear on earth, since all the multifu- rious denominations of Christians would claim him, which would he choose? The apostle himself shall answer: "Pure reli- gion, and undefiled before God, and the Father, is this—to visit the fatherless and the widow in their affliction, and to keep themselves unspotted from the world."

If the editor would go to Sunday school, or read his neighbor's Bible, he would see that the Apostle James, and not Paul, was the author of this beautiful definition of religion.—*Steubenville Herald.*

PRINTING BY THE YARD.—The Phila- delphia North American of yesterday no- tices the receipt of a roll of printed paper, seventy feet in length—from a printing office now in operation at Hanover, New Jersey. This enormous sheet contains eight books of 160 pages each! The re- gister is stated to be good, and the im- pression clear. The North American says of this establishment, that the rags are taken in at one door and stitched books delivered at another, at the rate of some thousands of volumes per day. The sheet received is printed on both sides with the Spelling Book. What promise for the rising generation!—*Baltimore Patriot.*

The Liverpool has brought a very val- uable cargo, including in it sixty cases of figured silk of very rich fabric, and of the value of ten thousand pounds each. —*N. Y. Express.*

Six hundred thousand pounds for fig- ured silks, or *two million eight hundred thousand dollars!* Who is to pay? Who can wonder at the constantly occurring bankruptcies of individuals, and the sus- pension of payment by the banks, in a nation that tolerates such unheard-of ex- travagance? What a disgrace to the people of this country, to be laid under tribute to a foreign nation for an article of superfluity in dress—a people, too, who, if they would, might clothe and feed themselves and half the world beside from the products of their labor, and the physical resources of their country.— *Boston Courier.*

STARTLING FACTS!—The late three years war with England, the most pow- erful nation in the world, cost the Uni- ted States about $90,000,000.

The three years war in Florida, with a remnant tribe of Seminole Indians and a few runaway Negroes, has cost us $40,000,000, or nearly half of the whole expense of our war with England!!

In the war with England, our navy and army, after covering themselves with glory, achieved an honorable peace.

The war against the miserable Indians and Negroes, was wickedly commenced, has been ingloriously conducted, and threatens to be interminable!

There is not in the history of wars among civilized nations, a parallel for the wantonness, imbecility and corrup- tion which distinguishes this dishonora- ble, infamous crusade.—*Alb. Eve. Jour.*

BURIED ALIVE.—Among the many fa- tal accidents which it becomes our un- pleasant duty to record is the following, which we were informed of by an eye- witness: On Friday, the 1st inst. a man by the name of Scott, who had recently located himself on a farm about seven miles north of Piqua, on the Hardin road, in attempting to deepen his well, and sink the wall, was buried by the caving in and falling of stones and earth all round him. In this situation he continued a- live for some time, before any one would volunteer to descend to his assistance.— At length an Irishman by the name of Tooly, came forward and offered his ser- vices. He was let down and had suc- ceeded in releasing one of the unfortu- nate man's arm, and conversed with him, until he was warned of his danger by a large stone falling on him. Those above had barely time to raise the brave fellow to the surface, when about eight feet more of the wall and earth fell in and lit- erally crushed and buried poor Scott alive! They eventually succeeded in exhuming the body and committed it to the grave. We understand that a numerous family depended upon him for support.—*Piqua Courier.*

DEAF AND DUMB BOY.—A few years ago a clergyman paid a visit to a deaf and dumb institution in London, for the pur- pose of examining the children in their knowledge of divine truth. A little boy on the occasion was asked in writing, "Who made the world?" He took up the chalk and wrote under the question, "In the be- ginning GOD created the heaven and the earth." The clergyman then inquired in a similar manner, "Why did Jesus Christ come into the world?" A smile of delight and gratitude rested on the countenance of the little fellow as he wrote, "This is a faithful saying, and worthy of all accep- tation, that Jesus Christ came into the world to save sinners." A third question was then proposed, evidently adapted to call his most powerful feelings into exer- cise: "Why were you born deaf and dumb, when I can both hear and speak?" "Never," said an eye witness, "shall I forget the look of resignation which sat on his countenance, as he took up the chalk and wrote, 'Even so, Father; for so it seemeth good in thy sight.'"

EFFECTS OF PURCHASING LOTTERY TICK- ETS.—The injurious effects resulting from the purchase of lottery tickets, were stri- kingly illustrated by some facts recently brought to light in the case of a dealer in dry goods in Boston, by the name of Thompson, who had failed. His creditors wishing to know what had become of his property, he frankly confessed that he had squandered it for lottery tickets. It seems that he had purchased of one Ray- mond, the keeper of a lottery office in Boylston market, during the past year, one thousand tickets, for which he had paid him four thousand dollars. His luck had been bad, having drawn only a few small prizes, and he was obliged to sell his goods at less than cost, in order to continue his purchases of tickets. A complaint was entered against Raymond, for selling the tickets, and he was order- ed to recognize in the sum of ten thousand dollars. The laws of Massachusetts, as well as those of Connecticut, prohibit the sale of lottery tickets, but they appear to be as little regarded in that State as this. —*Hartford Courier.*

THE BENEFITS OF NEWSPAPERS.—The existence of newspapers is one of the most remarkable features of the differ- ence between ancient and modern times. These sheets of intelligence now form an element in the condition of nations, which the ancients scarcely possessed in embryo. They render the official duties of states- men much more difficult than they form- ily were, but they also render the condi- tion of nations much more safe and se- cure; for no measure can become a law without the merits and demerits of it be- ing fully discussed by the press, and understood by the people. For the want of these useful monitors, the ancients were like people wandering in the dark: timid because of their ignorance, and apt to be overset by the slightest alarm. But by the aid of newspapers, we are enabled to know exactly the state of affairs in ev- ery part of our own country, and all over the world as well, and to be prepared in some measure for any event whatever.— Newspapers are the brief chronicles of the times, and have a wonderful influence in guiding and directing the public mind on all public questions. In short, they

"Hold the mirror up to nature."

PREACHING OF JOHN BUNYAN.—The Bi- ble was his principal library. But with scarcely any other book than this he was the most eminent minister of his age, if usefulness may be considered the stand- ard of eminence.

It is related of the learned Dr. Owen, that on a certain occasion, after having heard John Bunyan preach with much power and spirituality, and, on being ask- ed if he had been to hear the "tinker," the name by which in reference to his occupation he was scoffingly designated, the Doctor replied, "I have indeed, and if, by the surrender of all the human learn- ing I have acquired, I could preach with the ability and heavenly unction of Mr. Bunyan, the sacrifice should be cheerfully made."

Bunyan is but one instance, among the multitude that could be named, of talent which might be cultivated, and the elo- quence which might be elicited by a care- ful and truly conscientious and religious study of the book of God. The man who, in the public ministrations, would reason with the most effect, must argue on the principles of revelation. There is pre- sented a system of logic, built on the facts relating to God and eternity, which is un- erring in all its rudeness, infallible in all its premises, and inflexible, just and cor- rect in all its deductions.

He who would arrest the conscience of the bold transgressor, or awaken the stu- por of the careless and self-deceiving, must pluck his arrows of conviction from the Bible, and aim them, with an eloquence which a deep acquaintance with that book can alone inspire, at the feelings, the sinful habits, the corrupt, but secret pro- pensities, of those whom he would recall to duty and to God. It is because the models of inspiration are kept out of sight, and are superseded by a courtly address, and a model of argument built on the ba- sis of carnal reasoning, so that little is done by a large portion of modern preach- ers.

WILLIAM PITT.—Pitt, tall and slender, had an air at once melancholy and sar- castic. His delivery was cold, his into- nation monotonous, his action scarcely perceptible; at the same time the lucid- ness and fluency of his thoughts, the log- ic of his arguments, suddenly irradiated with flames of eloquence, rendered his talent something above the ordinary line.

I frequently saw Pitt walking across St. James' Park, from his own house to the palace. On his part, George the 3d arrived from Windsor, after drinking beer out of a pewter pot with the farmers of the neighborhood; he drove through the mean courts of his mean habitation in a gray chariot, followed by a few of the house-guards. This was the master of the Kings of Europe, as five or six mer- chants of the city are the masters of In- dia. Pitt dressed in black, with a steel hilted sword by his side, and his hat un- der his arm, ascended, taking two or three steps at a time. In his passage he only met with three or four emigrants who had nothing to do; casting on us a dis- dainful look, he turned up his nose and his pale face, and passed on.

At home, this great financier kept no sort of order; he had no regular hours for his meals, or for sleep. Over head and ears in debt, he paid nobody, and never could take the trouble to cast up a bill. A valet de chambre managed his house. Ill dressed, without pleasure, without passion, greedy of power, he des- pised honors, and would not be any thing more than William Pitt.

In the month of June, 1822, Lord Liv- pool took me to dine at his country-house. As we crossed Putney Heath, he showed me the small house where the son of Lord Chatham, the statesman who had Europe in his pay, and distributed with his own hand all the treasures of the world, died in poverty.—*Chateaubriand.*

NEW ENTERPRISE.—*Fishing Expedition to Lake Superior.*—Up to this period, the American Fur Company has principally monopolized the Fisheries of the fresh water ocean of the north-west, and that Company, with the Hudson Bay Company, the trade of the vast region beyond Lake Huron, stretching away to the mouth of the Columbia river on the west and Hud- son's Bay on the north. As far as possi- ble, they have hitherto kept the public in ignorance of their operations, particular- ly pertaining to the Fisheries under their control. But the rapidly increasing de- mand for Lake Fish, together with the in- formation obtained the past season in re- gard to the practicability of establishing Fisheries on Lake Superior, as well as the exhaustless resources of that great fish- pond, have induced several of our enter- prising citizens to associate under the style of the "Cleveland North Western Lake Company," for the purpose of es- tablishing fishing stations on Lake Supe- rior, and embarking in the north western trade generally. The principal members of the Company are Messrs. Menden- hall & Richardson, and the Messrs. Con- verses. The "Algonquin," a new schoon- er of sixty tons, purchased and fitted up expressly for the expedition, sailed from this port for the Sault St. Marie last week. The Company intend to take their vessel over land on the Canada side of the Sault this fall—launch it into the river above, and be ready for operations on Lake Su- perior with the opening of navigation next spring. They will have to raise the schooner from the water below the Sault —place it on the ways—and slide it some- thing more than half a mile before launch- ing. Considering the climate, the diffi- culty of obtaining machinery and help, and the elevation and obstacles to be sur- mounted—the undertaking would seem Herculean to most persons and impracti- cable to many.

In connection with their business in this city, the Company intend to establish a trading post at La Point on Lake Supe- rior. They apprehend no serious oppo- sition from the Companies that have so long monopolized the fisheries and trade of the north west, and enter upon the new enterprise with a zeal and determination characteristic of the universal Yankee nation, in seeking every avenue to the sources of prosperity and wealth. The services of a skilful captain and compe- tent pilot have been secured, and should success crown the expedition, it will pro- bably become the nucleus of extensive fu- ture operations. The single craft, with her bold and hardy adventurers from this port, will prove the pioneer in opening to honorable competition the treasures and commerce of the Father of Lakes, and when the ship canal at St. Marie is com- pleted, will be followed by hundreds of sail laden with products yet unappropri- ated, and just beginning to be known as important items in the trade of the Lakes. Success to the new enterprise.—*Cleveland Herald.*

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANS- ACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the pa- pers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for pa- pers, receipts should be taken; without these we shall consider our subscribers responsible. Ex- perience in conducting a paper, has shown us that attention to this rule is essentially neces- sary to secure justice to a publisher.

5. Our paper is $2 per annum on the recep- tion of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessa- ry to enable us to continue our paper.

Credits will be given in our paper for the mo- neys we have received.

☞All the travelling preachers are considered agents for this paper.

Bicknell's Detector.

MONEY and business matters have increas- ed to such an extent in this country, that we shall soon find it impossible to give an accu- rate and detailed account of all the Banking In- stitutions and Counterfeit Bank Notes within the limits of the thirty-two pages of our monthly pamphlet Detector. We propose therefore to in- crease *the size of that publication sixteen pages in each number.* We must either do one of two things, publish an *imperfect* and incomplete De- tector, or *enlarge* our limits. We have deter- mined upon the latter course, unwilling to do injustice to the public, and anxious as heretofore, to issue the only perfect sheet of the kind in the United States. We cannot do this however, without some increase in price; and hence we shall be compelled to charge $1 50 per annum for the enlarged Detector, instead of $1, the price of our present publication. We promise to make very considerable improvements, to give in addition to the present information, the names of the Cashiers of the various Banks as far as they can be ascertained—to renew the type, to obtain better paper, and, in short, to render our month- ly accurate in every particular, and entitled in a still greater degree to the confidence so gener- ously reposed in it by the public. The increase in the price, however, may not give satisfaction to all, although it must be apparent to every in- dividual, that in enlarging and improving, we shall necessarily be compelled to increase our ex- penses to a very considerable extent. Such, how- ever, as are unwilling to receive the enlarged De- tector at $1 50 per annum, will be good enough to notify us to that effect, immediately after re- ceiving the first number of the new volume. We may add, those who subscribe to the Weekly Re- porter, in addition to the Monthly Detector, will continue to be furnished with the latter at $1 per annum. We are anxious to do every thing in our power to retain our entire list, as well as to secure new patrons; and would make no increase in price, but we find on calculating the impossibility of publishing the enlarged and improved monthly, at the existing rates. Deep- ly grateful for liberal patronage enjoyed, we shall still keep on the even tenor of our way, exerting every energy to render both the Reporter and Detector acceptable, as well as useful and in- structive.

MATHEW T. MILLER,

No. 76 South Third-street, Philadelphia.

November 21, 1839. 14

RELIGION.

WHERE IS CALVARY?—As I was leaning over the railing at Catherwood's Penorama of Jerusalem a few days since, quite absorbed in contemplating the scenes of surpassing interest there pictured to the eye, a stranger broke my reverie by sudden but serious question: "Will you tell me, sir," said he, "where Calvary is?" I was startled at first by the inquiry, but recollecting myself immediately I pointed out the spot—I was then gazing on it—and amused again. The view before us was full of objects to fix the attention and awaken deep emotions in the heart. The mosque of Omor rose in eastern magnificence and reflected the dazzling radience of the noonday sun. Palaces and towers, minarets and arches stood before the eye, and claimed and received the admiration of every beholder. A mixed multitude were with the spectators of the scene—but one spot was the centre of universal attraction. Why did they not look at that troop of wondering Arabs who formed a prominent feature of the view? Why did they pass by the governor of the city as he sat luxuriating in his tent, "dispensing justice to the gathered people?" Why is that shocking sight overlooked where a criminal is stretched upon the ground with his feet upturned, and bared to receive a bastinado, which the executioner is brandishing over him? Why is Mount Olive, with its green foliage, and the more distant hills that surrounded the city, and remind us of that striking illustration, "as the mountains are round about Jerusalem the Lord is round about his people forever." Why are these unnoticed for the time, that all eyes be turned upon one marked spot?

Because that spot is Calvary. The time was when the eyes of the universe were fixed upon that spot. God from his throne looked down upon it. Angels ceased their songs awhile and gazed upon it. The son of God was dying there. The last act in the tragedy of man's redemption was closed on Calvary, and the spot has been memorable in the annals of the world. There are other scenes on earth that are beheld with lively interest and intense delight. But the mind that was ever touched with the dying love of the Lord of glory, it will turn away from all other spots and dwell on Calvary. It loves to dwell there. And should the humble follower of the meek and lowly Jesus be taken up into an exceeding high mountain, whence he could see the kingdoms of the world and the glory of them he would cast his eye over the broad expanded view, and before he rested on a single point would inquire, "Where is Calvary?"

There is no place out of heaven dearer to the pious heart. And am I wrong in saying there is no place in heaven more precious to the beliver's soul than this same sweet spot? I would rather lie at the foot of the Cross than the foot of the Throne. And though the heart is filled with sadness when the sufferings of the Saviour are in view; yet, the same heart is filled with love that no other scene excites, and with other scene affords.

"See from his head, his hands, his feet,
Sorrow and love flow mingled down,
Did e'er such love and sorrow meet,
Or thorns compress so rich a crown?"

But the question which the stranger asked suggested other reflections than these. If he knew not where Calvary was, it was the question of all others he ought to have asked. If he knew not the way to the Cross, he was wise in asking some one to take him by the hand and lead him to it. And as I pointed him to the spot where the Redeemer hung in agony and died in shame, I thought of the joy which the friend of Jesus feels in pointing sinners to the Lamb of God that taketh away the sins of the world. Next to the bliss of knowing that Christ is mine is the sweet bliss of showing him to others as their Saviour. No higher joy could be mine on earth, than to stand at the base of Calvary, and as the thoughtless multitude were journeying down to hell, to cry in their hearing, "This is the way, walk ye in it—turn ye, turn ye, for why will ye die—behold the Lamb of God?" And O! what rapture fills the watchman's heart when one from the multitude who are thronging the broad road to death turns aside and asks, "Can you tell me, sir, where Calvary is?"

Yes, poor sinner, inquiring sinner, I can tell you where Calvary is. Go with me, and I'll lead you to the very spot.—But you cannot go as you now are. You are laden with guilt. You must cast away from you all your transgressions and look forward with an eye of faith. But there in the distance stands the Cross. Upon it hangs the Saviour who bleeds for you and me. Look and live. Weary and heavy laden you may there find rest to your soul There is no way to heaven but the one that leads over Calvary. By the Cross you must win the Crown.

INFLUENCE OF RELIGION.

Religion in the human mind is apt to decline in two different ways. It degenerates into fanatic superstition or into a cold speculative philosophy. Both these are averse from its proper nature; but, perhaps the last most so; for the first is but excess, and the last is defect. The excesses of the first startle men, and warn them back: but the cold speculative faith almost recommends itself to an intellectual age. It looks like reason purifying religious belief, while she takes no more than she can comprehend. Yet it is an inclination of the mind to atheism, for it is a loosening of it from the bond of its full religious obligation. How shall we pretend to say that we will bring to this service our intellectual and not our moral being? That we will know what is to be known, and believe as far as undoubted evidence constrains our conviction?—But that our heart, our whole spirit of passion and feeling shall remain exempt from the same influence. If our minds owe any thing to God, they owe all.—Their rational intelligence is required to the highest use of its intelligent powers, when it is called upon to know the truths which religion teaches and on which it rests. The greatest object of thought is presented to the understanding. But, at the same moment, the greatest objeet of affection is offered to the soul. And it is as absurd and self-contradictory to our nature, not to feel, as it is, when truth is untolded clearly before us, not to understand.

The mere consideration of the constitution of the human mind is sufficient to show what is the relation that religion bears to the whole. It is the vital principle of the whole being. It is like the soul of the soul. By it all the other powers and feelings are reduced to their right place and subordination. Without it the whole mind is disturbed and thrown into disorder. Hence only are derived true magnanimity and wisdom. Hence only the affections are purified and sublimed. Hence only the passions receive their law.

What religion is to the individual mind, that it is to the mind of a whole people. This alone preserves it lofty and strong. Without this it sinks into weakness and degradation. Its intellectual powers, its courage, its liberty, are no sufficient security. These cannot preserve its elevation. These, though noble in themselves, are not of sufficient power to maintain the whole rational mind ennobled.—It is necessary that men should have before their minds some object of regard and desire, of which they fall infinitely short; that so they may be admonished to arouse themselves, and advance their nature. Their spirit is beset with many insidious foes; and it is not possible for them, by any vigilance of their own, to guard and protect themselves in the highest strength they become secure; for those betraying weakness cease to have any power over them.

The character of nations seems borne down by a fatal power. The great principles of opinion and passion which have sustained them for a period sink away, and none succeed in their place. The great progress of their maturer intelligence advances them beyond the noble errors of their uninstructed youth.—There is, then no principle which can save them from decay coming on, but religion. In their highest state of intelligence, here is an object which commands the adoration of reason. In their decay and fall of spirit, here is a passion which can enter the sunk and languishing heart, and rekindle and renovate its strength. In the flow of overwhelming luxury, here is a principle of power to contend against the enchantments of sense, and to cast out the madness of the grosser passions. Here is a spirit which can enter every house, can tell pleasure of its folly and wealth of its vanity, which can address itself to every heart, and chastise in each single breast the universal depravity.

How utterly have those nations fallen who have been without religion! How have those declined and suffered who have corrupted their religion! We feel that we have yet some strength with which to contend against the threatening decays that creep in upon the further periods of a nations existence. But of that strength how much do we owe to the vigor in which our religion has been maintained among us? How much of it would be left, if you should ever suffer that religion unhappily to decay?

In the laws, the manners, the philosophy, the literature of a people, the influence of high religious feeling will be traced, unobtrusively but powerfully diffusing itself through every part of their welfare. How much of the happiness of a people, of the purity and dignity of its manners, arises from that domestic virtue which religion alone can guard. Their public institutions must be actuated by the same spirit. Their literature will take a character, indirectly, from this source. If the thoughts of the people be high and pure, their whole literature will maintain the same tenor. Their philosophy especially, which continually draws near to religion—which weds itself to their morality—which is constantly derived anew from the highest faculties of their intelligence—their philosophy will be lofty or low, a science of truth or of falsehood, as their whole mind is more or less influenced and governed by these high doctrines and feelings. In truth, what philosophy of morals can there be which does not deprive its character directly from this source? Nothing but abasement and degradation of the whole moral nature of man can follow the moment morality is made independent of this connexion. It were better to leave man without speculation at all upon this subject, than to exhibit to him himself bereft of his highest capacity, and to persuade him that this is the faithful picture of that being which he was created.—Even that sience which seems less immediately connected with this part of our nature, pysical science, is in a thousand ways likened to it, and owes to its noblest character. For it is not the subject-matter itself that constrains the mind to an inevitable course, but the mind, according to its own character, selects the matter of its knowledge. The highest researches of this science are those which are connected with the great principles that govern the natural world; and to these the mind seems called forth as much by that secret moral feeling which accompanies the sublimer contemplations of nature, as by its own intellectual tendency. Nor is it possible to conceive of the mind of Newton investigating the laws of the universe, without believing that his great studies had to himself their brightest commendation, while he believed himself permitted, in pursuing them, to become, in some part, an interpreter of that divine wisdom which has framed and governs the world.

In these inquiries we are accustomed to speak of the light of nature in comparison with the light of revelation, and to speak of the theological doctrines of which our human reason gives us assurance. Such expressions as these may easily lead to important error, and do, indeed, seem often to have been misconceived and misemployed. What those truths are which human reason, unassisted, would discover to us on these subjects, it is impossible for us to know, for we have never seen it left absolutely to itself. Instruction, more or less, in wandering tradition, or in express, full, and recorded revelation, has always accompanied it; and we have never had other experience of the human mind than as exerting its powers under the light of imparted knowledge. In these circumstances, all that can be properly meant by those expresses which regard the power of the human mind to guide, to enlighten, or to satisfy itself these great inquiries is, not that it can be the discover of truth, but that, with the doctrines of truth set before it, it is able to deduce arguments from its own independent sources which confirm it in their belief; or that, with truth and error proposed to its choice, it has means to a certain extent, in its own power, of distinguishing one from the other. For ourselves, we may understand easily that it would be impossible for us to shut out from our minds the knowledge which has been poured in upon them from our earliest years, in order to ascertain what self-left reason could find out. Yet this much we are able to do in the speculations of our philosophy. We can inquire in this light, what are the grounds of evidence which nature and reason themselves offer for belief in the same truths. A like remark must be extended to the morality which we seem now to inculcate from the authority of human reason. We no longer possess any such independent morality. The spirit of a higher, purer moral law than man could discover has been breathed over the world, and we have grown up in the air and the light of a system so congenial to the highest feelings of our human nature, that the wisest spirits among us have sometimes been tempted to forget that its origin is divine.—*Blackwood's Magazine for April.*

A gentleman travelling in Vermont, found the following lines inscribed upon a board near a watering place where he stopped to water his horse.

"Temperance fountain good as can be,
Better far than rum or brandy;
If this truth excites your fury,
Let your horse be judge and jury."

RELIGIOUS SOCIETIES.—The following is a statement of the total receipts of the past year of some of the leading societies in England for the extension of Christianity. For Propogating Christian Knowledge, £90,365; for the Propogation of the Gospel in Foreign Parts, £71,308; Church Missionary, £72,031; British and Foreign Bible Society, £105,031; Wesleyan Missionary Society, £84,818; London Missionary, £65,490; Baptist Missionary, £22,416; Hibernian Society, £11,702; Church Pastoral Aid, £10,423; besides which, there is the Methodist Centenary Fund, amounting to upwards of £200,000.

We subjoin from Mr. Dunlap's racy volumes one of those historical rarities, an authentic account of *Washington's laugh*, about which the world is much divided. The scene is at Philadelphia early in the war, at a house where that General was staying:

"Mr. John Van Horne was a man of uncommon size and strength, and bulky withal. His hospitable board required that day, as it often did, a roasting pig in addition to the many other substantial dishes, which a succession of guests, civil and military, put in requisition. A black boy had been ordered to catch the young porker, and was in full, but unavailing chase, when the master and myself arrived from a walk. "Pooh! you awkward cur," said the good natured yeoman, as he directed Cato or Plato (for all the slaves were heathen philosephers in those days,) to exert his limbs—but all in vain—the pig did not choose to be cooked.—"Stand away," said Van Horne, and throwing off his coat and hat, undertook the chase, determined to run down the pig. His guests and his negroes stood laughing at his exertions and the pigs manifold escapes. Shout and laughter at length proclaimed the success of the *chasseur*, and while he held the pig up in triumph, the big drops coursing each other from forehead to chin, over his mahogany face, glowing with the effect of exercise, amidst the squealing of the victim, the stentorian voice of Van Horne was heard, "I'll show you how to run down a pig!" and, as he spoke, he looked up in the face of Washington, who with his suite, had trotted their horses in the Court-yard, unheard, amidst the din of the chase, and the shouts of triumphant success. The ludicrous expression of surprise at being so caught, with his attempts to speak to his heroic visitor, while the pig redoubled his efforts to escape, by kicking and sqeaking, produced so hearty a burst of laughter from the dignified Washington as any that shook the sides of the most vulgar spectator of the scene."

ADVERTISEMENTS.

School Teacher Wanted.

DISTRICT No. 6, composed of parts of Springfield and Newton townships, wants to employ a good TEACHER, to whom liberal wages will be given. None need apply who cannot come well recommended. Inquire of

Session Paper.

THE OHIO CONFEDERATE and OLD SCHOOL REPUBLICAN will be published twice a week during the approaching session of the General Assembly.

We will furnish it four months, from the 1st of December, for one dollar and fifty cents.

The assistance of our friends who are already in the reception of the paper, and acquianted with its character, is respectfully solicited, in procuring and sending us the names of any who may wish to receive it.

JOHN G. MILLER, Ed. & Pro.

Columbus, November 14, 1839. 13

Dr. A. W. Knight,

(Formerly of Philadelphia, but for the last six years in Muskingum county, Ohio,)

HAS removed to MT. STERLING, and now respectfully tenders his professional services to the citizens of this place and the surrounding country: he may at all times be found, when not absent on professional business, at his residence. He hopes that undivided attention to the duties of his profession, together with an experience derived from twelve years' practice of the various branches of a profession, and part of that time in the Philadelphia Hospital as one of the house physicians, will enable him to merit and receive a liberal share of public patronage.

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,

Corner of Vine and Gano Streets:

PUBLISHED BY G. G. MOORE,

Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience, and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

S. C. Haver,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

Brother Jonathan.

THE LARGEST PAPER IN THE WORLD.

THE proprietors of this sheet—the "Great Western" among the newspapers, have the pleasure of spreading before the reading public a weekly periodical containing a greater variety and amount of useful and entertaining miscellany, than is to be found in any similar publication in the world.

Each number of the paper contains as large an amount of reading matter as is found in volumes of ordinary duodecimo, which cost two dollars—and more than is contained in a volume of Irving's Columbus, or Bancroft's History of America, which cost three dollars a volume—and all for SIX CENTS a number, or *Three Dollars* a year.

BROTHER JONATHAN being a genuine Yankee, and thinking that some things can be done as well as others, is determined to present his readers a MEDLEY hitherto unrivalled by any other paper of Anecdotes, Amusements, Allegories, Accidents, Biography, Bon Mots, Conversation, Crimes, Dramatics, Drolleries, Erratics, Essays, Eloquence, Facetia, Geography, History, Jests, Learning, Morality, Marvels, Music, News, Novelties, Oratory, Poetry, Philosophy, Quiddities, Religion, Romance, Sports, Spectacles, Sorrows, Sufferings, Tales, Trials, Truths, Teachings, Wisdom, Wonders, Wit, &c. &c.

As a family newspaper, BROTHER JONATHAN will be found to present attractions beyond any other.

——"He comes the herald of a noisy world,
News from all nations lumbering at his back."

The earliest intelligence, Foreign and Domestic, and the latest novelties of the Literary World, will be promptly served up for the gratification of the reader.

Strictly neutral in politics, it will contain nothing in favor or against any party, and will as seduously avoid any of the controversies which agitate the religious community. Strict morality, temperance, industry and good order, benevolence, and usefulness to our common country and our fellow men, will be advocated and in every page of Brother Jonathan.

TERMS OF BROTHER JONATHAN—*Three Dollars a year in advance.*

For five dollars two copies will be sent one year, or one copy two years.

The EVENING TATTLER is published every day at the same office, and is put to press at meridian, in season for the great Northern, Eastern and Southern mails, which all close about two o'clock, P. M.

☞All country papers who give this prospectus three insertions, will be entitled to an exchange, on sending a number of their paper to this office containing the advertisement.

☞All communications and letters should be addressed *postage paid* to

GRISWOLD & COMPANY,
162 Nasau-street New York city.

November 14, 1839. 13

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description hereunto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts. - -	1 copy for a year.
" $5 - - -	12 copies.
" 10 - - -	25 "
" 20 - - -	60 "
" 30 - -	100 "
" 50 - - -	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can soiicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,

Ohio State Journal.

FOR THE SESSION.

IN consonance with previous usages, the proprietor of the Ohio State Journal submits following prospectus to the consideration of people of Ohio. The political character of Journal is so well known, that no new comm are necessary to explain it. It is unequivoc opposed to the administration of Martin Buren, and of all the mad schemes of himself his advisers. The Journal will continue ste ly in the path of its long avowed and long che ed principles. Success cannot corrupt it, defeat intimidate it. As a faithful sentine the watch-tower of American liberty, it wil ways be found awake on its post.

During the winter, abundance of interest matter may be expected from the halls of our S Legislature. The work of BANK REFORM i be finished, by the majority who now rule umphant, and we, in common with the w State, feel anxious to investigate its opera and its progress. Our attention will be give the subject most amply and unreservedly.

In every other respect, the Ohio State Jou will adhere to its original plan and characte It will be, emphatically, a NEWSPAPER, in w columns may be found all the interesting ev of the day. Congressional reports, Foreign Domestic intelligence, together with the opin of our cotemporories of the Press, and occasio draughts from the pens of our literati, will forn agreeable variety. A generous support is quested.

TERMS.—Daily Ohio State Journal, $

SESSION PAPER.

ACCORDING to custom, we again pre to the people of Ohio our prospectus paper during the session of the Legislature. ny persons who do not find it convenient to scribe for a paper printed at this place for a w year, do so during the sitting of the Legislat being desirous of seeing what is done by t in whose keeping they have entrusted the af of the State. To accommodate this just de in the people to be thoroughly acquainted every thing appertaining to their happiness welfare, we have in this prospectus extended cilities and favors beyond what has been cust ary. We shall issue during the session a we paper (free of advertisements,) at fifty cent semi-weekly at one dollar—a tri-weekly at dollars, and a daily at three dollars. By thi rangement, we will be able to accommodate ry portion of the State by all the mails, and hope our friends will not be remiss in avai themselves of these means of information. all important that every freeman should be acquainted with every question touching welfare of the State and nation.

The approaching session of the Ohio Legi ture will be a most important one. No prev one has ever had the same number of delicate exciting questions to meet and act upon—q tions which cannot be avoided, nor disposed a moment. Among these are our Internal provements, and the expenditures under th The condition of our Banks, and the bank system under the second suspension. The r sion of the laws, as collated under an act of last Legislature. The apportionment of State into Senatorial and Representative tricts, and an equitable taxation by a re-va tion of property, will be discussed. All t questions have been confided, by the overwhe ing voice of intelligent freemen to the care keeping of the democratic party, and it is portant that that party should meet them in s earnestness, and in that spirit of candor and triotism which they will bring together, for public good.

We shall also give such sketches of the doi of Congress as we conceive of immediate inte to the State, by the earliest aid of correspond

By the aid of a daily and tri-weekly paper, shall be able to throw out the earliest East news, Foreign and Domestic, which we hope not be overlooked by those desiring such infor tion, and with the aid of a power press, on a and improved model, we expect to add great the facility of preparing our papers for the m without the loss even of an hour. We ask such support as corresponds with our exertion make our paper useful to the public.

TERMS OF THE SESSION PAPER.—☞Pers receiving this paper will consider themselves gents—and for five subscribers one gratis wil sent.

Weekly Ohio Statesman,	$0 5
Semi-weekly "	1 0
Tri-weekly "	2 0
Daily "	3 0

☞All payments must be in advance or re ence to a member of the Legislature.

HYMN.

ion is a glorious treasure,
e purchase of a Saviour's blood,
the mind with consolation,
ll lifts the thoughts to things above;
ans our fears and soothes our sorrows,
l smoothes our way o'er life's rough sea,
nixed with goodness, meekness, patience,
is heavenly portion mine shall be.

earthly house must be dissolved,
d mortal life will soon be o'er,
rthly cares and earthly sorrows,
ll pain my eyes and heart no more.
ure religion remains forever,
d my glad heart shall strengthened be,
e endless ages are onward rolling,
is heavenly portion mine shall be.

vain, how fleet, how transitory,
is world with all its pomp and show,
ain delights, delusive pleasures,
gladly leave them all below.
grace and glory shall be my story,
hile I in Jesus such beauties see,
endless ages are onward rolling,
is heavenly portion mine shall be.

le journeying here through tribulation,
Christian love we'll march along;
while contentions divide the ambitious,
Jesus Christ we'll all be one.
ure religion unites together,
Christain union I plainly see,
le endless ages are onward rolling,
is heavenly portion mine shall be.

OR THE YOUNG.

From the Sunday School Treasury.

E BOY WHO MAKES HIS MOTHER HAP-

For some months past there have
o many military parades in H——,
ne boys have become delighted with
splay, and formed the plan of hav-
company of their own. Every boy
d desirous to become a young sol-
and was trying to get another one
the company.

ere was one little boy whom they
d to train with them; they urged him
much, and told him that it would
ost much, as he already had a lit-
n. They said so much to him that
gan to be very much pleased with
dea of being a soldier. But he al-
asked his mother's permission to
ything of the kind, especially when
ished to go with other boys. So he
his mother if he might join the
any. She was willing that he should
with his school-mates, and unite in
nocent sport; but said decidedly that
id not wish him to train with them,
gave him her reasons. Her son
ed satisfied. In a short time his
er left home to spend a few weeks
e country. Her son was left with
aunt and grandmother. The talk
among the boys was about the new
any and the training. William—
was his name—seemed to partake
e excitement, although he did not
ct to be one with them. His grand-
er, seeing how he felt about it, inti-
d that he might join them; saying
his mother would not be offended.—
emed his mother had signified this
re leaving. Making known her wish-
her son, no conditional reserve was
ssary in the case. William replied,
out any hesitation, "I should like to
if my mother had told me I might;
I know that she had rather I would
therefore I don't wish to."

ow such a boy makes his mother hap-
She can express her wishes, and he
not wish to do anything different.
can go away and leave him, know-
that he will obey her. How happy
she be to come back and meet that
and obedient son. But he will be
appy in receiving his mother. He
feel that he has pleased her. He
not be afraid to have her ask about
behaviour in her absence. There
always be a good account of such a
; for if he wished so much to please
ne thing he will in all.

Will all children try to do as their
ents wish? Will each remember that
l parents know what is best for their
dren? E. W.

RICHARD III.—The reign of the tyrant
ward IV was short; for he died in the
r 1483 just as he was making prepa-
ions for the invasion of France, in the
ty-second year of his age. He left
daughters, and two sons. His eldest
, Edward, was about thirteen years
age; and Richard, duke of Glouces-
, the late king's brother, was appoint-
regent, and afterwards caused him-
f to be proclaimed protector of the
lm.

Gloucester was one of the worst of
n; and under pretence of protecting
two princes, (the youngest of whom,
chard, duke of York, was but nine
rs old,) had them confined to the Tow-

He then reported them to be illegit-
ate, and, through much intrigue, caus-
himself to be proclaimed and crowned
g, under the name of Richard III.
After this inhuman wretch had ascend-
the throne, he caused both of the in-
nocent sons of Edward to be murdered.

He first sent orders to the governor of the Tower, whose name was Brackenbury, to put them to death; but this man had sufficient moral courage to refuse obedience to the tyrant's orders. He was therefore commanded to resign the keys of the Tower into the hand of Sir James Terrel, for a single night. Terrel employed three others as bad as himself, by the names of Slater, Deighton, and Forest. These monsters in human shape, he sent into the apartment of the princes, where they were found in a sound sleep. In this situation, the ruffians suffocated them with the bolster and pillows, and afterwards showed their naked bodies to the infamous Terrel at the door.

Richard now thought all obstacles to his ambition removed, but he found trouble from a source whence it might least be expected. The duke of Buckingham, who had done more to place him on the throne than any other person, and whom he considered as a creature of his will, took an affront at not receiving so great benefits as he expected, and repaired to Wales. Here he raised a considerable army, with an intention of dethroning Richard. He was, however, stopped on his march, by the swelling of the river Severn, which he designed to cross, so long that all his troops deserted him. In this situation, he was compelled to throw himself under the protection of one of his former servants, by the name of Banister, who, although he was under many obligations to his former master, allured by the large reward on the head of Buckingham, basely betrayed him. He was taken by the sheriff of Shropshire, and carried to Salisbury, where he was tried, condemned, and executed.

After this, the earl of Richmond rose up against Richard, and laid claim to the crown. Richmond had descended by the female line, from king John, who died in the year 1216; and owing to certain difficulties, had been a voluntary exile from his own country a number of years in Normandy. Knowing that Richard was obnoxious to the people of England, he set sail from Harfleur with an army of only 2,000 men, and landed in Wales in six days, without opposition. He was reinforced by several thousand men—was met by Richard—a bloody battle ensued—Richard was killed—the crown, which he had worn to the battle, was placed on the head of Richmond, who was now proclaimed king, by the title of Henry VII. Thus ended the career of the usurper and murderer Richard, whose conduct will always be detested, and his example carefully shunned, by all who wish for happiness, in this world, or in that which is to come.

THE REFORMED FATHER.

Father. Come, darling, take a little toddy,
It is a cold, and rainy day;
A little's good for any body;
Come, take a little, child, I pray.

Child. O father, do not tempt me so,
I fear I'll love it by and by,
And then my love will grow and grow,
Till I shall drink your bottle dry.

Father. Fie, fie! that uncle Charles, I think,
Has turned you silly quite, and wild;
Would your dear father tell you drink
If this would hurt his darling child?

Child. Father, I love you from my heart,
But O, I fear to take your brandy;
The sugar'd dram shall be your part,
And I will have my sugar candy.
O, father! tell me what's the matter
At Mr. Toper's house, just by;
O see the little children scatter,
And hear their mother shriek and cry!

Father. Why, child, that lazy drunken hog
Has just come home to beat his wife;
The brute is now so full of grog,
That all must run to save their life.

Child. And yet, when he was young, they say,
He was as good as any body;
But every cold or rainy day,
His father gave the darling toddy.
Father, if he had never tasted,
Would he have been a drunkard now?
His credit gone, his money wasted,
His wife and children sunk in woe?

Father. But ah, my child, he drank too deep,
He should have stopped at moderation;
If we in proper limits keep,
There is no danger in creation.

Child. And, father, I may drink to deep,
If I should drink your sweeten'd grog;
And, Oh! how would my father weep
To hear them call me "drunken hog!"
And, father, don't the Bible say,
No drunkards shall with Jesus dwell?
That God will send them far away,
To sigh and weep in deepest hell?
I love you, father, that you know—
O do not spoil your darling son:—
But should I drink and sink to woe,
I'll say my father urged me on.

Father. Enough, my son! I've no desire
To urge you on to woe and pain;
I'll throw my toddy in the fire,
And never taste myself again.

LIFE OF THOMAS WARE.

"*Sketches of the Life and Travels of Rev. Thomas Ware*, who has been an itinerant Methodist Preacher for more than fifty years. Written by himself," 264 pp.

This is another of the interesting books just published at the Book Room, 200, Mulberry street.

Who would not delight to sit down and listen, through many a long evening, to the instructive stories of a kind and intelligent old man? Though few of you can enjoy the privilege of listening to this patriarch of American Methodism, yet almost any of you can obtain the book, which is adorned with a beautiful likeness of its pleasant looking and venerable author.

It describes wonderful incidents enough to make a popular romance, all interwoven with an instructive history of a church whose rapid growth has astonished both friends and foes.

Mr. Ware was born in New Jersey, eighty-one years ago. When he was a little boy, his father died.

He gives an effecting account of the first gathering of the fatherless children around their widowed mother, at the hour of prayer.

"While thus seated, eight in number, and the eldest only in her seventeenth year, she attempted to read, but could not. She sat and wept. My eldest sister at last said, "My dear mother, why do you weep?" "Alas!" replied she, "death has made you all orphans, and your mother a disconsolate widow. I am not worthy to fill the place of your excellent father. Had I been so, and you been dutiful children, we should not have been left in this forlorn condition. Go, my children, and pray for yourselves. These little ones, (meaning the younger four of the number,) I will take with me into my closet." On hearing these remarks from my bereaved and much afflicted mother, I arose quickly, went out into the field, and wept bitterly. I said to myself, it is doubtless as my mother has said at least, we have been naughty children"

At the age of sixteen, he went to live with an uncle. The oppressive acts of the mother country were then just beginning to rouse the people. He was enthusiastic for liberty. When only seventeen, he enlisted in the army, and suffered with it in its gloomiest season. After he left the army he was providentially led to hear a Methodist preacher—the zealous Mr. Pedicord. He was converted under his preaching, and soon devoted himself to the work of proclaiming deliverance to those who were in the bondage of sin. He preached on Long Island, and in New Jersey, Pennsylvania, Delaware, Maryland, Tennessee, North Carolina and Virginia. He suffered many hardships, experienced surprising deliverances, and was instrumental in turning hundreds from "vanities to the living God."

Mr. Ware dates his book at Salem, New Jersey. Near the close of it, he says:

"For many years that are past, I have sighed and said, "I alone am left of all my father's house." A short time since, I made a visit to the place where I was born. I found one only of my early companions, and he was trembling on his staff. At first he did not know me, though we were particular friends. And where are those who, in 1783, filled the itinerant ranks? Are any of them left? Not one. All of them were in their graves, or in the shade, before I retired. Yet a little while and I shall go the way of all flesh."—*Youth's Cabinet.*

MR. JUDSON.—Soon after Mr. Malcom's arrival in Burmah, the missionaries held a Conference at which many important topics relative to the missionaries were discussed, and much business transacted.—The first Sabbath during this convocation, which was in April, 1836, Mr. Malcom, by request preached to the missionaries. He says it was delightful to preach to such greedy listeners as they were, for most of them had long been deprived of the refreshment of sitting under a gospel sermon; and Mr. Judson had not heard one for *fourteen years!* He then makes the following interesting reflections:—

"As my eye rested on this loved little company, it was sweet to contemplate the venerable founder of the mission sitting there to rejoice in the growth of the cause he had so assiduously and painfully sustained. His labors and suffering for years, his mastery of the language, his translation of the whole word of God, and his being permitted now to be pastor of a church, containing over a *hundred natives*—make him the most interesting missionary now living. What a mercy that he yet lives to devote to this people his enlarged powers of doing good! And we may hope he will be long spared.—His age is but *forty seven;* his eye is not dim; not a grey hair shows itself among his full auburn locks; his moderate-sized person seems full of vigor; he walks almost every evening a mile or two, at a quick pace; lives with entire temperance and regularity, and enjoys, in general, good health May a gracious God continue to make him a blessing more and more!"—*Zion's Herald.*

NEW PLANET.—An astronomer of Palermo supposes he has discovered a new planet; and, from the apparent slowness of its motion, concludes its orbit is beyond that of Herschel.

MISCELLANEOUS.

For the Western Recorder.

MR. EDITOR: The following extracts, from an Anniversary Address, delivered on the 22d of February last, contain some just views happily expressed, on a very interesting subject, and as a friend to labor, industry, education, and civil and religious liberty, I ask their republication in your useful paper. The Address is the production of Professor Schmucker, Principal of a Theological Seminary in Pennsylvania, and as a literary production is worthy of its learned author, who on every page, gives evidence of attachment to our republican institutions, of love to his country and human liberty, of gigantic intellect and ripe scholarship.

To the patriot and friend of human kind it is gratifying to see those whose position, learning and talents, enable them to exercise a great influence in forming public opinion and giving tone to public sentiment, so fearlessly, and with so much ability sustain the dignity of labor, by pleading the cause of the laborer, and so zealously advocate the necessity of *national industry*, *national intelligence*, and *national virtue*, which are the strong pillars on which our government rests. Let national industry once be superceded by national indolence, national intelligence by national ignorance and physical and mental imbecility, and national virtue by national degradation, vice and crime, and our government, now a beautiful, symmetrical structure, will soon crumble into ungatherable atoms. Luxury, indolence, effeminacy and vice, led to the downfall of the ancient Republic of Rome, and there is no good reason to suppose that the same causes will, in republican America, produce different results. We must be industrious, educated, enlightened and virtuous, to long maintain the political, civil and religious liberty we now enjoy. LUTHER.

DIGNITY OF LABOR—RELIGIOUS LIBERTY.

BY DR. SCHMUCKER.

"A republic is a beautiful edifice, but it must rest on firm pillars or it cannot long resist the shocks to which it is exposed. These pillars, in the judgment of the wisest statesmen, are national industry, national intelligence and national virtue. Every member of the community is under obligation to contribute his exertions to the common good. But the subsistence, clothing, and comfort of the whole, require that the major part be employed in productive labor, in developing the physical resources of the country, and in converting the bounties of nature and providence into the necessaries and comforts of life. Therefore labor is useful and honorable, and ought to be so regarded by all. Political economists and wise legislators have indeed always so regarded it, and have paid due respect to the agricultural, mechanical, manufacturing and commercial community; but we now and then meet with an ignorant or inflated coxcomb, or purse-proud sluggard, who would feel ashamed to be caught with an axe, a saw or a shovel in his hand. Such men deserve only our commiseration. If they were all throughout the land to evaporate in one night, the republic would be insensible of the loss. It is the operative, the productive community, that are the bone and sinew of the land, the sources of national wealth in peace, the bulwarks of national defence in war. It is by the hand of industry, that these Atlantic States have in half a century been transformed into highly cultivated farms, checkered with numberless villages, and towns, and populous cities, all linked together by turnpikes, canals and rail roads. It is before the arm of industry, that our western forests have been prostrated, and abodes for civilized men have been planted, where but lately the buffalo and bear held undisputed dominion. Such are the fruits of industry. What would our nation be without them?

Industry is a duty enjoined by our holy religion. As Christians, we cannot forget that Abraham, the father of the faithful, was a grazier; that to Adam, in the state of primitive innocence, was, by divine appointment, assigned the cultivation of the soil.—The Apostle Paul tells us; "If any will not work, neither shall he eat;" and the wisest of men has left on record this important maxim of political philosophy: "The hand of the dilligent shall *bear rule*; but the slothful shall be *under tribute*."

Nor is it at all necessary that the operative community should be ignorant and unenlightened. Of this our own New England States have for half a century furnished demonstrative proof: and when our free-school system shall have impressed its image on the rising generation, the remaining exceptions in our commonwealth will disappear. Indeed, labor combined with education, is calculated to produce the noblest specimens of humanity, as patriots, as warriors, and as missionaries of the cross. It was from the plough that the voice of his troubled country called Cincinnatus to her delivery. Fabricius, and Camillus were alike familiar with the implements of husbandry and of war. So highly was labor respected in the purer ages of Rome, that a single contemptuous allusion to it, was visited with signal displeasure.—"Pri, thee, friend," said Scipio Nasica to a laboring man, on shaking hands with him—"do you walk on your hands?" But mark the consequence. Scipio was then a candidate for the edileship, and *lost his election!* I need not tell you that some of the most illustrious philosophers of our country were mechanics; Franklin was a printer, Rittenhouse a goldsmith, that Washington himself personally attended to the management of his farm; and that it is from the laboring and educated New England, that the far greater part of the missionaries have come, who were willing to forsake every thing for Christ, and plant the standard of the cross in foreign lands!

National *Intelligence* is the second pillar on which a republic must rest. Indeed, the truth of this position must be self-evident to any man, who has a distinct idea of the organization of a republican government. As all power is ultimately vested in the mass of people, as that power is statedly exercised at the polls, in the choice of such men as favor the measures they prefer, it is obvious, that unless the people are capable of understanding the operation of different proposed measures or courses of policy, and of deciding which will exert the most salutary influence on the country, they may, and often will, though animated by the best intentions, decide in favor of the worst measures. The safety of our liberties, therefore, ultimately depends on the intelligence, the freedom and the purity of our elections. The great mass of our citizens are always honest in their intentions, and right at heart. Let them have intelligence enough to judge of men and measures, let them have the privilege of expressing that judgment, uninfluenced and unintimidated at the polls, and let the voice of the majority be fairly allowed to rule; and with the present industry and virtue of our people, our liberties are for the present safe. But if we would strike a fatal blow at the institutions of our country, if we would make the mass of the people mere tools of political demagogues, if we would make the rich richer and the poor poorer still, then let us keep them in ignorance. Let it not be forgotten that the rich will educate their sons, whether provision is made for popular education or not. But the schools place the poor man's sons on equality with those of the rich, as to personal qualifications for business, and for offices of trust or profit, and for the ordinary duties of the private citizen.

Education is moreover necessary to enable us to yield a faithful obedience to the laws. The theory of our government contemplates universal education, presupposes that not a single man shall be found under its jurisdiction unable to read. Accordingly the laws are not trumpeted forth by the proclamation of a herald, as in some ancient days, when letters were comparatively unknown; but they are published in at least one newspaper in every county; and then, devolving on every citizen the duty of reading them, admit not ignorance as a justification of transgression.

Again, popular education is the handmaid and powerful auxiliary of national industry and enterprise, and it is not only by the light of science and literature, that they are directed into the most profitable channels. Who that reads does not know what incalculable advantages the agriculturist has derived from the light which chemistry and vegetable physiology have thrown on the composition of the different soils, appropriate manures, and the rotation of crops adapted to each soil; or does no admit that Sir Humphrey Davy and Lorain, and Buel, and a multitude of others, who have written on the same subject, belong to the best friends of the farmer? To what else are we indebted for the unprecedented and amazing improvements in the different mechanical arts, in the invention, improvement and application of the infinite variety of machinery, and locomotive power, which form a new era in the history of productive industry? In all ages, indeed, literature and science have been made tributary to human industry, and men of the highest attainments have not disdained to labor in this cause. The ancient Greeks could boast among their writers on agriculture, a Democritus, a Xenophon, an Aristotle and a Theophrastus; whilst the Romans could point to Cicero, who, though he wrote nothing original on this subject, translated Xenophon's Economics into Latin, to Cato, to Varro, and to the inimitable author of the Georgics. It is worthy of particular note, that this admirable poem of Virgil, completed and published at the solicitation of Mæcenas, who deplored the suspension of agriculture during the civil war, effected a striking revolution in the habits of the Romans, and brought farming again in repute and practice. And indeed, independently of its high literary attractions, his work contains a multitude of the best economical maxims. I will mention one only, the propriety of which has often struck me when travelling through some portions of our country:

——Laudato ingentia rura:
Exiguum colito.——

that is: It may do well enough to praise large farms; but it is much wiser to cultivate well a small one.

In accordance with these views our ablest statesmen have urged the necessity of popular education. Hear the language of one, to whom you listen to-day with especial pleasure: "Promote then," says Washington, "as an object of primary importance institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it should be enlightened." Nearly all the Constitutions originally adopted by the States at the first organization enjoined on the respective Legislatures some provision for popular education, which proves the estimate of the patriots of seventy-six: and we feel proud in being able to say, that our own Pennsylvania has now redeemed her character, and that among all the States north and west of us, there is now not one without a free school system, unless perhaps our infant sisters Wisconsin and Iowa, which are but one year old, and will not long be without it.

One of the books, which ought to be studied in all our schools, should be a political class-book, explaining the elementary features of our government, and the political duties of our citizens. Such a one was furnished to Massachusetts by a member of her bar, Mr. Sullivan. May it not be long until our Commonwealth is as well supplied. Dr. Duer, President of Columbia College, and Mr. Bayard, of the Philadelphia bar, have each furnished an able work on the constitutional structure of our national government, equally adapted to all the States and well calculated for the higher classes of our common schools. As virtue is another pillar of republican governments, the Bible or at least the New Testament, without note or comment, ought to be read in our common schools; for it is admitted by infidels themselves, that no other system of morality was ever devised, so pure, so benevolent, so well calculated to make good men and valuable citizens as that of the Saviour and his Apostles. The form of government for the administration of the church in the New Testament is essentially republican, and could not fail to favor the free and popular institutions of our country, as it doubtless had great influence in forming the views of some of our revolutionary patriots. Indeed we have lately seen it stated, by Mr. Todd on Congregationalism, that before the Revolution, there was a small Congregational Church, near Charlottsville, Va., the residence of Thomas Jefferson, which that distinguished statesman contemplated with much interest; remarking to a friend, that it was a fine model for a republican government."

A GOOD SENTIMENT.—The following verse was translated from a Persian poem by Sir W. Jones:

On parent's knees, a naked new-born child,
Weeping, there sat, while all around it smiled;
So live, that sinking in thy last long sleep,
Calm thou may'st smile, while others round thee weep.

PUBLIC OPINION.—When a nation changes its opinion and habits of thinking, it is on longer to be governed as before; but it would not only be wrong, but bad policy to attempt by force what ought to be accomplished by reason. Rebellion consists in forcibly opposing the general will of a nation, whether by a party or by a government. There ought, therefore, to be in every nation, a method of occasionally ascertaining the state of public opinion, with respect to government.

"HONESTY THE BEST POLICY."—In the reign of Charles II. a court was to be held at Winchester. The King was to be lodged with one of the clergy, not very high in rank, but whose house was commodious. He was very happy to receive the King, but he most positively refused to admit Nell Gwyne, the King's mistress. He was deaf to all entreaty and remonstrance, and to every representation of consequences. Refuse he did, and another lodging was provided for the lady. Some time afterwards a valuable bishopric was vacant. Interest was made for this and that great divine; but the King inquired, "What is the name of that little fellow at Winchester that would not admit Nell Gwyne into his house? He is an honest fellow, and he shall have the appointment."—*Baptist Advocate.*

PULPIT ORATORY.—A Theological student once wrote to Mr. Garrick for advice on public speaking, and received the following reply:—*ib.*

My Dear Sir: You know how you would feel and speak in the parlor to a dear friend who was in imminent danger of his life, and with what energetic pathos of diction and countenance you would enforce the observance of that which you really thought would be for his preservation. You would not think of playing the orator, of studying your emphasis, cadence or gesture. You would be yourself; and the interesting nature of your subject, impressing your heart, would furnish you with the most natural tone of voice, the most proper language, the most engaging features, and the most suitable and graceful gestures. What you would be in the parlor, be in the pulpit; and you will not fail to please, to affect, to profit. Adieu. D. G.

In contests among men, the party who has committed wrong is generally the hardest to become reconciled.

WESTERN RECORDER.

ZANESVILLE:

THURSDAY, ...NOVEMBER 28, 1839.

☞In consequence of the illness of one of our hands, who has been unable to work for near two weeks, we are behind the time with this number The hands which were abundant in this place last summer are either engaged or gone to other business.

In our fourth and fifth numbers we published, from one of our exchange papers, a part of a Review of Campbellism, by the Rev. R. W. Landis, which was originally published in the American Biblical Repository. The preceding part of the Review we had not seen at the time, nor have we read it since.—We have just received No. XI, extra, of the "Millenial Harbinger," for 1839, which contains a Review of the Review of Mr. Landis, by the Rev. Alexander Campbell.

Mr. Campbell demands, on the principles of justice, that those editors who have published Mr. Landis' strictures should publish his reply. We admit the correctness of the principle.—When a man's opinions or morality is assailed he has a right to be heard in his own defenee, thro' the same medium that assailed him,—provided his application and defence be respectfully made.

So far as we are concerned we are willing to give Mr. Campbell a hearing; but as we have only published a part of Mr. Landis' Review, it would be injustice to him to publish the whole of Mr. Campbell's reply. What we published relates exclusively to the translation of the New Testament. If Mr. Campbell should think it worth while, and will mark for us what he may wish published from his pamphlet, relating to the subject of the translation, we will give it a place in our columns.

Meanwhile, we take pleasure in stating that Mr. Campbell denies the charge of Unitarianism which Mr. Landis fixes upon him, and asserts his belief in the expiatory power of the Redeemer. We will give his own words:

"As it respects the underived godhead of my Lord and Redeemer, on the expiatory power of whose blood, as a real sin-offering, my soul reposes with ineffable delight, I rejoice that the most thorough expurgation of spurious readings—of interpolations and mistakes which I have ever seen, weakens not the evidence, detracts in no wise from the assurance given of it in the volume of inspiration."

"The sacrificial system is itself the frame-work of the gospel. *No shedding of blood, no remission of sin*, is the plainest and most fully and emphatically developed oracle in the Bible. 'A body was prepared' for the 'WORD that was in the beginning with God'—'the *Living Word* that was God,' for the purpose of putting away sin by the sacrifice of himself. *No sin, no incarnation—no sin-offerings, no expiation—no expiation, no remission—no remission, no salvation; and, therefore, no distinction of* FATHER, SON *and* SPIRIT, *no redemption of man. To deny the doctrine of three names—of three relations—of three participents in one godhead is to deny the possibility of saving sinners, and of putting down sin forever.*"

As it respects the peculiar religious sentiments of Mr. Campbell, although we have some general idea of them, yet we have not such a particular acquaintance therewith as we might have. If we had a succint view of his religious opinions we should like to examine them and know for ourself. Our feelings towards Mr. Campbell, personally, have been kindly. But we have not felt so friendly to the genius he seems to impress upon the community, as we have felt to himself. We have been acquainted with a number, converted from the various churches, to his peculiar notions, who, after their change, grew exceedingly bigotted in their liberty, and as we thought, in the general, attended less habitually to the means of grace and the duties of religion; though this may, possibly, have been owing to some other cause than their new principles.

We cannot help expressing a regret that Mr. Campbell has indulged in so much feeling as is evinced in his Review. Take the following as a specimen; after quoting a paragraph from Professor Stuart, he adds:

"I say, gentlemen, with Professor Stuart, in a case by no means so palpably flagrant, cruel, and unjust, you must make amends in your American Biblical Repository, or depend upon it you must answer for it before another tribunal. You are not privileged to calumniate and abuse a large, respectable, and increasing community: nor maliciously to asperse and destroy my character to serve your purposes. You have no right to call me 'a Unitarian,' or to say that I am practising 'a crime in no way differing from actual forgery' in my manner of publishing the New Version. You have blasphemed my character with all your readers; and you are in duty bound as publicly to take back the false charges you have printed, published, and sold to me* and against me.—I will give you an opportunity of doing it, if you can honorably to yourselves.—But gentlemen it must be done. You have both violated the law of Moses, the law of Christ, and also the laws of the States in which you reside; and it behoves you to repent immediately and do works meet for repentance, or perchance you may repent when it is too late."

---

*I have been a paying subscriber to your work from the first number till now.

If we are correct Mr. Campbell professes to be a reviver of the "ancient gospel." Where, we ask, in the name of all that is calm and candid, will he find a precedent for this paragraph in the gospel he advocates? It is certainly not in the example of the benign Redeemer, who when reviled, reviled not again, and when robbed of his coat gave his cloak also. Where did Christ or his Apostles go to law to put down their opponents? Whenever a man resorts to carnal weapons, in religious matters, it is considered as a tacit admission, on his own part, that he considers himself destitute of spiritual means of defence Our friend should recollect, that there is no man in the country who has administered more public inflictions upon his opponents than he has; and has seemed to do it too with much satisfaction. When the same game is played off upon himself, he should bear it with little more patience, and not writhe so severely under the operation as this pamphlet indicates.

What! prosecute a man for calling you "a Unitarian," &c. No! never! brother Ellick.—Why, they call us a Radical, by way of reproach; but they may call us such until the sky falls upon the larks before we will sue them for it. If they have misrepresented you, there is no man in the country more able to set them right than yourself. Do this in the spirit of the gospel and the public will be with you. But the moment you institute a civil prosecution, the tide of public sympathy will be with your opponents.

A communication was handed to us, from a citizen of our town, containing some very severe strictures on professors of religion for extorting, these hard times, from fifteen to thirty per cent. for the use of money, and then evading the law by embracing the amount of interest in the body of the note. These men, he says, are seen at the sacramental altar, and are greeted in the churches and market places as christians and worthy citizens, while they assume a very sanctified and holy appearance. He thinks it is a great mark of depravity in the churches, that such professors as these are not only permitted to have a seat, but even the hightest seat, in the synagogue.—He thinks the common black legs are better men than these church members, because they do not add hypocrisy to their other crimes; yet while both the press and the law are wielded against the latter, they permit the former without rebuke to pass with credit among the first circles of society.

We presume, from the worthy character of the author of this communication, that these facts may be relied on. If correct (and we have little doubt of it,) they call for the severest reproof.—We are glad to know there are some men in the community who have spirit and independence enough to raise their voices against such merciless shaving. Such are gross violators of the spirit of the law, and oppressors of the poor. The principal reason why we did not publish this communication was its length. Those who wish to bear their testimony against vice and oppression, whether seated in high places or elsewhere, will find access to our columns if their essays be brief and couched in a dignified style.

IOWA FEVER.—This disease was epidemic in this neighborhood some two or three months since. Under its influence several parties were formed and set out, some on foot, and some on horseback, for Illinois and Iowa. But a glimpse of those western districts has effected a cure. Not a man of them, that we can learn, has any disposition to cast his lot in either Illinois or Iowa, but all are now perfectly satisfied with their present situations. Many, in former years, in this vicinity, were afflicted with the same symptoms; but most who took the precaution to look before they leaped,—who went to see the country before they sold their possessions, returned satisfied to stay were they were. A number, it is true, have went hence and settled in the far west, but they were generally those daring spirits, who under the impulse of the disease never waited to count the cost, but immediately closed their business here, embarked for the place of their destination, and as they proceeded broke down all the bridges behind them. These, of necessity, would ultimately become satisfied with their condition,—for as the poet sings—

> There 's mercy in every place,
> And mercy, encouraging thought,
> Gives even affliction a grace,
> And reconciles man to his lot.

PRICES OF PRODUCE.—Wheat, in our town, is still 50 cents, but Flour, since our last, has fallen 25 cents on the barrel. We quote it to day at 3 a 3 25. Oats is a few cents lower, and Hay one dollar less per ton. There is no established price yet for Pork. The butchers are offering four dollars, but we know no sales at that price.

Brother Jonathan of the 23d inst. gives the price of Ohio Flour at 6 a 6 12½ in New York, and the exports from that city from the 1st to the 15th November, 38,249 barrels Flour.

Lyford's Price Current quotes the price of Flour in Baltimore, 23d November, at from 6 12½ to 6 37½ at sixty days credit;—6 for cash. He gives as the export to Europe from that Port from the 30th ult. up to that date, 27,180 bushels Wheat, and 24,259 barrels Flour.

The Chillicothe Advertiser says that drovers have given in that vicinty 4 25 per 100 pounds for hogs that weighed two hundred and over.

Harris' Intelligencer of the 23d inst. quotes Flour in Pittsburgh at 3 50.

Just as we were about closing our paper the hands in our office were much excited by the introduction of "BROTHER JONATHAN," from New York. "He comes the Herald of a noisy world." The prospectus of this paper will be found on our last page, which shews it is a weekly sheet issued at three dollars per annum in advance. It is something like four and one half times larger than our own, and is filled with every variety of intelligence and news. Nothing has excited our astonishment, at the rapid march of mind, more than the appearance of this periodical. As much matter as it contains, a few centuries ago would have cost a large fortune. But this shews that improvement has put the means of intelligence within the power of the poorest peasant.

"The statement of Zion's Watchman, that camp-meetings cannot be held in the east, in the neighborhood of great cities, without being disturbed by mobs, is *nuts* to the editor of the Western Recorder, who triumphantly uses it to vindicate the people of the west, from the charge of being less orderly and obedient to the law, than their brethren of the east: he says, camp-meetings are held within a few miles of Cincinnati, where perfect order is preserved. Well, Brother Springer, we will come over the Alleghanies and see one of these days.."—*Boston Olive Branch.*

Come on, Bro. Norris, we will give you a hearty greeting.

We acknowledge the receipt of the first and second reports of the Geological Board of Ohio, from our old friend, Isaac Smucker, of Newark. We consider these as valuable, for which he will please accept our thanks. We shall be happy to receive the contributions of his pen for our paper, on any useful subject he may wish to discuss. If he will accept it we will forward him a copy of our paper as a small consideration for his favors.

Rev. James Gurley, preacher in charge of the Putnam circuit of the Episcopal Methodists, had his house, in the neighborhood of this town, and most of his goods consumed by fire on last Thursday night. Mr. Gurley appears to be a frank and liberal spirited man; this severe dispensation will entitle him to the sympathies, and probably to the assistance of his brethren and friends.

With pleasure we acknowledge the receipt of "Lyford's Baltimore Price Current, and Internal Improvement Journal." This is a valuable sheet to merchants; and to the raisers and venders of produce, especially in the west, as it will enable them to know constantly the state of the market, where a large amount of our produce is vended. See the terms on the third page.

We learn from the Cincinnati correspondent of the Middletown Mail, that a state of excitement exists between the market people and the citizens of Cincinnati, in consequence of an act of the corporation, taxing the market wagons twenty-five cents per day, for standing in the spaces occupied by the market houses, to which open resistance had been offered.

"AN INDEPENDENT MAN is one who blacks his own shoes and boots, who can live without whiskey and tobacco, and shave himself with brown soap and cold water without a mirror," and who does not depend on office for his livelihood.—That's we.

The public dam across the Muskingum at Marietta, was by the late rise of water undermined near the end on the Marietta side, and has sank some six feet. The one at Luke Shute also sank considerable at one side so as to throw the water against the abutment and undermine it.

Morton's majority, for Governor of Massachusetts, over Mr. Everet the whig candidate is 571. It is yet doubtful whether there is an election by the people, as the constitution requires a majority of all the votes cast to make an election. If no election by the people, it will devolve on the Senate.

It is stated by a Pittsburgh paper that three thousand hands, employed in manufacturing, either have, or will be thrown out of employment this winter. The factories of Steubenville have discharged a portion of their hands.

THEODORE SEDGEWICK, of Massachusetts, a short time since, while addressing a public meeting at Pittsfield, was seized with a sudden rushing of the blood to the brain, and expired shortly after.

The news two days later from England, by the ship Oxford, is of very little commercial importance. The British Queen is daily expected.

It is said the case of the Amistad and captured Africans is laid over until January, in consequence of the illness of Covey, the interpreter.

HOW TO LEARN FRENCH.—The Paris correspondent of the New York Star, in his last letter, says: "The Parisians remark that the English are the very slowest and dullest at learning the French tongue. The Poles are said to pick it up readily, then the Irish, (who usually procounce it remarkably well,) then the Germans, Russians, Italians, Spanish, and the English at the end of the *role*. The quickest 'picker up' of the language I ever heard of was a young Irishman named Carroll, whose plan was this: He bought a small dictionary, walked through the streets, and mastered the inscriptions on the signboards and over the shop doors. He consulted the dictionary at every step, and as he learned the meaning of a word, repeated it until he knew it well. He took equal pains with articles of food, furniture, apparrel, and every thing, in fact—and never heard a word without making some one spell it to him, and then he dictionaryed it. In this way he acquired such a knowledge of French, in three months, that he was able to take a share in any conversation. He is now professor of Greek, in a college at the south of France, and his duty is to teach his pupils a daily lecture in French.—That he can do so shows how well he has mastered the language."

PURSUIT OF KNOWLEDGE UNDER DIFFICULTIES.—"So has knowledge almost always been cultivated and genius nurtured—that is to say, amidst difficulties. Where did Franklin first cultivate the knowledge that at length bore him to the height of fame? In a printing office. Where did Bowditch study the mathematics? In early life on shipboard, and ever after in hours snatched from the cares of busy life. How did Ferguson begin to study astronomy? Tending sheep in Scotland; lying on his back upon the care earth, and gazing upon the heavens—mapping out the constellations by means of a simple string stretched from hand to hand, with beads upon it—which, sliding back and forth, enabled him to ascertain the relative distances of the stars. Where did young Faraday commence his studies—still young, and yet the successor in London to Davy? He began his chemical studies a poor boy, in an apothecary shop. Sir Richard Arkwright who was knighted for the improvemnents he introduced into cotton spinning, and whose beautiful seat upon the Wye is one of the fairest in England, was a barber till he was thirty years old. At this moment there is a man in New England who has read fifty languages, who was apprenticed—who has always worked—and who still works—as a blacksmith."—*Christian Ex.*

COLUMBUS NEWSPAPERS.—There is, we presume, no seat of State Government in the Union, if we accept perhaps Boston, from which emanate a greater number of newspapers than from our own city.

We learn from an authentic source that during the quarter terminating on the 30th of September, there were nine papers published in Columbus—six of which were of a political character—one devoted to the cause of religion—another to agriculture, and another to the promotion of the doctrines of the Thompsonian school of medicine.

Below will be found a table exhibiting the number of papers issued from each press during the three months referred to:

Ohio Statesman, issued	85,462
Ohio State Bulletin, "	0,672
Ohio Confederate, "	9,906
Ohio State Journal, "	37,076
Buckeye Whig, "	26,000
Cross & Journal "	21,060
Botanical Recorder*"	10,900
Staats Zeitung "	7,098
Ohio Farmer* "	3,041
	210,215.

*The Botanical Recorder and Ohio Farmer are issued but twice a month—hence their subscription lists are doubly as large as they appear at first glance, or from the table.—*Ohio States.*

BLOODY MURRAIN CURED.

GENOA, DELAWARE CO. Oct. 16, 1839.

On Friday evening last, one of my cows come home late. We noticed that she was out of health; and, on Saturday morning, we discovered that she labored under a severe attack of the Bloody Murrain. I had no hope of curing her—but my wife, having more faith in medicine, procured some two or three pounds of *Garget*, (called in this country pokeroot,) placed it over the fire, in six or eight gallons of water, and let it remain until the water was boiled down to about three gallons. The same evening, after dark, we gave the cow two quarts of this liquid—the same qantity on the following morning with two gills spts. of turpentine.—Through the day we administered frequent doses of the Garget juice, and on Monday morning we gave her another dose of turpentine, which made her very sick for about two hours; after the expiration of this time however, she got up and went to feeding, and has since gained rapidly, both in strength and in the quality of her milk.

N. B.—The turpentine should be reduced by the other liquid, or it may cause immediate death.

By giving publicity to this, you may confer a lasting favor upon the farmers of the west, where the Murrain is prevalent. Yours, &c.

THEO. L. MCDOWELL.

Ed. Ohio State Journal.

Many of the Coast Blockade seamen in Sussex lost their lives by walking over the cliffs during dark or foggy nights; and upon one occasion two of their bodies were discovered dreadfully mangled within a few yards of each other, having been precipitated from a height of about three hundred feet. The circumstance of their being killed nearly at the same spot, and at about the same moment, gave rise to an opinion that they had been thrown over by the smugglers. Be this as it might, some time after, an officer, much disliked for his activity, having fallen into an ambuscade of smugglers, they seized, blindfolded him, and tied his feet together, crying, "Throw him over the cliff!—throw him over the cliff?" Disregarding his entreaties for mercy, they bore him to the edge, and pushed him gradually over, feet foremost, till his arms and chin only remained above the brink; to which he clung by digging his finger nails into the grass, and in this cruel position they left him. He remained thus for above an hour, in agonies of terror, screaming for help, and straining every sinew to maintain his hold, till at length the blood seemed to stagnate in his arms; his strength failed—his brain reeled at the thought of the depth beneath, and he was on the point of letting go in despair, when as a last effort, he released one hand, tore the bandage from his eyes, turned his head with horror, and beheld the bottom within a yard of his feet!—the smugglers having selected a shallow chalk-pit for their purpose, upon the brink of which he had been so tormentingly suspended. —*English Paper.*

A DREADFUL EARTHQUAKE.—A letter from India gives an account of a dreadful earthquake, with which the city of Ava was visited on the 23d of March last.—After some preliminary particulars, the account proceeds:

The earth was rent in several places into wide chasms and fissures from ten to twenty feet wide, from which deluges of water had gushed, and a large quantity of grey earth was thrown up, coveriug the place around several feet deep and emitting a sulphurous smell. The rapid current of the Irrawaddi was even reversed at the time of the shock, and ascended up its bed for a while. The old cities of Ava and Tsagain, with their numerous pagodas and other edifices, have also been reduced to heaps of ruins, and their walls shattered and thrown down. The towns and villages above and below the capital, have likewise suffered, and it is reported that some have even been swallowed up and others destroyed by inundation. The number of persons that perished here, and in the surrounding towns and villages, amount to between 200 and 300, which number may, of course, be expected to swell as reports arrive from more distant places. Amongst those who died are Mr. Harapeat, the wealthy Armenian merchant, and three children of Mr. Avanese. These were the survivors of a family of six children, and he has now been deprived of them too. We have, indeed, to be grateful to Providence, that though we have been in the midst of so many dangers, and where so many have perished, none of us have sufferd either in person or property. We owe certainly our escape to the houses being built of the same light materials as the generality of buildings here, but we had nigh been swallowed up by some of the openings and gaps in the earth, for some of these were not many yards from our residence. An occurrence like this is not in the recollection of the oldest inhabitants in this country, nor is there any mention in any of their historical records.

KNOWEDGE IS POWER.—Some amusing anecdotes are going the rounds of the papers, illustrative of the fact, that "knowledge is power." We would recall to the readers of Italian history, the following remarkable circumstance:

In the centre of the *piazza*, or square of St. Peter's, at Rome, is placed the famous Egyptian Obelisk, of red granite, which was transported from Heliopolis to Rome by order of Caligula, in the 3d year of his reign. He had it erected in the circus, which was situated at the foot of the Vatican mount, near to the *Balilica* of St. Peter's. This circus is sometimes named "Nero's circus," from the circumstance of the gardens of the latter lying in the vicinity. Constantine the Great having ordered the circus to be demolished, the Obelisk remained, upright, among the ruins, until the time of Pope Sextus the Fifth, who caused it to be removed, and placed where it at present stands. The work of removal was entrusted to the celebrated engineer, Fontana, who employed, it is said, forty-one machines, with strong ropes, and immense iron rollers, the whole of which were put in motion by the aid of one hundred and sixty horses, and eight hundred men. It cost the labor of four months to remove the Obelisk, although the distance from the original site, to the spot where it now stands, was not more than three hundred paces. We may imagine the weight of this stupendous mass, when it is stated, that it is one hundred and twenty-six Italian feet from its base to the top of the cross.

After the pedestal was ready, the most difficult part of the operation commenced, namely, the raising and placing of the shaft of the Obelisk. To insure success, it was ordered that the force of all the machines should be simultaneously applied, at given signals; and that no one should utter a word, under pain of punishment, lest the signals should not be observed by the workmen. The shaft slowly rose towards its destined height; but just as it was on the point of reaching its elevation, it was discovered that the ropes, from having stretched more than had been expected were totally unable to accomplish their purpose. An awful pause ensued: the engineer anticipated, with consternation, the failure of his operation; when a sailor, who was amid the crowd of anxious spectators, forgetful, or rather in defiance, of the order of silence, cried out, "wet the ropes!"—The hint was taken, and the magnificent Obelisk was placed upon it pedestal.

REV. ROWLAND HILL.

A queer but true Anecdote—A pious women, a member of the Surry Chapel, was married to a husband, who, though very kind to her, and in many respects a moral man, had no sense whatever of religion, but delighted in spending those hours in swilling beer which she spent in attendance on the preaching of the gospel. It so happened that the parties, through some disappointment in business, had been unable to pay their rent on a particular quarter day. The consequence was, that a distraint on their furniture was put into the house, and a party was employed, as the technical phrase has it, to "take possession." After turning over every scheme in their minds, which could suggest itself for extricating themselves from the difficulties in which they were involved, they were just about to resign themselves to despair, when the idea occurred to the wife, of submitting the whole circumstances of the case to Mr. Hill, She accordingly proceeded to his house, at once got access to him, and with no small degree of tremor, made a short and simple representation of the state of mattters.

"How much would you require to save your furniture and get rid of the person in possession!" inquired Mr. Hill.

"Eighteen pounds, sir, would be quite sufficient for the purpose," answered the woman, with a palpitating heart.

"I'll let you have a loan of twenty, and you can pay me at your convenience."

The heart of the other was too full to give utterance to distinct expressions of gratitude for so great a mark of kindness on the part of her minister. He was too shrewd an observer of human nature not to perceive that the broken accents, sometimes entire absence of words, which characterized her attempt to express her gratitude, offered a far better proof of that feeling being at once deep and sincere, than if she had been most affluent in words and most fluent in using them.

"Send your husband to me on your return home," said Mr. Hill, after the other had returned thanks in the best way her feelings would allow her, "send him to me presently, I will have two ten pound notes waiting him about the time he arrives. I wish to give the notes to you rather than to you."

Mrs.——quitted his house and ried home with a light foot, but still li er heart. Having communicated to husband what had passed between he and the minister, it is unnecessary to that he lost no time in proceeding to house of Mr. Hill. The latter rece him with much kindness of manner.

"And so, said he, you are so unfo nate as to have a person in possessio

"We unfortunately have sir."

"And twenty pounds will be suffic to get rid of him, and restore your fu ture to you?"

"It will, sir."

"Well, then, said Mr. Hill pointin the table, there are two ten pound n for you, which you can pay when are able."

The other hesitatingly advanced to table, took up the notes, and was in act of folding them, and at the same t warmly thanking Mr. Hill for the ac friendship he had done for him, and pressing hope that he would soon be to pay the amount back again, when reverend divine suddenly exclain "Stop a little! Just lay down the n again until I ask a blessing upon the

They other did as he was desired; which the reverend gentleman exten both arms, addressed a short praye the Divine Being to this effect:—"O L who art the Author of all mercy and Giver of all good and perfect gifts, thou be graciously pleased to bless small sum of money to be given to who is before Thee, that it may cond to his present and eternal welfare. Jesus Christ's sake."

"Now, sir," said Rowland Hill, as finished his brief supplication to Throne of Grace. "Now sir, you take the money."

The party a second time took up notes and was in the act of folding th up; when Mr. Hill interposed, by questing him to wait a moment, adc that he had forgotten one thing. It r be easily supposed that by this time individual was a good deal confused. confusion increased a hundred fold, w Mr. Hill remarked. "But my friend, have not yourself asked for a blessing the money, you had better do it now."

"Sir," faltered out the other, scarc able to support himself; "Sir, I can pray. I never prayed in my life."

"You have the more need to be now," observed the reverend gentlen in his cool, yet rebuking manner.

"I cannot, sir—I do not know wha say."

"Make the effort, however short prayer may be."

"I cannot, sir, I am unable to utte single sentence."

"Then you cannot have the money. will not lend twenty pounds to a pray less person."

The other hesitated for a moment, a then closing his eyes, he said with gr earnestness: "O Lord, what shall I s to Thee and Mr. Hill on this occasio He was about to begin another senten when the reverend gentleman interru ed him by observing, "That will do a beginning. It is a very excellent fi prayer. It is from the heart. I ha not uttered a more sincere or fervent tition to God for the last fifty years. Take the money and may God's blessi be given along with it." As he spo Mr. Hill took up the two ten pound not and transferred them to the half bew dered man, cordially shook him by t hand, and wished him good morning.

THE CHINESE COLLECTION.—In the l number of the Baltimore Monument find an account of this magnificent coll tion at Philadelphia—wonderful in its and still more so from the fact that it the work of a single individual, unaid by government patronage or by any o er means save his own industry and p vate fortune. The account is written Brantz Mayer, Esq., of the city of Bal more, and contains, besides a descripti of the gallery, some very just encomiu upon Mr. Dunn, the indefatiguable c lector of this nation in miniature. "I has enclosed a whole people as it we in glass cases," says Dr. M.—"classifi them—their habits, their occupatio their follies, their amusements, the states, their tools, their manners, the dwellings, their custumes, their imp ments of husbandry and war, their shi their boats, their vanities, their mourni and their pleasure, their arts, and the antiquities, their luxury and their supe stitions.—In fact, he has taken a spe men of every thing natural and produce necessary and unnecessary, of the Ch nese empire, and placed it in his colle tion, forming a panoramic pageant Oriental life and art, which places th whole nation within the reach of the m motest inquiring inhabitant of our Union

Every one who has seen this collecti is struch with uncommon unique a splendid character, giving to the obse vant spectator at one view an insight i to the manner, customs, and modes of t Chinese. Besides the gratification of c riosity, the spectacle which such a mus um exhibits may impart much useful i formation. It may serve a better pu pose than a book of travels—for it spea to the eye, and conveys representatio which are indentical with realities, whil the ideas which it impresses upon t mind are definite and distinct. Mr. Dun spent many years in China, accumulat a fortune by successful and honorba trade, and has returned to enrich his n tive city, Philadelphia, with the fruits his industrious and curious researches.

THE RECORDER.

ZANESVILLE.

HURSDAY, ... NOVEMBER 28, 1839.

We made a call some few weeks ago upon our nts for their assistance in the financial way, ich has had but little effect. Bros. Lyon, ncy, Fordyce, Stephens and Scott have re- nded to it, for which they have our thanks.— . Fordyce rides the Middletown circuit, which d already sent us as much cash, and as many scribers, or within a small trifle of it, as any cuit in the District; but, nevertheless, he for- ded us ten dollars cash for five *new* subscri- s. This places Middletown circuit at the head the list in supporting the press. This is high- reditable to them; and we have no doubt ultimately be to their spiritual advantage, it is among such a spirited and liberal people t men of talent and usefulness will seek to la-

But how is it with old Monongahela directly ide Middletown? What has become of our er warm friends on that circuit? We per- ally know that some of them would be able to for a press, individually, without any preju- to their private fortune, and a score or two hem able to pay the annual subscription of a gious periodical almost any day they were ed upon. But hear it! we have received t or nine subscribers from Monongahela cir- , and FOUR dollars in cash, two of which e paid by Bro. Fordyce, above, for his own sub- ption. Brethren, you must be some how or r on the wane.

We regard not mental or bodily toil; these are rfully rendered in attempting to promote the dic good. But such is the nature of our mor- ensibilities, that it gives us the severest pain e unable to meet our financial engagements ey fall due. Such prompt attention as we received from Bro. F. and the Middletown uit, cheers us at our labor, and tends to keep ee from financial embarrassment.

We find that wherever the superintendents of nits make suitable efforts, a good list of sub- ers, with a considerable amount of cash is ed without difficulty. If they all knew how h it would accommodate us, and contribute he permanent establishment of the paper, certainly would not neglect this matter.— should like an effort to be made to see how y new subscribers could be raised, with the in advance, as well as to collect from those have already subscribed. The times are , but recollect we have already vested some ve hundred dollars in this enterprise, beside daily expenses. It will not be as hard for to do a little as for us to do all.

---

he following cases will shew the necessity of care on the part of our agents in writing the es and post offices, they may forward accord- o our published directions, in a fair hand.

ASHTABULA, O., Nov. 8, 1839.

r: I have to inform you that several of your rs with the following address and direction, come to this office and remain uncalled iz:—J. Chandler, Arnett, Ashtabula, Ohio, nich I apprehend there is some mistake.— person addressed is not known here, and the "Arnett," if intended for the name of a office or township, there is certainly none or similar to it in this county or elsewhere knowledge.

eturn one of the papers by this mail with irections thereon. With respect,

Your obedient servant,

N. HUBBARD.

e same note which forwarded to us the above gave us also the name of D. Rowland. But could not make out his post office, being so written, we did not forward to him, until ote us, giving his office so that we under- it.

e have sent papers from our commencement Ross, W. Ross and J. Shull, at the order of our friends, to Tuscarawas, Tuscarawas, ; after issuing our 13th number we received te from the post master that he knew of no names. The same mail conveyed a note the post master at Clarkesville, Ohio, re- ing us to discontinue the paper sent to his to H. M. Johnson, as he could find no such n. Here are mistakes in relation to five s returned to us by one mail,—and these are he only mistakes we have received. This of attention to our rule second, imposes a severe loss upon us;—to prevent this, and o get information in relation to these names hose who may have it, is why we make these ks.

---

e have been sending a paper over the coun- after our old friend, Joel Wood, first to ington, Pennsylvania, next to Cookstown, y his order. The post master at the last where we now send, informs us he knows such man, of course he must have taken an- dodge. If some one will tell us where he ives we will try him again.

---

ere is at present considerable excited at- on, in the city of Baltimore to the subject ligion, in all the churches, in which St. s church (Methodist Protestant,) is partic- ng; they have continued their meetings rly for three weeks, and at these many been reclaimed and a number joined the h.

---

ther F. Stier reports fifty-seven meeting s belonging to the Methodist Protestant in the Maryland District. Will our tent, this year, be so good as to make out of meeting houses in this District, for our iving the number on each circuit.

---

ce the above was in type, which relates to Monongahela circuit, we have received a let- m its worthy superintendent, containing new subscribers;—he says, "we have a few ions, and our people are generally doing We are glad to hear it.

---

communication of the committee of the etown circuit, in our next.

---

will forward the letter of E. Sturman to esident of the District.

The post master at Morgantown, Virginia, informs us that S. Gordon does not call for his paper. Will Bro. Fordyce be so good as to ascertain the reason and inform us?

COMMUNICATIONS.

MONONGALIA COUNTY, VIRGINIA, November 19, 1839

Respected Friend: Our first quarterly meeting closed last evening on Middletown circuit. The meeting was interesting; some half dozen professed conversion during the meeting, and seven joined the church on probation.

George Brown, the President of the Pittsburgh Conference, visited this circuit last month, and held a protracted meeting at Middletown, at which there was an addition of twelve members to the class at that place, and since then we have had an increase of five members more to the same class. On the whole of Middletown circuit there has been an addition of thirty members since the commencement of the present Conference year.

Yours, &c. JOHN FORDYCE.

WESTMINSTER, O., Nov. 19, 1839.

Bro. Springer: I have been about two months on this circuit, since when the power of God has been made manifest in the conversion of sinners; thirty have been added to the church. On the 14th of October we held a protracted meeting, of a very high character for spirituality. We were about closing on Monday morning when ten gave in their names to the church as probationers. It was thought from the indications of divine grace, best to continue the meeting until Thursday. Considering the number of people we had a most extraordinary time. One man, in the night, near two miles distant, hearing the songs of the people of God, was attracted to the house of devotion, and in a short time was at the altar soliciting the prayers of the pious; four more were received on probation.

We have, here, a friendly pious people. They generally keep up their prayer and class meetings. This bids fair to become one of the best circuits in the Districts.

Bro. J. Flood, our President, filled thirteen appointments on this circuit, and his labors were well received. Yours, &c.

JOHN GUEST,
Sup't. Lima Ct.

ITEMS.

A project is on foot to bridge the Mississippi at St. Louis. The cost is estimated at $600,000.

The State debt of Tennessee is only $2,666. Smaller, perhaps, than any other State in the Union.

The State debt of Pennsylvania is $32,000,000; greater than that of any other State in the Union Louisiana is the next, and New York follows.—*Philadelphia Inquirer.*

In the Insolvent Court of the city and county of Philadelphia, there are three hundred and forty applicants for the benefit of the insolvent laws.

Dr. Brownlee has commenced in the Protestant Vindicator, a full exposure of the cunning and art of Bishop England of Charleston, in relation to the "Tax Book of Holy Chancery."

PAYING IN PRODUCE.—The New York papers say that 1,500,000 barrels of flour will be sent to England, and thus $10,000,000 of the foreign debt will be paid off.

Nearly two hundred workmen are employed on the "Burnt District" in Philadelphia, and the prospect is that it will soon be rebuilt in a style of superior excellence and beauty.

A clergyman in Prussia. the Rev. Mr. Kuntze, has himself baptized one hundred and nine of the descendents of Israel. A large number appear disposed to join the christian church.

The city authorities of Wilmington, Delaware, have authorized the emission of five thousand dollars in sums under one dollar, for the purpose of making change.

A wag once remarked, that of all kinds of *lying* the most common is lying in bed late in the morning—except among editors of party newspapers, and they lie after they get up.

Late accouuts from St. Augustine mention that while a detachment of United States Dragoons was crossing Oscilla river, it was fired on by the Indians. Seven were killed and others wounded.

NOT A FABLE.—A boy in New York, not three years of age, was asked who made him? With his little hand a foot from the floor, he artlessly replied—"God made me a little baby, so high, and I grew the rest."

General Scott passed up the Lake this morning on the Buffalo. We understand that reported "Patriot movements" on the frontier, have induced the Secretary of War to order inspection of the military posts along the line.—*Cleveland Her.*

We have, at our office, some specimens of Silk Velvet, Satin Ribbon of fancy pattern, silk thread of several colors, manufactured at Mt. Pleasant and Economy, which are very superior and worth seeing as specimens of domestic manufacture.—*Wheeling Times.*

DELINQUENT SUBSCRIBERS.—The Newspaper credit system ceased in Mississippi on the first of the present month, by agreement among all the Printers of that State. No name is now added to the list of the papers there, unless a year's advance is forwarded.

WAFERS.—The oldest letter yet found with a red wafer was writen in 1624, from D. Krap, at Spires, to the government at Bayreuth. Wafers are ascribed, by Labat, to Genoese economy. In the seventeenth century they were only used by private persons, and public seals commenced only in the eighteenth century.

ACQUITTAL OF MR. ORME.—We learn from the National Intelligencer that the trial of Dennis G. Orme, late teller of the Bank of the Metropolis, for grand larceny, which lasted nearly a week, and created much interest in Washington, resulted on Friday in his acquittal. The jury was absent but about ten minutes.

Some short time ago two American sailors went ashore at Havana, having about them the ordinary jack-knives worn by seamen, and were immediately arrested and sentenced to imprisonment and hard labor for six years.—They are said to be still in confinement. The law against carrying deadly weapons is very severe in the island of Cuba, and is enforced with great strictness.

CAMP MEETING ANECDOTE.—At a camp meeting a number of ladies continued standing on the benches, notwithstanding frequent hints from the ministers to sit down. A reverend old gentleman noted for his good humor arose and said—"I think if those ladies standing on the benches knew that they had holes in their stockings, they would sit down." This address had the desired effect—there was an immediate sinking into the seats. A young minister standing behind him, and blushing to the temples, said, "O, brother, how could you say that?" said the old gentleman, "it is a fact—if they had'nt holes in their stockings, I'd like to know how they could get them on?"

A NEGRO'S PRAYER.—Good massa Lord, if thou wilt be so mitey accommodating as to jist come down here among de black fokes and sway de mighty septer till de black people of kuller gits to be like de white fokes, dis child will lobe you massa Lord, with all de mite he's got. I promis massa Lord, dat dis child wont be mad if you should hit him with a big stone. Just at that momeut his master, who had been listening to this dissertation to the Lord, threw a stone at the negro which felled him to the ground—his master still remained concealed. The negro recovered, and rose upon his feet, and cried out, ah! massa Lord, you'r a quare man, if a body says any ting in fun, you take him all in good arnest.

THE JEWS IN FRANCE.—They enjoy religious liberty, and their rabbies are paid by government. They have a divinity school at Metz, where their rabbies are educated, and receive much scientific instruction. There is much unbelief among them—and in their discussions, they appeal indifferently to the Scriptures, or the Talmuds; and sometimes adopt the infidel objections of Voltaire. Hebrew is very little understood among them, except by the rabbies of the new school; the Bible is in general a sealed book, even in its letter. The most learned books written by them of late years, denote much infidelity. If they are to be converted, it must be by the instrumentality of plain truth, addressed to them as sinners, and by persuading them to send their children to christian schools.—*Boston Recorder.*

An American has patented in England, and in several other countries of Europe, an invention for making broad or narrow woolen cloths, without spinning or weaving. The Leeds Mercury says, that after an inspection of patterns of the cloth, we should say there is every probability of this fabric superseding the usual mode of making cloth by spinning and weaving. The abridgement of labor will be very great. One set of machinery, it is said, not costing more than £600, will be capable of producing 600 yards of woolen cloth, thirty-six inches in width, per day of twelve hours. The machinery would be in a week or two ready for making a trial at Leeds, under the superintendence of the inventor, by a cloth merchant who has an exclusive license. A conditional sale has also been made for the patent right for the kingdom of Belgium, for the sum of £20,000.

A poor woman at Norwich, in England, once had a Jew rap at her door to ask her if she would part with a stone which lay in her window. She said no, it was a keepsake from her son Ben, who was gone to the Indies. The Jew, instead of being daunted was stimulated by this account, and said he had taken a fancy to it and would give a crown for it.

The woman was shrewd enough to know that a Jew would not give five shillings for anything unless it was worth a great deal more. She therefore obstinately refused to part with it till she found out what it was, and what was its value. In the sequel it was discovered that this stone was a very large diamond in its rough state, for which she procured a thousand pounds, or five thousand dollars, after it had thus lain in her window for years as a common stone.

A GOOD ARBITATOR.—Two men had a dispute who would repair a partition fence separating their fields, and through which the cattle found their way. After the usual preliminaries of demands, refusals, threats, and mutual recrimination, they resolved to try the glorious uncertainty of the law. They were however, persuaded by their friends to the more amicable mode of submitting the question to the final determination of a very worthy and intelligent neighbor, who was forthwith conducted to the scene of trouble.—Here, after hearing the arguments of both parties, he told them that the subject demanded great deliberation; and, as it would take him some time to decide, he would just clap a few boards over the holes, and in ten minutes' time, with his own hands, he effectually closed every gap. The parties silently retired, and the umpire has never been called upon to pronounce the final judgement in the case.—*Newburyport Herald.*

TROUBLE AMONG THE CHEROKEES.—"By a letter received last evening from Arkansas," says the Boonville Emigrant, of the 17th, "We learn that the hostility existing between the Ross and Ridge parties, temporarily suppressed, has again broken forth, and several individuals have been killed. The letter bearing date Evansville, Sept. 23d, state that on the night previous about midnight, the Ridge party crossed the Washington county line, and murdered Beng, and two of the Ratliffs of the Ross party. Beng was sick when they murdered him. He is said to have been a great man with his people. The murder of these individuals has caused considerable excitement. The Ridge party are flying to the whites for protection. Where it will end is uncertain, but it is believed that vengeance will be the order of the day."—*St. Louis Republican.*

BOUNDARY TROUBLES AT IOWA.—The last Jeffersonian, printed at the seat of Government in this State, says: We understand that information has been received by the Governor, that the Sheriff of Clark county, in this State, in attempting to discharge his duties, was resisted by an armed force acting under the authority of the Territory of Iowa. The sheriff has reported these facts to the proper military officer within his county, who immediately communicated the information to Gen. Willock, the commanding General of the Division. This officer has referred the matter to the Executive.—Directions have been given to Gen. Willock to cause the sheriff to be provided with a force sufficient to enable him to discharge his duties, and to apprehend and deliver to the civil authority all persons who may be found in open resistance to the laws, and to be dealt with as the law directs.—*Missouri Republican.*

BOSTON LIGHT.—The Boston Journal says—The new lanthorn is now in operation at the Boston Light House; and we learn, fully equals the expectations of those who devised the undertaking.—The light is of great brilliancy—and bursts upon the sight at the distance of twenty miles, with surprising effect, insomuch that in some instances the wondering mariner has hardly dared to trust to the evidence of his senses—but has feared that he was deceived by some pyrotechnical experiment on shore until the regularity of the revolutions, and the uniformity of the flashes, convinced him that it could be no other than Boston Light, astonishingly improved. A few evenings since we saw it from the summit of Bunker's Hill, and was much struck with the singular and beautiful effect which it produced, when it flashed through the darkness which prevailed around. This was at the distance of ten or eleven miles from the Light House. Boston Light now probably approaches nearer to the intensity of the lights in the British Channel, and some other parts of Europe, than any other light on our coast.

NOTICE.

☞A meeting of the "Springfield Lyceum," will be held in the McKendrie church, on Monday evening next, Dec. 2, at early candle-lighting. An Address will be delivered by JOHN W. WHITE.

Ladies and Gentlemen are politely requested to attend. Nov. 28

HYMENEAL.

Married—on Thursday evening last, by the Editor of this paper, Mr. EVAN WORTHINGTON, to MRS. BETSEY MOONEY, all of Springfield township.

Business Department.

RULES TO BE OBSERVED IN THE BUSINESS TRANSACTIONS OF THIS PAPER.

1. In remitting money, give the person's name, to whom credit is to be given, the State in which he lives, and the Post-office where he receives his paper.

2. In forwarding subscribers, be careful to give the *Post-office*, *county* and *State*, where the papers are to be sent, writing the name, office and county in a fair hand.

3. When a paper is to be transferred, give the place whence it is to be taken, as well as the place where it is to be directed.

4. In all cases where moneys are paid for papers, receipts should be taken; without these we shall consider our subscribers responsible. Experience in conducting a paper, has shown us that attention to this rule is essentially necessary to secure justice to a publisher.

5. Our paper is $2 per annum on the reception of the first No. On the first opportunity, therefore, be so good as to hand this amount to an agent, or remit, post paid, (except $10 be sent) by mail, at our risk. If any of our agents have made different stipulations with subscribers as it respects the time of payment, we cheerfully abide their arrangement. But in all other cases, and in future, we shall expect our "Terms" to be complied with. This will be absolutely necessary to enable us to continue our paper.

Credits will be given in our paper for the moneys we have received.

☞All the travelling preachers are considered agents for this paper.

Session Paper.

THE OHIO CONFEDERATE and OLD SCHOOL REPUBLICAN will be published twice a week during the approaching session of the General Assembly.

We will furnish it four months, from the 1st of December, for one dollar and fifty cents.

The assistance of our friends who are already in the reception of the paper, and acquianted with its character, is respectfully solicited, in procuring and sending us the names of any who may wish to receive it.

JOHN G. MILLER, Ed. & Pro.

Columbus, November 14, 1839. 13

Dr. A. W. Knight,

(Formerly of Philadelphia, but for the last six years in Muskingum county, Ohio,)

HAS removed to MT. STERLING, and now respectfully tenders his professional services to the citizens of this place and the surrounding country: he may at all times be found, when not absent on professional business, at his residence. He hopes that undivided attention to the duties of his profession, together with an experience derived from twelve years' practice of the various branches of a profession, and part of that time in the Philadelphia Hospital as one of the house physicians, will enable him to merit and receive a liberal share of public patronage.

Mt. Sterling, Ohio, Oct. 31, 1839. 11tf

Important to Rail Road Companies.

THE subscriber offers to the public a new and improved mode of ascending and descending Inclined Plains on Rail Roads. This improvement supercedes the necessity of horse or stationary power, by giving to the locomotive engine a new wheel, affixed to one of the axles of the motive, which connects with an extra railing laid in the centre of the road, on the plain. As the engine approaches the plain, the pilot wheel on the centre of the axle, falls into gear with the extra railing and propels her onward. The construction and connection of the pilot wheel and extra railing is of such a character that it not only necessarily advances, but advances perfectly smooth, and cannot be impeded by the congealing of ice, the connection of the wheel and railing being on the right and left of the tread.

Rail Road companies or managers wanting further information, will please address the subscriber, at Harrisville, Harrison county, Ohio, or William P. Ellis, Washington city, who has obtained the right of the State of Maryland by purchase, or William C. Pool, of Baltimore, who has the right of Georgia, North and South Carolina, on commission.

JOHN MERCER.

November 28, 1839. 15

Important to Farmers.

FARMERS are hereby invited to procure the hitherto unrivalled HULLING MILL.—This machine can be attached to any of the powers now in common use, and is calculated to save a great amount of manual labor. Clover-seed can be hulled at the rate of from three to five bushels per hour;—Rice can be hulled at the rate of twenty-five bushels per hour;—Oats, Barley or Spelts, can be hulled at the rate of thirty bushels per hour, ready for flouring;—Corn can be made into hominy at the rate of twenty bushels per hour. Corn, Oats, Rye, Barley, Spelts, or Buck-wheat, can be chopped at the rate of fifteen bushels per hour.

A moment's reflection will convince the Farmer of the advantage of possessing such a labor-saving machine. Is he a Rice grower?—he can prepare his Rice for the market in one-fourth of the time usually spent, and with one-fourth of the labor. Has he a surplus of Corn?—instead of selling it for twenty-five cents, he can make it into hominy and sell it for two dollars per bushel. Has he a surplus of Barley?—instead of selling it for fifty cents per bushel, he can hull and sell it for six cents per pound, &c. &c. The simplicity, durability, portability, and usefulness of this Mill, recommend it as one of the most desirable and money producing machines of modern invention.

Those wishing to procure this machine in Georgia, North or South Carolina, can address William C. Pool, Baltimore, Maryland; those of the State of Maryland, can address Richard B. Chinoweth, also of Baltimore; in this region of country, can address Lewis Ward, of Zanesville, Levi B. Ball, of Putnam, Abraham Baker, of Mt. Vernon, or Mr. Hanawalt, of Licking county; other sections can address the subscriber at Harrisville, Harrison county, Ohio. The most liberal terms will be given to mechanics who may wish to make, vend and use this Hulling Mill in sections not yet occupied. We invite the public to call and see for themselves.

JOHN MERCER.

November 28, 1839. 15

Bicknell's Detector.

MONEY and business matters have increased to such an extent in this country, that we shall soon find it impossible to give an accurate and detailed account of all the Banking Institutions and Counterfeit Bank Notes within the limits of the thirty-two pages of our monthly pamphlet Detector. We propose therefore to increase *the size of that publication sixteen pages in each number.* We must either do one of two things, publish an *imperfect* and incomplete Detector, or *enlarge* our limits. We have determined upon the latter course, unwilling to do injustice to the public, and anxious as heretofore, to issue the only perfect sheet of the kind in the United States. We cannot do this however, without some increase in price; and hence we shall be compelled to charge $1 50 per annum for the enlarged Detector, instead of $1, the price of our present publication. We promise to make very considerable improvements, to give in addition to the present information, the names of the Cashiers of the various Banks as far as they can be ascertained—to renew the type, to obtain better paper, and, in short, to render our monthly accurate in every particular, and entitled in a still greater degree to the confidence so generously reposed in it by the public. The increase in the price, however, may not give satisfaction to all, although it must be apparent to every individual, that in enlarging and improving, we shall necessarily be compelled to increase our expenses to a very considerable extent. Such, however, as are unwilling to receive the enlarged Detector at $1 50 per annum, will be good enough to notify us to that effect, immediately after receiving the first number of the new volume. We may add, those who subscribe to the Weekly Reporter, in addition to the Monthly Detector, will continue to be furnished with the latter at $1 per annum. We are anxious to do every thing in our power to retain our entire list, as well as to secure new patrons; and would make no increase in price, but we find on calculating the impossibility of publishing the enlarged and improved monthly, at the existing rates. Deeply grateful for liberal patronage enjoyed, we shall still keep on the even tenor of our way, exerting every energy to render both the Reporter and Detector acceptable, as well as useful and instructive.

MATHEW T. MILLER,
No. 76 South Third-street, Philadelphia.
November 21, 1839. 14

VARIETY.

Extract from the dying Confession of

LEWIS WILBER,

Who was executed October 3, 1839, at Morrisville, Madison county, New York, for the murder of ROBERT BARBER.

Robert Barber was a man of high respectability, and in easy circumstances as to property, living in Colerain, a rather secluded town in the northern part of Massachusetts. He was a widower, and had several children and numerous relatives in the neighborhood, of the highest respectability. He was rather beyond the prime of life, being nearly fifty-three years of age—of good stature and appearance—mild and peaceful in his manners—kind in his disposition—not extensively acquainted with the world—honest in all his pursuits—a professing Christian—and respected and beloved by all his acquaintances.

Previous to the 28th of August, 1837, he had contracted a matrimonial engagement with a lady then residing in Onondaga, in the State of New York, and on that day left his home and family to go to that place to be married. The place where he took the stage was at Wilmington, about fifteen miles distant from Colerain. It was here he unfortunately fell in company with Wilber, and travelled with him until the unfortunate occurrence that ended his life.

The history of the whole matter was related by Wilber to the writer, with the greatest minuteness, and agrees with the evidence on the trial in every material particular.

His first recollection of seeing Mr. Barber was somewhere between Brattleboro and Troy, where he formed some acquaintance with him in the stage. They arrived at Albany together, the 28th of August, and the next morning took the cars on the rail road for Utica. Previous to arriving at Albany they had not much conversation together. When they arrived at Utica they met again; but he tho't they were not in the same car on the rail road.

At Utica, Wilber first entertained the thought of murdering the old man. For that object, or any similar one, he purchased a common shoe-knife, as he said, but such a one as is often called a bread-knife, with a sharp point and a turned wooden handle; it cost eighteen pence. This he wrapped in a paper, and carried it in a pocket in the skirt of his coat.

Sometime towards the evening of the same day, (the 29th,) they took a line boat to go west, of which Edwin H. Munger was captain: the name of the boat he could not recollect. Night coming on, they lodged together in the same berth. Little of interest occurred during the passage until morning, when they arrived very early at Burr's Tavern, on the canal, in Sullivan, about three miles east of the Chittenango Landing. There, the boat having stopped, Wilber and his companion (for they had by this time become considerably acquainted, and the old gentleman familiar with him,) stepped off from the boat, went into the house, and drank something at the bar that they called for, which was handed to them by a woman.

They then walked along the tow path to Lee's Bridge (so called,) about eighty rods west, and had some conversation about going on foot to Chittenango Landing.—They passed the crotch of the road that leads off towards Canesaraga, and turning west, went on beyond all the houses and buildings. When they reached the last open field on the right, before entering the woods, Wilber informed the old gentleman that it would lessen the distance to turn to the right from the road, and cross the woods in that direction. They accordingly got over the fence, and walked in the direction of the woods, which they soon reached and entered. In the direction they were travelling at the time, the woods, where they entered them, were about sixty rods from the highway, and the distance through the woods to the canal (towards which they were going at an angle of about forty-five degrees to the general course of the canal,) must be not far from a quarter of a mile.

When they arrived at the place where the body of the old gentleman was subsequently found, (eighteen or twenty rods distant from the canal,) Wilber said he took from his pocket the knife before described, and a pistol that he carried, which at the time was not charged—and presenting the pistol to the old gentleman, demanded of him his money, at the same time showing him the knife. Here he said he became much agitated, and apparently much more so than the old gentleman. The latter deliberately took his pocket-book from a side-pocket in his coat, and a purse from his pantaloons pocket—saying at the same time, "I did not think that of you—I thought you was my friend." Wilber then told him to throw down the pocket-book and purse, which he did. "I was afraid to take them up," said he, "and told him to lie down and hide his face, and not look up for half an hour." He then laid down in the same position he lay when found, according to the testimony of the witnesses. Here Wilber resolved to take the money and leave him. He took the pocket-book and purse and secured them. Then, standing by the right side of the old gentleman, who lay on his face, with his right hand under his eyes and his hat on his head, a second thought warned Wilber of the danger of detection if the old gentleman should live; and throwing up the skirt of his coat, with a back-handed stroke he plunged the knife into his body, near the backbone and below the ribs. This he repeated several times. He said that from the time he struck the first blow with the knife, no signs of life appeared. Indeed he never moved from the original position in which he laid down.

But this seemed not enough. He then stepped a few paces to the west, and thinking that by possibility his victim might survive, he picked up a large stone,* and approaching him as he lay, threw it at him, and struck his head. This he thought made the fracture in the skull above the left ear, on the back of the head, which appeared when the body was found, and also a similar corresponding hole in the hat.

In describing this scene—which he did with a great deal of accuracy and minuteness—his feelings frequently overcame his utterance, and the burthen of his tho'ts choked him to silence. He would pause, and groan and weep; and when he spoke again, it would be by exclamations and ejaculations, accompanied by the most frightful writhings, manifesting the greatest mental suffering. He declared that if the old gentleman had made the least resistance or noise, he should have fled, and left him untouched.

He did not count the money contained in the purse and pocket-book, until he got some distance from the scene of blood.—He found he had about eighty dollars, including two half-eagles and some silver change, which was in the purse.

When he left the body, he threw down the knife, and walked towards the canal, and threw the pistol (as he thought) into a thicket. Seeing the canal not far distant, and fearing to be seen there, he turned his course, and took a direction towards Chittenango Landing, parallel with, but at some distance from the canal, till he reached the Cholera house, so called—a dwelling house situated a short distance from the canal, and about half a mile west of the place where he left his victim.

On arriving at the cleared fields near the Cholera house, he took a diagonal course across them, and came into the highway again, between the Cholera house and Chittenango Landing, when taking that direction. Just before getting over the fence into the road, he dropped the pocket-book and purse.

He followed the road to the Landing, and went into the tavern there kept by Harley Judd, where he called for and drank a glass of cider. He then crossed the canal on the bridge to the tow path side, and finding the boat was not yet in sight, he walked along the tow path west until the boat came up, and then got on board, and went on towards Buffalo.

Nothing worthy of notice occurred during his passage to Buffalo from Chittenango, except that he purchased a brace of pistols in Rochester.

They arrived at Buffalo on Saturday night, and the next morning Wilber took a steam boat and went up the lake to Cleveland. Soon after he arrived in Cleveland he took a boat upon the Ohio canal and started for Portsmouth. When within thirty miles of Portsmouth, his passage was interrupted by a break in the canal.

There was a man on board the boat—a stranger to him—that had boxes of gloves and mittens from the factory at Johnstown, New York, who was going south to dispose of them. His name he could not recollect. Wilber knew of his having four hundred dollars in money, and he there laid a plot to murder him.—They procured a small boat together, and putting their effects on board of it, they proceeded down the Scioto river towards Portsmouth. They were out two nights on the river, and each night hauled up, took their goods ashore, built up a fire, and lay by it all night, each alternately sleeping and watching.

The second night, while the stranger was asleep, and towards morning, Wilber made up his mind, as he said, to murder him, and went off about twenty rods to consider how to accomplish it. He returned to him with a full determination to murder him, and found him still asleep. His heart failed him, for the form of the murdered Barber haunted him, or, as he expressed it, "stood between him and the stranger." Again he walked away, and again he returned to do the deed as before, but with the same result. The third time he tried it; and on returning, shook the man and awoke him for fear he should commit the foul deed—and told him that they could go as well then as if it was light. They went on to Portsmouth that day, and he saw the stranger embark on board a steam boat to go down the Ohio.

Wilber stayed in Portsmouth until the next morning and then took the stage for Chillicothe, and arrived there in the evening. The next morning he took the packet boat "Portsmouth," and started for Cleveland. Captain Lancaster was master of the boat. When they arrived at Akron, he hired to Captain Lancaster, and then left the boat and went to visit his father and brothers. He returned to Cleveland by another boat. His business on the boat with Captain Lancaster was tending the mail—that is, carrying it from the boat to every post office from Cleveland to Portsmouth. This he did until the canal closed, and then made another bargain with Lancaster to go with him the same way another season.

He then went home to Medina county, and stayed and chopped some there, till February, 1838, and then went to East Union, in Wayne county, twenty-five or thirty miles from Medina, to work there at chopping. The second day he chopped he cut his foot, and was laid up till the last of the month, when he took the stage for Cleveland, and arrived there about the 1st of March, and then went to work for Captain Lancaster, in the boat-yard, waiting for the opening of the canal.

He was there in that boat-yard when he was arrested for the crime for which he has now suffered an ignominious death. He was taken in April, 1838, on the Ohio City side of the river, and confined a short time in the jail at Cleveland, and then transported from that place by S. C. Hitchcock, Under Sheriff of this county, to our jail, where he was executed.

A report of his trial has already been published, and the facts that appeared in evidence are of a character not differing in any material point from those confessed by the criminal.

When in Cleveland, Wilber went by the name of Lewis Lee, and was so known at the time he was arrested. Captain Lancaster had ascertained that his name was Wilber. Wilber excused the change of name by saying that he did it to avoid detection, he having been in the boat affray that happened near Lockport in 1836. The writer questioned him as to the fact of his being in that affray, and he stated that he was not there.

*The stone has been found since the confession, and is now in possession of the writer, and weighs 7¾ pounds. The pistol and knife have not yet been discovered, although considerable search has been made for them.

For the Western Recorder.

O God, thou merciful and true,
Teach me thy righteous will to do,
To me impart the sacred fire,
Of love, that I may well admire,
Thy wisdom, love and grace combin'd,
To re-instate the human mind
In fellowship with God, and bring
The rebel back to God his king.

O wond'rous day of gracious fame,
When from the father's bosom came,
The holy, meek, incarnate son,
To give his life for every one,
Of Adam's lost and ruined race
And save them by his glorious grace,
From the unending pains of Hell,
Saved from all sin with God to dwell.

Though deeply sank in guilt and sin,
The stains of which were deep within,
Still mercy, truth and righteousness,
Conspired a sinful world to bless.
Stern justice now is satisfied,
That as the Lamb of God hath died,
No violence to right is done,
To pardon through God's only son.

Bright angels who in glory dwell,
Desired long but could not tell
How God his promise could fulfil,
And sacred justice honor still.
But ah! astonished did they see
Lovely and meek as he could be
The son of God all veiled in flesh,
To shed his blood our souls to wash.

For man was sunk in crimson'd guilt,
And darkness thick which could be felt,
But sinners now may be set free,
Made pure and white as wool can be.
It is by Christ's most precious blood,
Their way is open now to God;
Come, sinners of a fallen race,
Approach this glorious throne of grace.

Come, sinners, come, this is the time,
No longer linger in your crime,
The day of hope, the day of grace,
Now God unveils his lovely face,
His mercy and his love to all
In Christ, will raise you from the fall,
Restore your long lost peace again,
Comply, you'll heavenly riches gain.

J. D.

PITTSBURGH, PA., Nov. 14, 1839.

Mr. Editor: I wish to be numbered among those who believe American Slavery to be one of the worst of moral evils. And it is matter of no little gratification to me to find myself in company, in this respect, with Wesley, Watson and Dr. A. Clarke, names which will not be forgotten by the religious world, nor blotted from the page of its history. I have the testimony of Dr. A. Clarke before me which I will transcribe for the benefit of any of your readers who may not have noticed it. It is as follows: "In heathen countries slavery was in some sort excusable; among christians it is an enormity and a crime, for which perdition has scarcely an adequate state of punishment." Note on Eph. vi. 5. And well may he call it "an enormity and a crime among christians," seeing it is wholly opposed to the Gospel of Christ, which is a proclamation of freedom to all the human race. The very errand of Christ into this world was to open the prison doors, preach deliverance to the captives, and to proclaim a universal jubilee, which is the acceptable year of the Lord. He who said, "Therefore all things whatsoever ye would that men should do unto you, do ye even so to them," could not have in any wise countenanced such a soul destroying and dishonoring system of iniquity as that of American Slavery. Paul tells us, God hath made of one blood all nations, &c. Hence the colored man is as much the offspring of God as the white man, and has by nature an equal right to be free.

The doctrine of equality taught by Christ to his disciples presses upon this subject with no little force. "One is your master even Christ, and all ye are brethren;"—that is equals in the sight of Christ. Now we ask how it is possible for the professed christian, who is a slave-holder to reconcile his conscience to the crime of oppressing one of Christ's disciples all the week, by causing him to perform labor to the utmost of his ability without wages, and then on the Sabbath to close the doors of the sanctuary and shut out from him the light of the Gospel lest he should hear the minister read from God's holy word, "Break every yoke, and let the oppressed go free."

Lest I should be considered a friend of oppression by holding my peace, and thereby become partaker with the slave-holder in his crime, I subscribe myself an enemy to oppression, and a friend of the oppressed in this as well as in all other lands.

JOEL DALBEY, JR.

RULE YOUR CHILD.—I once knew a mother who had an only son. She loved him most ardently, and could not bear to deny him any indulgence. He of course soon learned to rule his mother. At the death of his father, the poor woman was left at the mercy of this vile boy. She had neglected her duty, when he was young, and now his ungovernable passions had become too strong for her to control. Self-willed, turbulent, and revengeful, he was his mother's bitterest curse. His paroxysms of rage at times amounted almost to madness. One day, infuriated with his mother, he set fire to her house, and it was burned to the ground, with all its contents, and she was left in the extremest state of poverty. He was imprisoned as an incendiary, and, in his cell, he became a maniac, if he was not such before, and madly dug out his own eyes. He now lies in perpetual darkness, confined by the stone walls and grated bars of his dungeon, an infuriated madman.—*Abbott.*

The cause of freedom advances with steady step towards the final triumph.

The Western Farmer,

DEVOTED TO

Agriculture, Horticulture, and Rural Economy.

CINCINNATI,

Corner of Vine and Gano Streets:

PUBLISHED BY G. G. MOORE,

Former publisher of the Farmer's Cabinet of Phil.

A. W. HOSMER—ST. LOUIS.

WE intend the Western Farmer shall be a work of general *utility* to the Agricultural portions of community. Being enriched with the experience and valuable improvements of *practical* farmers, it will contribute to the best interests of society at large, for—just in proportion as the soil has been cultivated in every nation, ancient and modern, individual wealth and national prosperity have been promoted.

CONDITIONS.

The Western Farmer is regularly issued on or about the 20th of each month. Each number contains thirty-two pages, with occasional engravings illustrating the subjects, and is printed on good paper and new type, of which this may be regarded as a fair specimen.

TERMS.—Arrangements have been made, which enables the proprietor to publish it at only *one dollar per year, payable in advance.* ☞Seven copies for *five dollars.* N. B. Those who have paid two dollars will be entitled to the Western Farmer two years.

POSTAGE.—If unpaid letters are received from subscribers, the amount of their postage will be deducted by forwarding a less number of papers.

From the encouragement given by many gentlemen who are interested in agricultural pursuits, and from his own past experience in a similar publication, the proprietor is assured that the present work will prove both interesting and valuable to those portions of community to whose fostering care it is respectfully submitted.

ADVERTISEMENTS, being appropriate to the objects of this work, will be inserted on the cover at the rate of *ten dollars* per page, *five dollars* for a half page, *two dollars & fifty cents* for one-fourth of a page for each insertion, to be paid for *invariably in advance.*

AGENTS FOR THE WESTERN FARMER.

☞*The work is in no case forwarded to any order until the money is received at this office.*☜

S. C. Haver,

IN the flourishing town of Putnam has on hand 40 or 50 SADDLES ready for sale, of different qualities, comprising nearly all the varieties in fashion in our Buckeye State: a good assortment of Bridles and Martingales: riding and driving whips: between 80 and 100 carriage and heavy draft Collars, which will compare and wear with any others made here or elsewhere. Also, fine York, Dearborn, heavy team and common fancy Harness. A lot of Bear skins just received. Trunks, vallises, saddle-bags, and double covered wagon whips, varying in quality and price to suit purchasers.

The only recommendation he now offers for his work, is the testimony and long experience of his old customers and friends. He is still anxious to please and accommodate those who may call on him, and hopes to share so much of the public patronage as his attention to his business shall merit.

Putnam, August 15, 1839. 3tf

Brother Jonathan.

THE LARGEST PAPER IN THE WORLD.

THE proprietors of this sheet—the "Great Western" among the newspapers, have the pleasure of spreading before the reading public a weekly periodical containing a greater variety and amount of useful and entertaining miscellany, than is to be found in any similar publication in the world.

Each number of the paper contains as large an amount of reading matter as is found in volumes of ordinary duodecimo, which cost two dollars—and more than is contained in a volume of Irving's Columbus, or Bancroft's History of America, which cost three dollars a volume—and all for SIX CENTS a number, or *Three Dollars* a year.

BROTHER JONATHAN being a genuine Yankee, and thinking that some things can be done as well as others, is determined to present his readers a MEDLEY hitherto unrivalled by any other paper of Anecdotes, Amusements, Allegories, Accidents, Biography, Bon Mots, Conversation, Crimes, Dramatics, Drolleries, Erratics, Essays, Eloquence, Facetia, Geography, History, Jests, Learning, Morality, Marvels, Music, News, Novelties, Oratory, Poetry, Philosophy, Quiddities, Religion, Romance, Sports, Spectacles, Sorrows, Sufferings, Tales, Trials, Truths, Teachings, Wisdom, Wonders, Wit, &c. &c.

As a family newspaper, BROTHER JONATHAN will be found to present attractions beyond any other.

——"He comes the herald of a noisy world,
News from all nations lumbering at his back."

The earliest intelligence, Foreign and Domestic, and the latest novelties of the Literary World, will be promptly served up for the gratification of the reader.

Strictly neutral in politics, it will contain nothing in favor or against any party, and will as seduously avoid any of the controversies which agitate the religious community. Strict morality, temperance, industry and good order, benevolence, and usefulness to our common country and our fellow men, will be advocated and in every page of Brother Jonathan.

TERMS OF BROTHER JONATHAN—*Three Dollars a year in advance.*

For five dollars two copies will be sent one year, or one copy two years.

The EVENING TATTLER is published every day at the same office, and is put to press at meridian, in season for the great Northern, Eastern and Southern mails, which all close about two o'clock, P. M.

☞All country papers who give this prospectus three insertions, will be entitled to an exchange, on sending a number of their paper to this office containing the advertisement.

☞All communications and letters should be addressed *postage paid* to

GRISWOLD & COMPANY,
162 Nasau-street New York city.

November 14, 1839. 13

PROSPECTUS OF

The Methodist Protestant Letter-Press.

THE Methodist Protestant Church is distinguished by its union of the principles of spiritual and ecclesiastical liberty. On this account, it is deemed worthy the approbation and support of Christians and Freemen, throughout the land and the world. And there is no reason to doubt, that, wherever its character shall be justly appreciated, and suitable efforts made for its establishment and prosperity, it will prove to be one of the most honorable and successful instruments, employed in promotion of the glorious objects of our holy religion.

This Church is of recent institution. Its Constitution and Discipline were formed in 1830.—Since then, it has become favorably known, to some extent, in most parts of the United States, and in Foreign countries. Still it is neither as well, nor as widely, known, as it deserves to be. Various reasons might be assigned for this; but only three will be here submitted. The powers of the Pulpit, the School, and the Press, have not been exerted with adequate efficiency. The statement cannot be amplified, according to the demands of the subjects it embraces, in such a document as this. It is intended to furnish such a development in the progress of our work. Let it suffice, for the present, to say, that the causes of the alleged deficiences, in these respects, will be found, whenever exhibited, not so much calculated to cast discredit on the past operations of the Church, as to prompt it to immediate and energetic improvement of present and prospective advantages.

The editor of "The Methodist Protestant Letter-Press" proposes to render a little assistance in improvement of *this* power. His plan is, to publish a paper according to the description here unto annexed.

Its character may be intimated by the following briefly stated particulars. 1. It will be consecrated to Christianity. 2. It will make known the history, condition, and prospects of the Methodist Protestant Church. 3. It will notice all other Churches. 4. It will pay attention to all Benevolent Institutions. 5. It will be observant of Philosophy, Science, Art and Literature. It is not expected, of course, that each number will contain articles on all these subjects; but they are mentioned to indicate the range we contemplate, and so give assurance to the public as well as the Church, of as great a variety of matter as shall be consistent with our main objects and compatible with our narrow limits.—Whatever it may treat, shall be treated thoughtfully, charitably, freely. The editor acknowledges no higher obligations than those of Truth and Love.

It is believed that the extensive circulation of a paper is of more importance than its size or frequent appearance. Where it is impracticable to secure all these points, therefore, the first should be preferred. Our Chuch has several weekly journals, with limited circulation. In order to obtain a wider scope for the "Letter-Press," it will be published once a month. To make it the more worthy preservation, it will be printed in very neat style. The terms are as followers:

For 50 cts. - - -	1 copy for a year.
" $5 - - -	12 copies.
" 10 - - -	25 "
" 20 - - -	60 "
" 30 - -	100 "
" 50 - - -	200 "

Payment must always be made in advance.

The editor desires to publish, at least, 5000 copies, regularly; and, occasionally, to distribute a number, specially prepared for the purpose, to the extent of 20,000. But all his efforts depend upon public support. He can solicit this is no other way, than by sending a copy of the paper. If, therefore, any to whom it shall be sent, or who may see this Prospectus, wish the "Letter-Press" to flourish, they may confer a favor by their personal exertions to sustain it. Address,

THS. H. STOCKTON,

Ohio State Journal.

FOR THE SESSION.

IN consonance with previous usages, the proprietor of the Ohio State Journal submits the following prospectus to the consideration of the people of Ohio. The political character of the Journal is so well known, that no new commentaries are necessary to explain it. It is unequivocally opposed to the administration of Martin Van Buren, and of all the mad schemes of himself and his advisers. The Journal will continue steadily in the path of its long avowed and long cherished principles. Success cannot corrupt it, nor defeat intimidate it. As a faithful sentinel on the watch-tower of American liberty, it will always be found awake on its post.

During the winter, abundance of interesting matter may be expected from the halls of our State Legislature. The work of BANK REFORM is to be finished, by the majority who now rule triumphant, and we, in common with the whole State, feel anxious to investigate its operation and its progress. Our attention will be given to the subject most amply and unreservedly.

In every other respect, the Ohio State Journal will adhere to its original plan and character.—It will be, emphatically, a NEWSPAPER, in whose columns may be found all the interesting events of the day. Congressional reports, Foreign and Domestic intelligence, together with the opinions of our cotemporories of the Press, and occasional dranghts from the pens of our literati, will form a agreeable variety. A generous support is requested.

TERMS.—Daily Ohio State Journal, $3 0
Tri-weekly " " 2 0
Semi-weekly " " 1 5
Weekly, " " 1 0

☞All payments must be invariably in advance. CHARLES SCOTT, Pub'r.

Columbus, November 14, 1839. 13

The Ohio Statesman.

SESSION PAPER.

ACCORDING to custom, we again present to the people of Ohio our prospectus for a paper during the session of the Legislature. Many persons who do not find it convenient to subscribe for a paper printed at this place for a whole year, do so during the sitting of the Legislature, being desirous of seeing what is done by those in whose keeping they have entrusted the affairs of the State. To accommodate this just desire in the people to be thoroughly acquainted with every thing appertaining to their happiness and welfare, we have in this prospectus extended facilities and favors beyond what has been customary. We shall issue during the session a weekly paper (free of advertisements,) at fifty cents—semi-weekly at one dollar—a tri-weekly at two dollars, and a daily at three dollars. By this arrangement, we will be able to accommodate every portion of the State by all the mails, and we hope our friends will not be remiss in availing themselves of these means of information. It is all important that every freeman should be fully acquainted with every question touching the welfare of the State and nation.

The approaching session of the Ohio Legislature will be a most important one. No previous one has ever had the same number of delicate and exciting questions to meet and act upon—questions which cannot be avoided, nor disposed of in a moment. Among these are our Internal Improvements, and the expenditures under them. The condition of our Banks, and the banking system under the second suspension. The revision of the laws, as collated under an act of the last Legislature. The apportionment of the State into Senatorial and Representative districts, and an equitable taxation by a re-valuation of property, will be discussed. All the questions have been confided, by the overwhelming voice of intelligent freemen to the care and keeping of the democratic party, and it is important that that party should meet them in sober earnestness, and in that spirit of candor and patriotism which they will bring together, for the public good.

We shall also give such sketches of the doings of Congress as we conceive of immediate interest to the State, by the earliest aid of correspondents.

By the aid of a daily and tri-weekly paper, we shall be able to throw out the earliest Eastern news, Foreign and Domestic, which we hope will not be overlooked by those desiring such information, and with the aid of a power press, on a new and improved model, we expect to add greatly to the facility of preparing our papers for the mail without the loss even of an hour. We ask only such support as corresponds with our exertions to make our paper useful to the public.

TERMS OF THE SESSION PAPER.—☞Persons receiving this paper will consider themselves agents—and for five subscribers one gratis will be sent.

Weekly Ohio Statesman,		$0 50
Semi-weekly	"	1 00
Tri-weekly	"	2 00
Daily	"	3 00

☞All payments must be in advance or reference to a member of the Legislature.

S. & M. H. MEDARY

Columbus, Nov. 14, 1839. 13

THE

WESTERN RECORDER

IS PUBLISHED EVERY THURSDAY.

C. SPRINGER, EDITOR & PUBLISHER.

JOHN W. WHITE, PRINTER.

☞*The office of the Recorder is five and a half miles west of Zanesville.*

TERMS:

1. The WESTERN RECORDER will be published weekly, on an imperial sheet, at $2 per annum in advance: $2.50 at the end of three months, $3 at the end of the year.
2. No discontinuances will be allowed, except at the discretion of the publisher, until all rearages are paid.
3. To all ministers having regular pastoral charges, who do any thing at all for the paper, they will direct us where, a copy shall be sent gratis; any other who forwards to us $10, *paid*, for new subscribers, shall have six copies sent to any address he may give.
4. All letters designed for the paper, must be directed to the Editor, Zanesville, Ohio, *post paid*, except such as contain subscribers names, or $10 in money.
5. A failure to notify a discontinuance before the expiration of the subscription year, will be considered a new engagement.

CHARACTER.

The pages of the WESTERN RECORDER will be open to discussion on all moral questions; it will give articles on Literature, Mechanical Agriculture,—an abstract of Regligious and political intelligence, and whatever may be interesting and instructive to families in general. A portion of its columns will be open to advertisements and prices current,—another portion to sustain the interests of the Methodist Protestant Church in the West. These latter objects will not likely occupy more than one page.

The RECORDER will take a firm stand against Clerical Supremacy.

THE WESTERN RECORDER.

Volume 1. ZANESVILLE, OHIO, TUESDAY, DECEMBER 10, 1839. Number 16.

POETRY.

For the Western Recorder.

AN ACROSTIC.

How precious is the sacred page
Of light and life to ev'ry age;
Lo! here celestial glory shines,
Yes, glory fills those sacred lines.
Blest book, sweet treasure of my heart,
I never will from thee depart;
Be thou my ever dear delight,
Let me behold by thy blest light,
Eternal glory in my sight.

LUCINDA M'*****.

[Published by Request.]

is this that steals, that steals upon my me?
Is it death? Is it death?
oon will quench, will quench this vital me,
Is it death? Is it death?
be death I soon shall be
very pain and sorrow free,
the King of Glory see,
All is well! All is well!

not my friends, my friends, weep not for me,
All is well! All is well!
s are pardon'd, pardon'd, I am free,
All is well! All is well!
s not a cloud that doth arise
e my Saviour from my eyes,
shall mount the upper skies,
All is well! All is well!

tune your harps, your harps, ye saints in ry,
All is well! All is well!
ehearse, rehearse the pleasing story,
All is well! All is well!
angels are from glory come,
e round my bed, they 're in my room,
ait to waft my spirit home,
All is well! All is well!

ark, my Lord, my Lord and Master calls me,
All is well! All is well!
shall see, shall see his face in glory,
All is well! All is well!
ll my friends, adieu, adieu,
o longer stay with you,
tering crown appears in view,
All is well! All is well!

hail, all hail, all hail ye blood-washed throng!
Saved by grace! Saved by grace!
to join, to join your rapturous songs,
Saved by grace! Saved by grace!
is peace and joy divine,
aven and glory now are mine,
lelujah to the Lamb,
All is well! All is well!

OMMUNICATIONS.

UNICATION FROM THE LITERARY AGENT.

New Lisbon, Ohio, Nov. 28, 1839.

Editor: As I am now at the residence of gan, seated by a comfortable fire, and ha- little leisure, I take up my pen to give, the medium of your interesting paper, an e of my travels since Conference. Imme- after the Conference arose, I visited the t town of Steubenville, spent a few days and then went on board the steam boat sky," ascended the beautiful Ohio to the f Smoke."

name of this boat is familiar to the readers Recorder, and indeed too much praise can- iven to Capt. Dohrman, for the regulations his boat. Every Christian and moralist it greatly to their advantage, when tra- on the Ohio, to patronize the Sandusky. Dohrman, and his Clerk, Mr. Jordan, for y of manners cannot be excelled.

spending a few days in the city, I pro- to Pittsburgh circuit, and found many lib- d kind hearted friends. Thence I went elsville, and met with a warm reception W. Phillips and his kind partner. Bro. rendered me all the assistance in his pow- promoting the object of my visit. The s of the church and the citizens gener- re quite liberal. Having some leisure spent it very agreeably with a pious and ent member of the church, who has quite eresting family. My next visit was to own. Old Brother Phillips and his kind partner were in good health, and are still friends of the church. Bro. Deford and Phillips were liberal and zealous in aid- and certainly are useful members of the

From Uniontown I proceeded to Mor- , via Jackson's Iron Works. Any per- has a taste for romantic scenery, could y have it gratified by this route. The however, are very bad. Having crossed iver I soon arrived at the hospitable man- Dr. Laishley, and spent a night with him family pleasantly. The next day we made to obtain subscriptions and were pretty ful.

Morgantown I called upon Bro. J. A. Shac- found him in a very delicate state of and apparently near the close of life.— be fully prepared for the solemn change. Bro. Pool, (who is an efficient local preach- Middletown circuit,) I spent a few hours ly. My next visit was to Middletown. own is situated on the west side of the gahelia river, about one mile below the n of West Fork and Tygert's Valley riv- ch form the Monongahelia.

days before my arrival at this place, an rcumstance occurred. A man commit- ide by cutting his own throat. *This was t of Intemperance.* A few years ago he rofessor of religion, but alas! he yielded ark hour of temptation and relapsed into his former habits. His parents, I was creditably informed, were habitual drunkrads for more than 40 years. Never have I felt more shocked than in hearing the recital of his affair. The parents bending over their bleeding son, who, by their example, they encouraged in the vice of intemperance. What remorse must have filled their consciences at this moment. The feelings of a mother, however, were particularly manifested, while she earnestly implored a person present to offer up prayer in his behalf. Where is the Christian? Where the Philanthropist? who will not put forth renewed and vigorous efforts in behalf of the temperance enterprise, to stay the desolating tide of ruin that sets strongly in towards the region of darkness.

From Middletown I went to Pruntytown. In this place we have many excellent members, and indeed the same may be said of nearly all the places I have visited. Suffice to say, that, having visited a few intervening towns, through the Providence of God, I arrived safely in New Lisbon.

With regard to the condition of the church, in this place, the congregations are large and respectable; twelve have been added to the church at a recent quarterly meeting, and the prospect flattering. In conclusion, I would remark, that my success as agent has been beyond my expectations. In haste, yours truely,

GEO. HUGHES.

P. S.—Among the other in accuracies of the report on boundaries, &c., I find the omission of the name of Ralph Lee, a local preacher, belonging to the Pittsburgh circuit. Bro. Lee is a worthy man, and I deem it my duty to have this inserted in the Recorder. I do not consider the committee censurable in this matter, for I presume his name was not reported to them. G. H.

JAMESTOWN, O., Nov. 28, 1839.

Bro. Springer: Through the abundant mercy of God I am still living, and striving to do the duty of a Watchman on Zion's Walls. I left my family in Indiana on the 30th of October, for this circuit.

On the morning of the 7th of November, about four miles west of Springfield, Ohio, I witnessed a melancholy scene,—the body of a fellow being laying beside the road, whose spirit had taken its flight. Three men had reached the place; from one of them I learned that the name of the deceased was Barney King, a native of Ireland; that he had been subject to intemperance,—had been working on the turnpike, and died, it is thought, in a fit of intoxication; that he was first found by his wife, and dragged out of the road where he had perished. O! what a scene of wretchedness and misery. But I forbear further remarks.

I am sorry to say the prospect, on this circuit, is not very flattering. There is too much apathy among professors, and carelessness in attending class meeting and the other means of grace. I hope there will be an improvement in this matter, for without the co-operation and faithfulness of the people, success can hardly be expected to attend the labors of the minister. Whenever the people come up to the help of the Lord, against the mighty, then will Zion prosper.

Yours with esteem,

W. W. PAUL.

WHITE EYES, Coshocton, Ohio, November 21, 1839.

Dear Sir: Our first quarterly meeting was held, in the town of Coshocton, on the 16th and 17th inst. Having invited some five ministers to help us on the occasion, we expected aid; but in this we were disappointed; not one of those invited attended. But we presume they had some good excuse for not attending. Providence, however, favored us with the labors of Bro. Buckingham, of the New School Presbyterian church, who preached with ability and profit, and participated in all the exercises of the occasion, with the spirit of a christian, and zeal of a gospel minister. We had a moderately good meeting.

But the spirit of proscription is still abroad, and there are not wanting religious denominations who can pass resolutions prohibiting other pursuasions from occupying their meeting houses, even on special occasions.

The circuit is, I think, gradually improving in piety, and in the execution of discipline throughout the various classes.

Yours, &c. M. N. WARREN.

RUSH COUNTY, Ia., Nov. 24, 1839.

Bro. Springer: When you take into consideration that I am only one, among the humble laity of the church, you will, no doubt, bear with me while I endeavor to suggest a few thoughts to your numerous readers.

In the last chapter of St. Matthew, 19 and 20th verses, a solemn charge is given to those that were sent out to teach.—After having taught, mark you, they were to baptize, &c. In the 20th verse, immediately follows, as I conceive, a restriction on them; tho' inspired, not to teach any thing only what Christ commanded them. It reads thus: "Teaching them to observe all things whatsoever I have commanded you; and lo I am with you always, even unto the end of the world." Now, brethren, does it not plainly follow, if we teach any thing different from what Christ has commanded, that he will not be with us. If so, how important it is for us to observe these "things" very closely? Upon it depends our future and final destiny as a church, for if the blessed Redeemer is not with us, we can do nothing. O! that the Divine authority, by which he commands, may cause us all, ministers and laymen, to teach and observe as he has commanded us. Now, I ask, who are proper persons to teach? Such, and such only, as are properly or thoroughly instructed in whatsoever Christ has commanded. Persons who are enstrusted with the public ministry of the word should take care that they teach not human creeds, and confessions of faith, in place of the sacred writings. But those things, and those only, which Christ has commanded should be taught. A minister of Christ should consider that if he simply and uniformly follows him, he shall be made a constant instrument of bringing many sons and daughters to God. The darkened must be enlightened, the ignorant instructed, the profligate reclaimed, the guilty justified, and the unholy sanctified. Who is sufficient for this work? He who is favored with the presence and aid of the son of God, and none other.

My object in future will be, to endeavor, if possible, to bring in some manner before our brethren, the departures, in my opinion, we have made from the foregoing imperative command of the Saviour. And show that we have required more to be observed by our membership than Christ has commanded, which I think must become irksome, and be rebelled against, unless we can justify those acts from holy writ. Let Reformers bear in mind that we acknowledge Christ as our only head, and notwithstanding we have a representative or an elective form of government, yet, our delegation is not sovereign or infallible. They have no more right to transcend God's authority, and make such acts binding on their membership, than the divinely authorized expounders of the Methodist Episcopal church had on theirs. And every attempt of the kind should be repulsed immediately. Our system admits of amendments and improvements.

J. J. AMOS.

FARMINGTON, Belmont Co., O. Nov. 16, 1839.

Mr. Editor: As certain injurious reports had found currency, implicating the moral character of Bro. John Mercer, in relation to his business, circulated, perhaps, through inadvertency, or mistake, and possibly by malevolence, which were not only calculated to prostrate the character and influence of our esteemed brother, but to inflict a severe injury on that branch of the christian church of which he is an acceptable member and minister. It was thought due to the brother and the church, to appoint a committee at the last quarterly conference to inquire into the foundation of said rumors, and to make report to this conference; which report being duly made, we are happy to say, completely exonerates Bro. Mercer from any design to injure any creditor, or to act in any way dishonorable to himself or to the church. This report was made after a careful examination of Bro. Mercer's books, in the hands of George Atkinson and Samuel Lewis, justices of the peace, who explicitly declare that they have not been able to detect the slightest disposition in Bro. Mercer to take advantage of any individual. This conference, therefore, feel it an imperious duty to make this brief statement of facts, and appoint the undersigned as a committee to request their publicity in your paper.

GEO. WADDELL,
GEO. CLANCY, } Com.
H. HEBERLING,

A committee of the Vermont House of Representatives has reported in favor of making a geological survey of the State—proposing an appropriation of $2000 for that object.

WESTERN RECORDER.

ZANESVILLE:

TUESDAY, ... DECEMBER 10, 1839.

Governor's Message.

Gentlemen of the Senate,
and of the House of Representatives:

In meeting together for the purpose of discharging the high and responsible duties of the trust reposed in us by our constituents, we are naturally led, in the first place, to the consideration of those subjects which are calculated to make a pleasing impression on our minds, and inspire us with grateful feelings to a kind and benificent Providence to whom we are indebted for the numerous blessings which we enjoy. With but few exceptions, the health of the State has been unusually good during the past season; order, tranquility, and peace, have prevailed within our borders; and the difficulties which, to some extent, threatened the repose of our northern frontier, growing out of the late disturbances in Canada, have disappeared. A strict observance of the laws, and a high regard for their faithful execution, have eminently characterized the great body of our citizens; and the toil and industry of the husbandman has been rewarded with an abundant crop of all the productions usual to our fertile soil and genial climate.

The surplus produce of the State, it is believed, will be much greater this year, than any former season since the first settlement of the country; and will yield, even if it should be sold at the present reduced prices, an aggregate amount of value equal to that of any former year. This will sustain our agricultural interest in its usual prosperity and flourishing condition, upon which, mainly depends all the other great and leading interests of the State. Our climate, soil, and geographical position, designated us as an agricultural people; and upon this branch of industry must we principally depend for all our wealth and resources. It is from a soil of unsurpassed fertility and great agricultural capabilities that we must, sooner or later, draw the necessary means of paying our debts and sustaining the credit of our State. It is true, that a great portion of our State is well adapted to the business of manufacturing, and offers facilities and inducements for this branch of industry, which will not always be overlooked by enterprising capitalists. The inexhaustible beds of coal and iron ore found in many parts of the State, the extensive water power furnished by our numerous streams, and created by our various public works, hold out strong inducements for the investment of capital in this State, in manufacturing operations. But it is not in the infancy of a country that we see manufacturing establishments springing into existence, and rivaling agriculture in the creation of actual wealth—manufactures are always of slow growth, and rarely arrive to much importance, until the labor of a country becomes greater than the demands of agriculture require. We must, therefore, look to agriculture for the present, and for some time to come, as the great leading interest of the State from which our principal wealth and resources must be derived, and which is especially entitled to the fostering care of the Legislature.

Education, and moral and intellectual improvement among our citizens, are steadily and rapidly advancing under our liberal system of instruction. That general intelligence which is, and must ever continue to be, the great bulwark of our republican institutions, and which is the result in a great degree, of our liberal system of education, and the inquiring spirit of the age is rapidly increasing throughout the whole country. It is a duty which we owe to ourselves, as well as to prosperity, to adopt all the necessary means, which prudence may suggest and wisdom devise, to preserve and perpetuate our free instituuions. From the history of the past we may learn something of the future; and it is a fact worthy to be remarked, that no people hitherto have long been able to preserve their freedom, when the mass of the commnnity were uneducated and uninformed.—The great and unprecedented success which has marked our free institutions, and the wisdom and prudence which has generatly characterized the administration of our public affairs, are mainly to be attributed to the force of enlightened public opinion, emanating from an intelligent and well educated community. If we expect to avoid the fate of other republics in times past, and preserve our free institutions from the inroads of despotism, and the selfish ambition of the designing few, we must foster and cherish the means of general instruction. An enlightened system of education by which the rising youth in each succeeding generation will be prepared and qualified to act the part assigned them by the theory and fundamental principles of our government, as they take their position on the stage of human action, is the strongest barrier that can be presented against anti-republican principles. We may, with confidence, anticipate, that so long as we maintain a liberal, enlightened, and general system of instruction in our State, our free institutions will be maintained, liberty and a love of order and good government will be cherished, and, under Providence, we will continue to be a prosperous and happy people.

There is some opposition still existing to our system of Common Schools; nor is it to be presumed that the system is without some objections, or that any general law could at once be put in operation, that would meet with universal approbation. The system established by the present school law is, comparatively speaking, new, and we have not become familiar with the mode of doing business under it; but it is doubtful whether a better system, as to its general features, could be adopted; or one that would give more universal satisfaction to the people. Time and experience will suggest the defects in the present school law, and they will, no doubt, be gradually removed by legislative action, until it is rendered as perfect, and as satisfactory to the public as any system which could be devised. Any great and radical change, unless for very obvious and weighty reasons is to be deprecated; new experiments should be avoided; and our legislation on this subject should assume a stable character. The law of last session, by removing the just causes of complaints, has had the effect of reconciling, in a great degree, our German population to the present school law. I have not heard of any complaints from this valuable and patriotic portion of our fellow citizens, since they have been permitted to an equal participation with other citizens in the benefits of the system.

I would respectfully call your attention to the very able and satisfactory report of the Superintendent of Common Schools, made at the last session of the Legislature, on the subject of school lands, and the proceeds of school lands.—It will be perceived, upon an examination of that report, that several townships in this State have been deprived of school section sixteen, and have never received any section in lieu thereof; and that they are entitled, either from the State or General Government, to an equivalent for the land of which they have been deprived. Also, that there is a deficiency in one of the quarter townships, in the United States military school land, of four hundred and eighty acres, as found on actual survey, which Congress would, no doubt, make good upon proper application. There were a large number of fractional townships in this State, having no section sixteen, and unprovided with school land under the original law. In eighteen hundred and twenty-seven Congress passed a law giving to each township and fractional township, for which no previous provision had been made, school lands in proportion to the size of the township, to be selected in the respective land districts, where the townships unprovided for were situated.—The amount of school lands due this State under this act, was about thirty thousand acres. What proportion of this has been selected, I am unable to state, but no selections have been made, as I am informed, in the Chillicothe land district, where a great number of these fractional townships are situated, on the ground, that there is no suitable land within the district subject to be selected. In all cases where suitable selections cannot be made under the law within the land districts, Congress should permit the selections to be made from other government lands of the district. This is so obviously just, that upon a proper application to Congress, I presume they would not hesitate to authorize selections to be made from any government lands within the State. I would respectfully suggest the policy of submitting the whole subject to Congress, at the present session, and asking that body to pass a law, providing for those fractional townships, which have been deprived of school section sixteen, and to authorize selections to be made under the act of Congress, of eighteen hundred and twenty-seven, from any lands belonging to the General Government within the State. The only lands owned by the United States within the limits of Ohio, that are considered of much value, are the reserved sections embraced within the limits of the Wabash and Erie and Miami Canal grants. These lands, it is expected, will be brought into market, and sold the ensuing year; and unless Congress can be induced to act immediately on the subject, their interference hereafter, can be of little use to the State.

Our school fund and the means of education have been permanently impaired by that improvident system of legislation, which authorizes, under certain circumstances, the sale of our school lands. It seems to me our true policy is, to retain these lands for the benevolent and wise purposes for which they were intended, and authorize their sale in no case unless under very peculiar circumstances, and when the interest of our school fund would be obviously promoted.

During the past year great embarrassment has existed throughout the country in moneyed affairs, and especially in the eastern cities. In this State our citizens have felt the pressure to a considerable extent, and are still laboring under its unfavorable influence. It has not, however, fallen with the same force on us as on the citizens of some other portions of the Union.—This is owing to the fact that we are more an agricultural, than a manufacturing or a commercial people; and comparatively speaking, but little in debt. The embarrassments and pressure among the business men in Ohio, I am convinced, will be of but temporary duration. Their business habits, energy of character, with the great and increasing resources of the country, will soon enable them to recover from their present difficulties. The mechanical and agricultural portions of community being generally out of debt, have not experienced the same embarrassments that have been felt by the merchants, and those engaged in heavy business, demanding large capital and extensive credit.

The contraction of the banks, and the consequent scarcity, when compared with former years of a circulating medium, have had a tendency to increase the embarrassments among our citizens in moneyed affairs. In May, eighteen hundred and thirty-seven, the discounts of the banks in this State were nineteen millions five hundred and five thousand six hundred and sixty two dollars. On the thirteenth of September last, they were eleven millions two hundred and sixty-eight thousand one hundred and twenty-five dollars. Showing a reduction in the discounts of the banks since May, eighteen hundred and thirty seven, of eight millions two hundred and thirty-seven thousand five hundred and thirty-seven dollars. Their circulation has been diminished since the 30th April to the 30th September last, one million eight hundred and twenty four thousand four hundred and nineteen dollars and twenty-three cents. Under this contracted circulation, our citizens are now called upon to meet their engagements entered into under our extended and highly inflated circulation when money was plenty, and credit easily obtained, and when they had every reason to believe that they would be able to meet their engagements without any difficulty. This illustrates the injurious consequences to the community of a currency capable of great and sudden expansion and contraction.

The prominent causes, however, of the present difficulties under which the country labors, are to be sought for in the large amount of interest annually paid to foreign capitalists, (variously estimated at from eight to twelve millions,) for money borrowed by the States and Corporations, and in the great and excessive importation of foreign goods into this country, and the debt thereby created. Our imports for several years have annually exceeded our exports to a large amount, leaving a heavy debt against us to be paid in coin. This debt is now called for and must be paid. The coin necessary to pay our foreign debt being principally abstracted from the banks, they are forced to curtail their circulation and call in their discounts; by means of which, our circulating medium has been reduced for the last year by the double process of specie exportation, and bank contraction. The great evil of which we have cause to complain is, the excessive importation of foreign goods, greatly exceeding the necessary wants and demands of the country, and our ability to pay. This evil has had its origin in the overgown system of banking, which has sprung up in the United States within the last few years; and the consequent multiplication of bank paper beyond the real business wants of the community. The increase of paper money, by rendering the circulating medium cheap, naturally produced an increase in the price of foreign goods. By this means their importation has been invited into this country, to be sold at our paper prices, but to be paid for, either by our exports, or in coin. Our exports being insufficient, our coin is required to pay the balance. Until our foreign debt is reduced, we cannot expect much relief from the present pressure. The present crisis is one that must be met,—it may be postponed, but cannot be avoided by legislative action. Our foreign debt must be paid, not in paper money, but by our exports, or in gold and silver. An increase of paper circulation will not enable us to pay our foreign debt, while it will induce a continuation of excessive importations by keeping up the high prices for foreign goods. Our permanent relief will be found in the abundant crops of the country. When they are brought into market, and applied to the payment of our improvident debts, the difficulties and embarrassments under which the country is now laboring, will cease to exist.

To avoid a recurrence of these evils, we must, as a nation, import less, and export more. We must rely more upon our resources, and not so much on foreign capital. The credit system must be reformed and made secure, and brought down to the necessary business wants of the community. So far as this system is within our reach, it will be our duty to place it upon a solid and substantial footing, and restrain it within those limits which public policy and the permanent good of the country require. Other States will, no doubt, in due time perceive the necessity of pursuing a similar policy.—We cannot hope, perhaps, for an entire reformation of the paper system in the United States, until there is a separation of the General Government, in its fiscal action, from banks and bank paper. If this should take place, it will have a salutary check on the over issues of the banks, and admonish them at all times of the necessity of keeping up a due proportion between their circulation and their gold and silver. The recent demonstrations of public opinion would seem to leave but little room to doubt the speedy passage of this salutary measure into a law.

The subject of the currency is one in which the people at this time very properly take a deep interest, and is entitled to your calm and dispassionate consideration. In a growing business community like ours, a sound and stable currency, adopted to the business habits and wants of the people, is of the utmost importance, and exertion should be made to secure this desirable object. The currency is one of the necessary means of carrying on the commerce, trade and business of the country. When it becomes deranged—of unsteady and fluctuating value—and either too plenty or too scarce, every interest in the State is more or less affected thereby. A standard measure of value is as essential in a community like ours as a fixed and certain standard of weights and measures. We are as much bound, by a due regard to sound policy, to secure the one as the other, by legislative provision. The currency, not only of this, but of all our sister States, is principally composed of bank paper. It has become in a great degree, the only measure of value by which the price of every thing is fixed and regulated. It has driven principally all the gold and silver out of circulation, and usurped the place of the precious metals. The important part that paper money is thus made to perform in all the business transactions of life, and the impracticability of returning to a

circulation composed entirely of specie, and the strong tendency there is towards increasing, instead of diminishing, the quantity of bank paper, in many parts of the United States, impose on the legislature the important duty of regulating and controlling, as far as possible, paper issues, and guarding the public against all possible loss, either by a failure of banks or a depreciation of their paper. We are admonished of the necessity of this from the history of the past, and what we see daily transpiring around us. That a base and vitiated currency is one of the greatest evils with which we could be afflicted, cannot be doubted by any one who is capable of appreciating the benefits of a sound and steady circulating medium. That the present banking system has filled the country with a fluctuating, unsteady, and at times, a depreciated currency, is demonstrated by its history for the last twenty-five years. That it has been occasionally used by men destitute of moral principle, as a means of defrauding the public out of large sums of money, is equally true. The public has witnessed, year after year, a perpetuation of these wrongs by irresponsible corporations, until the policy of permitting them to exist, has become a doubtful question with some, and the propriety and necessity of reforming them is conceded by all whose judgements are not swayed by interest, or influenced by the party conflicts of the day. In a matter of great moment to the public, we should lay aside our party feelings and prejudices, if we may have any, and act alone for the permanent good and prosperity of our country, in which we all have an equal stake, and the welfare of which we all, no doubt, desire, whatever may be our party predilections.

The means of obtaining a sound, stable and safe circulating medium, is a subject on which I am aware, a great variety of opinions exists in the community. In a matter, however, of so much importance, a free and frank interchange of opinion, and a full and candid investigation of the whole subject will be likely, in due time, to enable us to adopt that course of policy best calculated to promote the general good. The time is rapidly approaching when some settled and definite policy must be adopted in relation to our banking system and the currency. Most of the present bank charters expire by their own limitation, on the first of January, 1843. The policy hereafter to be pursued, should be settled before the expiration of the present bank charters.—Whether the present is a propitious time to fix upon the settled policy to be adopted in relation to banking and the currency, or whether it would be more prudent to wait the developments of another year, is submitted to your own better judgments.

I consider it impracticable for this State to return to a hard money currency. Each State of this confederacy, possesses the power of incoporating banks, and regulating them at pleasure. This power has been, and most probably will continue to be, liberally exercised by most of the States. If we should dispense with banks, it would not prevent the circulation among us, of bank paper. There is no way of excluding bank paper from circulation, only by the cotemporaneous action of the several States. This is not to be expected. If we should abolish banks of circulation, the consequence would be, that the notes of other States would flow in among us, and circulate in the place of our own excluded notes. The profits of banking would thus be transferred from our own, to sister States, without any advantage in return. If we must have a paper currency, isit not better to have one of our own creation subject to our own control,& amenable to the people of our own State, than one issued by corporations beyond our jurisdiction,and the reach of our laws? The policy, however, of dispensing with banks of circulation entirely, is advocated by but few, and perhaps without full consideration of the circumstances by which we are surrounded.—The great majority of the public acknowledge the utility of banks, in the business transactions of life, when they are established upon proper principles, and confine their operations to legitimate banking.

In my inaugural address, I took occasion distinctly to state my view on this subject. I then stated as my settled opinion, "That our system of credit, to which we have long been accustomed, could not be destroyed without deranging to a great extent, the business order of the community. That our policy,therefore,should be, not to destroy, or impair that part of our credit system, which exists in the shape of bank paper, but to place it upon a more solid and substantial footing. That that currency which is best adapted to our various wants, long business habits, and all the circumstances by which we are surrounded, is one composed partly of gold and silver, and partly of bank paper, made safe to the public, and convertible at all times into gold or silver." These were the views which I then expressed, and still entertain on this subject. However difficult it may be to reform our banking system, so as to make it safe to the community, and at the same time render the circulating medium in some degree stable and uniform, I believe it is not entirely impracticable. The great object to be obtained is,a circulating medium of uniform value, convertible at all times into specie, and made entirely safe to the community. Cannot this object be obtained by any system of banking which can be devised?—Although I am free to admit, it cannot entirely, yet I believe we can come so near the attainment of this object, as to answer all practical purposes. In order to do this, various systems of banking have been suggested—a State bank with branches—a free banking law—and a system of independent banks, such as now exist, with modifications and restrictions, have all been mentioned, and the claims of each to superior excellence have been pressed upon the consideration of the community.

A State bank, with branches, owned entirely by the State, and under the control of the agents and representatives of the people, and where the whole profits on the capital invested would be paid into the public Treasury for the public use, it is claimed by its friends, would command as much public confidence, and furnish as sound and as safe a circulating medium, as any system that could be adopted—that it would be free from many objections to which other systems are obnoxious—that it could not be charged with being a monopoly, because the stock and profits would both belong to the people—that it would it be more regular in its action, and adhere more closely to the legitimate business of banking than like institutions, owned and controlled by individuals. There are objections, however, to putting this system into operation, which appear to me too formidable to be overcome. The banking capital of the State on the 13th of September last, was over 10,500,000. A State bank to supply the place of the present banks would require an equal amount of capital, which would have to be procured by a loan in some shape or other. The State is now largely in debt and engaged in public improvements which cannot be abandoned without losing a large amount of money and labor already expended. The completion of these works will swell our actual debt, which we will be compelled to pay as it falls due, to upwards of fifteen millions. Would it then be wise policy for the State to adopt a system of banking which would increase the debt of the State say five or ten million? Could the funds be obtained on a loan without extending our credit beyond the limits of prudence? Or could they be obtained on any terms, or such as would justify the State in taking them? These are questions in my judgment,worthy the serious consideration of those who advocates the creation of a State bank. It would be difficult to keep such an institution entirely free from political influences, and party conflicts. It is greatly to be feared that it would partake of the political impulses of the party in power, which would entirely destroy its usefulness as a banking institution, and bring into the political field a corrupting moneyed influence, hostile to the genius of our free institutions. The same objections, but not to the same extent, apply to a State bank, where the stock is in part owned by the State, and in part by individuals. No peculiar advantage or benefit belongs to a State bank where the stock is principally owned by individuals, which would consequently give them the management and control of it. The policy of mixing funds of the State with the funds of individuals in any enterprise, I consider questionable. If any loss is sustained it will generally be made to fall on the State. I am aware that in several of the States this system has been adopted and has, to a great extent, the confidence of the people. But when we examine it, we will find it liable to all, or nearly all, the objections which can be urged against a system of independent banks properly limited and restrained. It would seem to me that we would gain but little by this system of banking, while if we adopt it, we would be forced to increase the debt of the State in some shape or other, to a considerable extent.

The system of free banking is, comparatively of recent origin in this country, and may be viewed in the light of an experiment. Whether it will answer the purposes, and fulfil the expectation of its friends, is doubtful. The objection to it as a system calculated to furnish a sound and steady currency, is the unbounded field it would open to paper issues. Requiring bankers to pay their notes on demand in specie is not an effectual check against over issues. Bank paper is easily made, and the temptation to put an undue proportion in circulation is occasionally great. It will not do to trust entirely to the commercial law of supply and demand to regulate the amount of paper circulation. The demand for money, or that which passes for money, is as unbounded as the avarice of man. Too much paper money is more injurious in its ultimate effects on the community, than too little. I should consider any system of banking radically defective, which did not regulate the issues of the banks, and the amount of paper which they could put in circulation by some fixed rule. In a State bank, or a system of independent banks, the amount of bank capital can be fixed by law and made to correspond with the wants of the community; and the amount of paper which they may put in circulation can be limited by their charters, and regulated by the amount of specie in their vaults. This cannot be done in any system of free banking which has come under my observation, without destroying its distinct charter. We have seen in the State of N. York, where this system has been recently introduced, banks organized under it,in one year having an aggregate amount of incorporated capital of over four hundred millions. In the State of Michigan the same system has been tried and failed. The difficulty of procuring State stocks, and converting them into money when required and the uncertainty of raising money by the sale of lands, mortgaged, constitute objections to the adoption of this system in Ohio worthy of consideration. However plausible in theory it may appear, I doubt whether it is the best means that can be adopted to secure the end in view,—a currency of uniformity and steadiness of value.

A system of independent banks properly restricted and limited in their power, placed under the supervision of bank commissioners, and being at all times under the control of the legislature, if not the best system that could be adopted, is perhaps the best within our reach, at the present, or for some time to come. In adopting this system, however, there are certain principles and provisions which I would deem essentially necessary to be incorporated in it in order to guard against the abuses and evils which belong to the present system.

Each stockholder should be held personally liable for his proportion of the debts of the bank, to be estimated according to the amount of stock owned by him. No bank should be permitted to extend its liabilities, exclusive of deposits, beyond three times the amount of specie in its possession at the time of such extension. Each bank should be required to redeem its notes in gold or silver while it had the means of doing so, and if it refuse so to do, or if it suspend for the want of means, beyond a limited time, in either case it should be deemed a forfeiture of charter, and visited with suitable penalties. All notes of a less denomination than five dollars should be carefully excluded from circulation. Each bank should be required to publish at stated times, under the oath of the proper officer, a true statement showing its condition. The directors should be prohibited from borrowing money out of their own bank. No bank should be permitted to issue post notes for circulation. The banks should be prohibited, under severe penalties, from dealing in produce or merchandise, or buying the issues of other banks at a discount. While these restrictions would remedy, to a great extent, the evils which now exist in the present system, they would in no way operate against fair and legitimate banking, or prevent capitalists from realizing a liberal profit on their bank investments. They would operate solely on the fraudulent or reckless banker, and guard the public against all loss. If the system of independent banks should be adopted in Ohio, with these principles of reform incorporated in it, with some others of minor importance, and firmly adhered to, I believe it would, in due time, command the entire confidence of the community—be entirely safe and secure to the public, and furnish us with a circulation which would approximate as near uniformity and steadiness of value, as can be hoped for under any paper system which we can conveniently adopt. This system could be adopted in this State and carried into successful operation without producing any sudden shock in the business relations of of the community.

All that is necessary to regulate the exchanges of the country, and bring them down to the true point is, to secure a sound currency capable at all times of being converted into gold and silver.—"Exchange is an order for the payment of money in another place," and should never much exceed the cost of transporting specie to that place. Whenever it is beyond this, it is too high, and owing to some artificial cause. It is obvious that if we had a permanent and settled policy of banking, and bank paper was at all times convertible into coin, that exchanges on the eastern cities would ultimately settle down to something near the cost of transporting specie from this to the desired point. This ought not to exceed, ordinarily, more than one per cent., and is the true principle which must in time regulate the exchanges of this country.

The banks in this State, judging from their last quarterly report, are generally in a sound condition. It is highly creditable to them that they have, with few exceptions, continued to redeem their notes on demand, while like institutions elsewhere, have been under the necessity of suspending specie payments. It is much to be regretted, however, that a few of our banks deemed it advisable to pursue a different course. Whether this was with a view of preventing specie from being taken out of the State, or whether they were governed by other considerations, I am unable to say. However correct their motives may have been in suspending specie payments, the effect on the currency is unfavorable. It is much better to lose a portion of our specie for a time, than that public confidence should be destroyed in these institutions, and the country filled with a depreciated currency, which must necessarily take place when the banks fail to redeem their notes on demand. Most, if not all the snspended banks are, however, paying specie for their notes.
